

## Advanced Accounting

*Debra C. Jeter & Paul K. Chaney (Wiley)*

*Course # 1163459, Version 2007, 43 CPE Credits*

**your self-study.**  
**your way.**

## Course CPE Information

### Course Expiration Date

Per AICPA and NASBA Standards (S9-06), QAS Self-Study courses must include an expiration date that is *no longer than one year from the date of purchase or enrollment*.

### Field of Study

Accounting. Some state boards may count credits under different categories—check with your state board for more information.

### Course Level

Advanced.

### Prerequisites

Previous knowledge of basic accounting concepts.

### Advance Preparation

None.

### Course Description

*Advanced Accounting* delivers a balanced and detailed approach to the conceptual and technical aspects of financial accounting and reporting. The materials include comprehensive coverage of the three key methods of consolidated financial reporting (cost, partial equity, and complete equity). In its 6th edition, this course draws attention to the similarities and differences of U.S. Standards versus international principles.

Course content © Copyright John Wiley & Sons, Inc. 2015, reviewed 2020

Learning objectives, review questions, and qualified assessment © Copyright Western CPE 2017

### Publication/Revision

**Date** July 2020

## **Instructional Design**

This Self-Study course is designed to lead you through a learning process using instructional methods that will help you achieve the stated learning objectives. You will be provided with course objectives and presented with comprehensive information and facts demonstrated in exhibits and/or case studies. Review questions will allow you to check your understanding of the material, and a qualified assessment will test your mastery of the course.

Please familiarize yourself with the following instructional features to ensure your success in achieving the learning objectives.

### **Course CPE Information**

The preceding section, “Course CPE Information,” details important information regarding CPE. If you skipped over that section, please go back and review the information now to ensure you are prepared to complete this course successfully.

### **Table of Contents**

The table of contents allows you to quickly navigate to specific sections of the course.

### **Learning Objectives and Content**

Learning objectives clearly define the knowledge, skills, or abilities you will gain by completing the course. Throughout the course content, you will find various instructional methods to help you achieve the learning objectives, such as examples, case studies, charts, diagrams, and explanations. Please pay special attention to these instructional methods, as they will help you achieve the stated learning objectives.

### **Review Questions**

The review questions accompanying this course are designed to assist you in achieving the course learning objectives. The review section is not graded; do not submit it in place of your qualified assessment. While completing the review questions, it may be helpful to study any unfamiliar terms in the glossary in addition to course content. After completing the review questions, proceed to the review question answers and rationales.

### **Review Question Answers and Rationales**

Review question answer choices are accompanied by unique, logical reasoning (rationales) as to why an answer is correct or incorrect. Evaluative feedback to incorrect responses and reinforcement feedback to correct responses are both provided.

### **Glossary**

The glossary defines key terms. Please review the definition of any words you are not familiar with.

### **Index**

The index allows you to quickly locate key terms or concepts as you progress through the instructional material.

## **Qualified Assessment**

Qualified assessments measure (1) the extent to which the learning objectives have been met and (2) that you have gained the knowledge, skills, or abilities clearly defined by the learning objectives for each section of the course. Unless otherwise noted, you are required to earn a minimum score of 70% to pass a course. If you do not pass on your first attempt, please review the learning objectives, instructional materials, and review questions and answers before attempting to retake the qualified assessment to ensure all learning objectives have been successfully completed.

## **Answer Sheet**

Feel free to fill the Answer Sheet out as you go over the course. To enter your answers online, follow these steps:

1. Go to [www.westerncpe.com](http://www.westerncpe.com).
2. Log in with your username and password.
3. At the top right side of your screen, hover over “My Account” and click “My CPE.”
4. Click on the big orange button that says “View All Courses.”
5. Click on the appropriate course title.
6. Click on the blue wording that says “Qualified Assessment.”
7. Click on “Attempt assessment now.”

## **Evaluation**

Upon successful completion of your online assessment, we ask that you complete an online course evaluation. Your feedback is a vital component in our future course development.

Notice: This publication is designed to provide accurate information in regard to the subject matter covered. It is sold with the understanding that neither the author, the publisher, nor any other individual involved in its distribution is engaged in rendering legal, accounting, or other professional advice and assumes no liability in connection with its use. Because regulations, laws, and other professional guidance are constantly changing, a professional should be consulted should you require legal or other expert advice. Information is current at the time of printing.

## ABOUT THE AUTHORS

---

**Debra Jeter** is an Associate Professor of Management in the Owen Graduate School of Management at Vanderbilt University. She received her Ph.D. in accounting from Vanderbilt University. Dr. Jeter has published articles in *The Accounting Review*, the *Journal of Accounting and Economics*, *Auditing: A Journal of Practice & Theory*, *Contemporary Accounting Research*, and *Accounting Horizons*, as well as in popular magazines including *Working Woman* and *Savvy*. She has co-authored one previous book, “Managerial Cost Accounting: Planning and Control,” and chapters in others. She has taught at both the graduate and undergraduate levels and is currently teaching financial reporting to MBA students and Masters students in accounting and finance.

Dr. Jeter has also taught financial accounting in the Executive International MBA program for the Vlerick School of Management in Ghent and is a regular Visiting Research Professor at the University of Auckland. Debra Jeter has served as an editor for *Auditing: A Journal of Practice & Theory* and *Issues in Accounting Education* and on a number of editorial boards.

She has won three teaching awards as well as an Outstanding Alumnus Award from her undergraduate university, Murray State University. Her research interests extend to financial accounting and auditing, including earnings management, components of earnings, audit opinions, and the market for audit services. She practiced as a CPA in Columbus, Ohio, before entering academia. In 2011 professor Jeter was a screenwriter of the film *Jess & Moss*, which premiered in the New Frontier Films category at the Sundance Film Festival.

**Paul Chaney** is the E. Bronson Ingram Professor of Accounting in the Owen Graduate School of Management at Vanderbilt University. He has been at the Owen Graduate School since obtaining his Ph.D. from Indiana University in 1983. He has taught both undergraduate and graduate students, and currently teaches the core financial accounting class for both the MBA, Executive MBA, and Masters of Management in Healthcare programs. He has taught extensively in executive programs, including courses in Accounting and Finance for the Non-Financial Executive and specialized courses for specific businesses.

Dr. Chaney has published articles in *The Accounting Review*, the *Journal of Accounting Research*, the *Journal of Public Economics*, the *Journal of Business*, *Contemporary Accounting Research*, the *Journal of Accounting and Economics*, and *Accounting Horizons*. He has won three teaching awards and serves on the editorial board for *The Accounting Review*, *Auditing: A Journal of Practice & Theory*, and the *International Journal of Accounting*.

# PREFACE

---

Convergence with international accounting standards has played an important role in virtually every project entered into by the Financial Accounting Standards Board (FASB) in recent years. Accounting for business combinations is no exception. In the Sixth Edition of *Advanced Accounting*, we compare and contrast U.S. standards and international principles throughout the book, drawing the readers' attention to remaining differences with an IFRS icon. The reader is made aware of important changes, both present and forecasted. We also incorporate the FASB's codification system for referencing standards.

This book is designed for advanced courses dealing with financial accounting and reporting in the following topical areas: business combinations, consolidated financial statements, international accounting, foreign currency transactions, accounting for derivative instruments, translation of financial statements of foreign affiliates, segment reporting and interim reporting, partnerships, fund accounting and accounting for governmental units, and accounting for non-government—nonbusiness organizations. The primary objective of this book is to provide a comprehensive treatment of selected topics in a clear and understandable manner. The changes related to FASB ASC Topics 805 and 810 (*SFAS No. 141R* and *160*) are integrated throughout the edition. As in previous editions, we strive to maintain maximum flexibility to the instructor in the selection and breadth of coverage for topics dealing with consolidated financial statements and other advanced topics.

We have further expanded the number and variety of exercises and problem materials at the end of each chapter. We include codification exercises that require the student to research the FASB's Codification to determine the appropriate GAAP for a variety of issues. In addition, we include financial statement analysis exercises that relate to real companies and practical applications in virtually every chapter. All chapters have been updated to reflect the most recent pronouncements of the Financial Accounting Standards Board and the Governmental Accounting Standards Board as of this writing.

In teaching consolidation concepts, a decision must be made about the recording method that should be emphasized in presenting consolidated workpaper procedures. The three major alternatives for recording investments in subsidiaries are the (1) cost method, (2) partial equity (or simple equity) method, and (3) complete equity (or sophisticated equity) method. A brief description of each method follows.

1. *Cost method.* The investment in subsidiary is carried at its cost, with no adjustments made to the investment account for subsidiary income or dividends. Dividends received by the parent company are recorded as an increase in cash and as dividend income.
2. *Partial equity method.* The investment account is adjusted for the parent company's share of the subsidiary's reported earnings or losses, and dividends received from the subsidiary are deducted from the investment account. Generally, no other adjustments are made to the investment in subsidiary account.
3. *Complete equity method.* This method is the same as the partial equity method except that additional adjustments are made to the investment in subsidiary account to reflect the effects of (a) the elimination of unrealized intercompany profits, (b) the amortization (depreciation) of the difference between cost and book value, and (c) the additional stockholders' equity transactions undertaken by the subsidiary that change the parent company's share of the subsidiary's stockholders' equity.

We continue to present all three methods, using generic icons to distinguish among the three methods. The instructor has the flexibility to teach all three methods, or to instruct the students to ignore one or two. If the student is interested in learning all three methods, he can, even if the instructor only focuses on one or two. Also, we believe this feature makes the book an excellent reference for the student to keep after graduation, so that he or she can adapt to any method needed.

## WHAT'S NEW IN THE TEXT?

- Author-created online videos explain some of the critical concepts of advanced accounting and walk students through how to solve selected problems throughout the book.
  - A continuous consolidation problem is introduced in Chapters 4 and 5. This allows students to build on concepts learned in prior chapters.
  - The coverage of certain topics has been expanded (such as contingent consideration and bargain purchases) to incorporate information gleaned from the FASB's Post-Implementation Review of FASB Statement No. 141R and to include more realistic real-world issues.
  - Chapter 11 on International Accounting has been updated to reflect the current status of international financial reporting standards (IFRS) around the world and the SEC's position with respect to U.S. adoption. In addition, we pay particular attention to the remaining major joint projects of the two boards (FASB and IASB), which include revenue recognition, accounting for leases, insurance contracts, and financial instruments.
  - The chapters on fund accounting and governmental accounting (Chapters 17 and 18) were updated to reflect the latest GASB pronouncements, including changes in the classification of the fund balance.
  - An appendix to Chapter 1 has been posted online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter). This appendix illustrates a strategy or technique for analyzing a given company, such as a potential acquisition target. This strategy may be applied in some of the end-of-the-chapter Analyzing Financial Statements (AFS) problems. Several additional online appendices (including coverage of deferred taxes, as they pertain to individual topics throughout the text) may also be found at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).
4. FASB's conceptual framework is discussed as it relates to Advanced Accounting in Chapter 1. We also include marginal references to *Related Concepts* throughout the book. The GASB's conceptual framework is discussed in Chapters 17 and 18.
  5. Questions or problems related to *Business Ethics* are included in the end-of chapter materials for every chapter.
  6. We include real-company annual reports or excerpts from reports with related questions (*Analyzing Financial Statements*) in the end-of-chapter materials and/or online for most chapters excluding Chapters 15 and 16.
  7. In Chapter 9 of the 6th edition, the homework material includes the effective interest, in addition to the straight-line method for amortization of bond premiums and discounts. The Sixth Edition also includes online appendices on deferred taxes which are related to the topics in Chapter 6 & 7. (Go to [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).)
  8. The *in-the-news* boxes that appear throughout the book reflect recent business and economic events relevant to the subject matter.
  9. We have integrated *goodwill impairment* into some illustrations in the body of Chapter 5, as well as in several homework problems. We illustrate the goodwill impairment test described in FASB ASC topic 350 (*SFAS No. 142*), discussing its frequency, the steps laid out in the standard, and some of the likely implementation problems. The simplification of these tests for smaller companies is also discussed along with the role of qualitative factors for determining whether the steps are necessary. There are exercises on this topic in Chapters 2 and 5.
  10. At the beginning of Chapter 4 we discuss three methods of accounting for investments, depending on the level of ownership and the presumption of influence or control. We emphasize the importance of the complete equity method for certain investments that are not consolidated, or in the parent-only statements. In addition, online materials include an expanded discussion of the *accounting for investments*. (See [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).)

## OTHER HIGHLIGHTED FEATURES OF THE TEXT

1. We include a feature that requires students to research the FASB Codification in order to locate the current standard that applies to various issues. These exercises appear before the problems at the end of each chapter and often, but not always, relate to topics addressed in that chapter. (Similar questions appear on the CPA exam.)
2. We include a discussion of international accounting standards on each topic where such standards exist, and compare and contrast U.S. GAAP and IFRS. An IFRS icon appears in the margins where this discussion occurs.
3. A discussion of the joint projects of the FASB and the IASB is incorporated throughout the textbook where appropriate, with an expanded discussion in Chapter 11.
11. *Learning objectives* are included in the margins of the chapters, and relevant learning objective numbers are provided with end-of-chapter materials.
12. We continue the use of *graphical illustrations*, which was introduced in prior editions.
13. A few short-answer questions (and solutions) are periodically provided throughout each chapter to enable students to test their knowledge of the content before moving on.
14. The organization of the worksheets applies a format that separates accounts to the income statement, the statement of retained earnings, and the balance sheet in distinct sections. The worksheets are placed near the relevant text.

15. All illustrations are printed upright on the page and labeled clearly for convenient study and reference.
16. Entries made on consolidated statements workpapers are presented in general journal form. These entries are shaded in blue to distinguish them from book entries, to facilitate exposition and study. To distinguish among parent company entries and workpaper entries in the body of the text, we present parent entries in gray and workpaper entries in blue.
17. Summaries appear at the end of each chapter, and a glossary of key terms is provided at the end of the book.
18. Chapters 17 through 19 reflect the latest GASB and FASB pronouncements related to fund accounting.

Clearly there are more topics in this text than can be covered adequately in a one semester or one-quarter course. We believe that it is generally better for both students and instructors to cover a selected number of topics in depth rather than to undertake a superficial coverage of a larger number of topics. Modules of material that an instructor may consider for exclusion in any one semester or quarter include the following:

- Chapters 7–9. An expanded analysis of problems in the preparation of consolidated financial statements.
- Chapter 10. Insolvency—liquidation and reorganization.
- Chapters 11–14. International accounting, foreign currency transactions and translation, and segment and interim reporting.
- Chapters 15 and 16. Partnership accounting.
- Chapters 17 through 19. Fund accounting, accounting for governmental units, and accounting for nongovernment–nonbusiness organizations (NNOs).

## SUPPLEMENTS

The following supplements are available on the book companion web site: Study Guide, Excel Templates, PowerPoint Slides, Instructors' Manual, Solutions Manual, Test Bank, and videos. These materials are accessible from [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).

## WileyPLUS

*WileyPLUS* is an online learning and assessment environment, where students test their understanding of concepts, get feedback on their answers, and access learning materials like the eText and multimedia resources. Instructors can automate assignments, create practice quizzes, assess students' progress, and intervene with those falling behind.

## ACKNOWLEDGMENTS

We wish to thank the following individuals for their suggestions and assistance in the preparation of this edition.

Thank you goes to Anthony Abongwa (Monroe College), Jonghyuk Bae Darius Fatemi (Northern Kentucky University), Edward Julius (California Lutheran University), Ron Mano (Westminster College), Kevin Packard (Brigham Young University – Idaho), Ashley Stark (Dickinson State University), Denise Stefano (Mercy College), Deborah Strawser (Grand Canyon University Online), Joseph Wall (Carthage College), and Sheila Reed (State of Tennessee).

Thank you also goes to Sheila Ammons (Austin Community College) for preparing the PowerPoint slides, to TBD for preparing the Study Guide, to TBD for preparing the Test Bank, and to TBD for their helpful textbook, solutions manual, and test bank accuracy review comments.

Finally we would like to acknowledge a few individuals at Wiley who helped all this come together: Ellen Keohane, Mary O'Sullivan, Christina Volpe, Beth Pearson, Joel Hollenbeck, Tai Harris, Karolina Zarychta, Maddy Lesure.

# CONTENTS

**Note:** Learning Objectives located at the beginning of every chapter  
Review Questions located at the end of every chapter

## **1 INTRODUCTION TO BUSINESS COMBINATIONS AND THE CONCEPTUAL FRAMEWORK 1**

Learning Objectives 1

- 1.1** Growth Through Mergers 1
- 1.2** Nature of the Combination 3
- 1.3** Business Combinations: Why? Why not? 4
- 1.4** Business Combinations: Historical Perspective 7
- 1.5** Terminology and Types of Combinations 10
- 1.6** Takeover Premiums 12
- 1.7** Avoiding the Pitfalls before the Deal 13
- 1.8** Determining Price and Method of Payment in Business Combinations 14
- 1.9** Alternative Concepts of Consolidated Financial Statements 18
- 1.10** FASB's Conceptual Framework 22
- 1.11** FASB Codification (Source of GAAP) 27

Summary 31

**Appendix 1A:** Evaluating Firm Performance (Online only)

Questions 32

Analyzing Financial Statements 33

Exercises 35

ASC Exercises 36

## **2 ACCOUNTING FOR BUSINESS COMBINATIONS 37**

Learning Objectives 37

- 2.1** Accounting Standards on Business Combinations: Background 37
- 2.2** Pro Forma Statements and Disclosure Requirement 45
- 2.3** Explanation and Illustration of Acquisition Accounting 47
- 2.4** The Measurement Period (and Measurement Period Adjustments) 50
- 2.5** Contingent Consideration in an Acquisition 51
- 2.6** Leveraged Buyouts 55
- 2.7** IFRS versus U.S. GAAP 55

Summary 57

**Appendix 2A:** Deferred Taxes in Business Combinations (Online only)

## **8 CHANGES IN OWNERSHIP INTEREST 355**

---

- Learning Objectives **355**
- 8.1** Changes in Ownership **355**
- 8.2** Parent Acquires Subsidiary Stock Through Several Open-Market Purchases—Cost Method **357**
- 8.3** Parent Sells Subsidiary Stock Investment on the Open Market—Cost Method **360**
- 8.4** Equity Method—Purchases and Sales of Subsidiary Stock by the Parent **363**
- 8.5** Parent Sells Subsidiary Stock Investment on the Open Market—Cost Method **367**
- 8.6** Subsidiary Issues Stock **368**
- Summary **376**
- Questions **376**
- Analyzing Financial Statements **377**
- Exercises **377**
- ASC Exercises **380**
- Problems **380**

## **9 INTERCOMPANY BOND HOLDINGS AND MISCELLANEOUS TOPICS—CONSOLIDATED FINANCIAL STATEMENTS 388**

---

- Learning Objectives **388**
- 9.1** Intercompany Bond Holdings **389**
- 9.2** Accounting for Bonds—A Review **390**
- 9.3** Constructive Gain or Loss on Intercompany Bond Holdings **391**
- 9.4** Accounting for Intercompany Bonds Illustrated **393**
- 9.5** Book Entry Related to Bond Investment **394**
- 9.6** Interim Purchase of Intercompany Bonds **409**
- 9.7** Notes Receivable Discounted **410**
- 9.8** Stock Dividends Issued by a Subsidiary Company **410**

- 9.9** Dividends from Preacquisition Earnings **413**
- 9.10** Subsidiary with both Preferred and Common Stock Outstanding **414**
- 9.11** Consolidating a Subsidiary with Preferred Stock Outstanding **417**
- Summary **427**
- Questions **428**
- Analyzing Financial Statements **428**
- Exercises **430**
- ASC Exercises **433**

## **Chapter 1 – Introduction to Business Combinations and the Conceptual Framework**

### **Learning Objectives**

After completing this section of the course, you will be able to:

- Identify historical trends in types of business combinations and cite the major reasons that firms combine.
- Identify the factors that managers should consider in exercising due diligence in business combinations.
- Identify defensive tactics used to attempt to block business combinations.
- Recognize differences between an asset and a stock acquisition.
- Cite the factors used to determine the price and the method of payment for a business combination.
- Calculate an estimate of goodwill by discounting expected future excess earnings over some time period.
- Recognize differences between the two alternative views of consolidated financial statements.
- Identify concepts and requirements with Statements of Financial Accounting Concepts (SFAC) and the projects undertaken by FASB and the International Accounting Standards Board (IASB) and their primary objectives.

# INTRODUCTION TO BUSINESS COMBINATIONS AND THE CONCEPTUAL FRAMEWORK

---

## CHAPTER CONTENTS

- 1.1 GROWTH THROUGH MERGERS
- 1.2 NATURE OF THE COMBINATION
- 1.3 BUSINESS COMBINATIONS: WHY? WHY NOT?
- 1.4 BUSINESS COMBINATIONS: HISTORICAL PERSPECTIVE
- 1.5 TERMINOLOGY AND TYPES OF COMBINATIONS
- 1.6 TAKEOVER PREMIUMS
- 1.7 AVOIDING THE PITFALLS BEFORE THE DEAL
- 1.8 DETERMINING PRICE AND METHOD OF PAYMENT IN BUSINESS COMBINATIONS
- 1.9 ALTERNATIVE CONCEPTS OF CONSOLIDATED FINANCIAL STATEMENTS
- 1.10 FASB'S CONCEPTUAL FRAMEWORK
- 1.11 FASB CODIFICATION (SOURCE OF GAAP)

---

## 1.1 GROWTH THROUGH MERGERS

The merger between American Airlines and US Airways in 2013 has been the latest in a string of acquisitions in an industry described by Warren Buffett a few years earlier as typifying the “worst” sort of business. He went on to describe such a business as one that grows fast, earns next to nothing, and takes large amounts of capital to engender growth. Twenty-nine bankruptcies in 30 years support Buffett’s allegations. Still, the belief is growing that maybe now, at last, airlines have finally cut capacity sufficiently to earn profits in the long run.<sup>1</sup>

Growth through mergers and acquisitions (M&A) has become a standard in business not only in America but throughout the world. In the new millennium, the most recent in a series of booms in merger activity was sparked by cheaper credit and by global competition,

---

<sup>1</sup> WSJ, “Airlines Haven’t Reached Escape Velocity,” by Justin Lahart, 4/1/2013.

in addition to the usual growth-related incentives predominant during the boom of the 1990s. By the end of 2008, however, uncertainty in the commercial credit markets had led to anxiety about whether merger transactions could continue to be achieved successfully in the current environment, and by the middle of 2009 M&A activity had nearly come to a halt. With plunging market values and tightened credit, the mix and nature of the financing components were clearly in flux, and major adaptations needed to consummate any new deals.

As the markets began to recover in the second half of 2009, however, merger transactions picked up once more. Banks made capital available for bigger companies, such as Kraft, who looked to acquire Cadbury, and corporate debt offerings soared. By 2010, several huge deals were in the works.

Merger activity has historically been highly correlated with the movement of the stock market. Increased stock valuation increases a firm's ability to use its shares to acquire other companies and is often more appealing than issuing debt. During the merger cycle of the 1990s, equity values fueled the merger wave. The slowing of merger activity in the early years of the 21st century provided a dramatic contrast to this preceding period. Beginning with the merger of Morgan Stanley and Dean Witter Discover and ending with the biggest acquisition to that date—WorldCom's bid for MCI—the year 1997 marked the third consecutive year of record mergers and acquisitions activity. The pace accelerated still further in 1998 with unprecedented merger activity in the banking industry, the auto industry, financial services, and telecommunications, among others. This activity left experts wondering why and whether bigger was truly better. It also left consumers asking what the impact would be on service. A wave of stock swaps was undoubtedly sparked by record highs in the stock market, and stockholders reaped benefits from the mergers in many cases, at least in the short run. Regulators voiced concern about the dampening of competition, and consumers were quick to wonder where the real benefits lay. Following the accounting scandals of 2001 (WorldCom, Enron, Tyco, etc.), merger activity lulled for a few years.

Also in 2001, the *Financial Accounting Standards Board (FASB)* voted in two major accounting changes related to business combinations. The first met with vehement protests that economic activity would be further slowed as a result and the second with excitement that it might instead be spurred. Both changes are detailed in Chapter 2.

By the middle of 2002, however, these hopes had been temporarily quelled. Instead of increased earnings, many firms active in mergers during the 1990s were forced to report large charges related to the diminished value of long-lived assets (mainly goodwill). Merger activity slumped, suggesting that the frenzy had run its course. Market reaction to the mergers that did occur during this period typified the market's doubts. When *Northrop Grumman Corp.* announced the acquisition of *TRW Inc.* for \$7.8 billion, the deal was praised but no market reaction was noted. In contrast, when Vivendi Universal admitted merger-gone-wrong woes, investors scurried.

By the middle of the first decade of the 21st century, however, the frenzy was returning with steady growth in merger activity from 2003 to 2006. In 2005, almost 18% of all M&A (mergers & acquisitions) deals were in the services sector. In a one-week period in June of 2006, \$100 billion of acquisitions occurred, including Phelps Dodge's \$35.4 billion acquisition of Inco Ltd. and Falconbridge Ltd. In addition, because of the economic rise in China and India, companies there were looking to increase their global foothold and began acquiring European companies. Thus cross-border deals within Europe accounted for a third of the global M&A deals.

However, by the end of 2008, a decline in overall merger activity was apparent as the U.S. economy slid into a recession, and some forecasters were predicting the next chapter in mergers and acquisitions to center around bankruptcy-related activity. Data from Thomson Reuters revealed that in 2008, bankruptcy-related merger activity increased for the first time in the last six years. For example, the number of Chapter 11 M&A purchases rose from 136 for the entire year of 2007 to 167 for the first ten months of 2008, with more to come. Overall mergers, on the other hand, decreased from \$87 billion in the United States (\$277 billion globally) during October 2007 to \$78 billion in the United States (\$259 billion globally) during October 2008, based on the Reuters data.

"By 2006, the percentage of the mergers and acquisitions market

accounted for by private-equity firms had increased to approximately 15 percent from around 4 percent in 1990."<sup>4</sup>

 IN  
THE  
NEWS

After several lean years, U.S. M&A volume reached \$1 trillion in

2013. Scott Barshay of Cravath, Swaine, & Moore, a major law firm, claims that this growth was caused by "a stronger economy, . . . Congress behaving more responsibly, and . . . all appearances of stability at the Fed."<sup>5</sup>

On December 4, 2007, FASB released two new standards, *FASB Statement No. 141 R*, Business Combinations, and *FASB Statement No. 160*, Noncontrolling Interests in Consolidated Financial Statements [ASC 805, "Business Combinations" and ASC 810, "Consolidations," based on FASB's new codification system]. These standards have altered the accounting for business combinations dramatically.

Both statements became effective for years *beginning after December 15, 2008*, and are intended to improve the relevance, comparability and transparency of financial information related to business combinations, and to facilitate the convergence with international standards. They represent the completion of the first major joint project of the FASB and the IASB (International Accounting Standards Board), according to one FASB member, G. Michael Crooch. The FASB also believes the new standards will reduce the complexity of accounting for business combinations. These standards are integrated throughout this text.

## Planning M&A in a Changing Environment and Under CHANGING Accounting Requirements

1. The timing of deals is critical. The number of days between agreement or announcement and deal consummation can make a huge difference.
2. The effects on reporting may cause surprises. More purchases qualify as business combinations than previously. Income tax provisions can trigger disclosures.
3. Assembling the needed skill and establishing the needed controls takes time. The use of fair values is expanded, and more items will need remeasurement or monitoring after the deal.
4. The impact on earnings in the year of acquisition and subsequent years will differ from that in past mergers, as will the effects on earnings of step purchases or sales.
5. Unforeseen effects on debt covenants or other legal arrangements may be lurking in the background, as a result of the changes in key financial ratios.<sup>3</sup>

Growth is a major objective of many business organizations. Top management often lists growth or expansion as one of its primary goals. A company may grow slowly, gradually expanding its product lines, facilities, or services, or it may skyrocket almost overnight. Some managers consider growth so important that they say their companies must "grow or die." In the past hundred years, many U.S. businesses have achieved their goal of expansion through business combinations. A **business combination** occurs when *the operations of two or more companies are brought under common control*.

## 1.2 NATURE OF THE COMBINATION

A business combination may be friendly or unfriendly. In a **friendly combination**, *the boards of directors of the potential combining companies negotiate mutually agreeable terms of a proposed combination*. The proposal is then submitted to the stockholders of the involved companies for approval. Normally, a two-thirds or three-fourths positive vote is required by corporate bylaws to bind all stockholders to the combination.

An **unfriendly (hostile) combination** results when *the board of directors of a company targeted for acquisition resists the combination*. A formal **tender offer** enables the acquiring firm to deal directly with individual shareholders. The tender offer, usually published in a newspaper, typically provides a price higher than the current market price for shares made available by a certain date. If a sufficient number of shares are not made

Men's  
Wearhouse  
acquired all  
the  
outstanding  
shares of Jos.

A Bank with a per share offer that represented a 56% premium over Jos. A. Bank's closing share price. During a six month period, Jos. A. Bank made several offers to acquire Men's Wearhouse. At the end of this six month period, Men's Wearhouse, using a Pac Man strategy, made an offer to acquire Jos. A. Bank. No rebranding of the companies is expected and Men's Wearhouse shareholders hope to benefit from \$100 to \$150 million in synergies.<sup>6</sup>

**LO 4** Defensive tactics are used.

available, the acquiring firm may reserve the right to withdraw the offer. Because they are relatively quick and easily executed (often in about a month), tender offers are the preferred means of acquiring public companies.

Although tender offers are the preferred method for presenting hostile bids, most tender offers are friendly ones, done with the support of the target company's management. Nonetheless, hostile takeovers have become sufficiently common that a number of mechanisms have emerged to resist takeover.

## Defense Tactics

Resistance often involves various moves by the target company, generally with colorful terms. Whether such defenses are ultimately beneficial to shareholders remains a controversial issue. Academic research examining the price reaction to defensive actions has produced mixed results, suggesting that the defenses are good for stockholders in some cases and bad in others. For example, when the defensive moves result in the bidder (or another bidder) offering an amount higher than initially offered, the stockholders benefit. But when an offer of \$40 a share is avoided and the target firm remains independent with a price of \$30, there is less evidence that the shareholders have benefited.

A certain amount of controversy surrounds the effectiveness, as well as the ultimate benefits, of the following defensive moves:

1. *Poison pill*: Issuing stock rights to existing shareholders enabling them to purchase additional shares at a price below market value, but exercisable only in the event of a potential takeover. This tactic has been effective in some instances, but bidders may take managers to court and eliminate the defense. In other instances the original shareholders benefit from the tactic. Chrysler Corp. announced that it was extending a poison pill plan until February 23, 2008, under which the rights become exercisable if anyone announces a tender offer for 15% or more, or acquires 15%, of Chrysler's outstanding common shares. Poison pills are rarely triggered, but their existence serves as a preventative measure.
2. *Greenmail*: The purchase of any shares held by the would-be acquiring company at a price substantially in excess of their fair value. The purchased shares are then held as treasury stock or retired. This tactic is largely ineffective because it may result in an expensive excise tax; further, from an accounting perspective, the excess of the price paid over the market price is expensed.
3. *White knight or white squire*: Encouraging a third firm more acceptable to the target company management to acquire or merge with the target company.
4. *Pac-man defense*: Attempting an unfriendly takeover of the would-be acquiring company.
5. *Selling the crown jewels*: The sale of valuable assets to others to make the firm less attractive to the would-be acquirer. The negative aspect is that the firm, if it survives, is left without some important assets.
6. *Leveraged buyouts*: The purchase of a controlling interest in the target firm by its managers and third-party investors, who usually incur substantial debt in the process and subsequently take the firm private. The bonds issued often take the form of high-interest, high-risk "junk" bonds. Leveraged buyouts will be discussed in more detail in Chapter 2.

## 1.3 BUSINESS COMBINATIONS: WHY? WHY NOT?

**LO 2** Reasons firms combine.

A company may expand in several ways. Some firms concentrate on **internal** expansion. A firm may expand internally by engaging in product research and development. Hewlett-Packard is an example of a company that relied for many years on new product

<sup>6</sup> "Men's Wearhouse Reaches \$1.8 Billion Deal to Acquire Jos. A. Bank," by Maggie McGrath, Forbes.com, March 11, 2014.

development to maintain and expand its market share. A firm may choose instead to emphasize marketing and promotional activities to obtain a greater share of a given market. Although such efforts usually do not expand the total market, they may redistribute that market by increasing the company's share of it.

For other firms, **external** expansion is the goal; that is, they try to expand by acquiring one or more other firms. This form of expansion, aimed at producing relatively rapid growth, has exploded in frequency and magnitude in recent years. A company may achieve significant cost savings as a result of external expansion, perhaps by acquiring one of its major suppliers.

In addition to rapid expansion, the business combination method, or external expansion, has several other potential advantages over internal expansion:

1. **Operating synergies** may take a variety of forms. Whether the merger is **vertical** (a merger between a supplier and a customer) or **horizontal** (a merger between competitors), combination with an existing company provides management of the acquiring company with an established operating unit with its own experienced personnel, regular suppliers, productive facilities, and distribution channels. In the case of vertical mergers, synergies may result from the elimination of certain costs related to negotiation, bargaining, and coordination between the parties. In the case of a horizontal merger, potential synergies include the combination of sales forces, facilities, outlets, and so on, and the elimination of unnecessary duplication in costs. When a private company is acquired, a plus may be the potential to eliminate not only duplication in costs but also unnecessary costs.

Management of the acquiring company can draw upon the operating history and the related historical database of the acquired company for planning purposes. A history of profitable operations by the acquired company may, of course, greatly reduce the risk involved in the new undertaking. A careful examination of the acquired company's expenses may reveal both expected and unexpected costs that can be eliminated. On the more negative (or cautious) side, be aware that the term "synergies" is sometimes used loosely. If there are truly expenses that can be eliminated, services that can be combined, and excess capacity that can be reduced, the merger is more likely to prove successful than if it is based on growth and "so-called synergies," suggests Michael Jensen, a professor of finance at the Harvard Business School.

**IN  
THE  
NEWS**

Views on whether synergies are real or simply a plug figure to justify a merger that shouldn't happen are diverse. Time Warner, for example, has fluctuated back and forth on this issue in recent years. President Jeffrey Bewkes recently was quoted as saying, "No division should subsidize another." When queried about the message his predecessors sent to shareholders, he said, "It's bull—"<sup>7</sup>

**GAINS FROM BULKING UP<sup>8</sup>**

| <i>Industry</i>           | <i>Key Benefit of Consolidation</i>  |
|---------------------------|--|
| Antenna towers            | Frees up capital and management time for wireless communications operators |
| Funeral homes             | Yields greater discounts on coffins, supplies, and equipment               |
| Health clubs              | Spreads regional marketing and advertising costs over more facilities      |
| Landfill sites            | Lets operators cope with the new environmental and regulatory demands      |
| Physician group practices | Reduces overhead and costs of medical procedures                           |

2. Combination may enable a company to compete more effectively in the **international marketplace**. For example, an acquiring firm may diversify its operations rather rapidly by entering new markets; alternatively, it may need to ensure its sources of supply or market outlets. Entry into new markets may also be undertaken to obtain cost savings realized by smoothing cyclical operations. Diminishing savings from cost-cutting

<sup>8</sup> Business Week, "Buy 'Em Out, Then Build 'Em Up," by Eric Schine, 5/18/95, p. 84.

IN  
THE  
NEWS

More than a third of bankruptcy merger activity in 2008 took

place in financial services, with the sale of assets by Lehman Brothers (New York investment bank) and the \$2.8 billion acquisition by a consortium of Ashikaga Bank (Japan). Others included Thornwood Associates' \$900 million purchase of Federal-Mogul, Mendecino Redwood's \$600 million acquisition of Pacific Lumber, and NBTY's \$371 million purchase of Leiner Health Products.<sup>9</sup>

*within* individual companies makes combination more appealing. The financial crisis in Asia accelerated the pace for a time as American and European multinationals competed for a shrinking Asian market. However, a combination of growing competition, globalization, deregulation, and financial engineering has led to increasingly complex companies and elusive profits.

3. Business combinations are sometimes entered into to take advantage of **income tax** laws. The opportunity to file a consolidated tax return may allow profitable corporations' tax liabilities to be reduced by the losses of unprofitable affiliates. When an acquisition is financed using debt, the interest payments are tax deductible, creating a **financial synergy** or "tax gain." Many combinations in the past were planned to obtain the advantage of significant operating loss carryforwards that could be utilized by the acquiring company. However, the Tax Reform Act of 1986 limited the use of operating loss carryforwards in merged companies. Because tax laws vary from year to year and from country to country, it is difficult to do justice to the importance of tax effects within the scope of this chapter. Nonetheless, it is important to note that tax implications are often a driving force in merger decisions.
4. **Diversification** resulting from a merger offers a number of advantages, including increased flexibility, an internal capital market, an increase in the firm's debt capacity, more protection from competitors over proprietary information, and sometimes a more effective utilization of the organization's resources. In debating the tradeoffs between diversification and focusing on one (or a few) specialties, there are no obvious answers.
5. **Divestitures** accounted for 30% or more of the merger and acquisitions activity in each quarter from 1995 into mid-1998 and from 2001 to 2010. Shedding divisions that are not part of a company's core business became common during this period. In some cases the divestitures may be viewed as "undoing" or "redoing" past acquisitions. A popular alternative to selling off a division is to "spin off" a unit. Examples include AT&T's spin-off of its equipment business to form *Lucent Technologies Inc.*, Sears Roebuck's spin-off of *Allstate Corp.* and *Dean Witter Discover & Co.*, and Cincinnati Bell's proposed spin-off of its billing and customer-management businesses to form *Convergys Corp.*

Notwithstanding its apparent advantages, business combination may not always be the best means of expansion. An overriding emphasis on rapid growth may result in the pyramiding of one company on another without sufficient management control over the resulting conglomerate. Too often in such cases, management fails to maintain a sound enough financial equity base to sustain the company during periods of recession. Unsuccessful or incompatible combinations may lead to future divestitures.

In order to avoid large dilutions of equity, some companies have relied on the use of various debt and preferred stock instruments to finance expansion, only to find themselves unable to provide the required debt service during a period of decreasing economic activity. The junk bond market used to finance many of the mergers in the 1980s had essentially collapsed by the end of that decade.

Business combinations may destroy, rather than create, value in some instances. For example, if the merged firm's managers transfer resources to subsidize money-losing segments instead of shutting them down, the result will be a suboptimal allocation of capital. This situation may arise because of reluctance to eliminate jobs or to acknowledge a past mistake.

Some critics of the accounting methods used in the United States prior to 2002 to account for business combinations argued that one of the methods did not hold executives accountable for their actions if the price they paid was too high, thus encouraging firms to "pay too much." Although opinions are divided over the relative merits of the accounting alternatives, most will agree that the resulting financial statements should reflect the economics of the business combination. Furthermore, if and when the accounting standards

<sup>9</sup> "Water Cooler: What Players in the Mid Market Are Talking About," *Mergers & Acquisitions*, December 2008.

and the resulting statements fail even partially at this objective, it is crucial that the users of financial data be able to identify the deficiencies. Thus we urge the reader to keep in mind that an important reason for learning and understanding the details of accounting for business combinations is to understand the economics of the business combination, which in turn requires understanding any possible deficiencies in the accounting presentation.

## 1.4 BUSINESS COMBINATIONS: HISTORICAL PERSPECTIVE

### LO 1 Historical trends in types of M&A.

In the United States there have been three fairly distinct periods characterized by many business mergers, consolidations, and other forms of combinations: 1880–1904, 1905–1930, and 1945–present. During the first period, huge holding companies, or trusts, were created by investment bankers seeking to establish monopoly control over certain industries. This type of combination is generally called **horizontal integration** because it involves the combination of companies within the same industry. Examples of the trusts formed during this period are J. P. Morgan's U.S. Steel Corporation and other giant firms such as Standard Oil, the American Sugar Refining Company, and the American Tobacco Company. By 1904, more than 300 such trusts had been formed, and they controlled more than 40% of the nation's industrial capital.

The second period of business combination activity, fostered by the federal government during World War I, continued through the 1920s. In an effort to bolster the war effort, the government encouraged business combinations to obtain greater standardization of materials and parts and to discourage price competition. After the war, it was difficult to reverse this trend, and business combinations continued. These combinations were efforts to obtain better integration of operations, reduce costs, and improve competitive positions rather than attempts to establish monopoly control over an industry. This type of combination is called **vertical integration** because it involves the combination of a company with its suppliers or customers. For example, Ford Motor Company expanded by acquiring a glass company, rubber plantations, a cement plant, a steel mill, and other businesses that supplied its automobile manufacturing business. From 1925 to 1930, more than 1,200 combinations took place, and about 7,000 companies disappeared in the process.

The third period started after World War II and has exhibited rapid growth in merger activity since the mid-1960s, and even more rapid growth since the 1980s. The total dollar value of mergers and acquisitions grew from under \$20 billion in 1967 to over \$300 billion by 1995 and over \$1 trillion in 1998, and \$3.5 trillion by 2006. Even allowing for changes in the value of the dollar over time, the acceleration is obvious. By 1996, the number of yearly mergers completed was nearly 7,000. Some observers have called this activity **merger mania**, and most agreed that the mania had ended by mid-2002. However, by 2006, merger activity was soaring once more. Illustration 1-1 presents two rough graphs of the level of merger activity for acquisitions over \$10 million from 1972 to 2012 in number of deals, and from 1979 to 2012 in dollar volume. Illustration 1-2 presents summary statistics on the level of activity for the year 2012 by industry sector for acquisitions with purchase prices valued in excess of \$10 million.

This most recent period can be further subdivided to focus on trends of particular decades or subperiods. For example, many of the mergers that occurred in the United States from the 1950s through the 1970s were **conglomerate** mergers. Here the primary motivation for combination was often to diversify business risk by combining companies in different industries having little, if any, production or market similarities, or possibly to create value by lowering the firm's cost of capital. One conjecture for the popularity of this type of merger during this time period was the strictness of regulators in limiting combinations of firms in the same industry. One conglomerate may acquire another, as Esmark did when it acquired Norton-Simon, and conglomerates may spin off, or divest themselves of, individual businesses. Management of the conglomerate hopes to smooth earnings over time by counterbalancing the effects of economic forces that affect different industries at different times.

In contrast, the 1980s were characterized by a relaxation in antitrust enforcement during the Reagan administration and by the emergence of high-yield junk bonds to finance acquisitions. The dominant type of acquisition during this period and into the 1990s was the **strategic acquisition**, claiming to benefit from **operating synergies**. These synergies may arise when the talents or strengths of one of the firms complement the products or needs of

the other, or they may arise simply because the firms were former competitors. An argument can be made that the dominant form of acquisition shifted in the 1980s because many of the conglomerate mergers of the 1960s and 1970s proved unsuccessful; in fact, some of the takeovers of the 1980s were of a disciplinary nature, intended to break up conglomerates.

Deregulation undoubtedly played a role in the popularity of combinations in the 1990s. In industries that were once fragmented because concentration was forbidden, the

Data source: *Mergers & Acquisitions*, February 2013, p. 37.

pace of mergers picked up significantly in the presence of deregulation. These industries include banking, telecommunications, and broadcasting. Although recent years have witnessed few deals blocked due to antitrust enforcement, an example of a major transaction dropped in 1996 because of a planned FTC (Federal Trade Commission) challenge was in the drugstore industry. The FTC challenged the impact of a proposed merger between *Rite Aid Corp.* and *Revco D.S. Inc.* on market power in several sectors of the East and Midwest. Nonetheless, subsequent deals in the industry saw both companies involved: Rite Aid acquired *Thrifty PayLess Holdings Inc.*, and *CVS Inc.* purchased Revco in February 1997.

Later, the Justice Department sued to block Primestar's acquisition of a satellite slot owned by *MCI* and *News Corp.* Other deals were dropped in the face of possible intervention, including a planned merger between CPA firms KPMG Peat Marwick and Ernst & Young in 1998. Nonetheless, over time the group of large CPA firms once referred to as the Big 8 has blended into the Big 4, raising concerns about a possible lack of competition in the audit market for large companies. The Justice Department reached a settlement in 2013 with American Airlines and US Airways requiring them to sell facilities at seven airports before being allowed to consummate the planned merger.<sup>10</sup>

IN  
THE  
NEWS

Before the announcement of the merger between AT&T and T-Mobile, phone handset makers such as HTC and Motorola had two major carriers (ATT and T-Mobile) who could buy their GSM-based phones. They just lost any ability to control price and profits on handsets because now a single buyer that can dictate what GSM phones come to market. Even with LTE becoming the standard for the 4G world, it would essentially be a market dominated by three buyers, which would place handset makers at the mercy of the giants.<sup>11</sup>

## 1.5 TERMINOLOGY AND TYPES OF COMBINATIONS

### Lo 5 Stock versus asset acquisitions.

From an accounting perspective, the distinction that is most important at this stage is between an **asset acquisition** and a **stock acquisition**. In Chapter 2, we focus on the acquisition of the assets of the acquired company, where only the acquiring or new company survives. Thus the books of the acquired company are closed out, and its assets and liabilities are transferred to the books of the acquirer. In subsequent chapters, we will discuss the stock acquisition case where the acquired company and its books remain intact and consolidated financial statements are prepared periodically. In such cases, the acquiring company debits an account “Investment in Subsidiary” rather than transferring the underlying assets and liabilities onto its own books.

Note that the distinction between an asset acquisition and a stock acquisition does not imply anything about the medium of exchange or consideration used to consummate the acquisition. Thus a firm may gain control of another firm in a stock acquisition using cash, debt, stock, or some combination of the three as consideration. Alternatively, a firm may acquire the total assets of another firm using cash, debt, stock, or some combination of the three. There are two independent issues related to the consummation of a combination: what is acquired (assets or stock) and what is given up (the consideration for the combination). These are shown in Illustration 1-3.

In an asset acquisition, a firm must acquire 100% of the assets of the other firm. In a stock acquisition, a firm may obtain control by purchasing 50% or more of the voting common stock (or possibly even less). This introduces one of the most obvious advantages of the stock acquisition over the asset acquisition: a lower total cost in many cases. Also, in a stock acquisition, direct formal negotiations with the acquired firm’s management may be avoided. Further, there may be advantages to maintaining the acquired firm as a separate legal entity. The possible advantages include liability limited to the assets of the individual corporation and greater flexibility in filing individual or consolidated tax returns. Finally, regulations pertaining to one of the firms do not automatically extend to the entire merged entity in a stock acquisition. A stock acquisition has its own complications, however, and the economics and specifics of a given situation will dictate the type of acquisition preferred.

Other terms related to mergers and acquisitions merit mention. For example, business combinations are sometimes classified by method of combination into three types—statutory mergers, statutory consolidations, and stock acquisitions. However, the distinction between these categories is largely a technicality, and the terms **mergers**, **consolidations**, and **acquisitions** are popularly used interchangeably.

A **statutory merger** results when *one company acquires all the net assets of one or more other companies through an exchange of stock, payment of cash or other property, or issue of debt instruments (or a combination of these methods)*. The acquiring company survives, whereas the acquired company (or companies) ceases to exist as a separate legal entity, although it may be continued as a separate division of the acquiring company.

IN  
THE  
NEWS

Synergistic deals may be viable even in the current environment, given

adequate flexibility and preparation. Although the successful financing of large deals depends largely on capital markets, local middle market deals—say, less than \$20 million—more often rely on a combination of commercial loans, seller financing, and equity from private sources or a private equity group.<sup>12</sup>

Thus, if A Company acquires B Company in a statutory merger, the combination is often expressed as

#### Statutory Merger

$$\boxed{\text{A Company}} + \boxed{\text{B Company}} = \boxed{\text{A Company}}$$

The boards of directors of the companies involved normally negotiate the terms of a plan of merger, which must then be approved by the stockholders of each company involved. State laws or corporation bylaws dictate the percentage of positive votes required for approval of the plan.

A **statutory consolidation** results when *a new corporation is formed to acquire two or more other corporations through an exchange of voting stock; the acquired corporations then cease to exist as separate legal entities*. For example, if C Company is formed to consolidate A Company and B Company, the combination is generally expressed as

#### Statutory Consolidation

$$\boxed{\text{A Company}} + \boxed{\text{B Company}} = \boxed{\text{C Company}}$$

Stockholders of the acquired companies (A and B) become stockholders in the new entity (C). The combination of *Chrysler Corp.* and *Daimler-Benz* to form *Daimler-Chrysler* is an example of this type of consolidation. The acquired companies in a statutory consolidation may be operated as separate divisions of the new corporation, just as they may under a statutory merger. Statutory consolidations require the same type of stockholder approval as do statutory mergers.

A **stock acquisition** occurs when *one corporation pays cash or issues stock or debt for all or part of the voting stock of another company, and the acquired company remains intact as a separate legal entity*. When the acquiring company acquires a controlling interest in the voting stock of the acquired company (for example, if A Company acquires 50% of the voting stock of B Company), a parent–subsidiary relationship results.

### TEST YOUR KNOWLEDGE

1.1

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

#### Short Answer

- Name the following takeover defense tactics:
  - Issuing stock rights to existing shareholders, enabling them to purchase additional shares at a price below market value, but exercisable only in the event of a potential takeover. \_\_\_\_\_
  - The purchase of a controlling interest in the target firm by its managers and third-party investors, who usually incur substantial debt in the process and subsequently take the firm private. \_\_\_\_\_
  - Encouraging a third firm, more acceptable to the target company management, to acquire or merge with the target company. \_\_\_\_\_
- Which of the following can be used as consideration in a stock acquisition?
  - Cash
  - Debt
  - Stock
  - Any of the above may be used

#### Multiple Choice

- Which one of the following statements is **incorrect**?
  - In an asset acquisition, the books of the acquired company are closed out, and its assets and liabilities are transferred to the books of the acquirer.

<sup>12</sup> “The Credit Puzzle,” by Lou Banach and Jim Gettel, *Mergers & Acquisitions*, December 2008.

Consolidated financial statements (explained in later chapters) are prepared and the business combination is often expressed as

#### Consolidated Financial Statements

## 1.6 TAKEOVER PREMIUMS

IN  
THE  
NEWS

During March 2006, the Capital One Financial Corporation agreed to

acquire the North Fork Bancorporation for about \$14.6 billion in cash and stock. North Fork shareholders received a mix of cash and Capital One shares, representing a 22.8% premium over the closing price of North Fork shares.<sup>13</sup>

A **takeover premium** is the term applied to the excess of the amount offered, or agreed upon, in an acquisition over the prior stock price of the acquired firm. It is not unusual for the takeover premium to be as high as 100% of the target firm's market share price before the acquisition, and the average hovered around 40% to 50% into the late 1990s. In the face of the already high stock prices of this period, speculation was mixed as to the future of takeover premiums. Some experts predicted the premiums would shrink, leading to "takeunders" in some cases where companies are acquired below the listed stock prices. These predictions found some subsequent fulfillment as premiums in 2006 declined to around 20%.

Possible reasons acquirers are willing to pay high premiums vary. One factor is that the acquirers' own stock prices may be at a level which makes it attractive to issue stock (rather than cash) to consummate the acquisition. Another factor is the availability of relatively cheap credit for mergers and acquisitions.

Bidders may have private information about the target firm suggesting that it is worth more than its current market value or has assets not reported on the balance sheet (such as in-process research and development). Alternatively, companies desperate to boost earnings may believe that growth by acquisitions is essential to survive in the global marketplace and that the competition necessitates the premiums. At the other end of the spectrum, a final possibility, which cannot be entirely ruled out, is that managers eager for growth may simply pay too much.

One research study presented evidence that higher premiums were offered for firms with high cash flows, relatively low growth opportunities, and high tax liabilities relative to their equity values.<sup>14</sup> Another study suggested that the bigger the ego of the acquiring firm's CEO, the higher the takeover premium, while still another suggested that any premium over 25% is extremely risky.<sup>15</sup> Some compensation analysts argue that the massive options payouts to executives combined with golden parachutes provide an unhealthy incentive for executives to negotiate mergers, citing Chrysler's merger with Daimler-Benz as an example.<sup>16</sup>

Takeover premiums have attracted so much attention that some strategists (e.g., Paine Webber's Edward Kerschner) have advised clients looking for investments to choose stocks that might get taken over. Cautious financial advisors point out that lofty stock prices are a double-edged sword for financial buyers because they mean high prices for both companies' stocks and costlier acquisitions. Also, when stock prices fluctuate, the agreed-upon purchase price may suddenly appear more or less attractive than it did at the time of agreement. For example, a proposed acquisition of *Comsat Corp.* by Lockheed Martin Corp. was announced in September 1998, with the acquisition valued at \$2.6 billion, of which 49% was to be paid in cash and the rest in Lockheed stock. When Lockheed Martin's stock price subsequently faltered enough to suggest a 16% drop in the total value of the transaction, Comsat shareholders questioned whether the consideration for the transaction was fairly priced.<sup>17</sup>

## 1.7 AVOIDING THE PITFALLS BEFORE THE DEAL

IN  
THE  
NEWS

In a survey of 101 corporations that completed a merger or acquisition transaction of at least \$100 million, KPMG found that 93% of companies queried believed that their deal enhanced shareholder value and over a third said they would not do anything different in subsequent deals. However, KPMG's objective examination of the deals showed that only 31% of these deals improved value. KPMG concluded that many companies may not be prepared to make an honest assessment of the success of their deals in order to avoid making mistakes in future deals.<sup>19</sup>

**LO 3** Factors to be considered in due diligence.

To consider the potential impact on a firm's earnings realistically, the acquiring firm's managers and advisors must exercise **due diligence** in considering the information presented to them. The factors to beware of include the following:

1. Be cautious in interpreting any **percentages** presented by the selling company. For example, the seller may be operating below capacity (say, at 60% of capacity), but the available capacity may be for a product that is unprofitable or that is concentrated at a specific location, while the desirable product line (which the acquirer wishes to expand) is already at capacity.
2. Don't neglect to include **assumed liabilities** in the assessment of the cost of the merger. The purchase price for a firm's assets is the sum of the cash or securities issued to consummate the merger **plus** any liabilities assumed. This is equivalent to viewing the purchase price for a firm's **net** assets (assets **minus** liabilities assumed) as the sum of the cash or securities issued to consummate the merger.

IN  
THE  
NEWS

An important part of a buyer's preparation involves the development of a due diligence report (sometimes by a public accounting firm) for the purpose of uncovering "skeletons in the closet" (like vendor reliance or customer concentrations). These reports offer a fairly objective perspective of the business, so sharing them with potential lenders is one way of building trust and confidence in the collateral and cash flow. Most lenders prefer a 1-to-1 loan-to-collateral ratio in any deal, and regular monitoring through a monthly borrowing base. A lot of the scrutiny by senior lenders gets directed to the buyer's credentials and familiarity with the industry.<sup>20</sup>

In addition to liabilities that are on the books of the acquired firm, be aware of the possibility of less obvious liabilities. FASB ASC Section 805–20–25 [recognition] requires an acquiring firm to recognize at fair value all assets acquired and liabilities assumed, whether or not shown in the financial statements of the acquired company.<sup>21</sup>

Furthermore, FASB ASC paragraph 805–30–25–5 states that any *contingent* assets or liabilities that are acquired or assumed as part of a business combination must be measured and recognized at their fair values (provided they satisfy the definition of assets or liabilities), **even if they do not meet the usual recognition criteria for recording contingent items** (FASB ASC paragraph 450–20–25–2).<sup>22</sup>

FASB ASC Topic 805 [Business Combinations] also states that any costs associated with restructuring or exit activities should not be treated as liabilities at the acquisition

<sup>19</sup> KPMG Transaction Services, "The Morning After—Driving for Post Deal Success," January 31, 2006.

<sup>20</sup> "The Credit Puzzle," by Lou Banach and Jim Gettel, Mergers & Acquisitions, December 2008.

<sup>21</sup> See the section later in the chapter on the FASB Codification.

<sup>22</sup> FASB ASC paragraph 450–20–25–2 (FASB Statement No. 5) states that, in general, contingent liabilities (and related losses) should be accrued if they are both probable and reasonably estimable while contingent assets (and gains) should usually not be reflected to avoid misleading implications about their realizability. These conditions still apply for noncontractual contingent liabilities unless it is *more likely than not* that an asset or liability exists. The number of deals with contingent payments nearly doubled between 1997 and 2006, while the dollar value of those deals more than doubled (with the earn-out value portion rising from 3.3 billion dollars in 1997 to a high of 6.1 billion dollars in 2001 and leveling back to 5.3 billion dollars in 2006). See Chapter 2 for further details.

IN  
THE  
NEWS

"While everything in the offering memorandum may very well be true,

although not necessarily, the facts are designed to make the company look better than it would if an analyst were to dig into those facts."<sup>25</sup>

date unless they meet the criteria for recognition laid out in FASB ASC paragraph 420-10-15-2.<sup>23</sup> Instead, costs not meeting these criteria should be expensed in the period in which they are incurred. For example, future costs expected with regard to exiting an activity of the target, terminating the employment of the acquiree's employees, or relocation of those employees are not accounted for as part of the business combination.<sup>24</sup>

3. Watch out for the impact on earnings of the **allocation of expenses** and the effects of production increases, standard cost variances, LIFO liquidations, and by-product sales. For example, a firm that is planning to be acquired may grow inventory levels in order to allocate its fixed costs over more units, thus decreasing the cost of goods sold and increasing the bottom line. However, the inventory level that is acquired may be excessive and ultimately costly.
4. Note any **nonrecurring items** that may have artificially or temporarily boosted earnings. In addition to nonrecurring gains or revenues, look for recent **changes in estimates, accrual levels, and methods**. While material changes in method are a required disclosure under GAAP, the rules on materiality are fuzzy, and changes in estimates and accruals are frequently not disclosed (See Illustration 1-4).
5. Be careful of **CEO egos**. Striving to be number one may make business sense, but not everyone can hold that spot. One CEO drew both praise and criticism with his deal-of-the-month style. He stated, "There are the big dogs, there are the ankle-biters, and then there are those caught in the middle." The midsize firms have to combine, he claimed.<sup>26</sup>

## 1.8 DETERMINING PRICE AND METHOD OF PAYMENT IN BUSINESS COMBINATIONS

**LO 6** Factors affecting price and method of payment.

Whether an acquisition is structured as an asset acquisition or a stock acquisition, the acquiring firm must choose to finance the combination with cash, stock, or debt (or some combination). The cash-only financed portion of acquisition prices dropped approximately 10% from the early 2000s to an average of 63% between 2010 to 2014. The number of deals financed with stock-only increased by 6% to an average of 20% between 2010 and 2014. Earnouts were used in approximately 9% of acquisitions.

<sup>23</sup> FASB ASC paragraph 420-10-25-2 (*FASB Statement No. 146*) reiterates the definition of a liability and states that only present obligations to others are liabilities. It clarifies by specifying that an obligation becomes a present obligation when a past transaction or event leaves little or no discretion to avoid settlement, and that an exit or disposal plan, by itself, does not create a present obligation.

<sup>24</sup> FASB's new Codification system, referenced here, is discussed near the end of Chapter 1.

<sup>25</sup> *M&A*, "How Acquirers Can Be Blindsided by the Numbers," May/June 1997, p. 29.

<sup>26</sup> *WSJ*, "In the New Mergers Conglomerates Are Out, Being No. 1 Is In," by Bernard Wysocki Jr., 12/31/97, p. A1.

The mode of payment also affects the number of days it takes to complete the merger (from the announcement date to the effective date). The following schedule provides the average days to complete a merger for various modes of payment in an acquisition.

| Mode of Payment* | Days to Complete Acquisition |                 |
|------------------|------------------------------|-----------------|
|                  | Public Targets               | Private Targets |
| Common stock     | 158 days                     | 90 days         |
| Cash only        | 84 days                      | 67 days         |
| Earnout          | 75 days                      | 48 days         |

\* SDC Platinum (2010 to 2013).

As can be seen, if earnouts are used as part of the consideration, the time to complete the merger is significantly shorter (especially for private acquisitions, with an average of 48 days). Acquisitions using stock generally take much longer to complete. Information on the mode of payment in mergers and acquisitions is provided in Illustration 1-4.

The trends are often explained by fluctuating stock valuations. The higher the acquiring firm's stock valuation, the fewer shares are needed to pay for the acquisition. This means less dilution to existing shareholders, a frequent concern in the planning stages of a proposed acquisition. When stock prices slumped in the middle of 2001, merger activity slowed as well. But by the middle of the decade, both were booming once more. Then, merger activity rose steadily from 2002 to 2006, remained approximately the same in 2007 as in 2006, and then fell off by the end of 2008 as stock prices plunged and the economy slid into a recession. By 2010, many of the mega-mergers in the making were once again looking to use all (or mostly) stock, as the market moved up.

When a business combination is effected through an open-market acquisition of stock, no particular problems arise in connection with determining price or method of payment. Price is determined by the normal functioning of the stock market, and payment is generally in cash, although some or all of the cash may have to be raised by the acquiring company through debt or equity issues. Effecting a combination may present some difficulty if there are not enough willing sellers at the open-market price to permit the acquiring company to buy a majority of the outstanding shares of the company being acquired. In that event, the acquiring company must either negotiate a price directly with individuals holding large blocks of shares or revert to an open tender offer.

When a business combination is effected by a stock swap, or exchange of securities, both price and method of payment problems arise. In this case, the price is expressed in terms of a **stock exchange ratio**, which is generally defined as *the number of shares of the acquiring company to be exchanged for each share of the acquired company*, and constitutes a **negotiated price**. It is important to understand that each constituent of the combination makes two kinds of contributions to the new entity—net assets and future earnings. The accountant often becomes deeply involved in the determination of the values of these contributions. Some of the issues and the problems that arise are discussed in the following section.

In addition, it is not unusual, in an acquisition, for the acquiree to retain all cash as well as the responsibility for paying any interest bearing debt. A potential issue that can arise prior to the transaction close is that the acquiree has incentives to delay payments and collect large receivable balances. Thus acquisitions often include net working capital adjustments (true-up). The acquirer will receive additional consideration if net working capital is below agreed-upon target levels while the acquiree will receive additional consideration if the target amounts exceed the agreed-upon target amounts.

## Net Asset and Future Earnings Contributions

Determination of an equitable price for each constituent company, and of the resulting exchange ratio, requires the valuation of each company's net assets as well as their expected contribution to the future earnings of the new entity. The accountant is often called upon to

**IN THE NEWS**

In the merger run in 2005, the number of deals using stock decreased to about 11% of total deals, while in 2000, the percentage of deals using all stock averaged around 27%. Stock-for-stock swaps are more common when stock prices are increasing.<sup>27</sup>

<sup>27</sup> WSJ, "Year-End Review of Markets & Finance 2005," by Dennis Berman, 1/3/06, p. R1.

**EXCESS EARNINGS APPROACH TO ESTIMATING GOODWILL**

1. Identify a normal rate of return on assets for firms similar to the company being targeted. Statistical services are available to provide averages, or a normal rate may be estimated by examining annual reports of comparable firms. The rate may be estimated as a return on either total assets or on *net* identifiable assets (assets other than goodwill minus liabilities).
2. Apply the rate of return identified in step 1 to the level of identifiable assets (or net assets) of the target to approximate what the “normal” firm in this industry might generate with the same level of resources. We will refer to the product as “normal earnings.”
3. Estimate the expected future earnings of the target. Past earnings are generally useful here and provide a more objective measure than management’s projections, although both should be considered. Exclude any nonrecurring gains or losses (extraordinary items, gains and losses from discontinued operations, etc.) from past earnings if they are used to estimate future earnings.
4. Subtract the normal earnings calculated in step 2 from the expected target earnings from step 3. The difference is “excess earnings.” If the normal earnings are greater than the target’s expected earnings, then no goodwill is implied under this approach.
5. To compute estimated goodwill from “excess earnings,” we must assume an appropriate time period and a discount rate. The shorter the time period and the higher the discount rate, the more conservative the estimate. If the excess earnings are expected to last indefinitely, the present value of a perpetuity may be calculated simply by dividing the excess earnings by the discount rate. For finite time periods, use present-value tables or calculations to compute the present value of an annuity. Because of the assumptions needed in step 5, a range of goodwill estimates may be obtained simply by varying the assumed discount rate and/or the assumed discount period.
6. Add the estimated goodwill from step 5 to the fair value of the firm’s net identifiable assets to arrive at a possible offering price.

aid in determining net asset value by assessing, for example, the expected collectibility of accounts receivable, current replacement costs for inventories and some fixed assets, and the current value of long-term liabilities based on current interest rates. To estimate current replacement costs of real estate and other items of plant and equipment, the services of appraisal firms may be needed.

Estimation of the value of goodwill to be included in an offering price is subjective. A number of alternative methods are available, usually involving the discounting of expected future cash flows (or free cash flows), earnings, or excess earnings over some period of years. Generally, the use of free cash flows or earnings yields an estimate of the entire firm value (including goodwill), whereas the use of excess earnings yields an estimate of the goodwill component of total firm value. We next describe the steps in the excess earnings approach and then follow with an illustration.

**Estimating Goodwill and Potential Offering Price** Wanna Buy Company is considering acquiring *Hot Stuff Inc.* and is wondering how much it should offer. Wanna Buy makes the following computations and assumptions to help in the decision.

- a. Hot Stuff’s identifiable assets have a total fair value of \$7,000,000. Hot Stuff has liabilities totalling \$3,200,000. The assets include patents and copyrights with a fair value approximating book value, buildings with a fair value 50% higher than book value, and equipment with a fair value 25% lower than book value. The remaining lives of the assets are deemed to be approximately equal to those used by Hot Stuff.
- b. Hot Stuff’s pretax income for the year 2006 was \$1,059,000, which is believed by Wanna Buy to be more indicative of future expectations than any of the preceding years. The net income of \$1,059,000 included the following items, among others:

|  |          |
|--|----------|
| Amortization of patents and copyrights | \$50,000 |
| Depreciation on buildings              | 360,000  |
| Depreciation on equipment              | 80,000   |
| Extraordinary gain                     | 250,000  |
| Loss from discontinued operations      | 175,000  |
| Pension expense                        | 59,000   |

- c. The normal rate of return on net assets for the industry is 14%.

- d. Wanna Buy believes that any excess earnings will continue for seven years and that a rate of return of 15% is required on the investment.

Based on the assumptions above and ignoring tax effects, we will first calculate an estimation of the implied goodwill, and then use that estimate to arrive at a reasonable offering price for Hot Stuff.

*Normal earnings* for similar firms:  $(\$7,000,000 - \$3,200,000) \times 14\% = \$532,000$

*Expected earnings of target:*

|   |         |                |
|---|---------|----------------|
| Pretax income of Hot Stuff                    |         | \$1,059,000    |
| Add: Losses on discontinued operations        | 175,000 |                |
| Reduced depreciation on equipment             | 20,000  | 195,000        |
| Subtotal                                      |         | 1,254,000      |
| Subtract: Additional depreciation on building | 180,000 |                |
| Extraordinary gain                            | 250,000 | 430,000        |
| <b>Target's expected future earnings</b>      |         | <b>824,000</b> |

*Excess earnings* of target:  $\$824,000 - \$532,000 = \$292,000$  per year

Present value of excess earnings (ordinary annuity) for seven years at 15% (see Table A2 in Appendix PV at back of textbook):

*Estimated goodwill:*  $\$292,000 \times 4.16042 = \$1,214,843$

*Implied offering price* = Fair value of assets - Fair value of liabilities + Estimated goodwill  
 =  $\$7,000,000 - \$3,200,000 + \$1,214,843 = \$5,014,843$ .

In the illustration above, in arriving at the target's expected future earnings, we ignored the items that are expected to continue after the acquisition, such as the amortization of the patents and copyrights and the pension expense. We backed out nonrecurring gains and losses on extraordinary items or discontinued operations. We adjusted the prior reported earnings for the expected increase in depreciation on the building (50% higher than in the past), leading to a decrease in projected earnings. In contrast, we increased projected earnings for the decrease in equipment depreciation (25% lower than in the past). In practice, more specific information should be available as to which components of earnings are expected to continue at the same level, which might be reduced because of economies or cost-cutting plans, and which might increase because of transition costs. The better the information used in the computation, the better the estimate of goodwill and offering price.

Where the constituent companies have used different accounting methods, the accountant will often need to reconstruct their financial statements on the basis of agreed-upon accounting methods in order to obtain reasonably comparable data. Once comparable data have been obtained for a number of prior periods, they are analyzed further to project future contributions to earnings. The expected contributions to future earnings may vary widely among constituents, and the exchange ratio should reflect this fact. The whole process of valuation, of course, requires the careful exercise of professional judgment. Ultimately, however, the exchange ratio is determined by the bargaining ability of the individual parties to the combination.

Once the overall values of relative net asset and earnings contributions have been agreed on, the types of securities to be issued by the new entity in exchange for those of the combining companies must be determined. In some cases a single class of stock will be issued; in other cases equity may require the use of more than one class of security.

The concepts of earnings **dilution** and **accretion** are critical to the valuation of a merger. Does the merger increase or decrease expected earnings performance of the acquiring institution? From a financial and shareholder perspective, the price paid for a firm is hard to justify if earnings per share declines. When this happens, the acquisition is

Build-A-Bear Workshop, the teddy-bear-stuffing retailer, purchased

U.K.-based rival Bear Factory for \$41.4 million in cash to help solidify Build-A-Bear's global position. Build-A-Bear expected the acquisition to be accretive to earnings per share by 2007.<sup>30</sup>

considered **dilutive**. Conversely, if the earnings per share increases as a result of the acquisition, it is referred to as an **accretive** acquisition.

Many deals lower earnings per share initially but add significantly to value in later years. While initial dilution may not be a deal killer, however, many managers feel that they cannot afford to wait too long for a deal to begin to show a positive return. Opinions are divided, however, on what drives the market in relation to mergers and acquisitions, nor do research studies offer conclusive evidence on the subject. Bart Madden, a partner in a valuation advisory firm in Chicago, remarked, "I totally disagree that the market is EPS driven. From the perspective of the owner or manager of capital, what matters is cash in, cash out, not reported earnings."<sup>29</sup> He acknowledges, however, that CFOs, who "live in a world of accounting rules," are concerned about reported earnings.

**Evaluating Firm Performance** In Appendix 1A (online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter)), we provide a structured approach using ratios to evaluate the performance of a firm. This approach could be used to evaluate the financial performance of a potential target or in evaluating the strength of an acquirer. The ratio approach begins by analyzing the change in return on equity (ROE). This ratio is then decomposed into a return on asset (ROA) and a leverage ratio (total assets divided by equity). These ratios are further decomposed into other relevant combinations of variables. This structured approach allows the user to zero in on areas that have changed or that need to be examined in more detail.

## 1.9 ALTERNATIVE CONCEPTS OF CONSOLIDATED FINANCIAL STATEMENTS

**LO 8** Economic entity and parent company concepts.

As mentioned previously, business combinations may take the form of asset acquisitions or stock acquisitions. When the combination is consummated as an asset acquisition, the books of the acquired company are closed out and the accounting takes place on the books of the acquirer, as illustrated in Chapter 2. When the combination is consummated as a stock acquisition, both companies continue to prepare journal and ledger entries separately through future periods. Periodically the two sets of books are combined into one through a procedure sometimes referred to as the **consolidating process** to produce a set of consolidated financial statements. Chapters 3 through 9 deal with many of the technical procedures needed to carry out this process. Here we present a brief introduction to the more theoretical concepts involved in accounting for the consolidated entity. The question that arises relates to the primary purpose of the consolidated financial statements and to the relationships between the affiliated companies and their shareholders, keeping in mind that a certain group of shareholders may own a portion of the acquired company (often referred to as the **subsidiary**) but none of the acquiring company (or **parent**).

Historically, practice in the U.S. has reflected a compromise between two general concepts of consolidation given various designations in the accounting literature. However, in FASB ASC topics 805 [Business Combinations] and 810 [Consolidation] (formerly *FASB Statements No. 141-R* and *No. 160*), the FASB indicates that the economic entity concept is now to be embraced more fully. Next, let us review the basic differences between the alternative concepts. For our purposes, we will refer to them as the **parent company concept** and the **economic entity concept** (sometimes called the **economic unit concept**). A third concept, **proportionate consolidation**, was rejected by the FASB.

Although only one of these—the economic entity concept—is embraced by current GAAP and thus integrated throughout this text, the two more popular concepts are described below (as defined by the Financial Accounting Standards Board).<sup>31</sup>

<sup>29</sup> CFO, "Say Goodbye to Pooling," by Ian Springsteel, February 1997, p. 79.

<sup>30</sup> *MSNBC.com*, "When Bears Collide," by Rick Aristotle Munarriz, 3/6/06.

<sup>31</sup> *FASB Discussion Memorandum*, "Consolidation Policy and Procedures" FASB (Norwalk, CT: September 10, 1991), pars. 63 and 64.

### **Parent Company Concept**

The parent company concept emphasizes the interests of the parent's shareholders. As a result, the consolidated financial statements reflect those stockholder interests in the parent itself, plus their undivided interests in the net assets of the parent's subsidiaries. The consolidated balance sheet is essentially a modification of the parent's balance sheet with the assets and liabilities of all subsidiaries substituted for the parent's investment in subsidiaries. Similarly, the consolidated income statement is essentially a modification of the parent's income statement with the revenues, expenses, gains, and losses of subsidiaries substituted for the parent's income from investment in subsidiaries. These multi-line substitutions for single lines in the parent's balance sheet and income statement are intended to make the parent's financial statements more informative about the parent's total ownership holdings.

### **Economic Entity Concept**

The economic entity concept emphasizes control of the whole by a single management. As a result, under this concept, consolidated financial statements are intended to provide information about a group of legal entities—a parent company and its subsidiaries—operating as a single unit. The assets, liabilities, revenues, expenses, gains, and losses of the various component entities are the assets, liabilities, revenues, expenses, gains, and losses of the consolidated entity. Unless all subsidiaries are wholly owned, the business enterprise's proprietary interest (assets less liabilities) is divided into the controlling interest (stockholders or other owners of the parent company) and one or more noncontrolling interests in subsidiaries. Both the controlling and the noncontrolling interests are part of the proprietary group of the consolidated entity. Under this concept, the entirety of subsidiaries assets, liabilities, revenues, and expenses are reflected in the consolidated financial statements. Noncontrolling interest in equity and in income serves to capture the portion not controlled by the parent.

The parent company concept represents the view that the primary purpose of consolidated financial statements is to provide information relevant to the controlling stockholders. The parent company effectively controls the assets and operations of the subsidiary. Noncontrolling stockholders do not exercise any ownership control over the subsidiary company or the parent company. Thus, the parent company concept places emphasis on the needs of the controlling stockholders, and the noncontrolling interest is essentially relegated to the position of a claim against the consolidated entity. Thus, the noncontrolling, or minority, interest should be presented as a liability in the consolidated statement of financial position under the parent company concept or, as described in the next section, as a separate component before stockholders' equity.

The economic entity concept represents the view that the affiliated companies are a separate, identifiable economic entity. Meaningful evaluation by any interested party of the financial position and results of operations of the economic entity is possible only if the individual assets, liabilities, revenues, and expenses of the affiliated companies making up the economic entity are combined. The economic entity concept treats both controlling and noncontrolling stockholders as contributors to the economic unit's capital. Thus, the noncontrolling, or minority, interest should be presented as a component of equity in the consolidated financial statement under the economic entity concept.

The FASB stated that it had considered and rejected the concept of proportionate consolidation for subsidiaries. This concept, although not used in current or past practice, has been advocated by some as an alternative to full consolidation. Under proportionate consolidation, the consolidated statements would include only a portion, based on the parent's ownership interest, of the subsidiary's assets, liabilities, revenues, expenses, gains, and losses. The FASB stated that because the consolidated entity has the power to direct the use of all the assets of a controlled entity, omitting a portion of those assets from the statements would not be representationally faithful. Similarly, omitting part of the revenues and expenses from the consolidated income statement would not be representationally faithful.

Differences between the concepts are relevant only to less than wholly owned subsidiaries; they center on conflicting views concerning answers to three basic questions:

1. What is the nature of a noncontrolling interest?
2. What income figure constitutes consolidated net income?
3. What values should be reported in the consolidated balance sheet?

A related issue concerns the percentage (total or partial) of unrealized intercompany profit to be eliminated in the determination of consolidated balances.

## Noncontrolling Interest

Under the **economic entity concept**, a *noncontrolling interest is a part of the ownership equity in the entire economic unit*. Thus, a noncontrolling interest is of the same general nature and is accounted for in essentially the same way as the controlling interest (i.e., as a component of owners' equity). Under the **parent company concept**, the nature and classification of a noncontrolling interest are unclear. The parent company concept views the consolidated financial statements as those of the parent company. From that perspective, the noncontrolling interest is similar to a liability; but because the parent does not have a present obligation to pay cash or release other assets, it is not a liability based on the FASB's technical definition of a "liability." Nor is it a true component of owners' equity since the noncontrolling investors in a subsidiary do not have an ownership interest in the subsidiary's parent. Consequently, the parent company concept theoretically supports reporting the noncontrolling interest below liabilities but above stockholders' equity in the consolidated balance sheet.

Of 2,493 acquisitions of a public target by a public acquirer between 2010 and early 2014, 176, or 7%, resulted in a noncontrolling interest reported in stockholders' equity. Of 4,192 acquisitions of a private target by a public acquirer, 148, or 3.5%, resulted in a noncontrolling interest (Thomson One SDC Platinum).

## Consolidated Net Income

Under the **parent company concept**, *consolidated net income consists of the realized combined income of the parent company and its subsidiaries after deducting noncontrolling interest in income*; that is, the noncontrolling interest in income is deducted as an expense item in determining consolidated net income. This view emphasizes that the parent company stockholders are directly interested in their share of the results of operations as a measure of earnings in relation to their investment and dividend expectations.

Under the **economic entity concept**, consolidated net income consists of the total realized combined income of the parent company and its subsidiaries. The total combined income is then allocated proportionately to the noncontrolling interest and the controlling interest. Noncontrolling interest in income is considered an allocated portion of consolidated net income, rather than an element in the determination of consolidated net income. The concept emphasizes the view that the consolidated financial statements represent those of a single economic unit with several classes of stockholder interest. Thus, noncontrolling interest in net assets is considered a separate element of stockholders' equity, and the noncontrolling interest in net income reflects the share of consolidated net income allocated to the noncontrolling stockholders.

## Consolidated Balance Sheet Values

In the case of less than wholly owned subsidiaries, the question arises as to whether to value the subsidiary assets and liabilities at the **total** fair value implied by the price paid for the controlling interest, or at their book value adjusted only for the excess of cost over book value paid by the parent company. For example, assume that P Company acquires a 60% interest in S Company for \$960,000 when the book value of the net assets and of the

stockholders' equity of S Company is \$1,000,000. The implied fair value of the net assets of S Company is \$1,600,000 ( $\$960,000/.6$ ), and the difference between the implied fair value and the book value is \$600,000 ( $\$1,600,000 - \$1,000,000$ ). For presentation in the consolidated financial statements, should the net assets of S Company be written up by \$600,000 or by 60% of \$600,000?

Application of the *parent company concept* in this situation restricts the write-up of the net assets of S Company to \$360,000 ( $.6 \times \$600,000$ ) on the theory that the write-up should be restricted to the amount actually paid by P Company in excess of the book value of the interest it acquires [ $\$960,000 - (.6 \times \$1,000,000) = \$360,000$ ]. In other words, the value assigned to the net assets should not exceed cost to the parent company. Thus, the net assets of the subsidiary are included in the consolidated financial statements at their book value (\$1,000,000) plus the **parent company's share** of the difference between fair value and book value ( $.6 \times \$600,000$ ) = \$360,000, or at a total of \$1,360,000 on the date of acquisition. Noncontrolling interest is reported at its percentage interest in the **reported book value** of the net assets of S Company, or \$400,000 ( $.4 \times \$1,000,000$ ).

Application of the *economic entity concept* results in a write-up of the net assets of S Company in the consolidated statements workpaper by \$600,000 to \$1,600,000 on the theory that the consolidated financial statements should reflect 100% of the net asset values of the affiliated companies. On the date of acquisition, the net assets of the subsidiary are included in the consolidated financial statements at their book value (\$1,000,000) plus the **entire difference** between their fair value and their book value (\$600,000), or a total of \$1,600,000. Noncontrolling interest is reported at its percentage interest in the **fair value** of the net assets of S Company, or \$640,000 ( $.4 \times \$1,600,000$ ).

Regardless of the concept followed, the controlling interest in the net assets of the subsidiary reported in the consolidated financial statements is the same and is equal to P Company's cost, as demonstrated here:

|   | <i>Parent Company<br/>Concept</i> | <i>Economic Unit<br/>Concept</i> |
|---|-----------------------------------|----------------------------------|
| Net assets of S Company included in consolidation | \$1,360,000                       | \$1,600,000                      |
| Less: Noncontrolling interest                     | 400,000                           | 640,000                          |
| Controlling interest (cost)                       | <u>\$ 960,000</u>                 | <u>\$ 960,000</u>                |

While U.S. standards have, in the past, been more consistent with the parent company concept with respect to write-up of net assets, the implementation of *FASB Statements No. 141R* and *160* [FASB ASC topics 805 and 810] results in a shift to the economic entity concept in this regard, among others.

## Intercompany Profit

There are two alternative points of view as to the amount of intercompany profit that should be considered unrealized in the determination of consolidated income. The elimination methods associated with these two points of view are generally referred to as **total** (100%) **elimination** and **partial elimination**.

Proponents of total elimination regard all the intercompany profit associated with assets remaining in the affiliated group to be unrealized. Proponents of partial elimination regard only the parent company's share of the profit recognized by the selling affiliate to be unrealized. Under total elimination, the entire amount of unconfirmed intercompany profit is eliminated from combined income and the related asset balance. Under partial elimination, only the parent company's share of the unconfirmed intercompany profit recognized by the selling affiliate is eliminated.

## Past and Future Practice

Past practice has viewed noncontrolling interest in income neither as an expense nor as an allocation of consolidated net income, but as a special equity interest in the consolidated entity's combined income that must be recognized when all the earnings of a less

than wholly owned subsidiary are combined with the earnings of the parent company. Noncontrolling interest in net assets has been viewed neither as a liability nor as true stockholders' equity, but rather as a special interest in the combined net assets that must be recognized when all the assets and liabilities of a less than wholly owned subsidiary are combined with those of the parent company.

*In contrast, under the new standards, the noncontrolling interest in income is viewed as an allocation of consolidated net income on the income statement, and the noncontrolling interest in net assets as a component of equity in the balance sheet.*

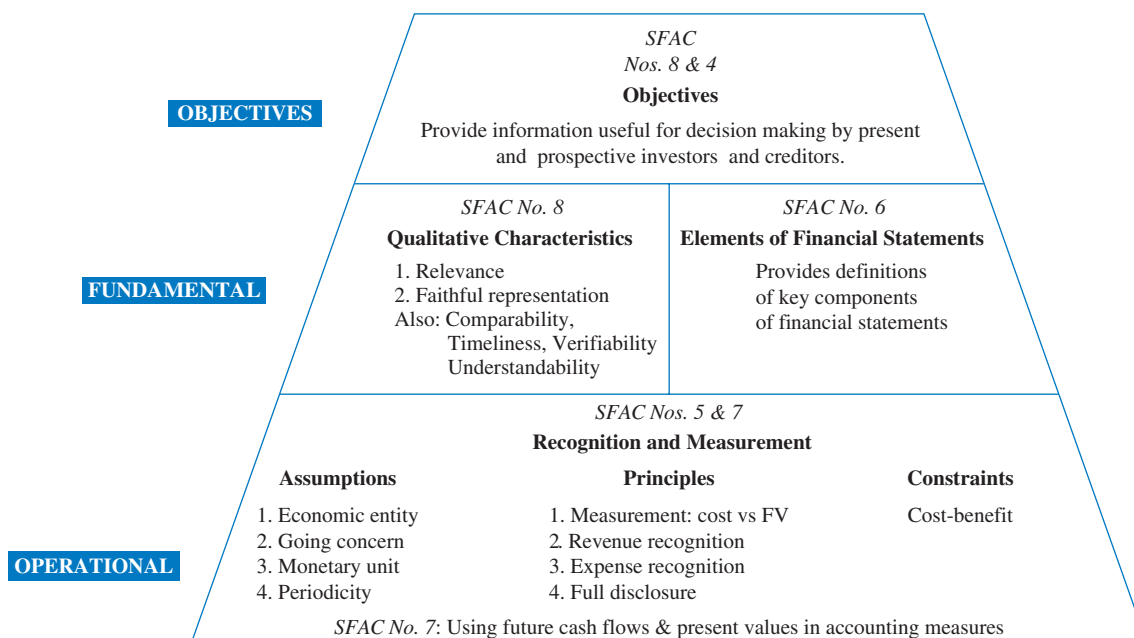

Past and future accounting standards are, however, consistent in requiring the total elimination of unrealized intercompany profit in assets acquired from affiliated companies, regardless of the percentage of ownership.

## 1.10 FASB'S CONCEPTUAL FRAMEWORK

The Financial Accounting Standards Board (FASB) began the process of developing a conceptual framework for financial reporting in 1976, a process that continues to the present. The much-needed objective of providing a basis for standard setting and controversy resolution has, as expected, proved to be challenging. The statements of concepts issued to date are summarized in Illustration 1-5. The reader should be aware that the FASB and the IASB are working on a joint project to converge their conceptual frameworks. The first phase has been completed with the issuance of Statement of Financial Accounting Concepts (SFAC) No. 8: Conceptual Framework for Financial Reporting—Chapter 1, *The Objective of General Purpose Financial Reporting*, and Chapter 3, *Qualitative Characteristics of Useful Financial Information* (a replacement of FASB Concepts Statements Nos. 1 and 2). New chapters and concepts are expected to be added. Concepts Statements are not part of the *FASB Accounting Standards Codification*, which is the source of authoritative GAAP recognized by the FASB to be applied by nongovernmental entities. The Board recognizes that in certain respects current generally accepted accounting principles may be inconsistent with those that may derive from the objectives and fundamental concepts set forth in

### ILLUSTRATION 1-5

#### Conceptual Framework for Financial Accounting and Reporting\*

Adapted from "Accounting for Financial Analysis," by W.C. Norby, *Financial Analysts Journal*, March–April 1982, p. 22.

Concepts Statements. However, a Concepts Statement does not (a) require a change in existing U.S. GAAP; (b) amend, modify, or interpret the Accounting Standards Codification; or (c) justify either changing existing generally accepted accounting and reporting practices or interpreting the Accounting Standards Codification based on personal interpretations of the objectives and concepts in the Concepts Statements.

**Joint Project of FASB and IASB on Conceptual Framework** The objective of the joint project is to develop an improved common conceptual framework that provides a sound foundation for developing future standards. Such a framework is believed to be essential to the two Boards' goal of developing standards that are principles-based, internally consistent, and internationally converged. The new framework is expected to deal with a wide range of issues, and will build on the existing IASB and FASB frameworks, while also considering developments subsequent to the issuance of those frameworks.

One of the goals of the Boards, which is shared by their constituents, is for the standards to be clearly based on consistent principles that are rooted in fundamental concepts rather than a collection of conventions. The objective is for the body of standards taken as a whole, as well as the application of those standards, to be based on a sound, comprehensive, and internally consistent framework. Another important goal is to converge the standards of the two Boards. As the Boards strive to more closely align their agendas to achieve standard convergence, they will be hampered unless they are basing decisions on the same basic framework.

**IFRS**

## Economic Entity vs. Parent Concept and the Conceptual Framework

The parent concept, discussed in the preceding section, was the essential approach used in the United States until 2008 for accounting for business combinations (although there were some exceptions to a wholly applied parent concept, as previously addressed). The parent company concept is tied to the *historical cost* principle, which suggests that the best measure of valuation of a given asset is the price paid. Historical cost thus suggests that the purchase price of an acquired firm should be relied on in assessing the value of the acquired assets, including goodwill. One problem that arises from a theoretical perspective is how to value the noncontrolling interest, or the portion of the acquired firm's assets which did not change hands in an arm's length transaction. The historical cost perspective would suggest that those assets (or portions thereof) remain at their previous book values. This approach might be argued to produce more *reliable* or "representationally faithful" values, addressed in the FASB's conceptual framework as a desirable attribute of accounting information (*SFAC No. 8*).

In contrast, the economic entity concept is itself an integral part of the FASB's conceptual framework and is named specifically in *SFAC No. 5* as one of the basic assumptions in accounting. The economic entity assumption views economic activity as being related to a particular unit of accountability, and the standard indicates that a parent and its subsidiaries represent *one economic entity* even though they may include *several legal entities*. Thus, the recent shift to the economic entity concept seems to be entirely consistent with the assumptions laid out by the FASB for GAAP.

The economic entity concept might also be argued to produce more *relevant*, if not necessarily more reliable, information for users. The two primary characteristics of relevance and reliability (or representational faithfulness) often find themselves in conflict in any given accounting debate. For example, the view of many users is that *market value accounting* would provide far more *relevant* information for users than continued reliance on historical cost in general. Proponents of historical cost, however, argue that market valuations suffer from too much subjectivity and vulnerability to bias, and are much *less* representationally faithful.

**IFRS**

In the joint project of the FASB and the IASB on the conceptual framework, the conclusion was reached that the entity perspective is more consistent with the fact that the vast majority of today's business entities have substance distinct from that of their capital providers. As such, the proprietary perspective does not reflect a realistic view of financial reporting. The Boards have not yet considered the effect that adoption of the entity perspective will have on phases of their project that have not yet been deliberated, and decisions related to those phases are being deferred.

 IN  
THE  
NEWS

Embedded in many of FASB's recent pronouncements have been a number of indicators of a shift away from historical cost accounting in the direction of fair value accounting. This shift drew a great deal of attention, much of it negative, when the financial crisis of 2008 became apparent. Critics claimed that values were dropping to artificially low values, forcing banks to take large write-downs, launching a desperate cycle from which they might not recover. Dennis Beresford, an accounting professor at the University of Georgia and chairman of the FASB from 1987 to 1997, explained, "It's intended to be more or less for orderly markets. But we don't have orderly markets these days. It's not so much that mark to market has people complaining, but marking to a particular market. Today it's more of fire-sale prices."<sup>32</sup>

## Overview of FASB's Conceptual Framework

### Lo 9 Statements of Financial Accounting Concepts.

The *Statements of Financial Accounting Concepts* issued by the FASB include the following:

*SFAC No. 4: Objectives of Financial Reporting by Nonbusiness Organizations*

*SFAC No. 5: Recognition and Measurement in Financial Statements of Business Enterprises*

*SFAC No. 6: (replaces SFAC No. 3): Elements of Financial Statements*

*SFAC No. 7: Using Cash Flow Information and Present Value in Accounting Measurements*

*SFAC No. 8: (replaces SFAC Nos. 1 and 2): The Objective of General Purpose Financial Reporting and Qualitative Characteristics of Useful Financial Information*

Please refer to Illustration 1-5 for a brief summation of these statements. Our focus is on *SFAC No. 8, No. 6, and No. 5*. The remaining statements of concept include one that was subsequently replaced by *SFAC No. 6 (SFAC No. 3)*, one that relates primarily to the last three chapters of our textbook (*SFAC No. 4*), and *FASB Statement of Concept, No. 7*, which provides some information on the use of discounted cash flows and present values as a measurement approach. *SFAC No. 7* might be viewed as an expansion of *SFAC No. 5*, and is thus included in the same level in Illustration 1-5.

## Linking the Conceptual Framework to Advanced Accounting Issues

We begin with a brief discussion of the two *Statements of Concepts* which receive the least attention in the following paragraphs (*SFAC No. 4 and SFAC No. 7*). With respect to *SFAC No. 4*, the Board believes that the objectives of reporting for government-sponsored entities should be, in general, similar to those of business enterprises engaged in similar activities. Please see Chapters 17 through 19 for further discussion. Moving to *SFAC No. 7*, the use of present values is clearly relevant in the accounting for business combinations as it impacts the estimated valuation of goodwill (previously illustrated in Chapter 1), as well as other intangible assets acquired in a business combination. Just as clearly, the use of present values is hampered by issues of uncertainty, both about estimated cash flows and about appropriate discount rates. As stated in *SFAC No. 7*, the objective of using present values in an accounting measurement is to capture, to the extent possible, the economic difference between sets of estimated future cash flows. The standard provides some guidance in this regard.

Referring to Illustration 1-5, note that the primary qualities laid out in *SFAC No. 8* are relevance and faithful representation (formerly referred to as reliability). Additional desirable characteristics include comparability, timeliness, and understandability.

The quality of *comparability* was very much at stake in FASB's decision in 2001 to eliminate the *pooling of interests* method for business combinations. This method was also argued to violate the *historical cost* principle as it essentially ignored the value of the consideration (stock) issued for the acquisition of another company. Of even greater

<sup>32</sup> "Wall St. Points to Disclosure As Issue," by Carrie Johnson, Washingtonpost.com, September 23, 2008.

concern was the potential for two nearly identical acquisitions to yield very different balance sheets, merely because one was accounted for under the pooling of interests method while the other used purchase accounting.

The issue of comparability plays a role in the more recent shift from the parent concept to the economic entity concept, as the former method valued a portion (the noncontrolling interest) of a given asset at prior book values and another portion (the controlling interest) of that same asset at exchange-date market value. The result was a piecemeal valuation of assets on the consolidated balance sheet.

## Distinguishing between Earnings and Comprehensive Income

Opponents of the change to the economic entity view of consolidated financial statements may argue that the economic entity concept is less *conservative*, as it often revalues assets—in the case of a less than 100% acquisition—to a higher amount than has been reflected in an arm's length transaction by relying on the valuation *implied* by the purchase price. However, the constraint of conservatism is no longer included in FASB's constraints (*SFAC No. 8*).

Turning now to the elements of financial statements, see Illustration 1-6 for a summary of definitions. We might note that earnings is not defined as one of the elements included in *SFAC No. 6*. In fact, the FASB explicitly stated that it reserved the term earnings for possible use to designate a significant intermediate measure or component of comprehensive income. In *SFAC No. 5*, FASB states that “it is important to avoid focusing attention almost exclusively on the bottom line, earnings per share, or other highly simplified condensations.” *SFAC No. 5* goes on to state that “statements of earnings and of comprehensive income together reflect the extent to which, and the ways in which, the equity of an entity increased or decreased from all sources other than transactions with

### ILLUSTRATION 1-6

#### Definitions of Financial Statement Elements\*

**Assets.** Probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.

**Liabilities.** Probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.

**Equity.** Residual interest in the assets of an entity that remains after deducting its liabilities, or the claims of the owners of the entity's assets.

**Investments by Owners.** Increase in net assets of a particular enterprise resulting from transfers to it from other entities of something of value to obtain or increase ownership interests (equity) in it.

**Distributions to Owners.** Decrease in net assets of a particular enterprise resulting from transferring assets, rendering services, or incurring liabilities by the enterprise to its owners (dividends or Draws).

**Comprehensive Income.** Change in equity (net assets) of an entity during a period from transactions and other events and circumstances from nonowner sources, i.e., all changes in equity during a period except from investments by owners and distributions to owners.

**Revenues.** Inflows or other enhancements of assets of an entity or settlement of its liabilities (or a combinations of both) during a period from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations.

**Expenses.** Outflows or other using up of assets or incurrences of liabilities (or a combination of both) during a period of delivering or producing goods, rendering services, or carrying out other activities that constitute the entity's ongoing major or central operations.

**Gains.** Increases in equity (net assets) from peripheral or incidental transactions of an entity and from all other transactions and other events and circumstances affecting the entity during a period except from revenues or investments by owners.

**Losses.** Decreases in equity (net assets) from peripheral or incidental transactions of an entity and from all other transactions and other events and circumstances affecting the entity during a period except from expenses or distributions to owners.

\* “Elements of Financial Statements,” *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, December 1985), pp. ix and x.

owners during a period.” The statement further expresses an expectation that the concept of earnings will evolve or develop over time. *SFAC No. 5* does, however, provide a working definition of earnings as follows:

Earnings is a measure of entity performance during a period. It measures the extent to which asset *inflows* (revenues and gains) associated with cash-to-cash cycles substantially completed during the period exceed asset *outflows* (expenses and losses) associated, directly or indirectly, with the same cycles.

In other words, earnings is essentially revenues and gains minus expenses and losses, with the exception of any losses or gains explicitly stated by FASB to bypass earnings and, instead, to be reported as a component of *other comprehensive income*.

What are examples of these “odd” gains and losses that bypass earnings under current GAAP? *SFAC No. 5* describes them as “principally certain holding gains or losses that are recognized in the period but are excluded from earnings such as some changes in market values of investments . . . and foreign currency translation adjustments.”

Not all changes in market values of investments are excluded from earnings, however. For example, the gains or losses recognized upon marking Trading Securities to market values *are* reported in earnings, while those on Available-for-Sale securities generally are not. Similarly, the gains or losses on foreign currency translation may or may not be reported in earnings, depending on whether the firm is using the temporal method (restatement) or the current method (translation) for its subsidiaries. In one case, the gain or loss appears in earnings. In the other, it appears as a component of *other comprehensive income*. This distinction is elaborated upon in Chapter 13, Translation of Financial Statements of Foreign Affiliates.

In short, these distinctions seem rather arbitrary and are thus, not surprisingly, confusing to students as well as to users of financial statements. The FASB’s choices in this regard appear to be affected by: (a) the volatility that a particular gain or loss might introduce into earnings, and whether that volatility is reflective of true economic performance (in which case it should be reported in earnings) or is reflective of something else (in which case it is more likely to fall into other comprehensive income); and (b) the attitude of various constituents, or the effect of lobbying, which is in turn largely related to (a).

In this text, we use the term *net income* to refer to *earnings*, and we do not focus on comprehensive income in most chapters. In the absence of gains or losses designated to bypass earnings, earnings and comprehensive income are the same. However, if the firm has foreign subsidiaries or has available-for-sale securities or other investments that are being marked to market at the balance sheet date, the reader should be aware that current GAAP distinguishes between net current income and comprehensive income. Other items that may arise include certain gains or losses related to a firm’s net pension liability; these too may bypass retained earnings and be reported instead as a component of *other comprehensive income*.

Be aware that any item which bypasses earnings will not appear in retained earnings (by definition, the accumulated earnings since incorporation minus dividends declared). Thus, other comprehensive income appears on the balance sheet as a separate component of stockholders’ equity, labeled “Accumulated Other Comprehensive Income.”

During June 2011, FASB voted to update FASB ASC topic 220 [Statement of Comprehensive Income], so that entities should present comprehensive income and its components either in a single *statement of comprehensive income* or as a consecutive statement immediately following the income statement. The single (combined) statement approach would still display net income as a subtotal, and continue on to display total comprehensive income on the same statement. Like most other current projects, this project reflects the joint efforts of the FASB and the IASB.

## Asset Impairment and the Conceptual Framework

*SFAC No. 5* provides the following guidance with respect to expenses and losses:

*Consumption of benefit.* Earnings are generally recognized when an entity’s economic benefits are consumed in revenue earnings activities (or matched to the period incurred or allocated systematically); or

*Loss or lack of benefit.* Expenses or losses are recognized if it becomes evident that previously recognized future economic benefits of assets have been reduced or eliminated, or that liabilities have increased, without associated benefits.

In 2001, the FASB abandoned its long-held position that all intangible assets must be amortized over their useful lives, not to exceed 40 years. In the place of this position was born a new standard. If the asset has a finite life, amortize it, as before, over its useful life. However, if the life is deemed indefinite, then do not amortize the asset. Instead, review it periodically (at least once a year) for impairment or decreased value. The former approach (that of amortization) illustrates a *consumption or benefit* approach to measuring expenses while the impairment standard illustrates a *loss or lack of benefit* approach.

Another of the principles laid out by the FASB in *SFAC No. 5* is that of **matching** expenses to revenues. The *consumption of benefit* approach emphasizes a more direct matching of expenses to revenues, while the *loss or lack of benefit* represents an example of those types of expenses that are most difficult, if not impossible, to match adequately to the generation of revenue. Thus, such losses as the impairment of goodwill reflect an attempt to recognize the loss of benefit in the period in which that loss is first identified.

Chapters 2 and 5 illustrate the impact of the impairment of goodwill (deemed to have an indefinite life) on the financial statements of the acquiring company and the consolidated entity, respectively.

---

## 1.11 FASB CODIFICATION (SOURCE OF GAAP)

On July 1, 2009, the Financial Accounting Standards Board (FASB) launched the *FASB Accounting Standards Codification* as the single source of authoritative nongovernmental U.S. generally accepted accounting principles (GAAP). The Codification is effective for interim and annual periods ending after September 15, 2009. All existing accounting standards documents are superseded as described in FASB Statement No. 168, *The FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles*. All other accounting literature not included in the Codification is nonauthoritative.<sup>33</sup>

While not intended to change existing U.S. GAAP, the purpose of the Codification is to integrate existing accounting standards by multiple standard-setters within levels A through D of the former GAAP hierarchy. Cross-references are provided to link the Codification to the original standards. The Codification also contains *relevant* portions of authoritative content issued by the Securities and Exchange Commission as well as selected SEC staff interpretations and administrative guidelines.

It does not include SEC staff speeches, testimony, or Current Issues and Rulemaking Projects (CIRPs), nor does it include pronouncements of the IASB. Nonetheless, one expectation of the Codification's implementation is that it will ease the convergence of U.S. GAAP and international standards (IFRS); and the material correlates at the topic and section levels to IFRS. As we move forward, future U.S. accounting standards will be issued in the form of an update to the appropriate topic or subtopic within the Codification.

The Codification is intended to simplify the classification of existing and future standards by restructuring all authoritative U.S. GAAP (other than that for governmental entities) into one online database under a common referencing system. The codification is organized in a tiered structure consisting of a framework of topics, subtopics, sections, and paragraphs on each subject. The Codification does not codify all GAAP since the GAAP

---

<sup>33</sup> Rules and interpretive releases of the Securities and Exchange Commission (SEC) under authority of federal securities laws are also sources of authoritative GAAP for SEC registrants. In addition to the SEC's rules and interpretive releases, the SEC staff issues Staff Accounting Bulletins that represent practices followed by the staff in administering SEC disclosure requirements, and it utilizes SEC Staff Announcements and Observer comments made at Emerging Issues Task Force meetings to publicly announce its views on certain accounting issues for SEC registrants.

hierarchy also includes items such as practice, textbooks, articles, and other similar content. Thus instead of referring to specific FASB statements, the Codification will be referred to as *ASC*, which is the Accounting Standards Codification (ASC). In fact, the FASB will no longer issue statements (such as FAS No. 141), but will instead issue updates to the Codification. The updates will be referred to as *ASU* (or accounting standards update). The Codification replaces the GAAP hierarchy.

GAAP pronouncements are divided into 90 accounting topics and all topics are displayed using a consistent structure. In order to apply or search the Codification, one must understand its structure. References to the Codification contain four groupings of numbers. These four numbered items refer to (1) the topic, (2) the subtopic, (3) the section, and (4) the paragraph number for the appropriate accounting. Thus the code ASC 450-20-25-2 refers to topic 450, which is contingencies; subtopic 20, which is loss contingencies; section 25, which is recognition; and the 2 refers to the second paragraph.

Highest-level topics are organized in nine main areas, but are mainly grouped by financial statement. For instance, three general topics relate to the balance sheet (assets, liabilities, and equity) and two of the general topics relate to the income statement (revenues and expenses).

| <i>Groupings</i>     | <i>General Topics</i>     | <i>Topic Numbering</i> | <i>Number of Specific Topics in Each General Topic</i> |
|----------------------|---------------------------|------------------------|--|
|                      | <b>General Principles</b> | 105                    | 1  |
|                      | <b>Presentation</b>       | 200–299                | 15   |
| Balance Sheet Topics | <b>Assets</b>             | 300–399                | 9  |
|                      | <b>Liabilities</b>        | 400–499                | 9  |
|                      | <b>Equity</b>             | 505                    | 1  |
| Income Statement     | <b>Revenues</b>           | 605                    | 1  |
|                      | <b>Expenses</b>           | 700–799                | 8  |
| Other Topics         | <b>Broad Transactions</b> | 800–899                | 14   |
|                      | <b>Industry</b>           | 900–999                | 32   |
|                      | Total                     |                        | 90   |

- a. *General Principles (Topic 105)*. This topic establishes the *Accounting Standards Codification* (Codification) as the source of authoritative generally accepted accounting principles (GAAP). Rules and interpretive releases of the Securities and Exchange Commission (SEC) under authority of federal securities laws are also sources of authoritative GAAP for SEC registrants. Also, certain accounting standards allowed for the continued application of superseded accounting standards. Such grandfathered standards are typically not included in the Codification. Some of the grandfathered topics are listed in ASC 105-10-65-1.
- b. *Presentation (Topic Codes 205–299)*. There are 15 topics related to presentation of comparative financial statements. These topics do not address recognition, measurement, and derecognition matters. Not all presentation issues will be found in ASC 200 topics. Within each general topic (topics 300 and higher), section 45 describes “other presentation matters” specific to that particular general topic. These can always be found in ASC XXX-YY-45-xx. For instance, ASC 330-10-45-2 describes the guidance on presenting contract costs of certain construction-type contracts. The topics included in presentation are as follows:

#### **Presentation Topic (ASC 200 Topics)**

|     |                                      |
|-----|--------------------------------------|
| 205 | Presentation of Financial Statements |
| 210 | Balance Sheet                        |
| 215 | Statement of Shareholder Equity      |
| 220 | Comprehensive Income                 |
| 225 | Income Statement                     |
| 230 | Statement of Cash Flows              |
| 235 | Notes to Financial Statements        |

|     |  |
|-----|--|
| 250 | Accounting Changes and Error Corrections |
| 255 | Changing Prices                          |
| 260 | Earnings per Share                       |
| 270 | Interim Reporting                        |
| 272 | Limited Liability Entities               |
| 274 | Personal Financial Statements            |
| 275 | Risks and Uncertainties                  |
| 280 | Segment Reporting                        |

- c. *Financial Statement Accounts (Topic Codes 305–700)*. The Codification organizes topics in a financial statement order including Assets, Liabilities, Equity, Revenue, and Expenses. Topics include Receivables, Revenue Recognition, Inventory, and so on.

### **Balance Sheet Topics**

#### ***Assets (ASC 300 Topics)***

Throughout this textbook, we reference the Codification by topic number only on occasion (i.e., FASB ASC 810 “Consolidations”) or in many instances using up to four groupings of numbers, which include the topic–subtopic–section–paragraph number (i.e., FASB ASC 810-20-25-4).

The Codification includes the following literature issued by various standard-setters that applies to all entities (other than governmental entities):

### Standards Issued by Standard-Setters other than the SEC

- a. Financial Accounting Standards Board (FASB)
  1. Statements (FAS)
  2. Interpretations (FIN)

3. Technical Bulletins (FTB)
4. Staff Positions (FSP)
5. Staff Implementation Guides (Q&A)
6. Statement No. 138 Examples
- b. Emerging Issues Task Force (EITF)
  1. Abstracts
  2. Topic D
- c. Derivative Implementation Group (DIG) Issues
- d. Accounting Principles Board (APB) Opinions
- e. Accounting Research Bulletins (ARB)
- f. Accounting Interpretations (AIN)
- g. American Institute of Certified Public Accountants (AICPA)
  1. Statements of Position (SOP)
  2. Audit and Accounting Guides (AAG)—only incremental accounting guidance
  3. Practice Bulletins (PB), including the Notices to Practitioners elevated to Practice Bulletin status by Practice Bulletin 1
  4. Technical Inquiry Service (TIS)—only for Software Revenue Recognition

## Standards Issued by the SEC

To increase the utility of the Codification for public companies, relevant portions of authoritative content issued by the SEC and selected SEC staff interpretations and administrative guidance have been included for reference in the Codification, such as:

- a. Regulation S-X (SX)
- b. Financial Reporting Releases (FRR)/Accounting Series Releases (ASR)
- c. Interpretive Releases (IR)
- d. SEC Staff Guidance in
  1. Staff Accounting Bulletins (SAB)
  2. EITF Topic D and SEC Staff Observer comments

## Changes to GAAP: Updating the FASB Standards

Updates to the Codification are called *Accounting Standards Updates* and are referenced as ASU YYYY-xx, where the *Ys* indicate the year the update was approved, and *xx* represents the number of the update for that year. For instance, ASU 2010-29 is the 29th update to the standards issued in 2010. Updates, by themselves, are not authoritative, but serve to update the Codification, provide background information, and provide the basis for the conclusions on the change. See online content at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter) for more detail on researching the Codification.

### SUMMARY

- 1 *Describe historical trends in types of business combinations.* Horizontal integration was popular from 1880 to 1904, while vertical integration became more prevalent from 1905 through 1930. The period beginning after World War II was called merger mania. From the 1950s through the 1970s, conglomerate mergers between companies in different industries occurred in the face of antitrust regulation restricting combinations within a particular industry. A relaxation of antitrust regulation in the 1980s and the emergence of high-yield junk bonds led to strategic acquisitions for firms seeking operating synergies. High stock prices in the 1990s created a wealth of mergers with stock the medium of exchange.
- 2 *Identify the major reasons firms combine.* Firms combine to achieve growth goals to obtain operating synergies, to compete more effectively in the international marketplace, to take advantage of tax laws in some cases, and to diversify or to eliminate competition.
- 3 *Identify the factors that managers should consider in exercising due diligence in business combinations.* Be aware of unrecorded liabilities; take care in interpreting percentages quoted by the selling company; examine the impact on earnings from allocated expenses, changes in LIFO reserves and inventory levels, and product sales; note any nonrecurring items, changes in estimates, accruals, or methods; and be careful of CEO egos.

- 4 *Identify defensive tactics used to attempt to block business combinations.* These tactics include poison pills, greenmail, white knights or white squires, pac-man defense, selling the crown jewels, and leveraged buyouts.
- 5 *Distinguish between an asset and a stock acquisition.* An asset acquisition involves the purchase of all of the acquired company's net assets, whereas a stock acquisition involves the attainment of control via purchase of a controlling interest in the stock of the acquired company.
- 6 *Indicate the factors used to determine the price and the method of payment for a business combination.* Factors include the effect of the acquisition on future earnings performance, (dilution or accretion), and the estimated value of the firm's identifiable net assets and implied goodwill. The method of payment is affected by the liquidity position of the purchaser firm, the willingness of the sellers to accept alternative forms of financing, and tax issues.
- 7 *Calculate an estimate of the value of goodwill to be included in an offering price by discounting expected future excess earnings over some period of years.* Identify a normal rate of return for firms similar to the company being targeted. Apply the rate of return to the level of identifiable assets of the target to approximate what the "normal" firm in this industry might generate. Estimate the expected future earnings of the target, and subtract the "normal" earnings to get "excess earnings." Assume an appropriate time period and a discount rate to calculate the discounted value of the excess earnings.
- 8 *Describe the two alternative views of consolidated financial statements: the economic entity and the parent company concepts.* Under the parent company concept, the consolidated financial statements reflect the stockholders' interests in the parent, plus their interests in the net assets of the subsidiaries. Thus the focus is on the interests of the parent's shareholders. The economic entity concept emphasizes control of the whole by a single management. As a result, consolidated financial statements provide information about a group of legal entities—a parent company and its subsidiaries—operating as a single unit.
- 9 *Discuss the Statements of Financial Accounting Concepts (SFAC).* These statements provide a framework for use by FASB in addressing topics that arise, and by users in interpreting and implementing FASB standards updates. They address definitions of key terms in financial reporting, its objectives, the role of cash flows and present values, qualitative characteristics of useful information, and underlying principles.
- 10 *Describe some of the current joint projects of the FASB and the International Accounting Standards Board (IASB), and their primary objectives.* Joint projects between the FASB and IASB include revenue recognition, leases, insurance contracts, and financial instruments. The objectives are to develop a converged set of standards based on fundamental concepts rather than a collection of rules.

### QUESTIONS

- LO 2 1. Distinguish between internal and external expansion of a firm.
- LO 2 2. List four advantages of a business combination as compared to internal expansion.
- LO 1 3. What is the primary legal constraint on business combinations? Why does such a constraint exist?
- LO 2 4. Business combinations may be classified into three types based upon the relationships among the combining entities (e.g., combinations with suppliers, customers, competitors, etc.). Identify and define these types.
- LO 5 5. Distinguish among a statutory merger, a statutory consolidation, and a stock acquisition.
- LO 4 6. Define a tender offer and describe its use.
- LO 6 7. When stock is exchanged for stock in a business combination, how is the stock exchange ratio generally expressed?
- LO 4 8. Define some defensive measures used by target firms to avoid a takeover. Are these measures beneficial for shareholders?
- LO 5 9. Explain the potential advantages of a stock acquisition over an asset acquisition.
- LO 6 10. Explain the difference between an accretive and a dilutive acquisition.
- LO 8 11. Describe the difference between the economic entity concept and the parent company concept approaches to the reporting of subsidiary assets and liabilities in the consolidated financial statements on the date of the acquisition.
- LO 8 12. Contrast the consolidated effects of the parent company concept and the economic entity concept in terms of:
  - (a) The treatment of noncontrolling interests.
  - (b) The elimination of intercompany profits.
  - (c) The valuation of subsidiary net assets in the consolidated financial statements.
  - (d) The definition of consolidated net income.
- LO 8 13. Under the economic entity concept, the net assets of the subsidiary are included in the consolidated financial statements at the total fair value that is implied by the price paid by the parent company for its controlling interest. What practical or conceptual problems do you see in this approach to valuation?

- LO 9** 14. Is the economic entity or the parent concept more consistent with the principles addressed in the FASB's conceptual framework? Explain your answer.
- LO 9** 15. How does the FASB's conceptual framework influence the development of new standards?
- LO 9** 16. What is the difference between net income, or earnings, and comprehensive income?

### Business Ethics

From 1999 to 2001, Tyco's revenue grew approximately 24% and it acquired over 700 companies. It was widely rumored that Tyco executives aggressively managed the performance of the companies that they acquired by suggesting that before the acquisition, they should accelerate the payment of liabilities, delay recording the collections of revenue, and increase the estimated amounts in reserve accounts.

1. What effect does each of the three items have on the reported net income of the acquired company before the acquisition and on the reported net income of the combined company in the first year of the acquisition and future years?
2. What effect does each of the three items have on the cash from operations of the acquired company before the acquisition and on the cash from operations of the combined company in the first year of the acquisition and future years?
3. If you are the manager of the acquired company, how do you respond to these suggestions?
4. Assume that all three items can be managed within the rules provided by GAAP but would be regarded by many as pushing the limits of GAAP. Is there an ethical issue? Describe your position as: (A) an accountant for the target company and (B) as an accountant for Tyco.

## ANALYZING FINANCIAL STATEMENTS

### AFS1-1 Kraft and Cadbury PLC **LO 2** **LO 3**

On February 2, 2010, Cadbury's Board of Directors recommended that Cadbury's shareholders accept the terms of Kraft's final offer to acquire Cadbury. This ended one of the larger hostile takeovers that combined one company (Kraft) that reported using U.S. GAAP with an international company (Cadbury) that reported using IFRS as promulgated by the IASB and prepared financial statements in a foreign currency (the pound). The acquisition allowed Kraft to increase its presence in the food processing industry in the developing world and to acquire a company specializing in confectionary products.

On February 2, 2010, Kraft acquired 71.73% of Cadbury's shares for \$13.1 billion. Incremental interest costs for Kraft to finance the deal are estimated to be approximately \$500 million (based on borrowing of \$9.5 billion). This interest cost is expected to decrease over time. Cadbury earned approximately \$428 million in income (exchange rate adjusted) for 2009. One issue that merging companies always face when another company is acquired is whether the merger will be accretive or dilutive in the early years after the acquisition.

- (1) Discuss some of the factors that should be considered in analyzing the impact of this merger on the income statement for the next few years.
- (2) Discuss the pros and cons that Kraft might have weighed in choosing the medium of exchange to consummate the acquisition. Do you think they made the right decision? If possible, use figures to support your answer.
- (3) In addition to the factors mentioned above, there are sometimes factors that cannot be quantified that enter into acquisition decisions. What do you suppose these might be in the case of Kraft's merger with Cadbury?
- (4) This acquisition is complicated by the lack of consistency between the two companies' methods of accounting and currency. Discuss the impact that these issues are likely to have on the merged company in the years following the acquisition.

### AFS1-2 AFS1-2 Kraft Acquires Cadbury PLC **LO 3**

The following information from the financial statements of Kraft Foods and Cadbury PLC is available for the three years prior to their merger. Evaluate the performance of each company leading up to the year of the acquisition (2010). Note that Cadbury's financial statements are in millions of pounds, while Kraft's statements are in millions of dollars.

#### Required:

- A. Evaluate the health of the target company, and point out any trends that might have been worrisome to Kraft. Also indicate any strengths in the firm's performance. Hint: An appendix "Evaluating Firm Performance" is available online at [www.wiley.com/jeter](http://www.wiley.com/jeter) and may prove useful in addressing this question.

| Gross Margin                           | 2,195       | 2,514       | 2,765       |
| Income continuing operations           | 149         | 370         | 275         |
| Net income                             | 405         | 364         | 509         |
| <b>Selected Income Statement items</b> |             |             |             |
| Interest Expense                       | 88          | 50          | 172         |
| Tax Expense                            | 105         | 30          | 103         |
| <b>Statement of Cash Flows</b>         |             |             |             |
| Cash from Operations (CFO)             | 812         | 469         | 523         |
| Cash interest paid                     | 193         | 165         | 122         |
| Cash taxes paid                        | 235         | 153         | 163         |

**B.** Evaluate the health of Kraft Foods, and point out any positive or negative trends. Refer to the online appendix, "Evaluating Firm Performance."

## EXERCISES

**EXERCISE 1-1 Estimating Goodwill and Potential Offering Price LO 7**

Plantation Homes Company is considering the acquisition of Condominiums, Inc. early in 2015. To assess the amount it might be willing to pay, Plantation Homes makes the following computations and assumptions.

- A. Condominiums, Inc. has identifiable assets with a total fair value of \$15,000,000 and liabilities of \$8,800,000. The assets include office equipment with a fair value approximating book value, buildings with a fair value 30% higher than book value, and land with a fair value 75% higher than book value. The remaining lives of the assets are deemed to be approximately equal to those used by Condominiums, Inc.
- B. Condominiums, Inc.'s pretax incomes for the years 2012 through 2014 were \$1,200,000, \$1,500,000, and \$950,000, respectively. Plantation Homes believes that an average of these earnings represents a fair estimate of annual earnings for the indefinite future. However, it may need to consider adjustments to the following items included in pretax earnings:

|                                       |         |
|---------------------------------------|---------|
| Depreciation on buildings (each year) | 960,000 |
| Depreciation on equipment (each year) | 50,000  |
| Extraordinary loss (year 2014)        | 300,000 |
| Sales commissions (each year)         | 250,000 |

- C. The normal rate of return on net assets for the industry is 15%.

**Required:**

- A. Assume further that Plantation Homes feels that it must earn a 25% return on its investment and that goodwill is determined by capitalizing excess earnings. Based on these assumptions, calculate a reasonable offering price for Condominiums, Inc. Indicate how much of the price consists of goodwill. Ignore tax effects.
- B. Assume that Plantation Homes feels that it must earn a 15% return on its investment, but that average excess earnings are to be capitalized for three years only. Based on these assumptions, calculate a reasonable offering price for Condominiums, Inc. Indicate how much of the price consists of goodwill. Ignore tax effects.

**EXERCISE 1-2 Estimating Goodwill and Valuation LO 7**

Alpha Company is considering the purchase of Beta Company. Alpha has collected the following data about Beta:

|                           | <i>Beta Company<br/>Book Values</i> | <i>Estimated<br/>Market Values</i> |
|---------------------------|-------------------------------------|------------------------------------|
| Total identifiable assets | \$585,000                           | \$750,000                          |
| Total liabilities         | <u>320,000</u>                      | 320,000                            |
| Owners' equity            | <u>\$265,000</u>                    |                                    |

Cumulative total net cash earnings for the past five years of \$850,000 includes extraordinary cash gains of \$67,000 and nonrecurring cash losses of \$48,000.

Alpha Company expects a return on its investment of 15%. Assume that Alpha prefers to use cash earnings rather than accrual-based earnings to estimate its offering price, and that it estimates the total valuation of Beta to be equal to the present value of cash-based earnings (rather than excess earnings) discounted over five years. (Goodwill is then computed as the amount implied by the excess of the total valuation over the identifiable net assets valuation.)

**Required:**

- A. Compute (a) an offering price based on the information above that Alpha might be willing to pay, and (b) the amount of goodwill included in that price.
- B. Compute the amount of goodwill actually recorded, assuming the negotiations result in a final purchase price of \$625,000 cash.

**EXERCISE 1-3 Estimated and Actual Goodwill LO 7**

Passion Company is trying to decide whether or not to acquire Desiree Inc. The following balance sheet for Desiree Inc. provides information about book values. Estimated market values are also listed, based upon Passion Company's appraisals.

|                                   | <i>Desiree Inc.</i><br><i>Book Values</i> | <i>Desiree Inc.</i><br><i>Market Values</i> |
|-----------------------------------|---|---|
| Current assets                    | \$260,000                                 | \$ 260,000                                  |
| Property, plant & equipment (net) | 650,000                                   | 740,000                                     |
| Total assets                      | <u>\$910,000</u>                          | <u>\$1,000,000</u>                          |
| Total liabilities                 | \$400,000                                 | \$ 400,000                                  |
| Common stock, \$10 par value      | 160,000                                   |   |
| Retained earnings                 | <u>350,000</u>                            |   |
| Total liabilities and equities    | <u>\$910,000</u>                          |   |

Passion Company expects that Desiree will earn approximately \$150,000 per year in net income over the next five years. This income is higher than the 12% annual return on tangible assets considered to be the industry “norm.”

**Required:**

- A. Compute an estimation of goodwill based on the information above that Passion might be willing to pay (include in its purchase price), under each of the following additional assumptions:
  - (1) Passion is willing to pay for *excess* earnings for an expected life of five years (undiscounted).
  - (2) Passion is willing to pay for *excess* earnings for an expected life of five years, which should be capitalized at the industry normal rate of return.
  - (3) Excess earnings are expected to last indefinitely, but Passion demands a higher rate of return of 20% because of the risk involved.
- B. Comment on the relative merits of the three alternatives in part (A) above.
- C. Determine the amount of goodwill to be recorded on the books if Passion pays \$800,000 cash and assumes Desiree’s liabilities.

**ASC Exercises:** For all ASC Exercises indicate as part of your answer: the Codification topic, subtopic, section, and/or paragraph upon which your answer is based (unless otherwise specified). All ASC questions require access to the FASB Codification.<sup>a</sup>

- 
- ASCI-1** **Cross-Reference** The conditions determining whether a lease is classified as an operating lease or a capital lease were prescribed in *SFAS No. 13*, paragraph 7. Where is this located in this Codification?
- ASCI-2** **Cross-Reference** The rules defining the conditions to classify an item as extraordinary on the income statement were originally listed in *APB Opinion No 30*, paragraph 20. Where is this information located in the Codification?
- ASCI-3** **Disclosure** Suppose a firm entered into a capital lease, debiting an asset account and crediting a lease liability account for \$150,000. Does this transaction need to be disclosed as part of the statement of cash flows? If so, where?
- ASCI-4** **General Principles** Accounting textbooks under the former GAAP hierarchy were considered level 4 authoritative. Where do accounting textbooks stand in the Codification?
- ASCI-5** **Presentation** How many years of comparative financial statements are required under current GAAP?
- ASCI-6** **Overview** Can the provisions of the Codification be ignored if the item is immaterial?

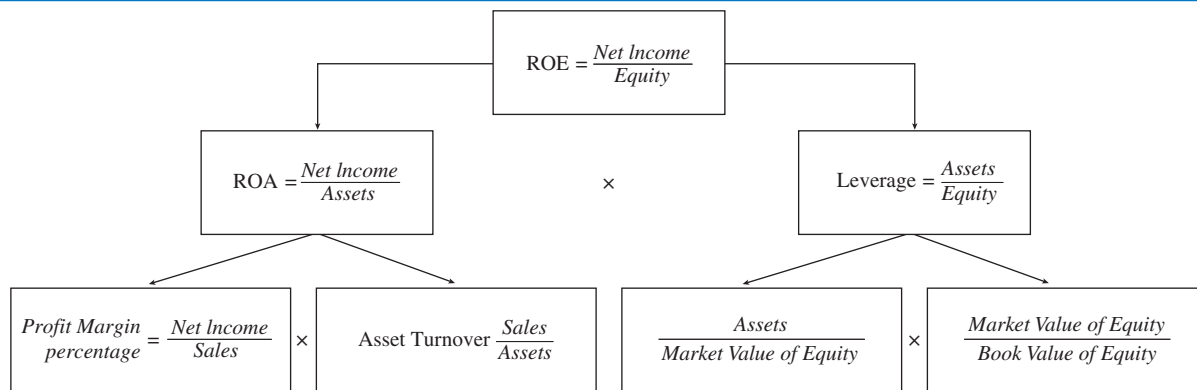

# Chapter 1

## APPENDIX 1A – EVALUATING FIRM PERFORMANCE (ONLINE)

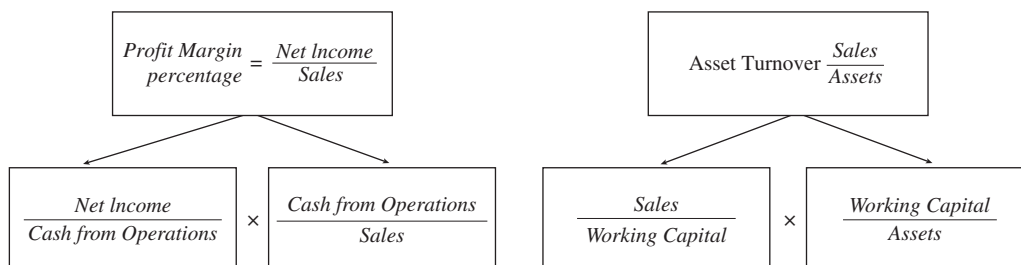

In this appendix, we provide a structured approach to evaluating firm performance. This approach can be used for many purposes. For example, it might be used to evaluate the potential performance of a proposed or completed merger. It might also be used as an analytical tool applied by auditors to evaluate the performance of an existing client. Individuals could use the approach as an initial step in determining investment opportunities. Depending on the objective of your analysis, a good starting point is to compute the return on equity (ROE) for the most recent years available. The structured approach decomposes this ratio into several commonly used ratios, which are subsequently decomposed further. The overall approach is summarized in Illustration A1-1.

### ILLUSTRATION A1-1

#### Structured Approach to Evaluate Firm Performance Panel A: Decomposing Return on Equity (ROE)

#### Panel B: Decomposing the Profit Margin Percentage Using Cash from Operations and Decomposing the Asset Turnover Ratio Using Working Capital

In this textbook and in our structured approach, we use the following definition of ROE (more complex definitions of ROE can be applied with similar results):

$$\text{ROE} = \frac{\text{Net Income}}{\text{Equity}} \quad (1)$$

Next this ratio is decomposed into two components: Return on Assets (ROA) and a Leverage ratio. These ratios are defined as:

$$\text{ROA} = \frac{\text{Net Income}}{\text{Assets}} \quad (2)$$

$$\text{Leverage} = \frac{\text{Assets}}{\text{Equity}} = \frac{\text{Equity} + \text{Liabilities}}{\text{Equity}} \quad (3)$$

If you multiply these two ratios, Assets cancels out and you get ROE. Thus  $\text{ROE} = \text{ROA} \times \text{Leverage}$ . Assets divided by equity is considered a leverage ratio because Assets are equal to Liabilities plus Equity. Thus if the firm has more liabilities, this ratio is greater. The advantage of decomposing the ratios is that the ratio of interest can be graphed as a function of its decomposition. The graph of the decomposition of ROE is shown in Illustration A1-2.

#### ILLUSTRATION A1-2

##### ROE (15%) by ROA and Leverage

In Illustration A1-2, the solid line represents all possible combinations of ROA and leverage that equal an ROE of 15%. ROE amounts greater than 15% would appear above the solid line and ROE amounts less than 15% would appear below the solid line in the illustration. This illustration dramatizes the fact that if you pick two points on the solid line, they represent two companies with the same ROE but for very different reasons. A firm on the lower part of the solid line achieved its ROE with a high ROA with low amounts of leverage. A firm on the upper portion of the solid line achieved its ROE by using more debt in the capital structure but earning a lower ROA.

## ROA Decomposition

The next decomposition breaks down the ROA ratio. ROA is decomposed into two components: the Profit Margin Percentage and an Asset Turnover ratio. These ratios are defined as:

$$\text{Profit Margin Percentage} = \frac{\text{Net Income}}{\text{Sales}} \quad (4)$$

$$\text{Asset Turnover} = \frac{\text{Sales}}{\text{Assets}} \quad (5)$$

Again note that if you multiply these two ratios, Sales cancels out and you obtain the ROA ratio (ROA = Profit Margin  $\times$  Asset Turnover). The graph of the decomposition of ROA is shown in Illustration A1-3.

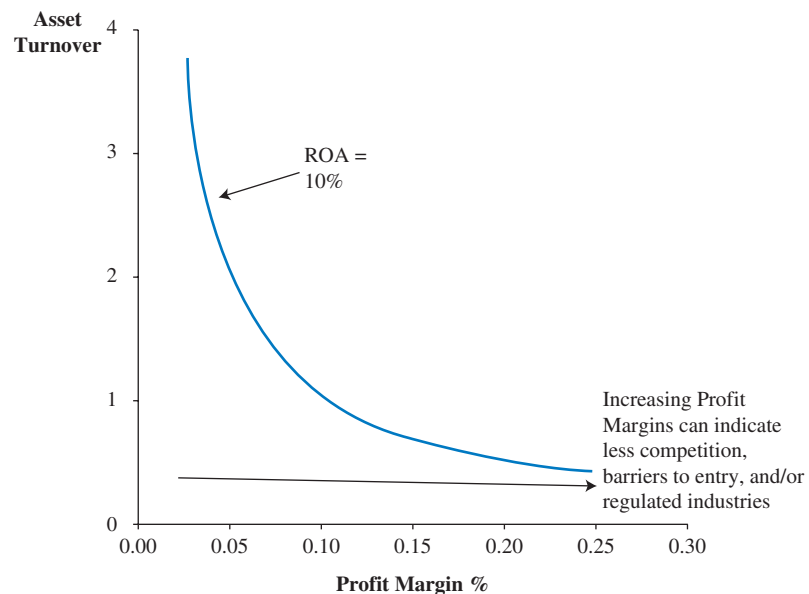

In Illustration A1-3, the solid line represents all possible combinations of the Asset Turnover ratio and Profit Margin percentage that equal an ROA of 10%. ROA amounts greater than 10% would appear above the solid line and ROA amounts less than 10% would appear below the solid line in the illustration. Thus, if you pick two widely spaced points on the solid line, they would represent two companies with the same ROA but for very different reasons. A firm on the lower part of the solid line achieved its ROA with a high profit margin but without generating a lot of revenues per dollar of assets. A firm on the upper portion of the solid line achieved its ROA by generating more sales per dollar of assets invested while earning a lower profit margin. As noted in the illustration, a higher profit margin may indicate a less competitive industry. Alternatively, it might indicate high profit margins resulting from barriers to entry in that industry, such as a very capital-intensive industry. Higher profit margins could be due to regulatory constraints that prevent other firms from entering the market.

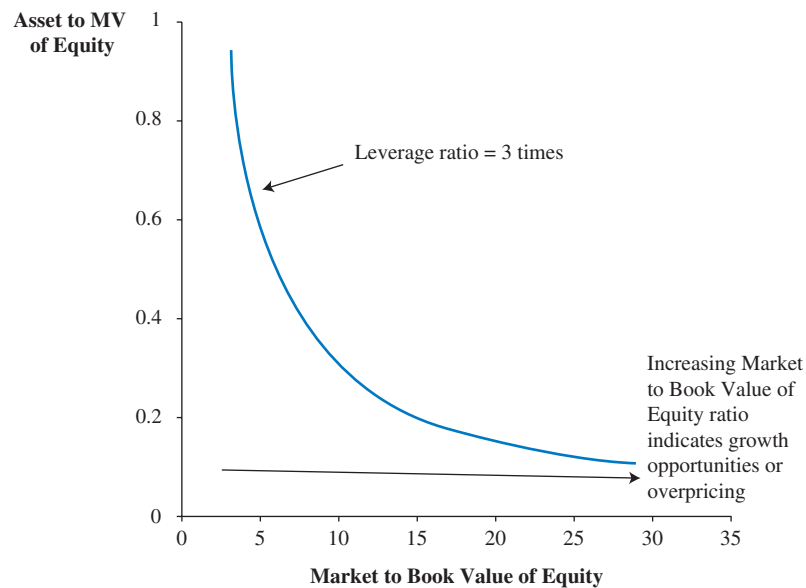

## Decomposing Leverage

The next decomposition breaks down the leverage ratio. Interpreting leverage goes beyond relying on book value to debt ratios. In measuring the level of debt it is important to consider the market value of the firm's equity. Therefore, leverage is decomposed into two

### ILLUSTRATION A1-3

#### ROA (10%) by Profit Margin % and Asset Turnover

**ILLUSTRATION A1-4****Leverage as Function of Asset/MVE and Market to Book Value of Equity**

components: the Asset to Market Value of Equity and the Market Value of Equity to Book Value of Equity (market to book ratio). These ratios are defined as:

$$\text{Asset to Market Value Percentage} = \frac{\text{Assets}}{\text{Market Value of Equity}} \quad (6)$$

$$\text{Market to Book Ratio} = \frac{\text{Market Value of Equity}}{\text{Book Value of Equity}} \quad (7)$$

Again note that if you multiply these two ratios, Market Value cancels out and you obtain the leverage ratio (Leverage = Asset to Market Value Percentage  $\times$  Market to Book Ratio). The graph of the decomposition of leverage is shown in Illustration A1-4.

Increasing market to book ratios often indicates increased growth opportunities for the firm, but could alternatively indicate overpricing. Thus, care must be taken in evaluating changes in these ratios.

## Decomposing the Profit Margin and the Asset Turnover Ratios

Because the income statement is prepared on an accrual basis, further analysis is needed to incorporate the firm's cash flow position. This decomposition examines the size of the firm's accruals and whether they increase or decrease a firm's earnings. Also, the decomposition takes into account the amount of cash from operations (CFO) that is generated by the reported level of revenues. The profit margin is decomposed into two components: Net Income to Cash from Operations and Cash from Operations to Total Revenues. These ratios are defined as:

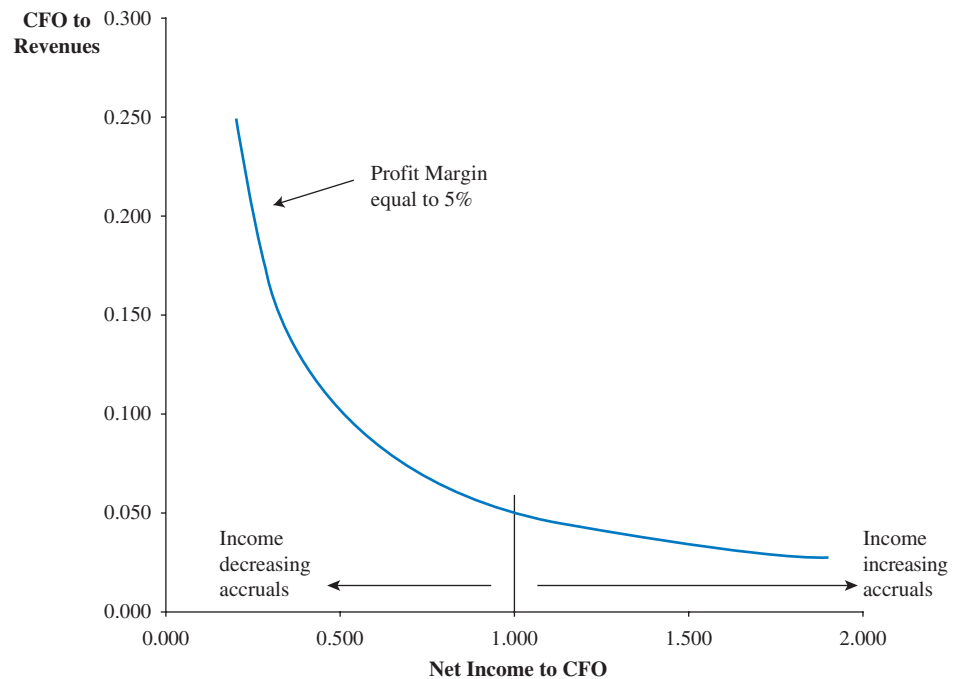

$$\text{Asset Net Income to Cash from Operations} = \frac{\text{Net Income}}{\text{Cash from Operations}} \quad (8)$$

$$\text{Cash from Operations to Revenues} = \frac{\text{Cash from Operations}}{\text{Revenues}} \quad (9)$$

The asset turnover ratio is decomposed using the firm's working capital (current assets less current liabilities). Working capital measures the firm's liquidity; changes in working

## ILLUSTRATION A1-5

## Profit Margin (5%) Decomposition

capital might indicate growth or alternatively could be a precursor to liquidity problems if the firm is struggling to sell its inventories or to collect its receivables, for example. The decomposition of the asset turnover ratio follows:

$$\text{Sales to Working Capital} = \frac{\text{Sales}}{\text{Working Capital}} \quad (10)$$

$$\text{Working Capital to Assets} = \frac{\text{Working Capital}}{\text{Assets}} \quad (11)$$

The graph for the profit margin decomposition is shown in Illustration A1-5. The solid line represents all the possible combinations of net income to CFO and CFO to revenues that result in a profit margin of 5%. The line representing higher profit margins would be located above the line and lower profit margins would be represented below the line. The graph provides insight into the accrual process. Consider the case where net income equals CFO (see the vertical line at 1.00). Points above 1.0 represent situations where accruals increase earnings and points below 1.0 represent cases where accruals decrease earnings. Thus if the firm's last three profit margin observations plot very close to the vertical line at net income to CFO of 1.0, this implies that the overall timing of the revenues and expenses reported on the income statement are very close to the overall timing of the cash collections and cash payments. Income increasing accruals might signal future cash from operations, while income decreasing accruals would be likely to indicate lower future cash flows.

Illustration A1-6 provides the graph of the decomposition of the asset turnover ratio. Clearly, if the firm can generate more revenues with lower working capital or lower assets, the asset turnover will increase.

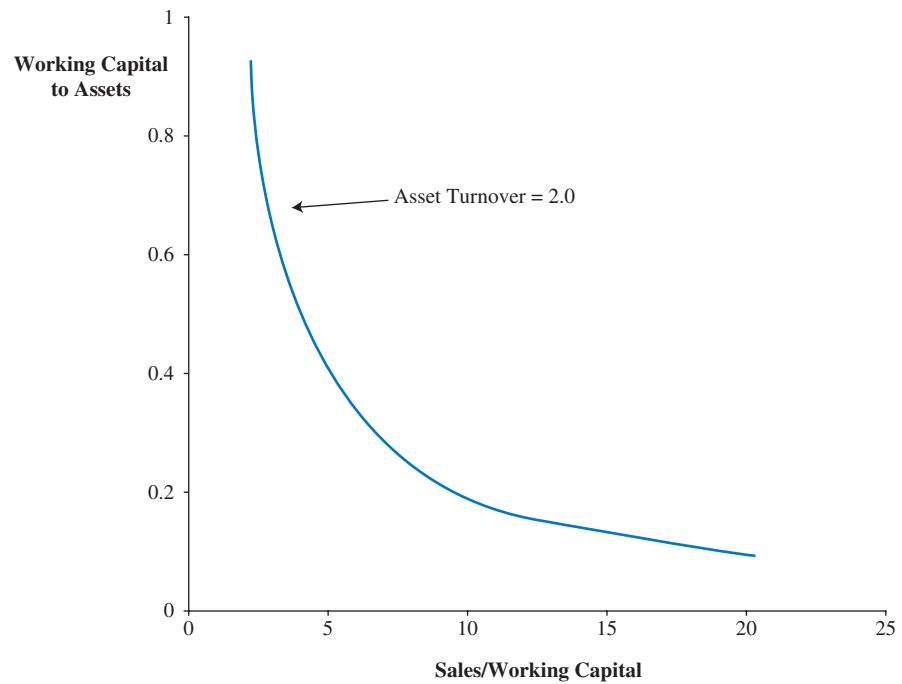

## Other Important Ratios

While the structured approach is a good start to financial analysis, it is not comprehensive. For instance, a common-size income statement is a great tool for analyzing various margins (such as the gross margin or operating margin) and locating areas of the income statement

## ILLUSTRATION A1-6

## Asset Turnover (= 2.0) Breakdown

where certain expenses are growing faster than revenues. Also, there are other groupings of ratios that bear mention. By *groupings*, we mean that these ratios should be considered jointly rather than individually. For instance, consider the following three ratios:

1. Gross margin percentage (sales less cost of goods sold divided by sales)
2. Receivables turnover (sales divided by receivables)
3. Inventory turnover (cost of goods sold divided by inventory)

Turnover ratios are useful because they compare an income statement number and a balance sheet number (the name of the turnover ratio always defines the item in the denominator of the ratio). The gross margin ratio might indicate that sales grew faster than cost of goods sold, while a decrease in the inventory turnover may provide a warning that the firm could have over-purchased inventory.

Two final ratios to consider in your evaluation are:

1. Long-term debt to assets
2. Cash interest coverage ratio (cash from operations plus cash interest and cash taxes divided by cash interest paid)

The first ratio measures the amount of debt included in the capital structure, while the second ratio provides a measure of the firm's ability to meet the cash interest payment.

## Chapter 1 – Review Questions

The review questions accompanying this course are designed to assist you in achieving the course learning objectives. The review section is not graded; do not submit it in place of your qualified assessment. While completing the review questions, it may be helpful to study any unfamiliar terms in the glossary in addition to course content. After completing the review questions, proceed to the review question answers and rationales.

1. Which of the following is accurate regarding merger and acquisition activity historically?
  - a. 2009 M&A activity reached historic highs and has trailed off since.
  - b. Low stock valuations in late 2008 and early 2009 fueled M&A activity.
  - c. Lower interest rates after 2009 spurred the largest growth in M&A activity since the 1990s.
  - d. 2008 saw a dramatic rise in bankruptcy-related M&A activity.
  
2. Which of the following types of M&A benefits was seen consistently from 2001 to 2010 accounting for more than 30% of the M&A activity each quarter during that period?
  - a. Diversification.
  - b. Expansion to international markets.
  - c. Financial “tax gain” synergies.
  - d. Divestitures.
  
3. Which of the following is accurate regarding a stock acquisition versus an asset acquisition?
  - a. A stock acquisition means that the acquiring firm will issue its own stock in order to acquire the stock of the other firm.
  - b. In an asset acquisition, the acquiring firm must acquire 100% of the assets of the other firm regardless of the medium of exchanged used to do so.
  - c. In an asset acquisition, the acquiring firm will issue its own stock in order to acquire the assets of the other company.
  - d. In a stock acquisition, the acquiring firm must acquire 100% of the stock of the other firm regardless of the medium of exchanged used to do so.
  
4. Which of the following statements is accurate regarding a statutory merger?
  - a. Only the acquiring company survives the merger as a legal entity.
  - b. The acquiring company may buy 100% of the stock of the acquired company or some smaller percentage depending on the dispersion of stock among stockholders.
  - c. Both companies will continue in existence for at least some period of time after the merger.
  - d. The board of the acquired company does not have much input into the terms of the merger.

5. Which of the following has different recognition rules for acquisitions which must be considered as part of due diligence?
  - a. LIFO inventory.
  - b. Indirect production expense allocations.
  - c. Contingent liabilities.
  - d. Changes in estimates.
  
6. Which of the following is accurate regarding the economic entity concept of consolidation?
  - a. The primary purpose of consolidated financial statements is to provide information relevant to the controlling stockholders.
  - b. It represents the view that the affiliated companies are a separate, identifiable entity and evaluation is only possible if all of the assets, liabilities and equity are combined.
  - c. The non-controlling or minority interest is presented as a liability.
  - d. The consolidated balance sheet is essentially a modification of the parent's balance sheet with the assets and liabilities of all subsidiaries substituted for the parent's investment in subsidiaries.
  
7. SFAC #6 fails to define:
  - a. Revenues.
  - b. Comprehensive income.
  - c. Investment by owners.
  - d. Earnings.

## Chapter 2 – Accounting for Business Combinations

### Learning Objectives

After completing this section of the course, you will be able to:

- Identify the major changes in the accounting for business combinations passed by the FASB in 2001 as well as changes made in December 2007, noting the reasons for both sets of changes.
- Cite elements of the goodwill impairment test, including its frequency, the steps laid out in the new standard, and some of the implementation problems.
- Cite the approach to reporting acquisition expenses.
- Identify the use of pro forma statements in business combinations.
- Identify the appropriate method for valuing assets, including goodwill, and liabilities in a business combination using the acquisition method.
- Identify how contingent consideration impacts the valuation of assets in a business combination using the acquisition method.
- Identify characteristics of leveraged buyouts.
- Cite disclosure requirements for business combinations.
- Recognize differences between GAAP and IFRS accounting for business combinations.

# ACCOUNTING FOR BUSINESS COMBINATIONS

---

## CHAPTER CONTENTS

- 2.1 ACCOUNTING STANDARDS ON BUSINESS COMBINATIONS: BACKGROUND
- 2.2 PRO FORMA STATEMENTS AND DISCLOSURE REQUIREMENT
- 2.3 EXPLANATION AND ILLUSTRATION OF ACQUISITION ACCOUNTING
- 2.4 THE MEASUREMENT PERIOD (AND MEASUREMENT PERIOD ADJUSTMENTS)
- 2.5 CONTINGENT CONSIDERATION IN AN ACQUISITION
- 2.6 LEVERAGED BUYOUTS
- 2.7 IFRS VERSUS U.S. GAAP

---

## 2.1 ACCOUNTING STANDARDS ON BUSINESS COMBINATIONS: BACKGROUND

In a controversial move, Dell Inc. announced a proposed \$24.4 billion deal to take itself private in 2013. CEO Brian Gladden claimed the deal delivered immediate value to shareholders, but critics felt the offer was too cheap and undervalued the company.<sup>1</sup>

In the wake of the Sarbanes-Oxley Act of 2002, a number of companies chose to go private in an effort to cut costs. The accounting for one type of privatization, the leverage buyout, is described in Section 2.6.

---

<sup>1</sup> WSJ, “Dell to Sell Itself for \$24.4 Billion,” by Ben Worthen, I. Sherr, and S. Oride, 2/5/2013.

**LO 1** FASB's two major changes for business combinations.

FASB shook up the accounting community in the area of business combinations in December of 2007 by releasing two new standards. The first, *SFAS No. 141R*, "Business Combinations," completely replaced *FASB Statement No. 141*. This pronouncement supports the use of a single method in accounting for business combinations, and uses the term "acquisition method" in place of the previous term, "purchase method," to describe the preferred approach. Most of the primary conclusions reached in *SFAS No. 141* (and elaborated upon in the following paragraph) were carried forward without reconsideration. The differences addressed in the newer standard related to a number of criticisms that have haunted the accounting for business combinations for some time. These standards are now codified in FASB ASC topic 805 [Business Combinations].

### IFRS

One of the criticisms is that the standards of accounting for business combinations differ significantly between U.S. GAAP and International Financial Reporting Standards (IFRS). In 2002 the two principal standard setting boards, the FASB and the IASB (International Accounting Standards Board), agreed to reconsider the topic jointly with the objective of convergence, or finding a common and comprehensive standard that could be used both domestically and in cross-border situations. Nonetheless, the standards are not identical. Those differences are described at the end of this chapter.

The objective of the change was to recommend a single method that should result in more comparable and transparent financial statements. The essence of the change is that the acquired business should be recognized at its fair value on the acquisition date rather than its cost, regardless of whether the acquirer purchases all or only a controlling percentage (even if the combination is achieved in stages). In the past, when a business combination was achieved in stages (for example, a company purchases 20% of another company at one date, purchases an additional 20% a number of years later, and then achieves control by purchasing 12% at a still later date), the cost amounts from prior purchases (which might have occurred decades earlier) were combined with current values to create an accumulated total that reflected a mix of fair values and old book values being carried forward. This combination of amounts has long been criticized as lacking consistency, understandability, and usefulness. **Under current GAAP the fair values of all assets and liabilities on the acquisition date, defined as the date the acquirer obtains control of the acquiree, are reflected in the financial statements.** This change has the potential to affect the timing and the structure of deals.

### IN THE NEWS

The amendment to business combinations, put forward jointly by the International Accounting Standards Board (IASB) and U.S. Financial Accounting Standards Board (FASB), has its share of opponents. Various parties, including companies, analysts, accountants and regulatory bodies, tried to block the change, which they claimed was an effort by the standard setters to implement new rules rather than fine-tune the existing ones. The new standard places emphasis on fair values in a business combination, even in cases where less than 100% of the equity interests in the acquiree are purchased. Opponents state that the outcome of placing more goodwill on a company's financial statement is to produce artificial figures that fail to reflect the true value of a takeover transaction.<sup>2</sup>

The standards for business combinations now apply to business combinations involving only mutual entities, those achieved by contract alone, and the initial consolidation of variable interest entities (VIEs). Variable interest entities are discussed in Chapter 3.

A second standard, also issued on December 4, 2007, "Noncontrolling Interests in Consolidated Financial Statements," amended *Accounting Research Bulletin (ARB) No. 51* (now included in FASB ASC topic 810 [Consolidations]). This pronouncement established standards for the reporting of the noncontrolling interest when the acquirer obtains control without purchasing 100% of the acquiree. A noncontrolling (or minority) interest does not exist in net asset acquisitions, which are the focus of this chapter. Thus most of the discussion of this issue is deferred to Chapter 3.

<sup>2</sup> *Finance Week*, "Analysis: New Merger Rules to Increase Scrutiny in Deal-Making," 11/16/05, p. 14.

## CHANGES IN GAAP/ASC TOPIC 8051 WITH SIGNIFICANT IMPLICATIONS FOR DEALS

| Issue                                     | Prior GAAP  | Current GAAP   |
|---|---|--|
| Measurement date for securities issued    | Use a reasonable period of time before and after the terms are agreed to and announced.   | Use the fair value on the acquisition date.  |
| Acquisitions costs                        | Capitalize the costs.   | Expense as incurred.   |
| Acquisition of control but less than 100% | Minority interest is recorded at historical cost.   | Non-controlling interest is recorded at fair value along with 100% of the goodwill.  |
| In-process R&D                            | Included as part of purchase price, but then immediately expenses.  | Included as part of purchase price, treated as an asset.   |
| Negative goodwill                         | Reduction of certain noncurrent assets with the remained as extraordinary gain.   | No reduction of assets is recorded, record as a gain on the income statement.  |
| Contingent consideration                  | Record when determinable and reflect subsequent changes in the purchase price.  | Record at fair value on the acquisition date with subsequent changes recorded on the income statement.   |
| Business definition                       | A business is defined as a self-sustaining integrated set of activities and assets conducted and managed for the purpose of providing a return to investors. The definition would exclude early-stage development entities. | A business or a <i>group of assets</i> no longer must be self-sustaining. The business or group of assets must be capable of generating a revenue stream. This definition would include early-stage development entities.  |
| Decreases in ownership interest           | Include gains and losses on decreases in ownership interest in income.  | Decreases in ownership (if control is still maintained) are capital transactions. Decreases in ownership accompanied by a loss of control result in a gain or loss. The gain or loss is realized on the portion of interest sold an unrealized on the equity interests retained. |

### RELATED CONCEPTS

Requiring one method for all acquisitions makes financial statements more comparable across firms than allowing two methods for similar events.

**Earlier Standards** In a unanimous vote in 2001, the *Financial Accounting Standards Board (FASB)* reaffirmed a decision that had drawn strong opposition from businesses and had led some members of Congress to propose legislative intervention. But opposition softened when the Board voted to change the alternative method of accounting for mergers, purchase accounting, to make it less onerous. Companies had often tried to avoid ‘purchase accounting’ because it required them to add the intangible asset goodwill to their balance sheets and then write off the goodwill over 20 years or more, lowering profits. But the Board decided that it would no longer require, or even allow, the write-off of goodwill until the company concluded that its value was impaired. This could mean higher profits.<sup>3</sup>

Historically, two distinct methods of accounting for business combinations were permitted in the United States: purchase and pooling of interests. Although the majority of mergers were accounted for by the purchase method, in cases where the stock of one company was being exchanged for all the assets or most of the stock (90% or more) of the other, firms sometimes went to great lengths to satisfy an elaborate set of pooling criteria laid out by the U.S. standard setters. Today all mergers in the United States must be accounted for by the acquisition (or purchase) method.

<sup>3</sup> *New York Times*, “Board Ends Method of Accounting for Mergers,” by Floyd Norris, 1/25/01, p. C9.

With the issuance of *SFAS No. 141*, “Business Combinations,” [FASB ASC 805] and *SFAS No. 142*, “Goodwill and Other Intangible Assets,” [FASB ASC 350] in June 2001, the FASB culminated a project on business combinations brought to its agenda in August 1996 to reconsider *APB Opinion No. 16*, “Business Combinations,” and *APB Opinion No. 17*, “Intangible Assets.” Although some companies’ management and even analysts responded initially with rosy predictions that the earnings numbers would look a lot *better* for companies with large amounts of goodwill, less than a year later many of these same firms were writing off large chunks of goodwill under the new impairment rules.

**Lo 2** FASB’s two major changes of 2001.

In a pronouncement issued in June 2001, **the Board reaffirmed its proposal to prohibit the popular method referred to as the pooling of interests and decided that goodwill would no longer be amortized and would instead be tested periodically for impairment in a manner different from other assets.** Specifically, use of the pooling method has been prohibited for business combinations initiated since June 30, 2001. Goodwill acquired in a business combination completed since June 30, 2001, should not be amortized.

IN  
THE  
NEWS

The Board included the following statements in justifying the changes: Analysts and other users of financial statements indicated that it was difficult to compare the financial results of entities because different methods of accounting for business combinations were used. Users of financial statements also indicated a need for better information about intangible assets because those assets are an increasingly important economic resource for many entities and are an increasing proportion of the assets acquired in many business combinations. Company managements indicated that the differences between the pooling and purchase methods of accounting for business combinations affected competition in markets for mergers and acquisitions.

As might be predicted, responses to the changes ranged from complaints that the FASB had “given away the store”<sup>4</sup> to praise that the combined changes would yield enhanced flexibility for businesses.

Others, such as Morgan Stanley Dean Witter’s Trevor Harris, argued from the onset that there should be no long-term effect on stock prices and that any initial price effect from the changed accounting standards was merely a momentum play.<sup>5</sup>

While fans of the standards regarding goodwill accounting applauded their flexibility, critics questioned whether the goodwill impairment test opens the door for manipulation of earnings via the timing of write-offs, and some suggested an increase in hostile activity.

## Goodwill Impairment Test

**Lo 3** Goodwill impairment assessment.

For **public companies**, goodwill is no longer amortized on the income statement. Instead, goodwill of each reporting unit is tested for impairment on an annual basis. The annual goodwill impairment test may be performed any time during the fiscal year, provided the test is performed at the same time every year. Different reporting units may be tested for impairment at different times. In January 2014, FASB amended the standard for **private companies**, allowing them to elect an alternative model. Under this alternative, goodwill is amortized over a period not to exceed 10 years, and a simplified impairment model is used.

For purposes of the goodwill impairment test for **public companies**, all goodwill must be assigned to a reporting unit. Public entities may first assess *qualitative* factors to determine whether it is more likely than not that the fair value of the reporting unit is less than its carrying amount. Qualitative factors include items such as general economic conditions, increased competitive environment, declining cash flows, etc. If the assessment of the qualitative factors indicate that it is more likely than not (a likelihood greater than 50%) that the fair value of the reporting unit is less than its carrying amount (with goodwill), the entity must perform a two-step *quantitative* goodwill impairment test.

<sup>4</sup> *WSJ*, “FASB Backs Down on Goodwill-Accounting Rules,” 12/7/00, page A2.

<sup>5</sup> *WSJ*, “Goodwill Hunting: Accounting Change May Lift Profits, but Stock Prices May Not Follow Suit,” by Jonathan Weil, 1/25/01, p. C1.

In the *first step*, the reporting unit must determine if the carrying value is greater than zero. If the carrying amount of a reporting unit is zero or less, the second step is performed when it is more likely than not that a goodwill impairment exists. Circumstances that determine whether it is more likely than not would include unanticipated competition, loss of key personnel, an adverse action by a regulator, and so on. If the carrying amount of a reporting unit is greater than zero and its fair value *exceeds* its carrying amount, goodwill of the reporting unit is considered not impaired; thus, the second step of the impairment test is unnecessary. If the carrying amount of a reporting unit is greater than zero and its fair value is *less than* its carrying amount, goodwill of the reporting unit is considered impaired; thus, the second step of the impairment test is needed. In the *second step*, the carrying value of the goodwill is compared to its implied fair value. See Illustration 2-1 for a visual illustration of this process.

### IN THE NEWS

*What is a reporting unit?* A reporting unit is the level at which management reviews and assesses the operating segment's performance—in other words, discrete business lines or units that can be grouped by geography and can produce stand-alone financial statements (for example, four operating divisions reporting to the corporate parent). A company can use a reporting unit one level below the operating segment for impairment testing if components of an operating segment engage in business activities for which discrete financial information is available, have economic characteristics different from the other components of the operating segments, and are at the level at which goodwill benefits are realized.

### IN THE NEWS

*How tough is it to establish a value for the reporting unit?*

Businesses may not like the impairment rules because of the difficulty they have determining the fair value of the segment. However, if the reporting unit is a whole company, the current stock price will represent fair value. Although many finance managers object that current trading price doesn't always reflect fair value, CPAs like this measure because it is objective and verifiable.<sup>6</sup>

The calculation of the implied fair value of goodwill used in the impairment test is similar to the method illustrated later in this chapter for valuing the goodwill at the date of the combination. The FASB specifies that an entity should allocate the fair value of the reporting unit at the review date to all of its assets and liabilities (including unrecognized intangible assets other than goodwill) as if the unit had been acquired in a combination where the fair value of the unit was the purchase price. The excess of that purchase price over the fair value of identifiable net assets (assets minus liabilities) is the implied fair value of the goodwill.

After a goodwill impairment loss is recognized, the adjusted carrying amount of the goodwill becomes its new accounting basis. Subsequent reversal of a previously recognized impairment loss is prohibited once the measurement of that loss has been completed.

If an impairment test for goodwill occurs at the same time as an impairment test for any other asset, the FASB instructs that the other asset should be tested for impairment first. FASB also specifies that intangible assets other than goodwill should be amortized over their useful lives (if finite lives exist) and reviewed for impairment in accordance with FASB ASC 350–30–35–17, 18.

## Illustration of Determining Goodwill Impairment

### RELATED CONCEPTS

Verifiability is specified in SFAC No. 8 as an enhancing attribute of accounting information.

As a preliminary test, the entity should assess qualitative factors to determine if it is *more likely than not* that the fair value of the reporting unit is below its book value. If it is, then there are two steps in determining whether the value of goodwill has been impaired.

Assume:

On the date of acquisition:

|                                       |                  |
|---------------------------------------|------------------|
| Fair value of the reporting unit      | \$450,000        |
| Fair value of identifiable net assets | <u>350,000</u>   |
| Goodwill                              | <u>\$100,000</u> |

<sup>6</sup> *Journal of Accountancy*, "Say Goodbye to Pooling and Goodwill Amortization," by S. R. Moehrle and J. A. Reynolds-Moehrle, September 2001, p. 31.

On the first periodic review date:

The first step determines if there is a potential impairment. Step two will be needed only if the carrying value of the reporting unit (including goodwill) is larger than the fair value of the reporting unit. If the carrying value is less, no impairment is considered.

*Step One: Does potential impairment exist (i.e., is step two needed)?*

|  |           |         |
|--|-----------|---------|
| Fair value of the reporting unit                     | \$400,000 |         |
| Carrying value of reporting unit (includes goodwill) |           | 410,000 |

Potential goodwill impairment must be further considered if the carrying value of the reporting unit is larger than \$400,000. Since this occurs, proceed to step two.

Step two determines the amount of the impairment (if any). In step two, the fair value of goodwill is determined by comparing the fair value of the reporting unit at the periodic review date to the fair value of the identifiable net assets at this time. (The difference is the implied value of goodwill on this date.)

*Step Two: What is the amount of goodwill impairment (if any)?*

|  |                  |
|--|------------------|
| Fair value of the reporting unit                     | \$400,000        |
| Fair value of identifiable net assets at review date | <u>325,000</u>   |
| Fair value of goodwill (implied)                     | <u>\$ 75,000</u> |

Since the carrying value of goodwill is \$100,000 and the remaining fair value of goodwill is \$75,000, goodwill impairment of \$25,000 must be reported.

|                            |                  |
|----------------------------|------------------|
| Carrying value of goodwill | \$100,000        |
| Fair value of goodwill     | <u>75,000</u>    |
| Goodwill impairment loss   | <u>\$ 25,000</u> |

See Illustration 2-1.

## Disclosures Mandated by FASB

FASB ASC paragraph 805–30–50–1 requires the following disclosures for goodwill:

1. The total amount of acquired goodwill and the amount expected to be deductible for tax purposes.
2. The amount of goodwill by reporting segment (if the acquiring firm is required to disclose segment information), unless not practicable.

FASB ASC paragraph 350–20–45–1 specifies the presentation of goodwill in the balance sheet and income statement (if impairment occurs) as follows:

- a. The aggregate amount of goodwill should be a separate line item in the balance sheet.
- b. The aggregate amount of losses from goodwill impairment should be shown as a separate line item in the operating section of the income statement unless some of the impairment is associated with a discontinued operation (in which case it is shown net-of-tax in the discontinued operations section).

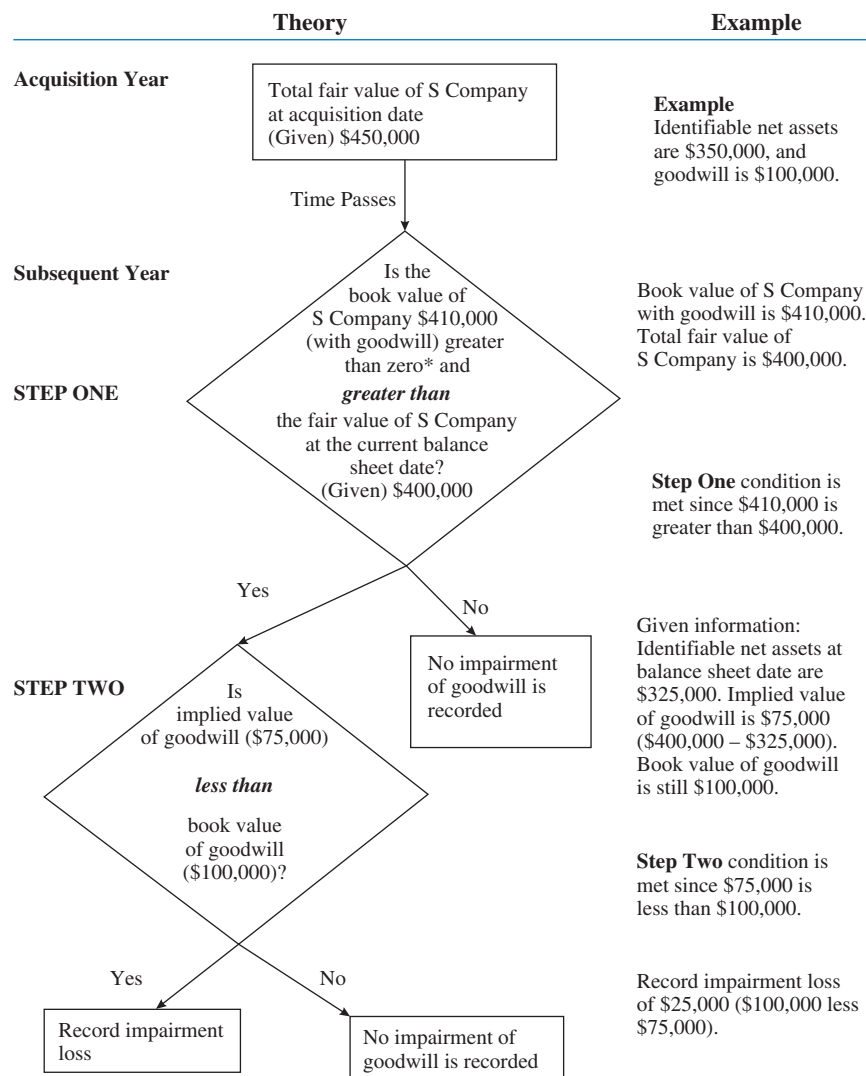

In a period in which an impairment loss occurs, FASB ASC paragraph 350–20–45–2 mandates the following disclosures in the notes:

1. A description of the facts and circumstances leading to the impairment.
2. The amount of the impairment loss and the method of determining the fair value of the reporting unit.
3. The nature and amounts of any adjustments made to impairment estimates from earlier periods, if significant.

### RELATED CONCEPTS

*Full disclosure suggests that all important aspects of acquisitions should be revealed to readers of the financial statements. This includes the reasons for subsequent impairment losses.*

### ILLUSTRATION 2-1 Goodwill Impairment Tests

**IN THE NEWS** CBS Corp. announced that it wrote down the goodwill value of its television and radio assets by \$9.5 billion to \$13.5 billion, resulting in a sizable fourth quarter loss. It is the second consecutive year CBS has taken a goodwill write-down under the accounting rule that requires an annual test for impairment of intangible assets. The most recent write-down is reflective of continued challenges and slow growth in the radio and broadcast television industries.<sup>7</sup>

\*If the carrying value of the reporting unit is zero or less, the second step of the impairment test is performed to measure the amount of impairment loss, if any, when it is more likely than not that a goodwill impairment exists. See FASB ASC paragraph 350-20-35-30 for such circumstances.

**Lo 9** New disclosure requirements for business combinations.

**Other Required Disclosures** FASB ASC paragraph 805–10–50–2 states that to meet its objectives, the acquirer should disclose pertinent information for each material business combination that takes place during the reporting period, to include the following:

- The name and a description of the acquiree.
- The acquisition date.
- The percentage of voting equity instruments acquired.
- The primary reasons for the business combination, including a description of the factors that contributed to the recognition of goodwill.
- The fair value of the acquiree and the basis for measuring that value on the acquisition date.

<sup>7</sup> WSJ, "CBS Posts \$9.14 Billion Loss on Hefty Asset Write-Downs," Brooks Barnes, 2/23/06.

- The fair value of the consideration transferred, including the fair value of each major class of consideration.
- The amounts recognized at the acquisition date for each major class of assets acquired and liabilities assumed in the form of a condensed balance sheet.
- The maximum potential amount of future payments the acquirer could be required to make under the terms of the acquisition agreement.

IN  
THE  
NEWS

A portion of auditors' testimony in the case against former Enron Corp. Chairman Kenneth Lay focused on the "alleged downward manipulation of charges for goodwill expenses." Prosecutors argued that Mr. Lay misled the company's auditors in October 2001 regarding Enron's plans for a water-distribution unit in order to avoid big charges to earnings. The accounting rules introduced in 2001 require a company to write-down an asset if it doesn't meet certain standards, which in the water-distribution's case included whether the company had a costly growth plan. Without such a plan, Enron would have been forced to recognize impairment in an amount in the hundreds of millions of dollars. At the time of the audit, Lay claimed the company planned to spend over \$1 billion on the unit; this statement contradicted earlier claims that the company was going to sell the water operation, a non-core business.<sup>8</sup>

## Other Intangible Assets

An acquired intangible asset other than goodwill should be amortized over its useful economic life if the asset has a limited useful life. Such assets should be reviewed for impairment in accordance with FASB ASC Section 350–30–35 [Intangibles—Subsequent Measurement]. However, if an acquired intangible asset other than goodwill has an indefinite life, it should not be amortized until its life is determined to be finite. Instead it should be tested annually (at a minimum) for impairment.

IN  
THE  
NEWS

FASB recognized the possible impact of the standard on earnings volatility in the following statements: Because goodwill and some intangible assets are no longer amortized, the reported amounts of goodwill and intangible assets (as well as total assets) do not decrease at the same time and in the same manner as under previous standards. There may be more volatility in reported income than under previous standards because impairment losses are likely to occur irregularly and in varying amounts.

## Treatment of Acquisition Expenses

### LO 4 Reporting acquisition expenses.

Under FASB ASC paragraph 805–10–25–23, acquisition-related costs are excluded from the measurement of the consideration paid, because such costs are not part of the fair value of the acquiree and are not assets. This is a change from past GAAP where the purchase method required only indirect costs to be expensed, while direct costs were capitalized as part of the purchase price. **Direct expenses** incurred in the combination include *finder's fees, as well as advisory, legal, accounting, valuation, and other professional or consulting fees.* **Indirect**, ongoing costs include *the cost to maintain a mergers and acquisitions department, as well as other general administrative costs such as managerial or secretarial time and overhead that are allocated to the merger but would have existed in its absence.* Both direct and indirect costs are expensed, and the cost of issuing securities is also excluded from the consideration and accounted for separately from the business combination accounting. Expected restructuring costs (with no obligation at the acquisition date) are also accounted for separately from the business combination. In the absence of more explicit guidance, we assume that **security issuance costs** are assigned to the valuation of the security, thus reducing the additional contributed capital for stock issues or adjusting the premium or discount on bond issues.

<sup>8</sup> WSJ, "Enron Former Auditors Testify on Charges, Reserve Accounts," by Gary McWilliams and John R. Emshwiller, 3/21/06, p. C3.

**ACQUISITION COSTS—AN ILLUSTRATION**

Suppose that SMC Company acquires 100% of the net assets of Bee Company (net book value of \$100,000) by issuing shares of common stock with a fair value of \$120,000. With respect to the merger, SMC incurred \$1,500 of accounting and consulting costs and \$3,000 of stock issue costs. SMC maintains a mergers department that incurred a monthly cost of \$2,000. The following illustrates how these direct and indirect merger costs and the security issue costs are recorded.

**ACQUISITION ACCOUNTING:**

|   |       |         |
|---|-------|---------|
| Professional Fees Expense (Direct)                | 1,500 |         |
| Merger Department Expense (Indirect)              | 2,000 |         |
| Other Contributed Capital (Security Issue Costs)* | 3,000 |         |
| Cash  |       | \$6,500 |

\* FASB ASC paragraph 805-10-25-23 states that the costs to issue debt or equity securities shall be recognized in accordance with other applicable GAAP.

## 2.2 PRO FORMA STATEMENTS AND DISCLOSURE REQUIREMENT

### LO 5 Use of pro forma statements.

Pro forma statements, sometimes called **as-if** statements, are prepared to show the effect of planned or contemplated transactions by showing how they might have affected the historical financial statements if they had been consummated during the period covered by those statements. Pro forma statements serve two functions in relation to business combinations: (1) to provide information in the **planning** stages of the combination and (2) to **disclose** relevant information subsequent to the combination.

First, pro forma statements are often prepared before the fact for combinations under consideration. When management is contemplating the purchase price offer, for example, a number of pro forma statements may be produced, using different assumed purchase prices and projecting one or more years into the future, or alternatively restating a past period as though the firms had been combined. After the boards of directors of the constituents have reached tentative agreement on a combination proposal, pro forma statements showing the effects of the proposal may be prepared for distribution to the stockholders of the constituents for their consideration prior to voting on the proposal. If the proposed combination involves the issue of new securities under *Securities and Exchange Commission (SEC)* rules, pro forma statements may be required as part of the registration statement.

When a pro forma statement is prepared, the tentative or hypothetical nature of the statement should be clearly indicated, generally by describing it as “pro forma” in the heading and including a description of the character of the transactions given effect to. Further description of any other adjustments should be clearly stated on the statement or in related notes. A pro forma balance sheet (based on data presented in Illustration 2-3) that might be prepared for use by the companies’ stockholders is presented in Illustration 2-2. The normal procedure is to show the audited balance sheet as of a given date, individual adjustments for the proposed transaction, and resulting account balances.

Second, pro forma presentation is a valuable method of disclosing relevant information to stockholders and other users subsequent to the combination. Some types of pro forma presentation are required by FASB ASC subparagraph 805-10-50-2(h) if the combined enterprise is a public business enterprise.

If a material business combination (or series of combinations material in the aggregate) occurred during the year, **notes** to financial statements should include on a pro forma basis:

1. Results of operations for the current year as though the companies had combined at the beginning of the year, unless the acquisition was at or near the beginning of the year.
2. Results of operations for the immediately preceding period as though the companies had combined at the beginning of that period if comparative financial statements are presented.

| Common stock                  | 750,000                      | 450,000           | 1,200,000                      |
| Other contributed capital     | 400,000                      | 990,000           | 1,390,000                      |
| Retained earnings             | <u>350,000</u>               |                   | <u>350,000</u>                 |
| Total equities                | <u>\$1,610,000</u>           |                   | <u>\$3,550,000</u>             |

**TEST YOUR KNOWLEDGE** 

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

## Multiple Choice

- Which of the following statements is *true* with respect to the accounting for business combinations under U.S. GAAP?
  - Incomparability of financial statements under the previous rules permitting two distinct methods of accounting for business combinations (purchase and pooling) was corrected by making amortization of goodwill optional.
  - Under the current standards, impairment of goodwill is not accounted for because it does not affect the actual profit of the company.
  - The acquired business should be recognized at its fair value on the acquisition date, regardless of whether the acquirer purchases all or only a controlling percentage.
  - Any goodwill acquired in previous acquisitions should continue to be amortized after the year 2001 for the continuity of the accounting practice.
- Goodwill impairment exists only if the fair value of the business unit:
  - Equals the carrying value of the reporting unit (including goodwill).
  - Is greater than the carrying value of the reporting unit (including goodwill).
  - Is less than the carrying value of the reporting unit (including goodwill).
  - None of the above.
- Which of the following is *incorrect*?
  - Under acquisition accounting, direct acquisition costs are recorded by decreasing goodwill as a contra account.
  - Under acquisition method accounting, indirect acquisition costs (such as expenses incurred by a firm's permanent M&A department) are expensed.
  - Security issue costs, such as brokerage fees, reduce the Excess Paid In Capital account (i.e., are recorded as a debit to that account).
  - Accounting and consulting fees incurred in a business combination are expenses under the current standards for acquisitions.

## 2.3 EXPLANATION AND ILLUSTRATION OF ACQUISITION ACCOUNTING

As the term implies, the acquisition method treats the combination as the acquisition of one or more companies by another. Four steps are required in accounting for a business combination:

- Identify the acquirer.
- Determine the acquisition date.

THE  
NEWS

Bank of New York will swap its retail banking business for J.P. Morgan

Chase's corporate trust unit plus \$150 million in cash. The Bank of New York's retail and regional middle-market businesses were valued at \$3.1 billion while J.P. Morgan Chase's corporate trust business was valued at \$2.8 billion. The difference results in a net cash payment, after negotiations, to Bank of New York.<sup>9</sup>

**LO 6** Valuation of acquired assets and liabilities assumed.

 IN  
THE  
NEWS

St. Jude Medical, Inc. announced that it will acquire Irvine Biomedical,

Inc. (IBI), an Irvine, California-based company that develops electrophysiology (EP) catheter products used by physician specialists to diagnose and treat cardiac rhythm disorders. St. Jude foresees recording an in-process R&D charge of \$8 to \$10 million at closing in connection with this acquisition. Apart from this in-process R&D charge, the transaction will not impact St. Jude's existing EPS guidance for 2004.<sup>10</sup>

3. Measure the fair value of the acquiree.
4. Measure and recognize the assets acquired and liabilities assumed.

Assets acquired by issuing shares of stock of the acquiring corporation are recorded at the fair values of the stock given or the assets received, whichever is more clearly evident. If the stock is actively traded, its quoted market price, after making allowance for market fluctuations, additional quantities issued, issue costs, and so on, is normally better evidence of fair value than are appraisal values of the net assets of an acquired company. Thus, an adjusted market price of the shares issued is commonly used. Where the issued stock is of a new or closely held company, however, the fair value of the assets received must generally be used. Any security issuance costs, whether bonds or stocks, incurred to consummate the merger are deducted from the value assigned to the debt or equity.

Identifiable assets acquired (including intangibles other than goodwill) and liabilities assumed should be recorded at their fair values at the date of acquisition. Any excess of total cost over the sum of amounts assigned to identifiable assets and liabilities is recorded as goodwill. Goodwill should not be amortized but should be adjusted downward only when it is "impaired" as described in the preceding section.

In the past, managers seeking to reduce the amount of goodwill recorded as a result of the acquisition sometimes found creative ways to avoid or reduce goodwill prior to the issuance by increasing the amounts allocated to other accounts. One tactic involved identifying *in-process research and development (R&D)* in the acquired company. FASB standards require that R&D costs be expensed as incurred, not capitalized. In an interpretation of the standard on R&D, FASB stated that some forms of R&D, including a specific research project in progress, which transferred in an acquisition, should also be expensed. Furthermore, the amount to be expensed was to be determined not by the original cost of the actual R&D but by the amount paid by the acquiring company. **However, under current GAAP, in-process R&D is measured and recorded at fair value as an asset on the acquisition date.** This requirement does not extend to R&D in contexts other than business combinations. In any event, the importance of maintaining supporting documentation for any amounts assigned to R&D is clear.

When the net amount of the fair values of identifiable assets less liabilities *exceeds the total cost* of the acquired company, the acquisition is sometimes referred to as a **bargain gain**. When a bargain acquisition occurs, either some of the acquired assets must be adjusted downward or a gain must be recognized to balance the accounts. Because of its reluctance to recognize income in a purchase or acquisition (where the usual facets of revenue recognition are absent), the FASB had, *in the past*, required that most long-lived assets be written down on a pro rata basis in such a situation before recognizing any gain. If the initial measurement of an acquisition results in a bargain purchase, FASB ASC paragraph 805-30-25-4 requires the acquirer *to reassess* whether it has correctly identified all of the assets acquired and all of the liabilities assumed *before* recognizing a gain on a bargain purchase. As part of the required reassessment, the acquirer needs to review the procedures used to measure the amounts recognized at the acquisition date. It does not, however, require that any asset be marked down *below* its fair value. Once that determination is established, then **the excess of acquisition-date fair value of net assets over the consideration paid is recognized in income.**

**Acquisition Example** Assume that on January 1, 2015, P Company, in a merger, *acquired the assets* and assumed the liabilities of S Company. P Company gave one of its \$15 par value common shares to the former stockholders of S Company for every two shares of the \$5 par value common stock they held. Throughout this text, the company names P and S are frequently used to distinguish a parent company from a subsidiary. In an asset acquisition, these terms are inappropriate because the books of the acquired firm

| Retained earnings   | 350,000            | 140,000            |                    |                   |
| Total Stockholders' equity  | <u>1,500,000</u>   | <u>490,000</u>     |                    |                   |
| Total liabilities and stockholders' equity  | <u>\$1,610,000</u> | <u>\$1,000,000</u> |                    |                   |
| Net assets at book value (Assets minus liabilities)                               | <u>\$1,500,000</u> | <u>\$ 490,000</u>  |                    |                   |
| Net assets at fair value  |                    |                    | <u>\$1,210,000</u> |                   |

\* Bonds payable are valued at their present value by discounting the future payments at the current market rate.

are dissolved at the time of acquisition. Nonetheless, the distinction is useful to avoid confusion between the acquirer and the acquired.

P Company common stock, which was selling at a range of \$50 to \$52 per share during an extended period prior to the combination, is considered to have a fair value per share of \$48 after an appropriate reduction is made in its market value for additional shares issued and for issue costs. The total value of the stock issued is \$1,440,000 ( $\$48 \times 30,000$  shares). Balance sheets for P and S companies (along with relevant fair value data) on January 1, 2015, are presented in Illustration 2-3. Because the book value of the bonds is \$400,000, bond discount in the amount of \$50,000 ( $\$400,000 - \$350,000$ ) must be recorded to reduce the bonds payable to their present value.

To record the exchange of stock for the net assets of S Company, P Company will make the following entry:

|   |           |         |
|---|-----------|---------|
| Cash and Receivables                                | 170,000   |         |
| Inventories   | 140,000   |         |
| Land  | 400,000   |         |
| Buildings & Equipment (net)                         | 1,000,000 |         |
| Discount on Bonds Payable                           | 50,000    |         |
| Goodwill (1,440,000 - 1,210,000**)                  | 230,000   |         |
| Current Liabilities                                 |           | 150,000 |
| Bonds Payable                                       |           | 400,000 |
| Common Stock* (30,000 × \$15)                       |           | 450,000 |
| Other Contributed Capital* (30,000 × [\$48 - \$15]) |           | 990,000 |

\* The sum of common stock and other contributed capital is \$1,440,000.

\*\* Fair value of net assets =  $\$1,710,000 - \$500,000 = \$1,210,000$ .

**ILLUSTRATION 2-4****P Company Balance Sheet after Acquisition, January 1, 2015**

|   |           |                    |
|---|-----------|--------------------|
| Cash and receivables                                    |           | \$ 420,000         |
| Inventories   |           | 400,000            |
| Land  |           | 1,000,000          |
| Buildings & equipment                                   | 1,800,000 |                    |
| Accumulated depreciation—buildings & equipment          | (300,000) | 1,500,000          |
| Goodwill  |           | 230,000            |
| Total assets  |           | <u>\$3,550,000</u> |
| Current liabilities                                     |           | \$ 260,000         |
| Bonds payable   | \$400,000 |                    |
| Less: Bond discount                                     | 50,000    | 350,000            |
| <i>Total liabilities</i>                                |           | 610,000            |
| Common stock, \$15 par value, 80,000 shares outstanding | 1,200,000 |                    |
| Other contributed capital                               | 1,390,000 |                    |
| Retained earnings                                       | 350,000   |                    |
| Stockholders' equity                                    |           | <u>2,940,000</u>   |
| Total liabilities and equity                            |           | <u>\$3,550,000</u> |

After the merger, S Company ceases to exist as a separate legal entity. Note that under the acquisition method the cost of the net assets is measured by the fair value (30,000 shares  $\times$  \$48 = \$1,440,000) of the shares given in exchange. Common stock is credited for the par value of the shares issued, with the remainder credited to other contributed capital. Individual assets acquired and liabilities assumed are recorded at their fair values. Plant assets are recorded at their fair values in their current depreciated state (without an initial balance in accumulated depreciation), the customary procedure for recording the purchase of new or used assets. Bonds payable are recorded at their fair value by recognizing a premium or a discount on the bonds. After all assets and liabilities have been recorded at their fair values, an excess of cost over fair value of \$230,000 remains and is recorded as goodwill.

A balance sheet prepared after the acquisition of S Company is presented in Illustration 2-4.

If an acquisition takes place within a fiscal period, GAAP requires the inclusion of the acquired company's revenues and expenses in the purchaser's income statement only from the date of acquisition forward. Income earned by the acquired company prior to the date of acquisition is considered to be included in the net assets acquired.

## Income Tax Consequences in Business Combinations

The fair values of specific assets acquired and liabilities assumed in a business combination may differ from the income tax bases of those items. A deferred tax asset or liability should be recognized for differences between the assigned values and tax bases of the assets and liabilities recognized in a business combination. The treatment of income tax consequences is addressed in Appendix 2A, which is available at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).

## Bargain Acquisition Illustration (Purchase Price Below Fair Value of Identifiable Net Assets)

When the price paid to acquire another firm is lower than the fair value of identifiable net assets (assets minus liabilities), the acquisition is referred to as a *bargain*. Although less common than acquisitions involving goodwill, bargain acquisitions do occur and require

IN  
THE  
NEWS

Chicago-based Abbott Laboratories completed its \$4.1 billion cash

acquisition of Guidant Corp.'s vascular-device business. Abbott originally agreed to the purchase during the bidding war between Johnson & Johnson and Boston Scientific over cardiac-device maker Guidant. Abbott's vascular operations generated just \$253 million in revenues in 2005 while Guidant's had more than \$1 billion in 2005. Abbott said it expects the combined vascular group to have revenue of \$3 billion in 2006. Experts consider Abbott to have obtained a solid bargain in its purchase.<sup>11</sup>

the application of specific rules to conform to generally accepted accounting principles. However, FASB simplified this issue.

- Any previously recorded goodwill on the seller's books is eliminated (and no new goodwill recorded).
- A **gain** is reflected in current earnings of the acquiree to the extent that the fair value of net assets exceeds the consideration paid.<sup>12</sup>

**Example of a Bargain Purchase** Assume that Payless Company pays \$17,000 cash for all the net assets of Shoddy Company when Shoddy Company's balance sheet shows the following book values and fair values:

|                                     | <i>Book Value</i> | <i>Fair Value</i> |
|-------------------------------------|-------------------|-------------------|
| Current Assets                      | \$ 5,000          | \$ 5,000          |
| Buildings (net)                     | 10,000            | 15,000            |
| Land                                | 3,000             | 5,000             |
| <b>Total Assets</b>                 | <b>\$18,000</b>   | <b>\$25,000</b>   |
| Liabilities                         | \$ 2,000          | \$ 2,000          |
| Common Stock                        | 9,000             |                   |
| Retained Earnings                   | 7,000             |                   |
| <b>Total Liabilities and Equity</b> | <b>\$18,000</b>   |                   |
| Net Assets at Book Value            | \$16,000          |                   |
| Net Assets at Fair Value            |                   | \$23,000          |

## RELATED CONCEPTS

Because a gain incurred on purchase of assets, or a related firm, does not meet the conceptual view of appropriate *revenue recognition* (no earnings process has occurred), FASB continues to strive to find the best approach for bargain acquisitions.

Cost of the acquisition (\$17,000) minus the fair value of net assets acquired (\$23,000) produces a bargain, or an excess of fair value of net assets acquired over cost of \$6,000.

The entry by Payless Company to record the acquisition is then:

|  |        |        |
|--|--------|--------|
| Current Assets                           | 5,000  |        |
| Buildings                                | 15,000 |        |
| Land                                     | 5,000  |        |
| Liabilities                              |        | 2,000  |
| Cash                                     |        | 17,000 |
| Gain on acquisition of Shoddy (ordinary) |        | 6,000  |

## 2.4 THE MEASUREMENT PERIOD (AND MEASUREMENT PERIOD ADJUSTMENTS)

The measurement period is the period after the acquisition date during which the acquirer may adjust the provisional amounts recognized for a business combination. The measurement period provides the acquirer with a reasonable time to obtain the information necessary to identify and measure any of the following as of the acquisition date:

- The identifiable assets acquired, liabilities assumed, and any noncontrolling interest in the acquiree
- Any consideration transferred to the acquiree

<sup>11</sup> *Chicago Tribune*, "Abbott Completes Vascular Purchase," James P. Miller, 4/22/06.

<sup>12</sup> Under previous GAAP, the excess of fair value over cost was allocated to reduce long-lived assets (with certain specified exceptions) in proportion to their fair values in determining their assigned values. If the long-lived assets were reduced to zero, and still an excess remained, an extraordinary gain was recognized under *SFAS No. 141*. Prior to *SFAS No. 141*, negative goodwill was recorded as a deferred credit and amortized. Current GAAP does not permit the recording of negative goodwill in this manner nor is the recognized gain to be treated as extraordinary.

- c. In a business combination achieved in stages, any previous equity interest held by the acquirer
- d. The amount recognized as goodwill or the gain from a bargain purchase

When the initial accounting for a business combination is incomplete by the end of the first reporting period, the acquirer should use provisional amounts in the financial statements for any item in which the accounting is incomplete. During the measurement period, the acquirer is required to **retrospectively adjust** the provisional amounts recognized at the acquisition date to reflect *new information* obtained about facts and circumstances *that existed at the acquisition date*.

Also during the measurement period, the acquirer recognizes additional assets or liabilities if new information is obtained about facts and circumstances that existed at the acquisition date which, if known, would have resulted in the recognition of those assets and liabilities. The **measurement period ends** as soon as the acquirer receives the information it was seeking about facts and circumstances that existed at the acquisition date, or learns that more information is not obtainable. However, **the measurement period shall not exceed one year** from the acquisition date.

The acquirer recognizes an increase (decrease) in the provisional amount recognized for an identifiable asset (liability) by means of a decrease (increase) in goodwill. During the measurement period, the acquirer should recognize adjustments to the provisional amounts as if the accounting for the business combination had been completed at the acquisition date. Further, the acquirer should revise comparative information for prior periods presented in financial statements if needed, including changes in depreciation, amortization, or other income effects recognized in completing the initial accounting.

**After the measurement period ends**, the acquirer only revises the accounting for a business combination to correct an error.

## 2.5 CONTINGENT CONSIDERATION IN AN ACQUISITION

### LO 7 Contingent consideration and valuation of assets.

Purchase agreements sometimes provide that the purchasing company will give additional consideration to the seller if certain specified future events or transactions occur. The contingency may require the payment of cash (or other assets) or the issuance of additional securities. Current GAAP requires that all contractual contingencies, as well as non-contractual liabilities for which it is **more likely than not** that an asset or liability exists, be measured and recognized at fair value on the acquisition date.\* This includes contingencies based on earnings, (often referred to as earnouts) guarantees of future security prices, and contingent payouts based on the outcome of a lawsuit. For example, if the acquirer agrees to transfer additional equity interests, cash or other assets to the former owners of the acquiree at some future date if *specified targets are met*, the acquirer should measure and recognize the fair value of the *contingent consideration* as of the acquisition date. That consideration would be classified as either debt or equity on the basis of other generally accepted accounting principles.

*SFAS No. 141R* (FASB ASC Topic 805 Business Combinations) changed the accounting for earnouts both on the measurement date and on subsequent dates (potential remeasurement of related liabilities or assets). In an earnout, for instance, the acquiring firm might agree to pay additional cash if the revenue of the acquired firm exceeds some specified future amount. Alternatively, future payments might be based upon gross margin, or earnings targets, or contingent upon the achievement of certain milestones such as regulatory approval of a drug. If there is *significant uncertainty* surrounding the future performance of a target, the acquiring firm often includes earnouts as part of the consideration

\* "Otherwise, non-contractual liabilities are recorded under other applicable GAAP (see FASB ASC Topic 450 Contingencies)."

paid to help mitigate the risk of overpayment. Since 2010, public acquirers in the United States have used earnouts in approximately 9% of all acquisitions.

*SFAS No. 141R* requires the acquirer to recognize contingent consideration and to measure the fair value of the consideration at the acquisition date. Typically, these are level 3 fair value liabilities.<sup>13</sup> Under the prior FASB standard, contingent consideration obligations usually were not recognized at the acquisition date, and were typically only recognized when the contingency was resolved and consideration was issued or became issuable.

Whether the consideration is classified as a liability or equity is based on FASB ASC Topic 480, Distinguishing Liabilities from Equity. An arrangement will generally be classified as a liability if it is settled with a variable number of a buyer's equity shares and creates

1. a fixed obligation known at inception,
2. an obligation, the amount of which varies inversely with changes in the fair value of the buyer's equity shares, or
3. an obligation, the amount of which varies based on something other than the fair value of the buyer's equity shares.

Equity classification generally requires that a fixed number of shares be paid and that the performance target be based on the operations of the acquirer or acquiree (and not on an external index).

Examples of equity shares used in contingent consideration that would be treated as a liability include: (1) the acquirer is required to issue additional shares if the acquirer's share price drops below a certain price after a year; (2) the acquirer's obligation is based on something other than the acquirer's operations, such as the S&P 500 index or oil price futures; and (3) the number of contingent shares changes based on different levels of the acquirer's or target's revenue. The FASB decided that obligations for contingent consideration classified as equity should not be remeasured after the acquisition date. Furthermore, many contingent consideration obligations that qualify for classification as liabilities meet the definition of a derivative.

The fair value of the contingent consideration (if classified as a liability) is remeasured each fiscal quarter with the resulting **change in fair value reported as a gain or a loss in operating income**. If the earnout is to be paid in stock (and the stock qualifies for equity classification), the changes in fair value are **never recognized** in income; once the earnout is resolved, any adjustment is made to equity.

The adjustment to fair value for contingent consideration classified as a liability is counterintuitive in the following sense. If the likelihood of an earnout payment increases because the likelihood of meeting the performance targets increases, a loss is recorded (this creates a larger liability because larger future cash payments are expected). The counterintuitive aspect is that this situation implies favorable performance by the target. On the other hand, if the likelihood of an earnout payment decreases, a gain is recorded. Thus if the target's performance is poor, a gain is likely to be recorded. To complicate the interpretation further, we note that the change in the liability may be offset against a change in value of the assets, with a concomitant offsetting in the income statement. For instance, if a fair value gain on contingent consideration is recorded because of poor performance, this might be offset by a loss on impairment of goodwill or other assets.

Since the issuance of *SFAS No. 141R*, contingent consideration has accounted for, on average, 34% of total deal value. Cadman, Carrizosa, and Faurel (2011)<sup>14</sup> report that 46%

<sup>13</sup> Level 3 obligations are obligations that cannot be determined using observable inputs, such as market prices. Fair values of these obligations require estimates.

<sup>14</sup> Cadman, B., R. Carrizosa, and L. Faurel, *The Information Content and Contracting Consequences of SFAS 141(R): the Case of Earnout Provisions*, 2012.

of the *maximum* potential earnout value, on average, is recorded on the books of the acquirer on the date of acquisition as the fair value of the contingent consideration. Thus a significant amount of debt is added to the books when the acquisition includes contingent consideration because most contingent consideration is classified as liabilities rather than as equity.

Potential methods for estimating the fair value of contingent consideration are quite varied. The income approach, for instance, involves estimating expected cash flows under various scenarios and discounting these using some appropriate discount rate and levels of probability for each.

**Contingent consideration classified as a liability:** Assume that P Company acquired all the net assets of S Company (current assets of \$20,000, buildings for \$400,000, and liabilities of \$50,000 for cash of \$510,000). P Company also agreed to pay an additional \$150,000 to the former stockholders of S Company if the post combination revenues over the next two years equaled or exceeded \$800,000 and \$200,000 if the revenues exceeded \$1,000,000. The fair value of the contingent consideration was estimated to be \$60,000. P Company will make the following entry on the date of acquisition:

|                          |         |         |
|--------------------------|---------|---------|
| Current assets           | 20,000  |         |
| Buildings                | 400,000 |         |
| Goodwill                 | 200,000 |         |
| Liabilities              |         | 50,000  |
| Contingent consideration |         | 60,000  |
| Cash                     |         | 510,000 |

Since the contingent consideration is classified as a liability, P Company must remeasure the contingent consideration each quarter and recognize the change in income.

If by the end of the first year, the likelihood has increased that the revenue target will be met, P Company should assess an increase in the fair value of the contingent consideration. If the fair value at the end of year one increased to \$100,000, P Company would make the following entry:

**Increase in Liability:**

|                                    |        |        |
|------------------------------------|--------|--------|
| Loss from contingent consideration | 40,000 |        |
| Contingent Consideration           |        | 40,000 |

If on the other hand, it has become unlikely that either target will be met, P Company should remove the liability altogether, and would make the following entry:

**Decrease in Liability:**

|                                    |        |        |
|------------------------------------|--------|--------|
| Contingent Consideration           | 60,000 |        |
| Gain from contingent consideration |        | 60,000 |

**Contingent consideration classified as equity:** In the previous example, even if the contingent consideration were to be paid in common shares, the contingent consideration would be classified as a liability because the number of shares needed to satisfy the obligation is variable.<sup>14A</sup>

Suppose that in the previous example, P Company agreed to issue an additional 10,000 shares of \$1 par value common stock to the former stockholders of S Company if the post-combination revenues over the next two years equaled or exceeded \$800,000. The fair value

<sup>14A</sup> If shares are issued to satisfy contingent consideration, a variable number of shares can be issued and still meet the equity classification if the settlement amount *varies directly with the acquirer's equity share price* (considered an input used to determine the fair value of a fixed option arrangement).

of the contingent consideration was estimated to be \$40,000. P Company should make the following entry on the date of acquisition:

|  |         |         |
|--|---------|---------|
| Current assets                           | 20,000  |         |
| Buildings                                | 400,000 |         |
| Goodwill                                 | 180,000 |         |
| Liabilities                              |         | 50,000  |
| Paid in capital contingent consideration |         | 40,000  |
| Cash                                     |         | 510,000 |

P Company would not remeasure the paid in capital balance based on changes in the fair value of the common stock. Suppose that the contingent consideration was paid. P Company would make the following entry:

**Consideration is paid:**

|  |        |        |
|--|--------|--------|
| Paid in capital contingent consideration | 40,000 |        |
| Common stock (10,000 shares at \$1 par)  |        | 10,000 |
| Paid in capital—common stock             |        | 30,000 |

If on the other hand, it became unlikely that the target would be met, P Company would make the following entry:

**Consideration is not paid:**

|  |        |        |
|--|--------|--------|
| Paid in capital contingent consideration | 40,000 |        |
| Paid in capital—from unsatisfied targets |        | 40,000 |

Approximately 90% of earnout contracts are based on the performance of the acquired firm, while 9% are based on the performance of the combined firm. One percent of earnouts are not directly related to either and might be based on other indices such as oil futures. When the earnout is based on the performance of the acquired firm, approximately 60% of these are based on revenue and 26% are based on achieving milestones (patent approval). Very few are actually based on earnings.

Although earnouts may be helpful in getting past negotiating obstacles and possibly in reducing up-front payouts for buyers, they suffer from drawbacks in implementation. In particular, they are very difficult to administer and may trigger post-deal conflicts between buyers and sellers. Their primary niche is in the acquisition of private companies where management retention is a key issue. Between 2010 and 2014, earnouts were used in 10% of acquisitions when a public company acquired a private company, but earnouts were used in only 2.8% of acquisitions when a public company acquired another public company. Other places where they are used include cross-border deals and deals where corporate sellers wish to maintain a share in future performance.

Earnouts are more significant in service-related industries and high-growth and high-tech industries. The average earnout period is around 3.6 years with approximately 18% of earnouts extending over five years. Illustration 2-5 summarizes recent trends related to the use of contingent payments.

**TEST YOUR KNOWLEDGE****2.2**

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

**Multiple Choice**

- In the year of a material business combination, pro forma disclosures must include all of the following except:
  - Revenue
  - Net income
  - Tax expenses
  - Nonrecurring items
- Which of the following statements best describes the current authoritative position with regard to the accounting for contingent consideration?
  - If contingent consideration depends on both future earnings and future security prices, an additional cost of the acquired company should be recorded only for the portion of consideration dependent on future earnings.
  - The measurement period for adjusting provisional amounts always ends at the year-end of the period in which the acquisition occurred.
  - A contingency based on security prices has no effect on the determination of cost to the acquiring company.
  - The purpose of the measurement period is to provide a reasonable time to obtain the information necessary to identify and measure the fair value of the acquiree's assets and liabilities, as well as the fair value of the consideration transferred.
- Which of the following statements concerning bargain purchases (purchase price below fair value of identifiable assets) is *correct*?
  - Any previously recorded goodwill on the seller's books is eliminated and no new goodwill is recorded.
  - Long-lived assets, including in-process R&D and excluding marketable securities, are recorded at fair market value minus an adjustment for the bargain, under current GAAP.
  - An extraordinary gain is recorded in the event that all long-lived assets other than marketable securities are reduced to the original purchase price, under current GAAP.
  - Current assets, long-term investments in marketable securities (other than those accounted for by the equity method), assets to be disposed by sale, deferred tax assets, prepaid assets relating to pension or other post-retirement benefit plans, and assumed liabilities are the only accounts that are always recorded at fair market value, under current GAAP.

**2.6 LEVERAGED BUYOUTS****Lo 8** Leveraged buyouts.**IN  
THE  
NEWS**

Kohlberg Kravis Roberts & Co. (KKR) agreed to purchase Flextronics

Software Systems for \$900 million, making the deal India's biggest leveraged buyout ever. Under the agreement, Singapore-based Flextronics International Ltd., the world's largest producer of electronics for other companies, will sell 85% of the unit to KKR. The investment in Flextronics Software surpasses General Electric Co.'s 2004 sale of its Indian call-center group to buyout firms General Atlantic Partners LLC and Oak Hill Capital Partners LP for \$500 million.<sup>15</sup>

A *leveraged buyout (LBO)* occurs when a group of employees (generally a management group) and third-party investors create a new company to acquire all the outstanding common shares of their employer company. The management group contributes whatever stock they hold to the new corporation and borrows sufficient funds to acquire the remainder of the common stock. The old corporation is then merged into the new corporation. The LBO market rose dramatically from 2002 to 2007, as evidenced in Illustration 2-6, before dropping off in 2008 and 2009. In 2010, the number of leveraged buyouts increased by 53% over the number in 2009 and has continued to increase in numbers through 2012.

The basic accounting question relates to the net asset values (fair or book) to be used by the new corporation. Accounting procedures generally followed the rules advocated by the Emerging Issues Task Force in *Consensus Position No. 88-16*, which did not view LBOs as business combinations. *FASB Statement No. 141R* did not comprehensively address this issue but did indicate that this position was no longer applicable. The essence of the change suggests that the economic entity concept should be applied here as well; thus leveraged buyout (LBO) transactions are now to be viewed as business combinations.

**2.7 IFRS VERSUS U.S. GAAP**

As mentioned in Chapter 1, the project on business combinations was the first of several joint projects undertaken by the FASB and the IASB in their move to converge standards globally. Nonetheless, complete convergence has not yet occurred. Most significantly the international standard currently allows the user a choice between writing all assets,

<sup>15</sup> *Bloomberg.com*, "KKR Acquires Flextronics Software in India's Biggest Buyout," by Vivek Shankar, 4/17/06.

including goodwill, up fully (100% including the noncontrolling share), as required now under U.S. GAAP, or continuing to write goodwill up only to the extent of the parent's percentage of ownership. This difference will be illustrated more fully in subsequent chapters in the context of stock (rather than asset) acquisitions. Other differences and similarities are summarized in Illustration 2-7.

**ILLUSTRATION 2-6****The Leveraged Buyout Market (LBO) 2002-2012**

| <i>Year</i> | <i>No. of Deals</i> | <i>% of all Deals</i> |
|-------------|---------------------|-----------------------|
| 2002        | 187                 | 3.1%                  |
| 2003        | 197                 | 3.0%                  |
| 2004        | 366                 | 4.7%                  |
| 2005        | 520                 | 6.1%                  |
| 2006        | 754                 | 7.8%                  |

| 9. <b>Purchased in-process R&amp;D</b> is capitalized with subsequent expenditures expensed. The capitalized portion is then amortized.   | 9. Purchased in-process R&D is capitalized with the potential for subsequent expenditures to be capitalized. The capitalized portion is then amortized.                                      |
| 10. Parent and subsidiary <b>accounting policies do not need</b> to conform.  | 10. Parent and subsidiary accounting policies <b>do need</b> to conform.   |
| 11. <b>Restructuring plans</b> are accounted for separately from the business combination and generally expensed (unless conditions in <i>SFAS No. 146</i> [ASC 420] are met).          | 11. Similar accounting under IFRS 3 and amended IAS 27.  |
| 12. <b>Measurement period</b> ends at the earlier of a) one year from the acquisition date, or b) the date when the acquirer receives needed information to consummate the acquisition. | 12. IFRS 3 is similar to U.S. GAAP.  |
| 13. For <b>step acquisitions</b> , all previous ownership interests are adjusted to fair value, with any gain or loss recorded in earnings.   | 13. IFRS 3 is similar to U.S. GAAP.  |
| 14. <b>Reporting dates</b> for the parent and subsidiary can be different up to three months. Significant events in that time must be <i>disclosed</i> .                                | 14. Permits a three-month difference if impractical to prepare the subsidiary's statements on the same date; however, <i>adjustments</i> are required for significant events in that period. |
| 15. Potential voting rights are generally not considered in determining <b>control</b> .  | 15. Potential voting rights are considered if currently exercisable.   |

IFRS

\* For complete coverage of the differences between IFRS and U.S. GAAP, see *IFRS 2010, Interpretation and Application of International Financial Reporting Standards*, by Epstein and Jermakowicz, 2010 (John Wiley & Sons, Inc.).

## SUMMARY

- 1 *Describe the changes in the accounting for business combinations approved by the FASB in 2007, and the reasons for those changes.* Under FASB ASC 805, the fair values of all assets and liabilities on the acquisition date are reflected in the financial statements, even if control is obtained with less than 100% ownership and even if control is achieved in stages rather than all at once. The scope includes business combinations involving only mutual entities, those achieved by contract alone, and the initial consolidation of variable interest entities (VIEs). *SFAS No. 160* [ASC 810-10-45-15 and 16] establishes standards for the reporting of the noncontrolling interest when the acquirer obtains control without purchasing 100% of the acquiree.
- 2 *Describe the two major changes in the accounting for business combinations approved by the FASB in 2001, as well as the reasons for those changes.* Of the two methods of accounting historically used in the United States—**purchase** (now called acquisition) and **pooling of interests**—pooling is now prohibited. The goodwill often recorded under the acquisition method is no longer amortized but instead is reviewed periodically for impairment. The standard setters believe that virtually all business combinations are acquisitions and should be based on the fair values exchanged.
- 3 *Discuss the goodwill impairment test, including its frequency, the steps laid out in the standard, and some of the implementation problems.* At least once a year, qualitative factors are considered initially to assess the likelihood of goodwill impairment. If indicated, goodwill impairment for each reporting unit is tested in a two-step process at least. In the first step, the fair value of a reporting unit is compared to its carrying amount (goodwill included) at the date of the periodic review. If the fair value at the review date is less than the carrying amount, then the second step is necessary. In the second step, the carrying value of the goodwill is compared to its implied fair value. Determining the fair value of the unit may prove difficult in cases where there are no quoted market prices. See Illustration 2-1 for an illustration of the goodwill impairment rules.
- 4 *Explain how acquisition expenses are reported.* Acquisition-related costs are excluded from the measurement of the consideration paid. Current GAAP requires that both direct and indirect costs be expensed and that the cost of issuing securities be excluded from the consideration and accounted for separately.
- 5 *Describe the use of pro forma statements in business combinations.* Pro forma statements are prepared to show the effect of planned or contemplated transactions on the financial statements. Pro forma statements serve: (1) to provide information in the **planning** stages of the combination and (2) to **disclose** relevant information subsequent to the combination.
- 6 *Describe the valuation of assets, including goodwill, and liabilities acquired in a business combination accounted for by the acquisition method.* Assets and liabilities acquired are recorded at their fair values. Any excess of cost over the fair value of net assets acquired is recorded as goodwill.

- 7** Explain how contingent consideration affects the valuation of assets acquired in a business combination accounted for by the acquisition method. On the date of the acquisition, the purchaser records the contingent consideration at its fair value as an adjustment to the original purchase transaction. Adjustments to provisional amounts may be made throughout the measurement period only if they reveal additional information about conditions that existed at the acquisition date. After the measurement date, subsequent adjustments for any contingent consideration recorded as a liability are recognized in the income statement; contingent consideration recorded as equity is not remeasured.
- 8** Describe a leveraged buyout. A leveraged buyout (LBO) occurs when a group of employees (generally a management group) and third-party investors create a new company to acquire all the outstanding common shares of their employer company. The LBO term results because most of the capital of the new corporation comes from borrowed funds.
- 9** Describe the disclosure requirements according to current GAAP related to each business combination that takes place during a given year. Required disclosures include: the name and a description of the acquiree; the acquisition date; the percentage of voting equity instruments acquired; the primary reasons for the business combination; the fair value of the acquiree and the basis for measuring that value on the acquisition date; the fair value of the consideration transferred; the amounts recognized at the acquisition date for each major class of assets acquired and liabilities assumed; and the maximum potential amount of future payments.
- 10** Describe at least one of the differences between U.S. GAAP and IFRS related to the accounting for business combinations. When a noncontrolling interest exists, IFRS allows a choice between recognizing goodwill fully or only to the extent of the acquired percentage, while U.S. GAAP requires full (100%) recognition of implied goodwill, even when a noncontrolling interests remains.

Appendix 2A, “Deferred Taxes in Business Combinations,” is available online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).

### QUESTIONS

(The letter A after a question, exercise, or problem means that the question, exercise, or problem relates to Chapter Appendix 2A.)

- LO 7** 1. When contingent consideration in an acquisition is based on the acquirer issuing its shares to the seller, how should this contingency be reflected on the acquisition date?
- LO 5** 2. What are pro forma financial statements? What is their purpose?
- LO 3** 3. How would a company determine whether goodwill has been impaired?
- LO 3** 4. AOL announced that because of an accounting change (*FASB Statements Nos. 141R* [ASC 805] and *142* [ASC 350]), earnings would be increasing over the next 25 years by \$5.9 billion a year. What change(s) required by FASB (in *SFAS Nos. 141R and 142*) resulted in an increase in AOL’s income? Would you expect this increase in earnings to have a positive impact on AOL’s stock price? Why or why not?

### Business Ethics

There have been several recent cases of a CEO or CFO resigning or being ousted for misrepresenting academic credentials. For instance, during February 2006, the CEO of RadioShack resigned by “mutual agreement” for inflating his educational background. During 2002, Veritas Software Corporation’s CFO resigned after claiming to have an MBA from Stanford University. On the other hand, Bausch & Lomb Inc.’s board refused the CEO’s offer to resign following a questionable claim to have an MBA.

Suppose you have been retained by the board of a company where the CEO has ‘overstated’ credentials. This company has a code of ethics and conduct which states that the employee should always do “the right thing.”

- (a) What is the board of directors’ responsibility in such matters?
- (b) What arguments would you make to ask the CEO to resign? What damage might be caused if the decision is made to retain the current CEO?

### ANALYZING FINANCIAL STATEMENTS

#### AFS2-1 EBay Acquires Skype **LO 7**

On October 14, 2005, eBay acquired all of the outstanding securities of Skype Technologies S.A. (“Skype”), for a total initial consideration of approximately \$2.593 billion, plus potential performance-based payments of up to approximately \$1.3 billion (based on the euro-dollar exchange rate at the time of the acquisition). Thus the potential purchase price could attain a value of \$3.9 billion. The net tangible and intangible assets acquired were \$262 million.

The initial consideration of approximately \$2.6 billion was comprised of approximately \$1.3 billion in cash and 32.8 million shares of eBay's common stock. For accounting purposes, the stock portion of the initial consideration was valued at approximately \$1.3 billion based on the average closing price of eBay's common stock surrounding the acquisition announcement date of September 12, 2005. The acquisition was treated as a non-taxable purchase transaction, and the purchase price was allocated to the tangible and intangible assets acquired and liabilities assumed based on their respective fair values at the acquisition date.

*Conditions of the earnout:* The maximum amount potentially payable under the performance-based earnout is approximately 1.1 billion euro, or approximately \$1.5 billion (based on a U.S. dollar-to-euro exchange rate of \$1.32), and would be payable in cash or common stock. The earn-out payments are contingent upon Skype achieving certain net revenue, gross profit margin-based, and active user targets. Base earnout payments of up to an aggregate of approximately 877 million euro, or approximately \$1.2 billion, weighted equally among the three targets, would be payable if the targets are achieved over any four-quarter period commencing on January 1, 2006 through June 30, 2009. Additional bonus earnout payments of up to an aggregate of approximately 292 million euro, or approximately \$386 million, weighted equally among the three targets, would be payable if Skype exceeds the targets during calendar year 2008. Any contingent earnout payments made would be accounted for as additional purchase price and would increase goodwill. As of December 31, 2006, the targets had not been met and accordingly, no payments had been made.

*From eBay's 2007 annual report:* In conjunction with the acquisition of Skype in 2005, eBay agreed to certain performance-based earnout payments. During the year ended December 31, 2007, eBay entered into an earnout settlement agreement with each of the former shareholders of Skype who had elected the earnout alternative at the time of the acquisition, under which eBay was relieved of all obligations under the original earnout agreement in exchange for an aggregate cash payment of 375.1 million euro, or approximately \$530.3 million. Goodwill was recorded because the earnout settlement amount was considered additional purchase price. In addition, eBay recorded a charge for impairment of goodwill for \$1.39 billion from the Skype acquisition.

**Required:**

- A. Compute the amount of goodwill acquired when eBay acquired Skype.
- B. Whenever contingent payments are used in an acquisition, it is important to identify the amounts that are part of the business combination or whether the transaction is separate from the business combination. FASB ASC paragraphs 805-10-55-18 through 25 identify factors that help to determine whether a transaction is part of the exchange for the acquiree or not. What are some of these conditions?
- C. Skype's earnings performance in the years following the acquisition never qualified for additional consideration. In 2007, eBay entered into a cash settlement with all former shareholders of Skype with earnout provisions. eBay paid \$530.3 million to be relieved of all obligations under the earnout provisions. Why would they want to do this?

**AFS2-2 eBay Sells Skype LO 5**

On November 19, 2009, eBay sold all the capital shares of Skype to Springboard Group. eBay received cash proceeds of approximately \$1.9 billion, a subordinated note issued by a subsidiary of the Buyer in the principal amount of \$125.0 million and an equity stake of approximately 30 percent in the outstanding capital stock of the Buyer (valued at \$620.0 million).

The sale resulted in the removal of all Skype-related assets and liabilities, which offset the proceeds noted above, resulting in a net gain of \$1.4 billion recorded in interest and other income. In conjunction with the sale of Skype, eBay reached a legal settlement of a lawsuit between Skype, Joltid, and entities controlled by Joltid's founders, resulting in a \$343.2 million charge to general and administrative expense.

In addition, eBay recorded a charge for impairment of goodwill for \$1.39 billion from the Skype acquisition.

*From eBay's 2009 annual report:*

**Required:**

Examine eBay's income statement from 2007 to 2009. Reconstruct eBay's income statement excluding the effects of Skype. Use the following categories in your analysis: Net revenue, Total operating expenses, Operating income, Interest and other income, and Income before taxes.

**AFS2-3 Measurement Period Adjustments and Contingent Consideration LO 6**

Consider the following footnote from a company's 2012 10K concerning an acquisition occurring during February of 2011 (The Company's year end is January 31). The measurement period adjustment did not occur until January 2012.

Based on our initial internal estimate of contingent shares to be issued as part of this agreement, we had estimated that the total fair value of the common stock shares issued and contingently issuable for this transaction on the acquisition date was \$367,500 (1,750,000 shares).

The Company originally recognized a liability based on the acquisition date fair value of the acquisition-related contingent consideration based on the probability of the achievement of the targets stipulated in the Purchase Agreement. Based on the Company's estimation, an initial liability of \$367,500 was recorded. Subsequently, we have reassessed our estimates and have determined that the initial terms of the agreement have not be met, and as the result, we have determined that there will be no additional shares contingently issuable under the terms of the Purchase Agreement and we have recorded an adjustment to revise our initial estimate of the purchase price in contemplation that no contingent consideration as was previously reported in our interim financial statements.

The following table summarizes the preliminary and final determination of the purchase price and fair value of AHI's assets acquired at the date of acquisition:

|   | <i>Preliminary</i> | <i>Final</i>   |
|---|--------------------|----------------|
| Purchase price calculation:                                 |                    |                |
| Common stock issued (1,000,000 shares)                      | 210,000            | 210,000        |
| Contingent consideration (1,750,000 shares of common stock) | 367,500            | —              |
| Fair value of total consideration                           | <u>577,500</u>     | <u>210,000</u> |
| Allocation of purchase price:                               |                    |                |
| Intellectual property and technical know-how                | 577,500            | —              |
| Goodwill  | —                  | 210,000        |
| Fair value of total consideration                           | <u>577,500</u>     | <u>210,000</u> |

As of January, 31, 2012, based upon the completion of the Company's annual goodwill impairment test, it was determined that the goodwill associated with the AHI acquisition has been impaired, and as the result, the Company has recorded an impairment loss of \$210,000. The cause of the impairment was the result of contracts that were anticipated to result from this acquisition that have not materialized and management has decided to focus its energies on new initiatives.

**Required:**

- A. When did the company record the measurement period adjustment? In your opinion, is this an appropriate use of a measurement period adjustment? Why or why not?
- B. Assuming the company had not made a measurement period adjustment, prepare the journal entries that would have been needed to adjust the contingent consideration to zero and record the impairment of the intangibles. How does this differ from what the company actually reported?
- C. What incentives might management have for presenting their financial statements as they did rather than using the method that you recorded in part B above? Support your answer with numbers and words.

**AFS2-4**

**Emdeon Inc. Acquisition of FVTech (Contingent Consideration) LO 6 LO 7**

**2010 Acquisitions**

On January 26, 2010, the Emdeon acquired all of the voting interest of FutureVision Investment Group, L.L.C. and substantially all of the assets of two related companies, FVTech, Inc. and FVTech Arizona, Inc. (collectively, "FVTech"). FVTech is a provider of outsourced services specializing in electronic data conversion and information management solutions.

The following table summarizes the preliminary fair values on March 31, 2010 and final fair values on December 31, 2010 of the assets acquired and liabilities after the measurement period adjustments.

|   | <i>Measurement</i>               |                               |                             |

| Other long-term liabilities                               | (306)                            | (1)                           | (307)                       |
| Total consideration transferred                           | <u>\$34,973</u>                  | <u>(815)</u>                  | <u>\$ 34,158</u>            |

**Consideration**

|                            |        |         |        |
|----------------------------|--------|---------|--------|
| Cash                       | 20,005 | –       | 20,005 |
| Working capital settlement | 58     | 245     | 303    |
| Contingent consideration   | 14,910 | (1,060) | 13,850 |
| Total consideration        | 34,973 | (815)   | 34,158 |

The following four paragraphs track the same acquisition paragraph as reported in the Emdeon's first, second, and third quarterly 10Q and the 2010 10K concerning the acquisition of FVTech during 2010. The measurement period adjustment occurred during the second quarter.

**Emdeon 3/31/2010 10-Q**

Emdeon has preliminarily valued the total consideration transferred at \$34,973, which consisted of \$20,005 cash at closing, estimated contingent consideration of \$14,910, and an estimated working capital settlement of \$58. The contingent consideration arrangement requires Emdeon to pay additional consideration ranging from \$0 to \$40,000 based upon the financial performance of the acquired business for the two- and three-year periods following the acquisition. Emdeon has preliminarily valued the contingent consideration at the acquisition date, using a probability-weighted discounted cash flow model, at \$14,910. This fair value measurement is based on significant inputs not observable in the market and thus represents a Level 3 measurement. The key assumptions in applying the income approach are as follows: 11.6% discount rate and a probability adjusted FVTech performance measure during the earnout period of between approximately \$1,500 and \$27,000. As of March 31, 2010, there were no significant changes in the range of outcomes for the contingent consideration recognized as a result of the acquisition of FVTech, although the recognized amount increased to \$15,200 as a result of the passage of time and the resulting reduced impact of discounting.

**Emdeon 6/30/2010 10-Q**

Emdeon has valued the total consideration transferred at \$34,158, which consisted of \$20,005 cash at closing, estimated contingent consideration of \$13,850, and a working capital settlement of \$303. The contingent consideration arrangement requires Emdeon to pay additional consideration ranging from \$0 to \$40,000 based upon the financial performance of the acquired business for the two- and three-year periods following the acquisition. Emdeon has valued the contingent consideration at the acquisition date, using a probability-weighted discounted cash flow model, at \$13,850. This fair value measurement is based on significant inputs not observable in the market and thus represents a Level 3 measurement. The key assumptions in applying the income approach were as follows: 11.6% discount rate and a FVTech performance measure during the earnout period of between approximately \$1,500 and \$27,000. As of June 30, 2010, Emdeon lowered its range of the FVTech performance measure during the earnout period which, combined with the reduced impact of discounting, resulted in a net increase to pre-tax income of \$930 for the three months ended June 30, 2010.

**Fair Value Measurements Using Significant Unobservable Inputs (Level 3)**

|   | <i>Contingent Consideration</i> |                         |                           | <i>Total</i> |
|---|---------------------------------|-------------------------|---------------------------|--------------|

| Issuances                                     | (13,850)                        | (8,230)                 | (1,565)                   | (23,645)     |
| Total changes included in other income (loss) | 640                             | 1,130                   | —                         | 1,770        |
| Balance at June 30, 2010                      | \$ (13,210)                     | \$ (7,100)              | \$ (1,565)                | \$ (21,875)  |

**Emdeon 9/30/2010 10-Q**

Emdeon has valued the total consideration transferred at \$34,158, which consisted of \$20,005 cash at closing, estimated contingent consideration of \$13,850, and a working capital settlement of \$303. The contingent consideration arrangement requires Emdeon to pay additional consideration ranging from \$0 to \$40,000 based upon the financial performance of the acquired business for the two- and three-year periods following the acquisition. Emdeon has valued the contingent consideration at the acquisition date, using a probability-weighted discounted cash flow model, at \$13,850. This fair

value measurement is based on significant inputs not observable in the market and thus represents a Level 3 measurement. The key assumptions in applying the income approach were as follows: 11.6% discount rate and a FVTech performance measure during the earnout period of between approximately \$1,500 and \$27,000. Through September 30, 2010, Emdeon has lowered its range of the FVTech performance measure during the earnout period which, combined with the reduced impact of discounting, resulted in a net increase to pre-tax income of \$2,270 for the nine-month period ended September 30, 2010.

#### **Emdeon 12/31/2010 10-K**

Emdeon has valued the total consideration transferred at \$34,158, which consisted of \$20,005 cash at closing, estimated contingent consideration of \$13,850, and a working capital settlement of \$303. The contingent consideration arrangement requires Emdeon to pay additional consideration ranging from \$0 to \$40,000 based upon the financial performance of the acquired business for the two- and three-year periods following the acquisition. Emdeon valued the contingent consideration at the acquisition date, using a probability-weighted discounted cash flow model, at \$13,850. This fair value measurement is based on significant inputs not observable in the market and thus represents a Level 3 measurement. The key assumptions in applying the income approach were as follows: 11.6% discount rate and a FVTech performance measure during the earnout period of between approximately \$1,500 and \$27,000. Through December 31, 2010, Emdeon has lowered its range of the FVTech performance measure during the earnout period, which, combined with the reduced impact of discounting, resulted in a net increase to pretax income of \$6,680 during 2010.

#### **Required:**

1. Why do you think firms include a working capital settlement in the merger agreement? A working capital settlement dictates that if the actual amount of working capital differs from a specified amount of working capital, either more or less consideration is offered for the acquisition.
2. Why may firms (acquiring and/or the acquired) include contingent consideration in an acquisition? What percentage of the total consideration offered is represented by the estimated liability for contingent consideration?
3. Prepare a schedule showing the quarterly and annual impact on income from contingent consideration (list the amount reported quarterly and for the year, and then indicate whether the amount is a gain or a loss).
4. Is it likely that Emdeon will have to pay any contingent consideration? If they do not pay any contingent consideration, what will be the impact on future income? List the amounts, if any, and specify whether the amount is a gain or loss. Does this imply anything about the likelihood of future goodwill impairment? If so, what?

#### **AFS2-5 Bargain Purchase LO7**

Consider the following information from Alliance Data Systems Corporation 2009 10K.

On October 30, 2009, the Company assumed the operations of the Charming Shoppes' credit card program, including the service center operations associated with Charming Shoppes' branded card programs, portfolio and securitization master trust. The transaction consisted of purchasing existing accounts and the rights to new accounts along with certain other assets that are required to support the securitization program including retained certificates and interests, cash collateral accounts, and an interest-only strip, totaling a combined \$158.9 million. The Company obtained control of the assets and assumed the liabilities on October 30, 2009, the acquisition date. The results of operations for this acquisition have been included since the date of acquisition and are reflected in the Private Label Services and Private Label Credit segments.

The Company engaged a third-party specialist to assist it in the measurement of the fair value of the assets required. The fair value of the assets acquired exceeded the cost of the acquisition. Consequently, the Company reassessed the recognition and measurement of the identifiable assets acquired and liabilities assumed and concluded that the valuation procedures and resulting measures were appropriate. The excess value of the net assets acquired over the purchase price has been recorded as a bargain purchase gain, which is included in gain on acquisition of a business in the Company's consolidated statements of income. The following table summarizes the fair values of the assets acquired and liabilities assumed in the Charming Shoppes' acquisition as of the date of purchase.

*As of October 30, 2009 (in thousands)*

|                                |                  |
|--------------------------------|------------------|
| Current assets                 | \$ 24,910        |
| Property, plant and equipment  | 491              |
| Due from securitization        | 108,554          |
| Identifiable intangible assets | 67,200           |
| Total assets acquired          | <u>201,155</u>   |
| Current Liabilities            | 8,500            |
| Deferred tax liability         | 12,527           |
| Total liabilities assumed      | <u>21,027</u>    |
| Net assets acquired            | \$ 180,128       |
| Total consideration paid       | <u>158,901</u>   |
| Gain on business combination   | <u>\$ 21,227</u> |

**Required:**

1. FASB ASC paragraph 805-30-50-1(f) requires a description of the reasons why the transaction resulted in a gain. In addition, the acquirer is required to reassess the valuations if a bargain purchase is indicated. Did Alliance Data Systems do either (or both) of these? Be specific.
2. Speculate as to some of the reasons that a bargain purchase might occur. Why has FASB struggled to find the appropriate accounting for bargains (changing the rules repeatedly)?
3. Assuming the acquisition is an asset acquisition treated as a business combination, prepare the journal entry on the acquirer's books to record the acquisition.

**EXERCISES****EXERCISE 2-1 Asset Purchase LO 6**

Preston Company acquired the assets (except for cash) and assumed the liabilities of Saville Company. Immediately prior to the acquisition, Saville Company's balance sheet was as follows:

|                              | <i>Book Value</i>  | <i>Fair Value</i>  |
|------------------------------|--------------------|--------------------|
| Cash                         | \$ 120,000         | \$ 120,000         |
| Receivables (net)            | 192,000            | 228,000            |
| Inventory                    | 360,000            | 396,000            |
| Plant and equipment (net)    | 480,000            | 540,000            |
| Land                         | 420,000            | 660,000            |
| Total assets                 | <u>\$1,572,000</u> | <u>\$1,944,000</u> |
| Liabilities                  | \$ 540,000         | \$ 594,000         |
| Common stock (\$5 par value) | 480,000            |                    |
| Other contributed capital    | 132,000            |                    |
| Retained earnings            | 420,000            |                    |
| Total equities               | <u>\$1,572,000</u> |                    |

**Required:**

- A. Prepare the journal entries on the books of Preston Company to record the purchase of the assets and assumption of the liabilities of Saville Company if the amount paid was \$1,560,000 in cash.
- B. Repeat the requirement in (A) assuming that the amount paid was \$990,000.

**EXERCISE 2-2 Acquisition Method LO 6**

The balance sheets of Petrello Company and Sanchez Company as of January 1, 2014, are presented below. On that date, after an extended period of negotiation, the two companies agreed to merge. To effect the merger, Petrello Company is to exchange its unissued common stock for all the outstanding shares of Sanchez Company

in the ratio of  $\frac{1}{2}$  share of Petrello for each share of Sanchez. Market values of the shares were agreed on as Petrello, \$48; Sanchez, \$24. The fair values of Sanchez Company's assets and liabilities are equal to their book values with the exception of plant and equipment, which has an estimated fair value of \$720,000.

|                              | <i>Petrello</i>    | <i>Sanchez</i>     |
|------------------------------|--------------------|--------------------|
| Cash                         | \$ 480,000         | \$ 200,000         |
| Receivables                  | 480,000            | 240,000            |
| Inventories                  | 2,000,000          | 240,000            |
| Plant and equipment (net)    | <u>3,840,000</u>   | <u>800,000</u>     |
| Total assets                 | <u>\$6,800,000</u> | <u>\$1,480,000</u> |
| Liabilities                  | \$1,200,000        | \$ 320,000         |
| Common stock, \$16 par value | 3,440,000          | 800,000            |
| Other contributed capital    | 400,000            | —0—                |
| Retained earnings            | <u>1,760,000</u>   | <u>360,000</u>     |
| Total equities               | <u>\$6,800,000</u> | <u>\$1,480,000</u> |

**Required:**

Prepare a balance sheet for Petrello Company immediately after the merger.

**EXERCISE 2-3 Asset Purchase, Cash and Stock LO 6**

Pretzel Company acquired the assets (except for cash) and assumed the liabilities of Salt Company on January 2, 2015. As compensation, Pretzel Company gave 30,000 shares of its common stock, 15,000 shares of its 10% preferred stock, and cash of \$50,000 to the stockholders of Salt Company. On the acquisition date, Pretzel Company stock had the following characteristics:

| <b>PRETZEL COMPANY</b> |                  |                   |
|------------------------|------------------|-------------------|
| <i>Stock</i>           | <i>Par Value</i> | <i>Fair Value</i> |
| Common                 | \$ 10            | \$ 25             |
| Preferred              | 100              | 100               |

Immediately prior to the acquisition, Salt Company's balance sheet reported the following book values and fair values:

| <b>SALT COMPANY</b>                             |                    |                    |
|---|--------------------|--------------------|
| <b>Balance Sheet</b>                            |                    |                    |
| <b>January 2, 2015</b>                          |                    |                    |
|   | <i>Book value</i>  | <i>Fair value</i>  |
| Cash  | \$ 165,000         | \$ 165,000         |
| Accounts receivable (net of \$11,000 allowance) | 220,000            | 198,000            |
| Inventory—LIFO cost                             | 275,000            | 330,000            |
| Land  | 396,000            | 550,000            |
| Buildings and equipment (net)                   | <u>1,144,000</u>   | <u>1,144,000</u>   |
| Total assets                                    | <u>\$2,200,000</u> | <u>\$2,387,000</u> |
| Current liabilities                             | \$ 275,000         | \$ 275,000         |
| Bonds Payable, 10%                              | 450,000            | 495,000            |
| Common stock, \$5 par value                     | 770,000            |                    |
| Other contributed capital                       | 396,000            |                    |
| Retained earnings                               | <u>309,000</u>     |                    |
| Total liabilities and stockholders' equity      | <u>\$2,200,000</u> |                    |

**Required:**

Prepare the journal entry on the books of Pretzel Company to record the acquisition of the assets and assumption of the liabilities of Salt Company.

**EXERCISE 2-4 Asset Purchase, Cash LO 6**

P Company acquired the assets and assumed the liabilities of S Company on January 1, 2013, for \$510,000 when S Company's balance sheet was as follows:

| <b>S COMPANY</b>                        |                  |
|---|------------------|
| <b>Balance Sheet</b>                    |                  |
| <b>January 1, 2013</b>                  |                  |
| Cash                                    | \$ 96,000        |
| Receivables                             | 55,200           |
| Inventory                               | 110,400          |
| Land                                    | 169,200          |
| Plant and equipment (net)               | 466,800          |
| <b>Total</b>                            | <u>\$897,600</u> |
| Accounts payable                        | \$ 44,400        |
| Bonds payable, 10%, due 12/31/2018, Par | 480,000          |
| Common stock, \$2 par value             | 120,000          |
| Retained earnings                       | 253,200          |
| <b>Total</b>                            | <u>\$897,600</u> |

Fair values of S Company's assets and liabilities were equal to their book values except for the following:

1. Inventory has a fair value of \$126,000.
2. Land has a fair value of \$198,000.
3. The bonds pay interest semiannually on June 30 and December 31. The current yield rate on bonds of similar risk is 8%.

**Required:**

Prepare the journal entry on P Company's books to record the acquisition of the assets and assumption of the liabilities of S Company.

**EXERCISE 2-5 Asset Purchase, Contingent Consideration as a Liability LO 7**

Pritano Company acquired all the net assets of Succo Company on December 31, 2013, for \$2,160,000 cash. The balance sheet of Succo Company immediately prior to the acquisition showed:

|                           | <i>Book value</i>  | <i>Fair value</i>  |
|---------------------------|--------------------|--------------------|
| Current assets            | \$ 960,000         | \$ 960,000         |
| Plant and equipment       | 1,080,000          | 1,440,000          |
| <b>Total</b>              | <u>\$2,040,000</u> | <u>\$2,400,000</u> |
| Liabilities               | \$ 180,000         | \$ 216,000         |
| Common stock              | 480,000            |                    |
| Other contributed capital | 600,000            |                    |
| Retained earnings         | 780,000            |                    |
| <b>Total</b>              | <u>\$2,040,000</u> |                    |

As part of the negotiations, Pritano agreed to pay the stockholders of Succo \$360,000 cash if the post-combination earnings of Pritano averaged \$2,160,000 or more per year over the next two years. The estimated fair value of the contingent consideration was \$144,000 on the date of the acquisition.

**Required:**

- A. Prepare the journal entries on the books of Pritano to record the acquisition on December 31, 2013.
- B. At the end of 2014, the estimated fair value of the contingent consideration increased to \$200,000. Prepare the journal entry to record the change in the fair value of the contingent consideration, if needed.
- C. In 2015, the earnings did not meet the earnout target and the estimated fair value of the contingent consideration was zero. Prepare the journal entry to record the change in the fair value of the contingent consideration.

**EXERCISE 2-6 Asset Purchase, Contingent Consideration as Equity LO7**

Assume the same information as in Exercise 2-5 except that instead of paying a cash earnout, Pritano Company agreed to issue 10,000 additional shares of its \$10 par value common stock to the stockholders of Succo if the average postcombination earnings over the next three years equaled or exceeded \$2,500,000. The fair value of the contingent consideration on the date of acquisition was estimated to be \$200,000. The contingent consideration (earnout) was classified as equity rather than as a liability.

**Required:**

- A. Prepare the journal entries on the books of Pritano to record the acquisition on December 31, 2013.
- B. On January 1, 2017, the additional 10,000 shares of Pritano's stock were issued because the earnout targets were met. On this date, Pritano's stock price was \$50 per share. Prepare the journal entry to record the issuance of the shares of stock.

**EXERCISE 2-7 Multiple Choice LO6**

Price Company issued 8,000 shares of its \$20 par value common stock for the net assets of Sims Company in a business combination under which Sims Company will be merged into Price Company. On the date of the combination, Price Company common stock had a fair value of \$30 per share. Balance sheets for Price Company and Sims Company immediately prior to the combination were:

|                              | <i>Price</i>       | <i>Sims</i>      |
|------------------------------|--------------------|------------------|
| Current assets               | \$ 438,000         | \$ 64,000        |
| Plant and equipment (net)    | 575,000            | 136,000          |
| Total                        | <u>\$1,013,000</u> | <u>\$200,000</u> |
| Liabilities                  | \$ 300,000         | \$ 50,000        |
| Common stock, \$20 par value | 550,000            | 80,000           |
| Other contributed capital    | 72,500             | 20,000           |
| Retained earnings            | 90,500             | 50,000           |
| Total                        | <u>\$1,013,000</u> | <u>\$200,000</u> |

**Required:**

Select the letter of the best answer.

1. If the business combination is treated as a purchase and Sims Company's net assets have a fair value of \$228,800, Price Company's balance sheet immediately after the combination will include goodwill of
  - (a) \$10,200.
  - (b) \$12,800.
  - (c) \$11,200.
  - (d) \$18,800.
2. If the business combination is treated as a purchase and the fair value of Sims Company's current assets is \$90,000, its plant and equipment is \$242,000, and its liabilities are \$56,000, Price Company's balance sheet immediately after the combination will include
  - (a) Negative goodwill of \$36,000.
  - (b) Plant and equipment of \$817,000.
  - (c) Gain of \$36,000.
  - (d) Goodwill of \$36,000.

**EXERCISE 2-8 Purchase LO6**

Effective December 31, 2013, Zintel Corporation proposes to issue additional shares of its common stock in exchange for all the assets and liabilities of Smith Corporation and Platz Corporation, after which Smith and Platz will distribute the Zintel stock to their stockholders in complete liquidation and dissolution. Balance sheets of each of the corporations immediately prior to merger on December 31, 2013, follow. The common stock exchange ratio was negotiated to be 1:1 for both Smith and Platz.

|                        | <i>Zintel</i>      | <i>Smith</i>       | <i>Platz</i>     |
|------------------------|--------------------|--------------------|------------------|
| Current assets         | \$1,600,000        | \$ 350,000         | \$ 12,000        |
| Long-term assets (net) | 5,700,000          | 1,890,000          | 98,000           |
| Total                  | <u>\$7,300,000</u> | <u>\$2,240,000</u> | <u>\$110,000</u> |

|                             | <i>Zintel</i>      | <i>Smith</i>       | <i>Platz</i>     |
|-----------------------------|--------------------|--------------------|------------------|
| Current liabilities         | \$ 700,000         | \$ 110,000         | \$ 9,000         |
| Long-term debt              | 1,100,000          | 430,000            | 61,000           |
| Common stock, \$5 par value | 2,500,000          | 700,000            | 20,000           |
| Retained earnings           | 3,000,000          | 1,000,000          | 20,000           |
| Total                       | <u>\$7,300,000</u> | <u>\$2,240,000</u> | <u>\$110,000</u> |

**Required:**

Prepare journal entries on Zintel's books to record the combination. Assume the following:

The identifiable assets and liabilities of Smith and Platz are all reflected in the balance sheets (above), and their recorded amounts are equal to their current fair values except for long-term assets. The fair value of Smith's long-term assets exceed their book value by \$20,000, and the fair value of Platz's long-term assets exceed their book values by \$5,000. Zintel's common stock is traded actively and has a current market price of \$15 per share. Prepare journal entries on Zintel's books to record the combination. (*AICPA adapted*)

**EXERCISE 2-9 Allocation of Purchase Price to Various Assets and Liabilities LO 6**

Company S has no long-term marketable securities. Assume the following scenarios:

**Case A**

Assume that P Company paid \$130,000 cash for 100% of the net assets of S Company.

| <b>S COMPANY</b> |                       |                          |                    |                   |
|------------------|-----------------------|--------------------------|--------------------|-------------------|
| <i>Assets</i>    |                       |                          |                    |                   |
|                  | <i>Current Assets</i> | <i>Long-lived Assets</i> | <i>Liabilities</i> | <i>Net Assets</i> |
| Book Value       | \$15,000              | \$85,000                 | \$20,000           | \$80,000          |
| Fair Value       | 20,000                | 130,000                  | 30,000             | 120,000           |

**Case B**

Assume that P Company paid \$110,000 cash for 100% of the net assets of S Company.

| <b>S COMPANY</b> |                       |                          |                    |                   |
|------------------|-----------------------|--------------------------|--------------------|-------------------|
| <i>Assets</i>    |                       |                          |                    |                   |
|                  | <i>Current Assets</i> | <i>Long-lived Assets</i> | <i>Liabilities</i> | <i>Net Assets</i> |
| Book Value       | \$15,000              | \$85,000                 | \$20,000           | \$80,000          |
| Fair Value       | 30,000                | 80,000                   | 20,000             | 90,000            |

**Case C**

Assume that P Company paid \$15,000 cash for 100% of the net assets of S Company.

| <b>S COMPANY</b> |                       |                          |                    |                   |
|------------------|-----------------------|--------------------------|--------------------|-------------------|
| <i>Assets</i>    |                       |                          |                    |                   |
|                  | <i>Current Assets</i> | <i>Long-lived Assets</i> | <i>Liabilities</i> | <i>Net Assets</i> |
| Book Value       | \$15,000              | \$85,000                 | \$20,000           | \$80,000          |
| Fair Value       | 20,000                | 40,000                   | 40,000             | 20,000            |

**Required:**

Complete the following schedule by listing the amount that would be recorded on P's books.

|        | <i>Assets</i>   |                       |                          | <i>Liabilities</i> | <i>Retained Earnings</i>          |
|--------|-----------------|-----------------------|--------------------------|--------------------|-----------------------------------|
|        | <i>Goodwill</i> | <i>Current Assets</i> | <i>Long-lived Assets</i> |                    | <i>(Gain in Income Statement)</i> |
| Case A |                 |                       |                          |                    |                                   |
| Case B |                 |                       |                          |                    |                                   |
| Case C |                 |                       |                          |                    |                                   |

**EXERCISE 2-10 Goodwill Impairment Test LO 3**

On January 1, 2013, Porsche Company acquired the net assets of Saab Company for \$450,000 cash. The fair value of Saab's identifiable net assets was \$375,000 on this date. Porsche Company decided to measure goodwill impairment using the present value of future cash flows to estimate the fair value of the reporting unit (Saab). The information for these subsequent years is as follows:

| Year | <i>Present Value<br/>of Future Cash Flows</i> | <i>Carrying Value of<br/>Saab's Identifiable<br/>Net Assets*</i> | <i>Fair Value<br/>Saab's Identifiable<br/>Net Assets</i> |
|------|---|--|--|
| 2014 | \$400,000                                     | \$330,000  | \$340,000  |
| 2015 | \$400,000                                     | \$320,000  | 345,000  |
| 2016 | \$350,000                                     | \$300,000  | 325,000  |

\* Identifiable net assets do not include goodwill.

**Required:**

*Part A:* For each year determine the amount of goodwill impairment, if any.

*Part B:* Prepare the journal entries needed each year to record the goodwill impairment (if any) on Porsche's books from 2014 to 2016.

*Part C:* How should goodwill (and its impairment) be presented on the balance sheet and the income statement in each year?

*Part D:* If goodwill is impaired, what additional information needs to be disclosed?

**EXERCISE 2-11 Relation between Purchase Price, Goodwill, and Negative Goodwill LO 6**

The following balance sheets were reported on January 1, 2014, for Peach Company and Stream Company:

|                              | <i>Peach</i>       | <i>Stream</i>    |
|------------------------------|--------------------|------------------|
| Cash                         | \$ 100,000         | \$ 20,000        |
| Inventory                    | 300,000            | 100,000          |
| Equipment (net)              | 880,000            | 380,000          |
| Total                        | <u>\$1,280,000</u> | <u>\$500,000</u> |
| Total Liabilities            | \$ 300,000         | \$100,000        |
| Common stock, \$20 par value | 400,000            | 200,000          |
| Other contributed capital    | 250,000            | 70,000           |
| Retained earnings            | 330,000            | 130,000          |
| Total                        | <u>\$1,280,000</u> | <u>\$500,000</u> |

**Required:**

Appraisals reveal that the inventory has a fair value of \$120,000, and the equipment has a current value of \$410,000. The book value and fair value of liabilities are the same. Assuming that Peach Company wishes to acquire Stream for cash in an asset acquisition, determine the following cutoff amounts:

- A. The purchase price above which Peach would record goodwill.
- B. The purchase price below which the equipment would be recorded at less than its fair market value.
- C. The purchase price below which Peach would record a gain.
- D. The purchase price below which Peach would obtain a "bargain."
- E. The purchase price at which Peach would record \$50,000 of goodwill.

**EXERCISE 2-12A Acquisition Entry, Deferred Taxes (see Appendix 2A online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).) LO6**

Patel Company issued 100,000 shares of \$1 par value common stock (market value of \$6/share) for the net assets of Seely Company on January 1, 2014, in a statutory merger. Seely Company had the following assets, liabilities, and owners' equity at that time:

|                                      | <i>Book Value</i> |                   |                   |
|--------------------------------------|-------------------|-------------------|-------------------|
|                                      | <i>Tax Basis</i>  | <i>Fair Value</i> | <i>Difference</i> |
| Cash                                 | \$ 20,000         | \$ 20,000         | \$—0—             |
| Accounts receivable                  | 112,000           | 112,000           | —0—               |
| Inventory (LIFO)                     | 82,000            | 134,000           | 52,000            |
| Land                                 | 30,000            | 55,000            | 25,000            |
| Plant assets (net)                   | 392,000           | 463,000           | 71,000            |
| Total assets                         | <u>\$636,000</u>  | <u>\$784,000</u>  |                   |
| Allowance for uncollectible accounts | \$ 10,000         | \$ 10,000         | \$—0—             |
| Accounts payable                     | 54,000            | 54,000            | —0—               |
| Bonds payable                        | 200,000           | 180,000           | 20,000            |
| Common stock, \$1 par value          | 80,000            |                   |                   |
| Other contributed capital            | 132,000           |                   |                   |
| Retained earnings                    | 160,000           |                   |                   |
| Total equities                       | <u>\$636,000</u>  |                   |                   |

**Required:**

Prepare the journal entry to record the assets acquired and liabilities assumed. Assume an income tax rate of 40%.

**ASC Exercises:** For all ASC exercises indicate as part of your answer: the Codification topic, subtopic, section, and paragraph upon which your answer is based (unless otherwise specified). All ASC questions require access to the FASB Codification.

- ASC2-1** **Presentation** Does current GAAP require that the information on the income statement be reported in chronological order with the most recent year listed first, or is the reverse order acceptable as well?
- ASC2-2** **General Principles** In the 1990s, the pooling of interest method was a preferred method of accounting for consolidations by many managers because of the creation of instant earnings if the acquisition occurred late in the year. Can the firms that used pooling of interest in the 1990s continue to use the method for those earlier consolidations, or were they required to adopt the new standards for previous business combinations retroactively?
- ASC2-3** **Glossary** What instruments qualify as cash equivalents?
- ASC2-4** **Overview** If guidance for a transaction is not specifically addressed in the Codification, what is the appropriate procedure to follow in identifying the proper accounting?
- ASC2-5** **General** List all the topics found under General Topic 200—Presentation (*Hint*: There are 15 topics).
- ASC2-6** **Cross-Reference** The rules providing accounting guidance on subsequent events were originally listed in *FASB Statement No. 165*. Where is this information located in the Codification? List all the topics and subtopics in the Codification where this information can be found (i.e., ASC XXX-XX).
- ASC2-7** **Overview** Distinguish between an asset acquisition and the acquisition of a business.
- ASC2-8** **Measurement** GAAP requires that firms test for goodwill impairment on an annual basis. One reporting unit performs the impairment test during January while a second reporting unit performs the impairment test during July. If the firm reports annual results on a calendar basis, is this acceptable under GAAP?

## PROBLEMS

**PROBLEM 2-1 Consolidation LO 6**

Condensed balance sheets for Phillips Company and Solina Company on January 1, 2013, are as follows:

|                                | <i>Phillips</i>  | <i>Solina</i>    |
|--------------------------------|------------------|------------------|
| Current assets                 | \$180,000        | \$ 85,000        |
| Plant and equipment (net)      | 450,000          | 140,000          |
| Total assets                   | <u>\$630,000</u> | <u>\$225,000</u> |
| Total liabilities              | \$ 95,000        | \$ 35,000        |
| Common stock, \$10 par value   | 350,000          | 160,000          |
| Other contributed capital      | 125,000          | 53,000           |
| Retained earnings (deficit)    | 60,000           | (23,000)         |
| Total liabilities and equities | <u>\$630,000</u> | <u>\$225,000</u> |

On January 1, 2013, the stockholders of Phillips and Solina agreed to a consolidation. Because FASB requires that one party be recognized as the acquirer and the other as the acquiree, it was agreed that Phillips was acquiring Solina. Phillips agreed to issue 20,000 shares of its \$10 par stock to acquire all the net assets of Solina at a time when the fair value of Phillips' common stock was \$15 per share.

On the date of consolidation, the fair values of Solina's current assets and liabilities were equal to their book values. The fair value of plant and equipment was, however, \$150,000. Phillips will incur \$20,000 of direct acquisition costs and \$6,000 in stock issue costs.

**Required:**

Prepare the journal entries on the books of Phillips to record the acquisition of Solina Company's net assets.

**PROBLEM 2-2 Merger and Consolidation, Goodwill Impairment LO 3 LO 6**

Stockholders of Acme Company, Baltic Company, and Colt Company are considering alternative arrangements for a business combination. Balance sheets and the fair values of each company's assets on October 1, 2014, were as follows:

|                              | <i>Acme</i>        | <i>Baltic</i>      | <i>Colt</i>        |
|------------------------------|--------------------|--------------------|--------------------|
| Assets                       | <u>\$3,900,000</u> | <u>\$7,500,000</u> | <u>\$ 950,000</u>  |
| Liabilities                  | \$2,030,000        | \$2,200,000        | \$ 260,000         |
| Common stock, \$20 par value | 2,000,000          | 1,800,000          | 540,000            |
| Other contributed capital    | —0—                | 600,000            | 190,000            |
| Retained earnings (deficit)  | (130,000)          | 2,900,000          | (40,000)           |
| Total equities               | <u>\$3,900,000</u> | <u>\$7,500,000</u> | <u>\$ 950,000</u>  |
| Fair values of assets        | <u>\$4,200,000</u> | <u>\$9,000,000</u> | <u>\$1,300,000</u> |

Acme Company shares have a fair value of \$50. A fair (market) price is not available for shares of the other companies because they are closely held. Fair values of liabilities equal book values.

**Required:**

- A. Prepare a balance sheet for the business combination. Assume the following: Acme Company acquires all the assets and assumes all the liabilities of Baltic and Colt Companies by issuing in exchange 140,000 shares of its common stock to Baltic Company and 40,000 shares of its common stock to Colt Company.
- B. Assume, further, that the acquisition was consummated on October 1, 2014, as described above. However, by the end of 2015, Acme was concerned that the fair values of one or both of the acquired units had deteriorated. To test for impairment, Acme decided to measure goodwill impairment using the present value of future cash flows to estimate the fair value of the reporting units (Baltic and Colt). Acme accumulated the following data:

| <i>Year</i> | <i>Present Value<br/>of Future Cash Flows</i> | <i>Carrying Value of<br/>Identifiable<br/>Net Assets*</i> | <i>Fair Value<br/>Identifiable<br/>Net Assets</i> |
|-------------|---|---|---|
| 2015        |   |   |   |
| Baltic      | \$6,500,000                                   | \$6,340,000   | \$6,350,000                                       |
| Colt        | \$1,900,000                                   | 1,200,000   | 1,000,000   |

\* Identifiable Net Assets do not include goodwill.

Prepare the journal entry, if needed, to record goodwill impairment at December 31, 2015.

**PROBLEM 2-3 Purchase of Net Assets Using Bonds LO 6**

On January 1, 2014, Perez Company acquired all the assets and assumed all the liabilities of Stalton Company and merged Stalton into Perez. In exchange for the net assets of Stalton, Perez gave its bonds payable with a maturity value of \$600,000, a stated interest rate of 10%, interest payable semiannually on June 30 and December 31, a maturity date of January 1, 2024, and a yield rate of 12%. Balance sheets for Perez and Stalton (as well as fair value data) on January 1, 2014, were as follows:

|   | <i>Perez</i>       |                   | <i>Stalton</i>    |  |
|---|--------------------|-------------------|-------------------|--|
|   | <i>Book Value</i>  | <i>Book Value</i> | <i>Fair Value</i> |  |
| Cash  | \$ 250,000         | \$114,000         | \$114,000         |  |
| Receivables   | 352,700            | 150,000           | 135,000           |  |
| Inventories   | 848,300            | 232,000           | 310,000           |  |
| Land  | 700,000            | 100,000           | 315,000           |  |
| Buildings   | 950,000            | 410,000           | 54,900            |  |
| Accumulated depreciation—buildings                              | (325,000)          | (170,500)         |                   |  |
| Equipment   | 262,750            | 136,450           | 39,450            |  |
| Accumulated depreciation—equipment                              | (70,050)           | (90,450)          |                   |  |
| Total assets  | <u>\$2,968,700</u> | <u>\$881,500</u>  | <u>\$968,350</u>  |  |
| Current liabilities   | \$ 292,700         | \$ 95,300         | \$ 95,300         |  |
| Bonds payable, 8% due 1/1/2019, Interest payable 6/30 and 12/31 |                    | 300,000           | 260,000           |  |
| Common stock, \$15 par value                                    | 1,200,000          |                   |                   |  |
| Common stock, \$5 par value                                     |                    | 236,500           |                   |  |
| Other contributed capital                                       | 950,000            | 170,000           |                   |  |
| Retained earnings   | 526,000            | 79,700            |                   |  |
| Total equities  | <u>\$2,968,700</u> | <u>\$881,500</u>  |                   |  |

**Required:**

Prepare the journal entry on the books of Perez Company to record the acquisition of Stalton Company's assets and liabilities in exchange for the bonds.

**PROBLEM 2-4 Cash Acquisition, Contingent Consideration LO 6 LO 7**

Pham Company acquired the assets (except for cash) and assumed the liabilities of Senn Company on January 1, 2014, paying \$720,000 cash. Senn Company's December 31, 2013, balance sheet, reflecting both book values and fair values, showed:

|                             | <i>Book Value</i> | <i>Fair Value</i>  |
|-----------------------------|-------------------|--------------------|
| Accounts receivable (net)   | \$ 72,000         | \$ 65,000          |
| Inventory                   | 86,000            | 99,000             |
| Land                        | 110,000           | 162,000            |
| Buildings (net)             | 369,000           | 450,000            |
| Equipment (net)             | 237,000           | 288,000            |
| Total                       | <u>\$874,000</u>  | <u>\$1,064,000</u> |
| Accounts payable            | \$ 83,000         | \$ 83,000          |
| Note payable                | 180,000           | 180,000            |
| Common stock, \$2 par value | 153,000           |                    |
| Other contributed capital   | 229,000           |                    |
| Retained earnings           | 229,000           |                    |
| Total                       | <u>\$874,000</u>  |                    |

As part of the negotiations, Pham Company agreed to pay the former stockholders of Senn Company \$200,000 cash if the postcombination earnings of the combined company (Pham) reached certain levels during 2014 and 2015. The fair value of contingent consideration was estimated to be \$100,000 on the date of acquisition.

**Required:**

- A. Record the journal entry on the books of Pham Company to record the acquisition on January 1, 2014.
- B. During 2014, the likelihood of meeting the post combination earnings goal increased. As a result, at the end of 2014, the estimated fair value of the contingent consideration increased to \$120,000. Prepare any journal entry needed to account for the change in the fair value of contingent consideration.
- C. During 2015, the likelihood of meeting the post combination earnings goal significantly decreased and the contingent consideration target was not met. Prepare any journal entry needed to account for the change in the fair value of contingent consideration.

**PROBLEM 2-5****Asset Acquisition, Pro forma LO 5**

Balance sheets for Salt Company and Pepper Company on December 31, 2013, follow:

|                              | <i>Salt</i>        | <i>Pepper</i>      |
|------------------------------|--------------------|--------------------|
| <b>ASSETS</b>                |                    |                    |
| Cash                         | \$ 95,000          | \$ 180,000         |
| Receivables                  | 117,000            | 230,000            |
| Inventories                  | 134,000            | 231,400            |
| Plant assets                 | <u>690,000</u>     | <u>1,236,500</u>   |
| Total assets                 | <u>\$1,036,000</u> | <u>\$1,877,900</u> |
| <b>EQUITIES</b>              |                    |                    |
| Accounts payable             | \$ 180,000         | \$ 255,900         |
| Mortgage payable             | 152,500            | 180,000            |
| Common stock, \$20 par value | 340,000            | 900,000            |
| Other contributed capital    | 179,500            | 270,000            |
| Retained earnings            | <u>184,000</u>     | <u>272,000</u>     |
| Total equities               | <u>\$1,036,000</u> | <u>\$1,877,900</u> |

Pepper Company tentatively plans to issue 30,000 shares of its \$20 par value stock, which has a current market value of \$37 per share net of commissions and other issue costs. Pepper Company then plans to acquire the assets and assume the liabilities of Salt Company for a cash payment of \$800,000 and \$300,000 in long-term 8% notes payable. Pepper Company's receivables include \$60,000 owed by Salt Company. Pepper Company is willing to pay more than the book value of Salt Company assets because plant assets are undervalued by \$215,000 and Salt Company has historically earned above-normal profits.

**Required:**

Prepare a pro forma balance sheet showing the effects of these planned transactions.

**PROBLEM 2-6****Purchase, Decision to Accept LO 5**

Spalding Company has offered to sell to Ping Company its assets at their book values plus \$1,800,000 representing payment for goodwill. Operating data for 2013 for the two companies are as follows:

|                    | <i>Ping Company</i> | <i>Spalding Company</i> |
|--------------------|---------------------|-------------------------|
| Sales              | \$3,510,100         | \$2,365,800             |
| Cost of goods sold | <u>1,752,360</u>    | <u>1,423,800</u>        |
| Gross profit       | 1,757,740           | 942,000                 |
| Selling expenses   | \$ 632,500          | \$ 292,100              |
| Other expenses     | <u>172,600</u>      | <u>150,000</u>          |
| Total expenses     | <u>805,100</u>      | <u>442,100</u>          |
| Net income         | <u>\$ 952,640</u>   | <u>\$ 499,900</u>       |

Ping Company's management estimates the following operating changes if Spalding Company is merged with Ping Company through a purchase:

- A. After the merger, the sales volume of Ping Company will be 20% in excess of the present combined sales volume, and the sale price per unit will be decreased by 10%.

- B. Fixed manufacturing expenses have been 35% of cost of goods sold for each company. After the merger the fixed manufacturing expenses of Ping Company will be increased by 70% of the current fixed manufacturing expenses of Spalding Company. The current variable manufacturing expenses of Ping Company, which is 70% of cost of goods sold, is expected to increase in proportion to the increase in sales volume.
- C. Selling expenses of Ping Company are expected to be 85% of the present combined selling expenses of the two companies.
- D. Other expenses of Ping Company are expected to increase by 85% as a result of the merger.

Any excess of the estimated net income of the merged company over the combined present net income of the two companies is to be capitalized at 20%. If this amount exceeds the price set by Spalding Company for goodwill, Ping Company will accept the offer.

**Required:**

Prepare a pro forma (or projected) income statement for Ping Company for 2014 assuming the merger takes place, and indicate whether Ping Company should accept the offer.

**PROBLEM 2-7A Acquisition Entry and Deferred Taxes (see Appendix 2A online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).)**

On January 1, 2015, Pruitt Company issued 30,000 shares of its \$2 par value common stock for the net assets of Shah Company in a statutory merger accounted for as a purchase. Pruitt's common stock had a fair value of \$28 per share at that time. A schedule of the Shah Company assets acquired and liabilities assumed at book values (which are equal to their tax bases) and fair values follows:

| <i>Item</i>               | <i>Book Value/Tax Basis</i> | <i>Fair Value</i>  | <i>Excess</i>    |
|---------------------------|-----------------------------|--------------------|------------------|
| Receivables (net)         | \$125,000                   | \$ 125,000         | \$ —0—           |
| Inventory                 | 167,000                     | 195,000            | 28,000           |
| Land                      | 86,500                      | 120,000            | 33,500           |
| Plant assets (net)        | 467,000                     | 567,000            | 100,000          |
| Patents                   | 95,000                      | 200,000            | 105,000          |
| <b>Total</b>              | <b>\$940,500</b>            | <b>\$1,207,000</b> | <b>\$266,500</b> |
| Current liabilities       | \$ 89,500                   | \$ 89,500          | \$—0—            |
| Bonds payable             | 300,000                     | 360,000            | 60,000           |
| Common stock              | 120,000                     |                    |                  |
| Other contributed capital | 164,000                     |                    |                  |
| Retained earnings         | 267,000                     |                    |                  |
| <b>Total</b>              | <b>\$940,500</b>            |                    |                  |

**Additional Information:**

1. Pruitt's income tax rate is 35%.
2. Shah's beginning inventory was all sold during 2015.
3. Useful lives for depreciation and amortization purposes are:
 

|              |          |
|--------------|----------|
| Plant assets | 10 years |
| Patents      | 8 years  |
| Bond premium | 10 years |
4. Pruitt uses the straight-line method for all depreciation and amortization purposes.

**Required:**

- A. Prepare the entry on Pruitt Company's books to record the acquisition of the assets and assumption of the liabilities of Shah Company.
- B. Assuming Pruitt Company had taxable income of \$468,000 in 2015, prepare the income tax entry for 2015.

# Chapter 2

## APPENDIX 2A – DEFERRED TAXES IN BUSINESS COMBINATIONS (ONLINE)

A common motivation for the selling firm in a business combination is to structure the deal so that any gain is tax-free at the time of the combination. To the extent that the seller accepts common stock rather than cash or debt in exchange for the assets, the sellers may not have to pay taxes until a later date when the shares accepted are sold. In this situation, the acquiring firm inherits the book values of the assets acquired for *tax* purposes. When the acquirer has inherited the book values of the assets for tax purposes but has recorded market values for reporting purposes, a deferred tax liability needs to be recognized.

For example, suppose that Taxaware Company has net assets totaling \$700,000 (market value), including fixed assets with a market value of \$200,000 and a book value of \$140,000. The book values of all other assets approximate market values. Taxaware Company is acquired by Blinko in a combination that qualifies as a *nontaxable exchange* for Taxaware shareholders. Blinko issues common stock valued at \$800,000 (par value \$150,000). First, if we disregard tax effects, the entry to record the acquisition would be:

|                                |           |           |
|--------------------------------|-----------|-----------|
| Assets                         | \$700,000 |           |
| Goodwill                       | 100,000   |           |
| Common Stock                   |           | \$150,000 |
| Additional Contributed Capital |           | 650,000   |

Now consider tax effects, assuming a 30% tax rate. First, the excess of market value over book value of the fixed assets creates a deferred tax liability because the excess depreciation is not tax deductible. Thus, the deferred tax liability associated with the fixed assets equals  $30\% \times \$60,000$  (the difference between market and book values), or \$18,000. The inclusion of deferred taxes would increase goodwill by \$18,000 to a total of \$118,000. The entry to include goodwill is as follows:

|   |         |         |
|---|---------|---------|
| Assets  | 700,000 |         |
| Goodwill  | 118,000 |         |
| Deferred Tax Liability (.3 × [200,000 – 140,000]) |         | 18,000  |
| Common Stock                                      |         | 150,000 |
| Additional Contributed Capital                    |         | 650,000 |

The reader may be aware that in recent years in the United States, *the amortization of goodwill is often deductible on the tax return of the acquirer over a period of 15 years*. This, however, is **not the case in a nontaxable exchange, where the goodwill is not subject to amortization on either the tax return or the books under current GAAP**. Thus, in a nontaxable exchange, there is no obvious temporary difference related to the goodwill. In *FASB Statement No. 141R* [ASC 805–740] the FASB addressed the issue of deferred taxes in business combinations, stating its decision not to require deferred taxes be measured at fair value. The statement amends *FASB Statement No. 109*, and states that a deferred tax liability or asset should be recognized for differences between the recognized values of assets acquired and liabilities assumed in a business combination (except the

portion of goodwill for which amortization is not deductible for tax purposes). Thus, we do not record a deferred tax liability on goodwill in this illustration.

Note, however, that in a *taxable exchange*, the excess amount of tax-deductible goodwill over the goodwill recorded in the books *does* meet the definition of a temporary difference. Further, *FASB Statement No. 141R* [ASC 805–740] addresses this issue explicitly, stating that the tax benefit in such a case should be recognized at the date of the business combination.

In FASB ASC 805-740-45-20, FASB also addressed changes in the valuation allowance on deferred tax assets. FASB requires that such an allowance be recognized when it is deemed more likely than not that some or all of the deferred tax asset will not be realized. Also, a change in the valuation allowance resulting from changed circumstances due to a business combination should be accounted for separately from the business combination. In other words, the change in the valuation allowance would be shown as income or expense in the period of the combination. FASB stated that this position was in line with the goal of convergence toward international standards. See Illustration 2-8 for a summary of the changes in deferred taxes.

IN  
THE  
NEWS

“Together, these statements [ASC 805] and [ASC 740] can affect acquisitions past, present, and future—dramatically changing the way companies account for future business combinations and minority interests (now noncontrolling interests). In some cases, they can affect the tax accounting for transactions completed prior to the effective date.” Examples of potential changes from the prior standard include: the handling of tax uncertainties and their effect on the valuation allowance; the recording of a deferred tax asset when goodwill for tax is greater than book goodwill; the effect of contingent consideration on the purchase price, deferred tax assets, and the tax provision; and transaction costs that are now expensed for book as well as tax purposes (thus no deferred taxes).<sup>17</sup>

#### ILLUSTRATION 2-8

##### Summary of Selected Income Tax Changes: Old vs. New Application

|  | <i>Old</i>  | <i>New</i>   |
|--|---|--|
| Changes in the valuation allowance resulting from the business combination.  | Decreases in the acquirer’s valuation allowance are included in the business combination accounting.  | Changes would be reflected in the income statement or in some cases, equity.   |
| Subsequent changes in the valuation allowance related to the target’s recorded tax attributes or the tax positions acquired. | All changes would first reduce goodwill to zero, then reduce other noncurrent intangibles to zero and lastly reduce income tax expense.   | Changes would be reflected in the income statement or, in some cases, equity (not for measurement period adjustments). Accounting depends on whether the new information relates to conditions that existed at the acquisition date. |
| Excess of the tax-deductible amount over accounting goodwill.  | No deferred tax asset recognized in the business combination; when the tax deduction is realized on the tax return, reduce goodwill to zero, then reduce other non-current intangibles to zero and finally reduce income tax expense. | Recognize a deferred tax asset.  |

## Chapter 2 – Review Questions

The review questions accompanying this course are designed to assist you in achieving the course learning objectives. The review section is not graded; do not submit it in place of your qualified assessment. While completing the review questions, it may be helpful to study any unfamiliar terms in the glossary in addition to course content. After completing the review questions, proceed to the review question answers and rationales.

8. Which of the following statements is accurate regarding the comparison of SFAS No. 141R and FASB Statement No. 141?
  - a. Most of the primary conclusions reached in the original SFAS No. 141 were revised in SFAS No. 141R.
  - b. The essence of the change is that the acquired company should be recognized at its fair value on the acquisition date.
  - c. The driving force was the complete convergence of U.S. GAAP and IFRS for business combinations.
  - d. The outcome was the pooling of interest method was eliminated.
  
9. Goodwill:
  - a. Must be amortized over its useful life, not to exceed 40 years, for all public companies.
  - b. Must be amortized over 10 years for all public companies.
  - c. Must be assigned to a reporting unit for all public companies.
  - d. May be evaluated under an alternative method if certain public companies meet the criteria.
  
10. Which of the following is accurate regarding acquisition costs under FASB ASC 805-10-25-23?
  - a. Expected restructuring costs resulting from the business combination must be accounted for separately from the business combination accounting.
  - b. Only direct expenses can be capitalized as part of the purchase price.
  - c. Only security issuance costs, if any, can be capitalized as part of the purchase price.
  - d. Direct costs may be capitalized as part of the purchase but indirect costs must be expensed.

11. Earnouts:
  - a. Measured and recognized when they are earned.
  - b. Measured at the acquisition date and reflected as equity.
  - c. Measured at the acquisition date and reflected as a liability.
  - d. Must be measured at fair value as of the acquisition date and recognized as part of the transaction.
  
12. Which of the following is accurate regarding GAAP versus IFRS standards in the area of business combinations?
  - a. IFRS offers acquiring companies a choice in the valuation of goodwill whereas U.S. GAAP does not.
  - b. IFRS does not allow for the recognition of goodwill whereas U.S. GAAP requires it if there is goodwill.
  - c. IFRS requires that companies write all assets, including goodwill, up fully even if there is a minority interest.
  - d. IFRS does not require the recognition of contingent consideration at the acquisition.

## Chapter 3 – Consolidated Financial Statements – Date of Acquisition

### Learning Objectives

After completing this section of the course, you will be able to:

- Identify “control” as it relates to business consolidations and cite the impact of controlling and non-controlling interests on the consolidation.
- Cite the rationales for acquiring a subsidiary versus acquiring its net assets and identify the resulting impact.
- Identify the valuation and classification of accounts in consolidated financial statements.
- Cite requirements for inclusion of a subsidiary in consolidated financial statements.
- Identify limitations in consolidated financial statements.
- Identify the journal entries and calculations for recording a subsidiary at the date of acquisition.
- Identify the need for eliminating entries at the date of acquisition.
- Recognize differences between implied value and book value of the acquired firm’s equity.
- Recognize differences between GAAP and IFRS with respect to preparation of consolidated financial statements.

## CONSOLIDATED FINANCIAL STATEMENTS—DATE OF ACQUISITION

### CHAPTER CONTENTS

- 3.1 DEFINITIONS OF SUBSIDIARY AND CONTROL
- 3.2 REQUIREMENTS FOR THE INCLUSION OF SUBSIDIARIES IN THE CONSOLIDATED FINANCIAL STATEMENTS
- 3.3 REASONS FOR SUBSIDIARY COMPANIES
- 3.4 CONSOLIDATED FINANCIAL STATEMENTS
- 3.5 INVESTMENTS AT THE DATE OF ACQUISITION
- 3.6 CONSOLIDATED BALANCE SHEETS: THE USE OF WORKPAPERS
- 3.7 A COMPREHENSIVE ILLUSTRATION—MORE THAN ONE SUBSIDIARY COMPANY
- 3.8 LIMITATIONS OF CONSOLIDATED STATEMENTS

### LEARNING OBJECTIVES

- 1 Understand the concept of control as used in reference to consolidations.
- 2 Explain the role of a noncontrolling interest in business combinations.
- 3 Describe the reasons why a company acquires a subsidiary rather than its net assets.
- 4 Describe the valuation and classification of accounts in consolidated financial statements.
- 5 List the requirements for inclusion of a subsidiary in consolidated financial statements.
- 6 Discuss the limitations of consolidated financial statements.
- 7 Record the investment in the subsidiary on the parent's books at the date of acquisition.
- 8 Prepare the consolidated workpapers and eliminating entries at the date of acquisition.
- 9 Compute and allocate the difference between implied value and book value of the acquired firm's equity.
- 10 Discuss some of the similarities and differences between U.S. GAAP and IFRS with respect to the preparation of consolidated financial statements at the date of acquisition.

IN  
THE  
NEWS

Microsoft purchased Internet phone service provider Skype for \$8.5 billion in cash. The deal gave Microsoft access to Skype's real-time video and voice communications services. The companies said the software maker planned to use Skype to support such products as the Xbox gaming system and Windows Phone.<sup>1</sup>

In acquiring another company, the acquirer must allocate its purchase price to the fair value of the underlying assets and liabilities acquired. Because determination of fair values often involves some degree of subjectivity, acquiring firms sometimes use their discretion to allocate the values in such a way as to pave the way for future growth in earnings and reported profitability.

<sup>1</sup> Money.cnn.com, May 10, 2011.

For example, higher values for property, plant, and equipment will lead to regular increases in depreciation charges for the remaining life of the assets, while higher values for inventories will flow through to the income statement as soon as the inventory is sold. These topics are developed and illustrated fully in Chapter 5. Among the assets that have drawn the attention of regulators in recent years are technology-related intangibles and in-process research and development costs. For a time, it seemed that any target with products in the pipeline provided an opportunity for R&D allocations. Sphinx Pharmaceuticals, for instance, ascribed the entire purchase cost of Genesis Pharmaceuticals to R&D.

How could this happen? To answer this question keep in mind that the acquirer evaluates estimated liabilities as well as assets of the target. When Disney acquired ABC, it determined that significant programming commitments led to probable and estimable liabilities that, though previously unrecorded by ABC, needed to be recorded in the acquisition. The result of this, and several other adjustments, was the recording of goodwill in an amount slightly larger than the purchase price.

IN  
THE  
NEWS

“Few things in banking are as ho-hum as the back-office operations that handle billions of deposits, withdrawals, and other transactions every day. But with acquisition activity intensifying such systems are about to face a huge test.” J.P. Morgan Chase & Co., Wells Fargo & Co. and PNC Financial Services Group Inc. will need to spend hundreds of millions of dollars over the next several years to integrate recent acquisitions of Washington Mutual’s banking operations, Wachovia Corp. and National City Corp. respectively. Combining two banks is notoriously expensive, risky, and complicated. It took J.P. Morgan about seventeen years after its 1988 acquisition to completely/fully merge the operations of Texas Commerce Banc-shares Inc.<sup>2</sup>

Recall that business combinations may be negotiated either as **asset acquisitions** or as **stock acquisitions**. In Chapter 2 the procedural focus was on business combinations arising from **asset acquisitions**. In those situations the acquiring company survived, and the acquired company or companies ceased to exist as separate legal entities. The focus in this chapter is on accounting practices followed in **stock acquisitions**, that is, when one company **controls** the activities of another company through the direct or indirect ownership of some or all of its voting stock.

**LO 2** Noncontrolling interest (NCI).

When this occurs, the acquiring company is generally referred to as the **parent** and the acquired company as a **subsidiary**. Those holding any remaining stock in a subsidiary are referred to as the **noncontrolling (minority) interest**. Any joint relationship is termed an **affiliation**, and the related companies are called **affiliated companies**. Each of the affiliated companies continues its separate legal existence, and the investing company carries its interest as an investment. The affiliated companies continue to account individually for their own assets and liabilities, with the parent company reflecting the investment on its books in a single account, Investment in Subsidiary. This account will ultimately be eliminated in the consolidation process to produce a set of consolidated financial statements. However, the investment account will be maintained in the “parent” records. Thus, an important distinction is noted between the **consolidated** statements and the **parent only** records or statements in the case of stock acquisitions.

A corporate affiliation may, of course, consist of more than two companies. A parent may obtain a controlling interest in the voting stock of several subsidiaries. If one or more of the subsidiaries owns a controlling interest in one or more other companies, a chain of ownership is forged by which the parent company controls, either directly or indirectly, the activities of the other companies. Many large American conglomerates have been formed by a variety of indirect ownerships.

THE  
NEWS

In a stock-for-stock deal valued at \$1.46 billion, Houston-based Plains Exploration & Production Co. acquired Stone Energy Corp. of Lafayette, Louisiana. The purchase price was based on Plains' closing stock price on April 21, 2006 and the assumption of \$483 million of Stone's debt. Shareholders of Stone received 1.25 shares of Plains per share of Stone common. Upon the deal's closing, Plains shareholders owned 70% of the combined company while Stone shareholders owned 30%.<sup>3</sup>

1. What risks did the shareholders of Stone take on by accepting only stock in this transaction?
2. Discuss reasons why Plains' shareholders would rather use its stock than cash to purchase Stone.

### 3.1 DEFINITIONS OF SUBSIDIARY AND CONTROL

#### LO 1 Meaning of control.

Although the term **subsidiary** takes on varied meanings in practice, in this text it refers to *the situation wherein a parent company (and/or the parent's other subsidiaries) owns a controlling financial interest in another company, whether that company is incorporated or not (such as a trust or partnership).*<sup>4</sup> Both the IASB and the FASB have indicated their opinion that the definition of control should not be limited to the common presumption in practice of a 50% cutoff but should instead include an indirect ability to control another entity's assets. **Controlling interest is defined as the portion of the equity of the consolidated group attributable to the parent and the parent's owners.**

#### IFRS

Consolidated financial statements are usually necessary for a fair presentation if one of the entities in the consolidated group directly or indirectly has a controlling financial interest in the other entities. FASB ASC paragraph 810-10-15-8 states that the usual condition for a controlling financial interest is ownership of a *majority voting interest*. However, application of the majority voting interest requirement may not identify the party with a controlling financial interest because the controlling financial interest may be achieved through arrangements that do not involve voting interests. The first step in determining whether the financial statements should be consolidated is to determine if the reporting entity has a variable interest in another entity, referred to as a potential variable interest entity (VIE).<sup>5</sup>

The Variable Interest Entities subsection of the Codification provides guidance for identifying such entities. The language is technical, but bear in mind that these rules originated largely to close loopholes that had previously allowed such companies as Enron to keep partnerships or other entities under the company's control off its consolidated financial statements. Transactions involving VIEs have become increasingly common. Some reporting entities have entered into arrangements using VIEs that appear to be designed to avoid reporting assets and liabilities for which they are responsible, to delay reporting losses that have already been incurred, or to report gains that are illusory. At the same time, many reporting entities have used VIEs for valid business purposes and have properly accounted for those VIEs based on guidance and accepted practice (FASB ASC paragraph 810-10-05-9).

The crux of the issue is that sometimes the party that owns the majority of the equity of a variable interest entity does not actually control the entity because it is thinly capitalized; in other words, the majority of the financing is through debt rather than equity. When

<sup>3</sup> *Houston Business Journal*, "Plains E&P to Acquire Stone Energy," 4/24/06.

<sup>4</sup> The SEC distinguishes majority-owned, totally held, and wholly owned subsidiaries. The term **majority-owned** means a subsidiary more than 50% of whose outstanding voting shares are owned by its parent and/or the parent's other majority-owned subsidiaries. The term **totally held** means a subsidiary (1) substantially all of whose outstanding equity securities are owned by its parent and/or the parent's other totally held subsidiaries, and (2) which is not indebted to any person other than its parent and/or the parent's other totally held subsidiaries, in an amount that is material in relation to the particular subsidiary. The term **wholly owned** means a subsidiary all of whose outstanding voting shares are owned by its parent and/or the parent's other wholly owned subsidiaries.

<sup>5</sup> Prior to the first step, the entity must determine if it qualifies for the deferral conditions in FASB ASC paragraph 810-10-65-2(aa). If so, the entity would follow previous GAAP for VIEs.

a company like Enron creates a partnership but does not own any stock in that partnership, it may nonetheless effectively control the activities of the partnership, while the outside shareholders do not. FASB developed a risk and reward model to determine who should consolidate such a partnership or other variable interest entity. The investments or other interests that absorb portions of a variable interest entity's expected losses or receive portions of the entity's expected residual returns are called variable interests. The identification of variable interests requires an economic analysis of the rights and obligations of a legal entity's assets, liabilities, equity, and other contracts. Variable interests are contractual, ownership, or other pecuniary interests in a legal entity that change with changes in the fair value of the legal entity's net assets exclusive of variable interests (FASB ASC paragraph 810-10-55-17). Operations of an entity and its assets tend to create variability (and are generally not variable interests) while liabilities and equity tend to absorb that variability. FASB ASC paragraphs 810-10-55-16 through 41 describe examples of variable interest in VIEs. For instance, equity investments or investments in subordinated debt in a VIE are variable interests to the extent that they are at risk. Guarantees of the value of the assets or liabilities of a VIE are variable interests.

Once the variable interests are identified, it must be determined whether the entity is a VIE (FASB ASC paragraph 810-10-15-14). If so, then the final step is to determine the VIE's primary beneficiary, or the party that would be required to consolidate the VIE into its own books. An entity is subject to consolidation if *any* of the following conditions exist:

- a. The total equity at risk is not sufficient to permit the legal entity to finance its activities without additional subordinated financial support provided by any parties, including equity holders. See FASB ASC 810-10-25-45 through 47 for a determination of equity at risk.
- b. The holders of the equity investment at risk *lack* any one of the following three items:
  1. The power to direct the activities of the legal entity that impact the entity's economic performance
  2. The obligation to absorb the expected losses of the legal entity
  3. The right to receive the expected residual returns of the legal entity
- c. The equity investors as a group lack the power to direct the activities if both
  1. The voting rights are not proportional to their obligations to absorb the expected losses or their rights to receive the expected residual returns, and
  2. Substantially all of the legal entity's activities, such as borrowing, either involve or are conducted on behalf of an investor who has disproportionately few voting rights.

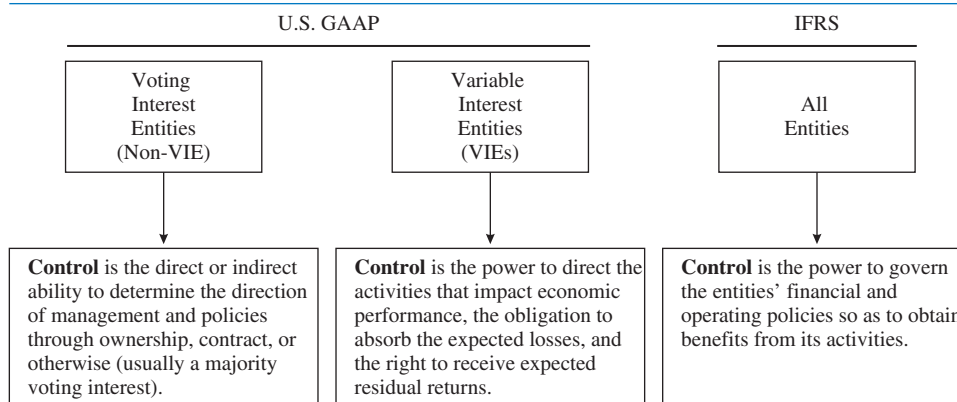

These conditions determine whether a controlling financial interest is achieved through arrangements that do not involve voting interests. If the entity is a VIE in which any of the above conditions exist, then an evaluation is necessary of factors indicating which party holds the power to direct the activities of the VIE and the obligation to absorb losses or right to reap benefits from the VIE. This party is the primary beneficiary, and must consolidate the VIE. See Appendix 3B online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).

On the other hand, if the entity is not considered a VIE, the determination of consolidation is based on whether one of the entities in the consolidated group directly or indirectly has a controlling financial interest in the other entities (usually ownership of a majority voting interest). Control, according to U.S. GAAP, is defined as the direct or indirect ability to determine the direction of management and policies through ownership, contract, or otherwise. IFRS defines control to be the power to govern the entities' financial and operating policies so as to obtain benefits from its activities. See Illustration 3-1 for a summary.

In this chapter we focus on situations where the control is evidenced by a majority ownership. The same procedures would apply, however, in the case where a smaller percentage ownership exists concurrently with evidence of effective control (for example, the

## Definitions of Control

IN  
THE  
NEWS

Profits rose 20% in Walt Disney Co.'s fiscal third quarter of 2004 as revenue at its parks and resorts and studio-entertainment businesses doubled. Revenue at parks and resorts climbed 32% to \$2.29 billion as the financial statements of Euro Disney and Hong Kong Disneyland were consolidated, contributing \$332 million to the revenue increase. Disney adopted an accounting rule pertaining to the consolidation of variable interest entities or VIEs. In implementing this rule, Disney consolidated the balance sheets of Euro Disney and Hong Kong Disneyland as of March 31, and the income and cash flow statements beginning April 1 of that year.<sup>6</sup>

1. Prior to the adoption of the accounting rule, where in Disney's financial statements would the financial results from the VIEs appear?
2. Why might Disney choose separate dates to consolidate the balance sheets and income and cash flow statements?

IN  
THE  
NEWS

Consolidation of entities that are not majority-owned is opposed by some companies, particularly biotechnology and pharmaceutical concerns, whose financial strength could be hurt by reporting consolidated financials. Accounting professionals have argued that some firms deliberately avoid consolidating results by owning less than 50% of the voting stock in an entity, even though they effectively control it by hiring and firing management.<sup>7</sup>

1. In what instances would a company *want* to consolidate an entity of which the company owns less than 50%?
2. Discuss ways that a company can control another with less than majority ownership.

parent owns 40% of the voting stock, and no other party has a significant interest, or the parent controls the board).

For companies reporting periods beginning after November 15, 2009, the accounting for transfers of financial assets and consolidation of variable interest entities (VIEs) will change. The changes, which are expected to reduce the amount of "off-balance-sheet" reporting include eliminating the current QSPE concept. A QSPE was a separate structure that held passive financial assets for the benefit of the investors and was so passive, and its actions and decisions so limited, that control (and thus consolidation) was not an issue. A qualifying special-purpose entity is a trust or other legal vehicle that meets all the conditions listed in FASB ASC paragraph 860-40-15-3. International accounting standards (IFRS), in contrast, did not contain provisions that allow for the idea of a QSPE, and they require all "controlled" SPEs to be consolidated.

<sup>7</sup> *WSJ*, "FASB Seeks More Disclosure in Minor Stakes," by Elizabeth MacDonald, 3/3/99, p. C12.

The Securities and Exchange Commission defines a subsidiary as an affiliate controlled by another entity, directly or indirectly, through one or more intermediaries. Control means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of another entity, whether through the ownership of voting shares, by contract, or otherwise. The debate arises because such a definition is less clear cut than majority ownership. It is, however, consistent with the stated objective of the IASB and the FASB to move away from rules-based accounting in favor of principles-based accounting.

On July 30, 2002, President Bush signed into law an Accounting Industry Reform Act, requiring chief executive officers to certify the validity of their firms' financial statements beginning August 14, 2002. Other aspects of the act included the following: the establishment of an oversight board for the accounting industry and the auditing sector in particular (the PCAOB or The Public Company Accounting Oversight Board); restrictions on the types of consulting services allowed to be performed by auditors, such as bookkeeping, financial systems design, and personnel and legal services; bans on personal loans from companies to their top officials and directors; and the creation of new penalties for corporate fraud.

## 3.2 REQUIREMENTS FOR THE INCLUSION OF SUBSIDIARIES IN THE CONSOLIDATED FINANCIAL STATEMENTS

**LO 5** Requirements regarding consolidation of subsidiaries.

The purpose of consolidated statements is to present the operating results and the financial position of a parent and all its subsidiaries as if they are one economic entity. Given this purpose and problems related to off-balance-sheet financing, the FASB has taken the position that essentially all controlled corporations should be consolidated. In general, the objective of consolidation is to provide the most meaningful financial presentation possible in the circumstances. The FASB has reemphasized the basic position that parent-company -only financial statements are unacceptable for general purpose distribution; that is, the consolidated financial statements are the primary statements of the economic entity. It notes that parent-company-only statements may be needed in addition to consolidated financial statements for the interests of such parties as bondholders, other creditors, and preferred shareholders of the parent. Consolidating statements, with columns for different subsidiaries or groups of subsidiaries and one column for the parent, are one effective way to present such information.

Under some circumstances, majority-owned subsidiaries should be excluded from the consolidated statements. Those circumstances include those where:<sup>8</sup>

1. Control does not rest with the majority owner. For example, a subsidiary in legal reorganization or bankruptcy should not be consolidated.
2. The subsidiary operates under governmentally imposed uncertainty so severe as to raise significant doubt about the parent's control. For example, a foreign subsidiary is domiciled in a country with foreign exchange restrictions, controls, or other governmentally imposed uncertainties so severe that they cast significant doubt on the parent's ability to control the subsidiary.

A difference in fiscal year-ends between the parent and a subsidiary does not justify the exclusion of the subsidiary from the consolidation financial statements. It is generally viewed as feasible for the subsidiary to prepare financial statements to coincide, or nearly coincide, with the parent's fiscal period. When the difference between year-ends is greater than three months, it is usually acceptable to use the subsidiary's statements for its fiscal period, giving recognition by disclosure notes or other means of intervening events that materially affect the results of operations or financial position.

<sup>8</sup> FASB ASC paragraph 810-10-15-10(a).

### 3.3 REASONS FOR SUBSIDIARY COMPANIES

**LO 3** Acquiring assets or stock.

There are several advantages to acquiring a controlling interest in the voting stock of another company rather than its assets or all its voting stock. For example:

1. Stock acquisition is relatively simple. Stock can be acquired by open market purchases or by cash tender offers to the subsidiary’s stockholders. Such acquisitions avoid the often lengthy and difficult negotiations that are required in an exchange of stock for stock during a complete takeover.
2. Control of the subsidiary’s operations can be accomplished with a much smaller investment, since not all of the stock need be acquired.
3. The separate legal existence of the individual affiliates provides an element of protection of the parent’s assets from attachment by creditors of the subsidiary. A parent may sometimes establish a subsidiary by forming a new corporation rather than simply adding a division to the existing company. The limited liability characteristic of the corporate form of business organization is often the primary reason for doing so.

### 3.4 CONSOLIDATED FINANCIAL STATEMENTS

**RELATED CONCEPTS**  
 The *economic entity* assumption suggests that a parent and its subsidiaries be viewed as one economic entity, even if several separate legal entities exist.

The statements prepared for a parent company and its subsidiaries are called **consolidated financial statements**. They include the full complement of statements normally prepared for a separate entity and represent essentially the sum of the assets, liabilities, revenues, and expenses of the affiliates after eliminating the effect of any transactions among the affiliated companies. Accountants recognize that the unconsolidated financial statements of the parent company, the **legal entity**, are *insufficient to present the financial position and results of operations of the economic entity controlled by the parent company*.

Consider for a moment the unconsolidated financial statements of the parent company. When the parent acquires a controlling interest in the subsidiary, the parent makes an entry debiting **Investment in Subsidiary** and crediting either cash, debt, or stock (or some combination), depending on the medium of exchange. Assume that the acquisition relies on a cash purchase price of \$5 million. The entry on the parent’s books would be:<sup>9</sup>

|                          |             |             |
|--------------------------|-------------|-------------|
| Investment in Subsidiary | \$5,000,000 |             |
| Cash                     |             | \$5,000,000 |

The parent’s investment account represents the parent’s investment in the different asset and liability accounts of the subsidiary and often includes a significant amount of goodwill. However, it is recorded in a single account entitled Investment. The subsidiary, in contrast, continues to keep its detailed books based on historical book values. These values are not as current as the market values assessed by the parent at the date of acquisition, but they are detailed as to classification. One way of looking at the process of consolidating is to consider the following table.

**LO 4** Valuation and classification of subsidiary assets and liabilities.

|                | <i>Investment Account on the Parent’s Books</i> | <i>Asset and Liability Accounts on the Subsidiary’s Books</i> |
|----------------|---|---|
| Valuation      | Market Value                                    | Historical Value  |
| Classification | One Account                                     | Multiple Accounts   |

From the table above, we see that neither the parent’s Investment account nor the subsidiary’s detailed asset and liability accounts serves to provide **both** the valuation and classification desired in the consolidated financial statements. The process of preparing

<sup>9</sup>All parent company journal entries will be shaded gray.

consolidated financial statements aims to achieve the desirable characteristics in the diagonal by showing the detailed asset and liability accounts on the consolidated balance sheet, but using the valuation established by the acquisition price. Further, this valuation provides the basis needed to measure earnings, reflecting all necessary charges.<sup>10</sup>

*The purpose of consolidated statements is to present, primarily for the benefit of the owners and creditors of the parent, the results of operations and the financial position of a parent company and all its subsidiaries as if the consolidated group were a single economic entity.*<sup>11</sup> Consolidated statements ignore the legal aspects of the separate entities but focus instead on the economic entity under the “control” of management. The presumption is that most users of financial statements prefer to evaluate the economic entity rather than the legal entity. Thus, the preparation of consolidated statements is an example of focusing on substance rather than form.

Although consolidated statements for the economic entity are considered to be more appropriate for use by the stockholders and creditors of the parent company (and are the only general-purpose financial statement acceptable under GAAP for companies with one or more subsidiaries), they are not substitutes for the statements prepared by the separate subsidiaries. Creditors of the subsidiaries must look to the statements of the individual legal entities in assessing the degree of protection related to their claims. Likewise, noncontrolling stockholders need the statements of the individual companies to determine the degree of investment risk involved and the amounts available for dividends. Also, regulatory agencies are often concerned with the net resources and results of operations of the individual subsidiaries.

### 3.5 INVESTMENTS AT THE DATE OF ACQUISITION

**LO 7** Recording of investment at acquisition.

The general principles used to record business combinations effected as asset acquisitions were discussed in Chapter 2. *In this chapter and throughout Chapters 4 through 9, we will concentrate on accounting for the acquisition of another company’s voting stock.* See Appendix 3A online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter) for issues related to deferred taxes.

#### Recording Investments at Cost (Parent’s Books)

The basic guidelines for valuation discussed in Chapter 2 pertaining to business combinations apply equally to the acquisition of voting stock in another company. Under the purchase or acquisition method, the stock investment is recorded at its cost as measured by the fair value of the consideration given or the consideration received, whichever is more clearly evident. Recall that the consideration given may consist of cash, other assets, debt securities, stock of the acquiring company, or a combination of these items. Both the direct costs of acquiring the stock and the indirect costs relating to acquisitions (such as the costs of maintaining an acquisitions department) should be expensed as incurred.

If cash is used for the acquisition, the investment is recorded at its cash cost, excluding broker’s fees and other direct costs of the investment. For example, assume that P Company acquires all 10,000 shares of the common stock of S Company for \$25 per share and pays acquisition fees of \$10,000. The entry to record the investment on P Company’s books is:

|                         |         |         |
|-------------------------|---------|---------|
| Investment in S Company | 250,000 |         |
| Cash (10,000)(\$25)     |         | 250,000 |
| Acquisition Expense     | 10,000  |         |
| Cash                    |         | 10,000  |

<sup>10</sup> FASB ASC topic 810 [Consolidation].

<sup>11</sup> FASB ASC paragraph 810-10-10-1.

The acquisition fee would be recorded in a separate entry as an expense. If P Company acquired only 50% of the 10,000 shares at \$25 per share and paid an acquisition fee of \$8,000, the acquisition entry would be:

|                         |         |         |
|-------------------------|---------|---------|
| Investment in S Company | 125,000 |         |
| Cash (5,000)(\$25)      |         | 125,000 |

If P Company issues stock in the acquisition, the investment is recorded at the fair value of the stock issued, giving effect to any costs of registering the stock issue. Assume, for example, that P Company issues 20,000 of its \$10 par value common shares with a fair value of \$13 per share for the 10,000 shares of S Company, and that registration costs amount to \$5,000, paid in cash. The entries to record the investment on P Company's books are:

|   |         |         |
|---|---------|---------|
| Investment in S Company (20,000)(\$13)  | 260,000 |         |
| Common Stock (20,000)(\$10)             |         | 200,000 |
| Other Contributed Capital (20,000)(\$3) |         | 60,000  |
| Other Contributed Capital               | 5,000   |         |
| Cash (registration costs)               |         | 5,000   |

If P Company paid an additional \$10,000 as a finder's fee, the entry would be:

|                           |        |        |
|---------------------------|--------|--------|
| Professional Fees Expense | 10,000 |        |
| Cash                      |        | 10,000 |

### TEST YOUR KNOWLEDGE 3.1

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

#### Multiple Choice

- Stock given as consideration is valued at:
  - Fair market value
  - Par value
  - Historical cost
  - None of the above
- Which of the following advantages and/or disadvantages of stock acquisitions relative to asset acquisitions (and subsequent consolidated financial statements) is *misstated*?
  - Consolidated statements need not be produced as long as a parent company owns less than 50% of the voting shares of the subsidiary.
  - Stock can be acquired by open-market purchases or by cash tender offers to the subsidiary's stockholders.
  - Control of the subsidiary's operation can be accomplished with a much smaller investment, since not all of the stock need be acquired.
  - The separate legal existence of the individual affiliates provides an element of protection of the parent's assets from attachment by creditors of the subsidiary.
- Which of the following is not (generally) an advantage of stock acquisitions over asset acquisitions?
  - Speed
  - Majority of ownership not required
  - Liability protection
  - Anonymity
- In its conceptual framework, the FASB set out a number of principles to be adhered to in standard setting and in interpreting financial statements. The decision to require a consolidated statement, rather than separate financial statements, for a parent firm and its subsidiary best illustrates which of the following principles or concepts?
  - Periodicity
  - Going concern
  - Materiality
  - Economic entity

## 3.6 CONSOLIDATED BALANCE SHEETS: THE USE OF WORKPAPERS

**Lo 8** Preparing consolidated statements using a workpaper.

Affiliated companies should prepare a full set of financial statements (balance sheet, or statement of position; statement of income and comprehensive income; statement of cash flows; statement of stockholders' equity (or retained earnings); and notes to the financial statements). As of the **date of acquisition** of one company by another, however, the most relevant statement is the consolidated balance sheet. Preparation of the other consolidated financial statements becomes important with the passage of time and is discussed in later chapters.

The consolidated balance sheet reports *the sum* of the assets and liabilities of a parent and its subsidiaries as if they constituted a single company. Assets and liabilities are summed in their entirety, regardless of whether the parent owns 100% or a smaller controlling interest. In the latter case, the noncontrolling interests are reflected as a component of owners' equity. This interest may be referred to as either the noncontrolling interest in net assets or as the noncontrolling interest in equity (these terms are identical), and is sometimes abbreviated as NCI.

Since the parent and its subsidiaries are being treated as a single entity, eliminations must be made to cancel the effects of transactions among them. Intercompany receivables and payables, for example, must be eliminated to avoid double counting and to avoid giving the impression that the consolidated entity owes money to itself. Likewise, any intercompany profits in assets arising from subsequent transactions must be eliminated, since an entity cannot profit on transactions with itself. A **workpaper** is frequently used to summarize the effects of the various additions, eliminations, and so forth. Among the types of transactions that necessitate eliminating entries are the following:<sup>12</sup>

#### Intercompany Accounts to Be Eliminated

| <i>Parent's Accounts</i>                                     |         | <i>Subsidiary's Accounts</i>                         |
|--|---------|--|
| Investment in subsidiary                                     | Against | Equity accounts                                      |
| Intercompany receivable (payable)                            | Against | Intercompany payable (receivable)                    |
| Advances to subsidiary (from subsidiary)                     | Against | Advances from parent (to parent)                     |
| Interest revenue (interest expense)                          | Against | Interest expense (interest revenue)                  |
| Dividend revenue (dividends declared)                        | Against | Dividends declared (dividend revenue)                |
| Management fee received from subsidiary                      | Against | Management fee paid to parent                        |
| Sales to subsidiary (purchases of inventory from subsidiary) | Against | Purchases of inventory from parent (sales to parent) |

#### RELATED CONCEPTS

The *revenue recognition* principle indicates that revenue should be recognized only when transactions with entities *outside* the consolidated economic unit are completed.

The process of eliminating these and other types of items (such as the profit or loss on intercompany sales of assets not realized in transactions with outsiders) will be discussed in detail in this and later chapters. This chapter will focus on balance sheet accounts, while later chapters will focus on both balance sheet and income statement accounts.

### Investment Elimination

**LO 8** Investment is eliminated for consolidated statements.

An important basic elimination in the preparation of consolidated statements is the elimination of the investment account and the related subsidiary's stockholders' equity. The investment account represents the investment by the parent company in the net assets of the subsidiary and is, therefore, reciprocal to the subsidiary company's stockholders' equity. Since the subsidiary company's assets and liabilities are combined with those of the parent company in the consolidated balance sheet, it is necessary to eliminate the investment account of the parent company against the related stockholders' equity of the subsidiary to avoid double counting of these net assets. In effect, when the parent company's share of the subsidiary company's equity is eliminated against the investment account, the subsidiary company's net assets are substituted for the investment account in the consolidated balance sheet.

The process of combining the individual assets and liabilities of a parent company and its subsidiary at the date of acquisition is discussed next. If the acquisition is for less than 100% of the subsidiary, the fair value of both the controlling interest and the noncontrolling interest must be determined. The fair value of the controlling interest is generally assumed to equal the amount paid by the acquirer. However, determination of the fair value of the

<sup>12</sup> The account used by the parent to record dividends received from the subsidiary will differ if the parent uses the equity method, described in Chapter 4, to account for its investment.

noncontrolling interest is less straightforward. For instance, as noted in FASB ASC paragraphs 805-20-30-7 and 8, the per share amount paid by the acquirer could include a ‘control premium.’ If the acquirer is able to measure the fair value of the noncontrolling interest on the basis of active market prices for the shares not obtained by the acquirer at the acquisition date, this will provide the basis for valuing the noncontrolling interest. If not, other valuation techniques must be applied.

To illustrate, suppose Company P acquires 80% of Company S for \$70 per share and the remaining shares actively trade at \$65 per share immediately following the acquisition. This would imply a control premium of \$5 per share, and it would be appropriate to value the noncontrolling shares at \$65 rather than \$70 per share.

However, throughout this textbook, we assume the value of the controlling and noncontrolling shares to be equal unless explicitly stated otherwise. Thus, the fair value of the noncontrolling interest can be inferred from the value implied by the acquisition price. This approach is illustrated next.

To start the consolidating process, a useful first step is to prepare a “*Computation and Allocation of Difference between Implied Value and Book Value*” schedule (CAD). Preparation of this schedule requires us to address three basic issues.

1. Determine the percentage of stock acquired in the subsidiary. (Is it a 100% acquisition, or a smaller percentage?)
2. Use the purchase price (cost) to compute the *implied value* of the subsidiary. Simply divide the purchase price by the percentage acquired to calculate this value. If the percentage is 100%, the implied value will equal the purchase price.
3. Compare the implied value from step (2) to the book value of the subsidiary’s equity. If a difference exists, we must then allocate that difference to adjust the underlying assets and/or liabilities of the acquired company.

**LO 9** Computing and allocating the difference between implied and book value (CAD).

The book value of the equity is the sum of all equity accounts (common stock, additional contributed capital, retained earnings, etc.), which equals the book value of the acquired firm’s assets minus liabilities at the date of acquisition.

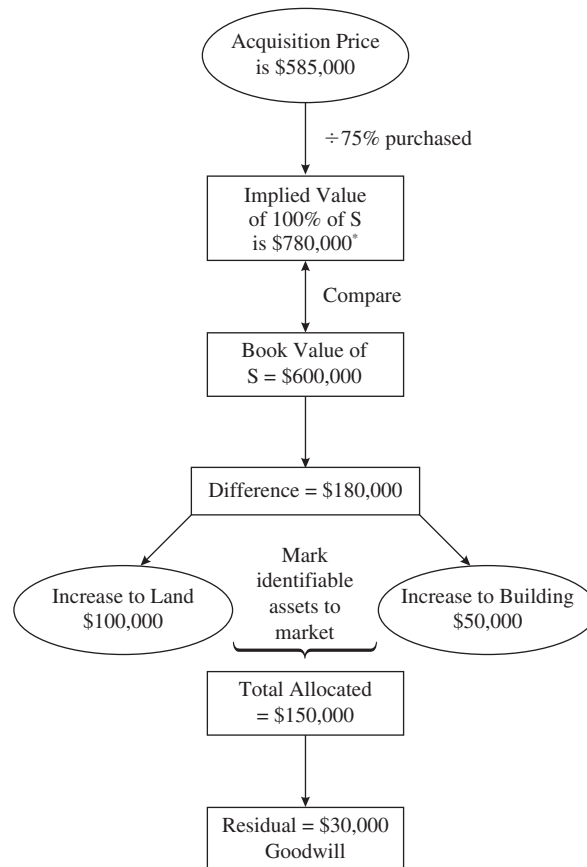

$$\text{Implied Value of Subsidiary Equity} = (\text{Acquisition Price})/(\text{Percentage Acquired})$$

Note that the comparison is between implied value and **book** value. This comparison is appropriate because the subsidiary company’s accounts are recorded at book value amounts, and the trial balance of the subsidiary company (along with the trial balance of the parent company) provides the starting point for the consolidation process. Thus, although market values are crucial in determining the numbers that are eventually reported in the consolidated financial statements, we use book values to establish a starting point. When the implied value exceeds the book value, the difference will be distributed to adjust net assets upward. See Illustration 3-2 for a graphic illustration of this principle. When the implied value is less than the book value, the difference may be distributed to adjust net assets downward, or a gain may be recognized for a “bargain,” as dictated by the facts of the acquisition.

The steps above lead to the following possible cases:

- Case 1.** The implied value (IV) of the subsidiary (purchase price divided by percentage acquired) is **equal** to the book value of the subsidiary company’s equity ( $IV = BV$ ), and
- a. The parent company acquires 100% of the subsidiary company’s stock; or
  - b. The parent company acquires less than 100% of the subsidiary company’s stock.
- Case 2.** The implied value of the subsidiary **exceeds** the book value of the subsidiary company’s equity ( $IV > BV$ ), and
- a. The parent company acquires 100% of the subsidiary company’s stock; or
  - b. The parent company acquires less than 100% of the subsidiary company’s stock.
- Case 3.** The implied value of the subsidiary is **less** than the book value of the subsidiary company’s equity ( $IV < BV$ ), and
- a. The parent company acquires 100% of the subsidiary company’s stock; or
  - b. The parent company acquires less than 100% of the subsidiary company’s stock.

ILLUSTRATION 3-2

\*This assumes no control premium is attached to the acquisition price.

We next illustrate the alternatives above in the order listed, with the exception that we omit illustrations of Cases 2(a) and 3(a), which should be readily apparent after reading the others. Examples are based on the balance sheets as of January 1, 2015, for P Company and S Company as shown in Illustration 3-3.

It is important to distinguish between **actual entries** that are recorded in the books of one of the two companies and **workpaper-only entries**. The entries presented in the preceding section to record the investment in S Company were actual entries, which would be recorded in the accounts of P Company. These types of entries would already be reflected in the trial balance, which constitutes the first column of the workpapers presented throughout this chapter (see, for example, Illustration 3-4 or Illustration 3-5).

The entries that we develop next, and which appear in the middle “elimination” columns of the workpapers, are **workpaper-only entries**. As such, they are never posted to the books or accounts of either company’s general ledger. Consequently, the entries will need to be repeated each year in the consolidating process. In some cases a number of entries from prior years may be combined to simplify the process; but, in essence, the entries are being repeated each year. Throughout this book, workpaper-only entries will be presented **shaded in blue**. Parent company and subsidiary entries are shaded in **gray**.

### Case 1 (a): Implied Value of Subsidiary Is Equal to Book Value of Subsidiary Company’s Equity (IV = BV)—Total Ownership (100% of Subsidiary Stock Acquired)

If the purchase price happens to be exactly equal to the book value of the equity acquired, the investment account (from the parent’s trial balance) will eliminate cleanly against the

**ILLUSTRATION 3-3****Balance Sheets for P Company and S Company—January 1, 2015**

|                              | <i>P Company</i> | <i>S Company</i> |
|------------------------------|------------------|------------------|
| Cash                         | \$100,000        | \$ 20,000        |
| Other current assets         | 140,000          | 50,000           |
| Plant and equipment (net)    | 120,000          | 40,000           |
| Land                         | 40,000           | 20,000           |
| Total assets                 | <u>\$400,000</u> | <u>\$130,000</u> |
| Liabilities                  | \$ 60,000        | \$ 50,000        |
| Common stock, \$10 par value | 200,000          | 50,000           |
| Other contributed capital    | 40,000           | 10,000           |
| Retained earnings            | 100,000          | 20,000           |
| Total Liabilities and Equity | <u>\$400,000</u> | <u>\$130,000</u> |

equity accounts of the subsidiary. If we assume further that the market values of the assets acquired approximate their book values, then there is no need to adjust assets or liabilities from their recorded values. The end result of the eliminating process is that the investment account is completely eliminated, as are the equity accounts of the subsidiary (since it is a 100% acquisition). In essence the investment account is replaced with the underlying assets and liabilities of the subsidiary.

To illustrate, assume that on January 1, 2015, P Company acquired all the outstanding stock (5,000 shares) of S Company for a cash payment of \$80,000. P Company would record an actual journal entry as follows:

|                         |          |          |
|-------------------------|----------|----------|
| Investment in S Company | \$80,000 |          |
| Cash                    |          | \$80,000 |

Immediately after the acquisition, P Company has \$20,000 in cash (\$100,000 shown in Illustration 3-3, immediately prior to acquisition, minus \$80,000 spent to acquire Company S) and \$80,000 in an Investment in S Company account. These amounts appear in the first column of the workpaper presented in Illustration 3-4. In the case of a 100% acquisition, the implied value of the subsidiary equals the purchase price. The majority of acquisitions between 2010 and 2014 were for 100% of the outstanding stock (or total net assets) of the target; thus, noncontrolling interest in equity was recognized in a relatively small percentage. When the target was a private, rather than publicly traded, company, the percentage was even smaller, with only 3.5% of acquisitions by a public acquirer targeting a private company resulting in a noncontrolling interest. When a public acquirer targeted a publicly traded firm, 7.1% of acquisitions resulted in a noncontrolling interest in equity being reported.

The Computation and Allocation of Difference between Implied and Book Values Schedule reveals no difference, as shown below.

**Computation and Allocation of Difference  
(between Implied and Book Values) Schedule**

|  | <i>Parent Share</i> | <i>NonControlling Share</i> | <i>Total Value</i> |
|--|---------------------|-----------------------------|--------------------|
| Purchase price and implied value           | \$80,000            | —0—                         | \$80,000           |
| Less: Book value of equity acquired        | 80,000              | —0—                         | 80,000             |
| Difference between implied and book values | <u>\$ —0—</u>       | <u>\$ —0—</u>               | <u>\$ —0—</u>      |

Note that the \$80,000 paid equals the recorded value of S Company's stockholders' equity. Data for the preparation of formal consolidated statements are normally accumulated on a workpaper, on which any required adjusting and eliminating entries are made prior to combining remaining balances. **Adjusting entries** are those needed to correct any

accounts of the affiliates that may be incorrect or to recognize the unrecorded effect of transactions that have been recorded by one party, but not by the other. Adjusting entries must be made ultimately on the books of one or more of the affiliates. **Eliminating entries** are made to cancel the effects of intercompany transactions and are made on the workpaper only. In all illustrations throughout this book, **letter notation** is used to identify related parts of adjusting entries, and **number notation** to identify related parts of eliminating entries. Note, however, that some of the eliminating entries will involve “adjustments” to accounts, particularly when there is a difference between implied and book values. Thus, it is technically more accurate to think of eliminating entries as eliminating/adjusting entries or as workpaper entries. These entries will be our focus throughout the next several chapters, and adjusting entries are used only rarely.

The workpaper entry to eliminate S Company’s stockholders’ equity against the investment account, in general journal form, is:

|     |                                     |        |        |
|-----|-------------------------------------|--------|--------|
| (1) | Common Stock—S Company              | 50,000 |        |
|     | Other Contributed Capital—S Company | 10,000 |        |
|     | Retained Earnings—S Company         | 20,000 |        |
|     | Investment in S Company             |        | 80,000 |

Remember, although it is expressed in general journal form, this is a **workpaper-only entry**. No entry is made on the books of either company. As mentioned previously, *all workpaper entries are shaded in blue* to distinguish them clearly from book entries.

A workpaper for the preparation of a consolidated balance sheet for P and S Companies on January 1, 2015, the date of acquisition, is presented in Illustration 3-4.

Note the following on the workpaper:

1. The investment account and related subsidiary’s stockholders’ equity have been eliminated, and the subsidiary company’s net assets substituted for the investment account.
2. Consolidated assets and liabilities consist of the sum of the parent and subsidiary assets and liabilities in each classification.

## Acquisition Accounting

| Common Stock                    |                                      |                  |                 |                 |                       |
| P Company                       | 200,000                              |                  |                 |                 | 200,000               |
| S Company                       |                                      | 50,000           | (1) 50,000      |                 |                       |
| Other Contributed Capital       |                                      |                  |                 |                 |                       |
| P Company                       | 40,000                               |                  |                 |                 | 40,000                |
| S Company                       |                                      | 10,000           | (1) 10,000      |                 |                       |
| Retained Earnings               |                                      |                  |                 |                 |                       |
| P Company                       | 100,000                              |                  |                 |                 | 100,000               |
| S Company                       |                                      | 20,000           | (1) 20,000      |                 |                       |
| Total Liabilities and Equity    | <u>\$400,000</u>                     | <u>\$130,000</u> | <u>\$80,000</u> | <u>\$80,000</u> | <u>\$450,000</u>      |

(1) To eliminate investment in S Company.

3. Consolidated stockholders' equity is the same as the parent company's equity. This is as it should be, since the subsidiary company's stockholders' equity has been eliminated against the parent company's investment account. The consolidated balance sheet is that of the *economic* entity, and the only ownership interest is that represented by P Company's stockholders; that is, P Company owns all of S Company's stock.

### Case 1 (b): Implied Value of Subsidiary Is Equal to Book Value of Subsidiary Company's Stock (IV = BV)—Partial Ownership (Less Than 100% of Subsidiary Stock Acquired)

Next we introduce a noncontrolling interest. In this situation, the consolidated balance sheet will nonetheless reflect the combined assets and liabilities of parent and subsidiary *in their entirety*. To balance, the equity interests will then be separated into the noncontrolling interest's equity in net assets and the usual controlling interest equity accounts.

Assume that on January 1, 2015, P Company acquired 90% (4,500 shares) of the stock of S Company for \$72,000. Since P Company owns less than 100% of S Company's stock, consideration must be given to the existence of a noncontrolling interest (minority interest) in the net assets of S Company. The purchase price of \$72,000 for 90% of S Company implies a total valuation for S Company of \$72,000/90%, or \$80,000. The noncontrolling interest is, thus, implied to be valued at 10% × \$80,000 or \$8,000. In this illustration the implied and book values are equal, both for the controlling and noncontrolling interests. A Computation and Allocation of Difference (CAD) Schedule would appear as follows:

#### Computation and Allocation of Difference (between Implied and Book Values) Schedule

|   | <i>Parent Share</i> | <i>Noncontrolling Share</i> | <i>Total Value</i> |
|---|---------------------|-----------------------------|--------------------|
| Purchase price and implied value          | <b>\$72,000</b>     | <b>8,000</b>                | 80,000             |
| Less: Book value of subsidiary equity:    |                     |                             |                    |
| Common stock                              | 45,000              | 5,000                       | <b>50,000</b>      |
| Other contributed capital                 | 9,000               | 1,000                       | <b>10,000</b>      |
| Retained earnings                         | 18,000              | 2,000                       | <b>20,000</b>      |
| Total book value                          | <u>72,000</u>       | <u>8,000</u>                | <u>80,000</u>      |
| Difference between implied and book value | <u>—0—</u>          | <u>—0—</u>                  | <u>—0—</u>         |

Note that the amounts in bold in the CAD Schedule provide the entries in the following workpaper investment elimination entry:

|     |                                     |        |        |
|-----|-------------------------------------|--------|--------|
| (1) | Common Stock—S Company              | 50,000 |        |
|     | Other Contributed Capital—S Company | 10,000 |        |
|     | Retained Earnings—S Company         | 20,000 |        |
|     | Investment in S Company             |        | 72,000 |
|     | Noncontrolling Interest in Equity   |        | 8,000  |

The entire 100% of S Company's equity is eliminated, 90% against the investment account with the remaining 10% of S Company's equity constituting the noncontrolling interest. The purpose of the consolidated balance sheet is to report the net resources under the control of a single management, and the management of P Company effectively controls all S Company's resources. Thus, all S Company's assets and liabilities are combined with those of P Company on the consolidated balance sheet, and the noncontrolling interest representing the noncontrolling shareholders' interest in the net assets is a separate component of stockholders' equity.

A workpaper for the preparation of a consolidated balance sheet at the date of acquisition in this situation is presented in Illustration 3-5. A separate column is added to the

workpaper in this illustration between the eliminations columns and the consolidated balances to compute the noncontrolling interest in equity. The total in this column represents the percentage of equity of S Company *not* acquired by P Company and recorded at the fair value implied by P Company's acquisition price. The total noncontrolling interest is transferred to the consolidated balance sheet column. Although it is listed last on the workpaper, the noncontrolling interest on the actual consolidated balance sheet should appear as the **first component of stockholders' equity** (because it is the nearest, from the perspective of the controlling interest, to a liability).

In comparing Illustration 3-4 and Illustration 3-5, it might be noted that: (1) consolidated assets are \$8,000 greater in Illustration 3-5 since it took \$8,000 less cash to acquire a 90% investment, and (2) an \$8,000 noncontrolling interest exists (the remaining 10%). Noncontrolling interest is accumulated on the consolidated workpaper in a separate column.

The proper classification of the noncontrolling interest has been a subject of debate. From the perspective of the controlling interest, it is similar to a liability. It is not, however, a liability because it does not require a future payment by the parent company or the consolidated entity. The shareholders who represent the noncontrolling interest are indeed stockholders, but only of the subsidiary company and not the parent. Some companies, in the past, presented this interest after liabilities and before stockholders' equity on the balance sheet to convey the "hybrid" nature of the noncontrolling interest. According to FASB ASC paragraph 810-10-45-16, the noncontrolling interest should be presented as a part of stockholders' equity of the consolidated entity, but clearly labeled to distinguish it from the other equity accounts.<sup>13</sup>

| S Company                       |                                      | 20,000           | (1) 20,000          |                 |                                |                              |
| Noncontrolling Interest         |                                      |                  |                     | (1) 8,000       | \$8,000                        | 8,000                        |
| Total Liabilities and Equity    | <u>\$400,000</u>                     | <u>\$130,000</u> | <u>\$80,000</u>     | <u>\$80,000</u> |                                | <u>\$458,000</u>             |

(1) To eliminate investment in S Company and create noncontrolling interest account.

<sup>13</sup> The term **minority interest** may not reflect clearly the actual nature of some items. For example, a parent company may own 25% of its subsidiary's outstanding preferred stock. In this case, the use of the term "minority interest" to represent the 75% interest held by noncontrolling shareholders is not representative of the circumstances. Also, a parent may have control of a subsidiary with less than 50% of its common stock. The term "noncontrolling interest" is recommended by FASB and is used throughout this text.

## Case 2 (b): Implied Value Exceeds Book Value of Subsidiary Company's Equity (IV > BV)—Partial Ownership (Less Than 100% of Subsidiary Stock Acquired)

Next, we continue to allow for a noncontrolling interest, and we introduce a difference between the cost and the book value acquired, and thus between the implied value and the book value of the subsidiary. In Case 2, we illustrate the common situation where the purchase price is higher than the book value of equity acquired.

Assume that on January 1, 2015, P Company acquired 4,000 shares (80%) of the outstanding common stock of S Company for \$74,000 cash, after which P Company has \$26,000 in cash and \$74,000 in an Investment in S Company. The purchase price of \$74,000 for 80% of S Company implies a total value of \$74,000/80% or \$92,500. The implied value of the noncontrolling interest is \$92,500 × 20% or \$18,500. The total implied value of \$92,500 exceeds the book value of equity of \$80,000 by \$12,500. A Computation and Allocation of Difference (CAD) Schedule for this situation *begins* as follows:

### Computation and Allocation of Difference (between Implied and Book Values) Schedule

|   | Parent Share    | Noncontrolling<br>Share | Total Value   |
|---|-----------------|-------------------------|---------------|
| Purchase price and implied value          | <u>\$74,000</u> | <u>18,500</u>           | <u>92,500</u> |
| Less: Book value of equity acquired:      |                 |                         |               |
| Common stock                              | 40,000          | 10,000                  | <b>50,000</b> |
| Other contributed capital                 | 8,000           | 2,000                   | <b>10,000</b> |
| Retained earnings                         | <u>16,000</u>   | <u>4,000</u>            | <u>20,000</u> |
| Total book value                          | <u>64,000</u>   | <u>16,000</u>           | <u>80,000</u> |
| Difference between implied and book value | <u>10,000</u>   | <u>2,500</u>            | <u>12,500</u> |

In this case, because there is a difference between implied and book values, we must not only *compute* the difference but also *allocate* that difference to the appropriate accounts. If we assume that the entire difference is attributable to land with a current market value higher than its historical recorded cost, we would complete the CAD schedule as follows:

### Computation and Allocation of Difference (between Implied and Book Values) Schedule

|   | Parent Share    | Noncontrolling<br>Share | Total Value     |
|---|-----------------|-------------------------|-----------------|
| Purchase price and implied value          | <u>\$74,000</u> | <u>18,500</u>           | <u>92,500</u>   |
| Less: Book value of equity acquired:      |                 |                         |                 |
| Common stock                              | 40,000          | 10,000                  | <b>50,000</b>   |
| Other contributed capital                 | 8,000           | 2,000                   | <b>10,000</b>   |
| Retained earnings                         | <u>16,000</u>   | <u>4,000</u>            | <u>20,000</u>   |
| Total book value                          | <u>64,000</u>   | <u>16,000</u>           | <u>80,000</u>   |
| Difference between implied and book value | 10,000          | 2,500                   | <b>12,500</b>   |
| Adjust land upward (mark to market)       | <u>(10,000)</u> | <u>(2,500)</u>          | <u>(12,500)</u> |
| Balance                                   | <u>—0—</u>      | <u>—0—</u>              | <u>—0—</u>      |

The difference must be allocated to specific accounts. In this example, the adjustment to increase land to its market value is a debit, and is shown in parentheses. The popular phrase “mark to market” may be used here. In no case would the asset be marked higher than its market value. The amounts are then summed (treating debit adjustments as negative amounts) to yield a balance. The correct distribution of the difference between implied and book values depends on the market values of the underlying assets and liabilities. If the difference is *larger than the amount* needed to adjust all net assets, then, *the excess is goodwill*.

In the past, firms looking for creative ways to avoid recording goodwill sometimes wrote off a portion of the purchase price as an immediate expense under the guise of in-process

R&D. This issue has been a controversial one, and current GAAP requires that in-process R&D be capitalized *if it is acquired in a business combination*.

By adjusting all net assets to their market value, a negative balance could result. This situation, referred to as a *bargain acquisition*, occurs when the *acquisition price is less than the market value of identifiable net assets acquired*. After eliminating any previously recorded goodwill on the books of the acquiree, *this negative balance is recognized in its entirety as an ordinary gain in the income statement in the period of the acquisition*. We will illustrate bargain acquisitions, which were initially introduced in Chapter 2, again in Chapter 5. The treatment of bargain purchase reflects a significant change from prior GAAP, which required that negative goodwill be allocated as a reduction of acquired assets below their fair value. Such a reduction is no longer allowed.

Textbook problems (including those at the end of this chapter) will often make simplifying assumptions, such as “Assume that any difference between implied and book values is attributable solely to land,” or “Assume that any difference between implied and book values is attributable to goodwill.” This latter assumption is equivalent to stating that book values approximate fair market values. It is important, however, to be aware that more complex adjustments are often needed, and may include a variety of asset and liability accounts (as illustrated in detail in Chapter 5).

Returning to the example above, in which a difference of \$12,500 is attributed to land, a workpaper for a consolidated balance sheet at the date of acquisition in this situation is presented in Illustration 3-6.

The first workpaper investment elimination entry is:

|     |  |        |        |
|-----|--|--------|--------|
| (1) | Common Stock—S Company                     | 50,000 |        |
|     | Other Contributed Capital—S Company        | 10,000 |        |
|     | Retained Earnings—S Company                | 20,000 |        |
|     | Difference between Implied and Book Values | 12,500 |        |
|     | Investment in S Company                    |        | 74,000 |
|     | Noncontrolling Interest in Equity          |        | 18,500 |

Elimination entry (1) serves to eliminate the investment account against the equity accounts of the subsidiary and to recognize the difference between implied and book values. A new account entitled “Difference between Implied and Book Values” is created in this entry. This account is a temporary account, which will be immediately eliminated in the very next entry.

Elimination entry (2) (below) serves to allocate the Difference between Implied and Book Values to the appropriate accounts, in this case land:

|     |  |        |        |
|-----|--|--------|--------|
| (2) | Land                                       | 12,500 |        |
|     | Difference between Implied and Book Values |        | 12,500 |

Clearly entries (1) and (2) could be collapsed into one entry, and the account Difference between Implied and Book Values avoided. It becomes useful, however, to separate the two entries in situations involving a number of accounts with more complex adjustments. As this account will be used in future chapters, it is helpful to become acquainted with it at this point.

**Reasons an Acquiring Company May Pay More Than Book Value** The parent company often pays an amount in excess of the book value of the subsidiary company’s stock acquired. Although we have assumed here that it relates to the undervaluation of the subsidiary company’s land, any one, or a combination, of the following conditions might exist:

1. The fair, or current, value of one or more specific tangible or intangible assets of the subsidiary company may exceed its recorded value because of appreciation. Sometimes the application of conservative accounting procedures under generally accepted accounting principles results in book values that are lower than fair values for assets. Examples are:
  - a. The current expensing of some costs that may contain future benefits (for example, research and development expenditures),
  - b. The use of accelerated depreciation methods,

| S Company                                 |                  | 20,000           | (1) 20,000       |                  |                         |                       |
| Noncontrolling Interest                   |                  |                  |                  | (1) 18,500       | 18,500                  | 18,500                |
| <b>Total Liabilities and Equity</b>       | <b>\$400,000</b> | <b>\$130,000</b> | <b>\$105,000</b> | <b>\$105,000</b> |                         | <b>\$468,500</b>      |

(1) To eliminate investment in S Company and create noncontrolling interest account.

(2) To distribute the difference between implied and book value.

- c. The use of the LIFO inventory method, and
  - d. The general prohibition against recognizing unrealized gains.
2. The excess payment may indicate the existence of unrecorded goodwill of the subsidiary company as reflected by its above-normal earning capacity.
  3. Liabilities, generally long-term ones, may be overvalued. For example, the subsidiary company may have 8% bonds payable outstanding when acquired by the parent company even though the market rate of interest is 12% at that time.
  4. A variety of market factors may affect the price paid for the stock. The mere entry of another large buyer of stock into the market would generally have the effect of increasing the stock's market price. In essence, the parent company is willing to pay a premium for the right to acquire control and the related economic advantages it expects to obtain from integrated operations.

IN  
THE  
NEWS

The agreement to a \$13.6 billion cash purchase of Jim Beam by Japanese beverage giant Suntory Holdings Limited represents the first big corporate acquisition of 2014 and is also a sign of the growing popularity of whiskey, particularly Kentucky Bourbon's whiskey, both overseas and domestically. The Japanese firm will pay \$83.50 per share, a 25percent premium to Beam's closing price of \$66.97 on the Friday previous to the announcement. The merger represents the largest deal that the Japanese firm has ever closed, which will elevate it to the third largest maker of distilled drinks worldwide. The merged company is expected to have annual sales of more than \$4.3 billion. According to analysts, this would give Suntory 11 percent of the spirits market share in the United States, up from less than 1 percent.<sup>14</sup>

<sup>14</sup> "Japan's Suntory Limited purchases Jim Beam for \$16 billion," by Laura Gomez, Jan 21, 2014, *Industry Leaders Magazine* (www.industryleadersmagazine.com).

### Case 3 (b): Implied Value of Subsidiary Is Less Than Book Value (IV < BV)—Partial Ownership (Less Than 100% of Subsidiary Stock Acquired)

Finally, we illustrate the less common situation where the purchase price is below the book value of the acquired equity, still assuming the existence of a noncontrolling interest. In this case, the implied value of the subsidiary is below its book value as well.

Assume that on January 1, 2015, P Company acquired 4,000 shares (80%) of the outstanding common stock of S Company for \$60,000, after which P Company has \$40,000 in cash and \$60,000 in an Investment in S Company. The implied value of the subsidiary is thus \$60,000/80% or \$75,000. The noncontrolling interest is \$75,000 × 20% or \$15,000. The book value of S Company equity of \$80,000 exceeds its implied value of \$75,000 by \$5,000. We assume that the difference between implied and book values is attributable to plant and equipment, in this case an overvaluation of \$5,000. The Computation and Allocation of Difference (CAD) Schedule would appear as follows:

#### Computation and Allocation of Difference (between Implied and Book Values) Schedule

|   | <i>Parent Share</i> | <i>Noncontrolling Share</i> | <i>Total Value</i>   |
|---|---------------------|-----------------------------|----------------------|
| Purchase price and implied value          | <u>\$60,000</u>     | <u>\$15,000</u>             | <u>\$75,000</u>      |
| Less: Book value of equity acquired:      |                     |                             |                      |
| Common stock                              | 40,000              | 10,000                      | <b>50,000</b>        |
| Other contributed capital                 | 8,000               | 2,000                       | <b>10,000</b>        |
| Retained earnings                         | <u>16,000</u>       | <u>4,000</u>                | <u><b>20,000</b></u> |
| Total book value                          | <u>\$64,000</u>     | <u>\$16,000</u>             | <u>\$80,000</u>      |
| Difference between implied and book value | (4,000)             | (1,000)                     | <b>(5,000)</b>       |
| Adjust Plant & Equipment downward         | <u>4,000</u>        | <u>1,000</u>                | <u><b>5,000</b></u>  |
| Balance                                   | <u>—0—</u>          | <u>—0—</u>                  | <u>—0—</u>           |

In this instance the difference is negative and is shown in parentheses, and the adjustment is a credit to plant & equipment. When the difference between cost and book value is negative (i.e., purchase price is below book values), it generally reflects one or a combination of the following:<sup>15</sup>

1. One or more of the subsidiary company's assets is overvalued,
2. One or more of the subsidiary company's liabilities is undervalued or unrecognized, or
3. The parent company simply made a bargain purchase.

As usual, the Computation and Allocation Schedule yields two eliminating/adjusting entries. The investment elimination entry is:

|     |  |        |        |
|-----|--|--------|--------|
| (1) | Common Stock—S Company                     | 50,000 |        |
|     | Other Contributed Capital—S Company        | 10,000 |        |
|     | Retained Earnings—S Company                | 20,000 |        |
|     | Difference between Implied and Book Values |        | 5,000  |
|     | Investment in S Company                    |        | 60,000 |
|     | Noncontrolling Interest in Equity          |        | 15,000 |

Note that when the difference is negative, it appears in the journal entry as a credit in order to balance the entry. In the second workpaper entry, this account will be debited to eliminate it, and the appropriate underlying asset and/or liability accounts will be adjusted

<sup>15</sup> Chapter 5 elaborates on these alternatives, with illustrations.

to reflect a net downward adjustment of net assets, in this case plant & equipment. The second elimination entry is:

|     |   |       |       |
|-----|---|-------|-------|
| (2) | Difference between Implied and Book Values<br>Plant and Equipment | 5,000 | 5,000 |
|-----|---|-------|-------|

A workpaper for a consolidated balance sheet at date of acquisition in this situation is presented in Illustration 3-7.

## Subsidiary Treasury Stock Holdings

A subsidiary may hold some of its own shares as treasury stock at the time the parent company acquires its interest. Recall that treasury stock is a contra-equity account, which has a debit balance on the books of the subsidiary. The computation of the percentage interest acquired, as well as the total equity acquired, is based on shares outstanding and should, therefore, exclude treasury shares.

For example, assume that P Company acquired 18,000 shares of S Company common stock on January 1, 2015, for a payment of \$320,000 when S Company's stockholders' equity section appeared as follows:

|  |                  |
|--|------------------|
| Common Stock, \$10 par, 25,000 shares issued | \$250,000        |
| Other Contributed Capital                    | 50,000           |
| Retained Earnings                            | 125,000          |
|  | <u>425,000</u>   |
| Less: Treasury Stock at Cost, 1,000 Shares   | <u>20,000</u>    |
| Total Stockholders' Equity                   | <u>\$405,000</u> |

| Acquisition Accounting                    |                  | ILLUSTRATION 3-7                     |                 |                 |                         |                       |
|---|------------------|--------------------------------------|-----------------|-----------------|-------------------------|-----------------------|
| Book Value Exceeds Implied Value          |                  | Consolidated Balance Sheet Workpaper |                 |                 |                         |                       |
| 80% Owned Subsidiary                      |                  | P Company and Subsidiary             |                 |                 |                         |                       |
| Date of Acquisition                       |                  | January 1, 2015                      |                 |                 |                         |                       |
|   | P Company        | S Company                            | Eliminations    |                 | Noncontrolling Interest | Consolidated Balances |

| S Company                                 |                  | 50,000                               | (1) 50,000      |                 |                         |                       |
| Other Contributed Capital                 |                  |                                      |                 |                 |                         |                       |
| P Company                                 | 40,000           |                                      |                 |                 |                         | 40,000                |
| S Company                                 |                  | 10,000                               | (1) 10,000      |                 |                         |                       |
| Retained Earnings                         |                  |                                      |                 |                 |                         |                       |
| P Company                                 | 100,000          |                                      |                 |                 |                         | 100,000               |
| S Company                                 |                  | 20,000                               | (1) 20,000      |                 |                         |                       |
| Noncontrolling Interest                   |                  |                                      |                 | (1) 15,000      | 15,000                  | 15,000                |
| Total Liabilities and Equity              | <u>\$400,000</u> | <u>\$130,000</u>                     | <u>\$85,000</u> | <u>\$85,000</u> |                         | <u>\$465,000</u>      |

(1) To eliminate investment in S Company and create noncontrolling interest account.

(2) To distribute the difference between implied and book value.

P Company's interest in S Company is 75% (18,000 shares/24,000 shares), and the total implied value of S Company is \$320,000/75% or \$426,667. The implied value of the noncontrolling interest is  $\$426,667 \times 25\%$  or \$106,667. This results in a difference between implied and book values of  $\$426,667 - \$405,000$  or \$21,667.

Because the treasury stock account represents a contra stockholders' equity account, it must be eliminated by a credit when the investment account and subsidiary company's equity accounts are eliminated on the workpaper. Thus, the workpaper eliminating entry is:

|  |         |         |
|--|---------|---------|
| Common Stock—S Company                     | 250,000 |         |
| Other Contributed Capital—S Company        | 50,000  |         |
| Retained Earnings—S Company                | 125,000 |         |
| Difference between Implied and Book Values | 21,667  |         |
| Investment in S Company                    |         | 320,000 |
| Noncontrolling Interest in Equity          |         | 106,667 |
| Treasury Stock—S Company                   |         | 20,000  |

## Other Intercompany Balance Sheet Eliminations

Up to this point we have discussed the elimination of the subsidiary equity against the related investment account, with recognition in the consolidated accounts of the noncontrolling interest in equity. Balance sheet eliminations of a variety of intercompany receivables and payables are also often required. Intercompany accounts receivable, notes receivable, and interest receivable, for example, must be eliminated against the reciprocal accounts payable, notes payable, and interest payable. Cash advances among affiliated companies constitute receivables and payables and must be eliminated. Eliminations must also be made for all types of intercompany accruals for such items as rent and other services. The full amount of all intercompany receivables and payables is eliminated without regard to the percentage of control held by the parent company.

For example, to eliminate a \$25,000 cash advance made by P Company and received by S Company, the following entry would be made:

|                        |          |          |
|------------------------|----------|----------|
| Advance from P Company | \$25,000 |          |
| Advance to S Company   |          | \$25,000 |

Similarly, to eliminate a \$100,000 intercompany account receivable/payable, this entry would be made:

|                              |           |           |
|------------------------------|-----------|-----------|
| Accounts Payable (to S)      | \$100,000 |           |
| Accounts Receivable (from P) |           | \$100,000 |

## Adjusting Entries Prior to Eliminating Entries

At times, workpaper adjustments to accounting data may be needed before appropriate eliminating entries can be accomplished. The need for adjustments generally arises because of in-transit items where only one of the affiliates has recorded the effect of an intercompany transaction. For example, the parent company may have recorded a cash advance to one of its subsidiaries near year-end but the subsidiary has not yet recorded the receipt of the advance. Thus, the Advances to Subsidiary account on the parent company's books has no reciprocal account on the subsidiary company's books. An adjusting workpaper entry debiting Cash and crediting Advances from Parent is required so that the asset (cash) can be appropriately included in consolidated assets and a reciprocal account established that permits the elimination of intercompany advances. The workpaper eliminations columns may be used to enter these adjusting entries. Alternatively, it is possible simply to adjust the subsidiary company's statements prior to their entry on the workpaper.

**TEST YOUR KNOWLEDGE****3.2**

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

**Multiple Choice**

- Which of the following adjustments do not occur in the consolidating process?
  - Elimination of parent's retained earnings
  - Elimination of intra-company balances
  - Allocations of difference between implied and book values
  - Elimination of the investment account
- The noncontrolling interest in the subsidiary is reported as:
  - Asset
  - Liability
  - Equity
  - Expense

**True or False**

- \_\_\_\_\_ a. In computing the difference between the implied and book values, the implied value of the acquired entity will always equal the purchase price to the parent.
 

\_\_\_\_\_ b. In the Computation and Allocation of Difference (between Implied Value and Book Value) schedule for a stock acquisition, the implied value of subsidiary equity is computed as: (purchase price) divided by (percentage acquired by parent).

\_\_\_\_\_ c. Once the eliminating/adjusting entry columns of the worksheet are completed, the entries are posted to the books of the company's general ledger and therefore need not be repeated in the following year in the consolidating process.

\_\_\_\_\_ d. In allocating the difference between implied and book values, if the difference is more than needed to adjust all net assets to market values, then the excess is goodwill.

### 3.7 A COMPREHENSIVE ILLUSTRATION—MORE THAN ONE SUBSIDIARY COMPANY

No particular problem exists where the parent company owns a direct controlling interest in more than one subsidiary company. The balance sheet of each affiliate is entered on the workpaper, any adjustments needed are prepared, and all related intercompany accounts, including those between subsidiary companies, are eliminated. The remaining balances are combined, and they constitute the consolidated balance sheet.

It is useful at this point to look at an illustrative workpaper and consolidated balance sheet for a parent company, P Company, and its two subsidiaries, S Company and T Company. Assume that on January 1, 2015, P Company acquired 90% and 80% of the outstanding common stock of S Company and T Company for \$250,200 and \$115,000, respectively. Immediately after the stock acquisition, balance sheets of the affiliates were:

**January 1, 2015**

|                                     | <i>P Company</i> | <i>S Company</i> | <i>T Company</i> |
|-------------------------------------|------------------|------------------|------------------|
| Cash                                | \$ 81,800        | \$ 36,000        | \$ 4,000         |
| Accounts receivable (net)           | 68,000           | 59,000           | 10,000           |
| Inventories                         | 76,000           | 64,000           | 15,000           |
| Advances to T Company               | 20,000           |                  |                  |
| Investment in S Company             | 250,200          |                  |                  |
| Investment in T Company             | 115,000          |                  |                  |
| Plant and equipment (net)           | 200,000          | 241,000          | 130,000          |
| Land                                | 24,000           | 10,000           | 6,000            |
| <b>Total assets</b>                 | <b>\$835,000</b> | <b>\$410,000</b> | <b>\$165,000</b> |
| Accounts payable                    | \$ 85,000        | \$ 40,000        | \$ 25,000        |
| Notes payable                       | —0—              | 100,000          | —0—              |
| Common stock, \$10 par value        | 500,000          | 200,000          | 100,000          |
| Retained earnings                   | 250,000          | 70,000           | 40,000           |
| <b>Total liabilities and equity</b> | <b>\$835,000</b> | <b>\$410,000</b> | <b>\$165,000</b> |

*Other information*

1. On the date of acquisition, P Company mailed a cash advance of \$20,000 to T Company to improve T Company's working capital position. T Company had not yet received and, therefore, had not yet recorded the advance.
2. On the date of acquisition, P Company owed S Company \$6,000 for purchases on open account, and S Company owed T Company \$5,000 for such purchases. All these items had been sold by the purchasing companies prior to the date of acquisition.
3. The difference between implied and the book values of equity relates to the undervaluation of subsidiary plant and equipment.

Since the Investments are carried in two separate accounts, it is best to prepare two separate CAD Schedules, one for each investment, as follows:

**Computation and Allocation of Difference (between Implied and Book Values)  
Schedule (Investment in S Company)**

|   | <i>Parent Share</i> | <i>Noncontrolling Share</i> | <i>Total Value</i> |
|---|---------------------|-----------------------------|--------------------|
| Purchase price and implied value          | <u>\$250,200</u>    | <u>27,800</u>               | <u>278,000</u>     |
| Less: Book value of subsidiary equity:    |                     |                             |                    |
| Common stock                              | 180,000             | 20,000                      | <b>200,000</b>     |
| Retained earnings                         | <u>63,000</u>       | <u>7,000</u>                | <u>70,000</u>      |
| Total book value                          | <u>243,000</u>      | <u>27,000</u>               | <u>270,000</u>     |
| Difference between implied and book value | 7,200               | 800                         | <b>8,000</b>       |
| Adjust plant assets upward                | <u>(7,200)</u>      | <u>(800)</u>                | <u>(8,000)</u>     |
| Balance                                   | <u>—0—</u>          | <u>—0—</u>                  | <u>—0—</u>         |

**Computation and Allocation of Difference (between Implied and Book Values)  
Schedule (Investment in T Company)**

|   | <i>Parent Share</i> | <i>Noncontrolling Share</i> | <i>Total Value</i> |
|---|---------------------|-----------------------------|--------------------|
| Purchase price and implied value          | <u>\$115,000</u>    | <u>28,750</u>               | <u>143,750</u>     |
| Less: Book value of subsidiary equity:    |                     |                             |                    |
| Common stock                              | 80,000              | 20,000                      | <b>100,000</b>     |
| Retained earnings                         | <u>32,000</u>       | <u>8,000</u>                | <u>40,000</u>      |
| Total book value                          | <u>112,000</u>      | <u>28,000</u>               | <u>140,000</u>     |
| Difference between implied and book value | 3,000               | 750                         | <b>3,750</b>       |
| Adjust Plant Assets upward                | <u>(3,000)</u>      | <u>(750)</u>                | <u>(3,750)</u>     |
| Balance                                   | <u>—0—</u>          | <u>—0—</u>                  | <u>—0—</u>         |

A workpaper for the preparation of a consolidated balance sheet on January 1, 2015, for P, S, and T companies is presented in Illustration 3-8. Several items on the workpaper should be noted. The cash in transit from P Company to T Company was picked up through an adjusting entry; if not, \$20,000 cash would have been excluded from the consolidated balance sheet. The adjustment also provided a reciprocal account, Advance from P Company, that permitted the elimination of the intercompany transaction for advances. (The perceptive reader will have already noticed that the same net effect could have been accomplished by a combined adjusting and eliminating entry with a debit to Cash and a credit to Advance to T.)

The elimination of all intercompany accounts receivable and accounts payable, including those between subsidiary companies, was accomplished through one entry. There is no need to eliminate them individually. Notice also that the equity in each subsidiary company was eliminated against each individual investment account, with a corresponding amount recorded for the noncontrolling interest in each.

The formal consolidated balance sheet is prepared from the detail in the consolidated balance sheet columns of the workpaper and is presented in Illustration 3-9. Note the agreement between the common stock and retained earnings balances in the consolidated balance sheet and those in the final column of the workpaper (Illustration 3-8) for P Company. The balance sheet data are classified according to normal balance sheet arrangements. As discussed earlier, noncontrolling interest in consolidated net assets or equity should be shown as a component of stockholders' equity (preferably the first component of equity listed in the balance sheet).

**3.8 LIMITATIONS OF CONSOLIDATED STATEMENTS****Lo 6** Limitations of consolidated statements.

As noted earlier, consolidated statements may have limited usefulness for noncontrolling stockholders, subsidiary creditors, and some regulatory agencies. These groups may find little information of value to them in the consolidated statements because they contain insufficient detail about the individual subsidiaries. For example, creditors of a specific company have claims only against the resources of that company unless the parent guarantees the claims.

In addition, financial analysts have criticized consolidated statements on several counts. For example, highly diversified companies operating across several industries, often the result of mergers and acquisitions, are difficult to analyze or compare. For instance, *General Electric (GE)* reports consolidated financial statements that include its credit corporation. The combining of a financial company with a manufacturing company makes interpreting the statements more difficult. In an attempt to make the statements more readable, GE reports three columns with each statement: one showing the total consolidated statements, a column for GE, and a column for the credit corporation. Consolidated operating results for such companies cannot be compared with industry standards, nor can one conglomerate be compared with another. Both the SEC and the FASB have developed requirements for segmental reporting in an effort to address these concerns. Determining what constitutes a segment is not easy, however, and the standards have met criticism and subsequent revision. Segmental reporting is discussed in Chapter 14.

**Lo 10** Comparison of Business Combinations and Consolidations under U.S. GAAP and IFRS.

Regardless of these limitations, however, consolidated statements continue to grow in importance. The vast majority of publicly held companies own one or more subsidiaries and report on a consolidated basis. Thus, consolidated statements have assumed the position of primary statements, and the separate statements of individual subsidiaries are considered supplementary. The recent attention by both the FASB and the International Standards Board reaffirm this role. Illustration 3-10 provides a comparison of business combinations between U.S. GAAP and IFRS.

**ILLUSTRATION 3-10**

**Comparison of Business Combinations and Consolidations under U.S. GAAP and IFRS\***

| U.S. GAAP  | IFRS   |
|--|--|
| 1. Fair value of <b>contingent consideration</b> recorded at acquisition date, with subsequent adjustments recognized through earnings if contingent liability (no adjustment for equity).   | 1. IFRS 3R uses the same approach.   |
| 2. <b>Contractual contingent liabilities</b> assumed (such as warranties) are measured at fair value on the acquisition date. <b>Non-contractual contingent liabilities</b> (such as patent infringement) are measured at fair value only if it is more likely than not that a liability exists. | 2. Under IFRS 3R a contingent liability is recognized at the acquisition date if its fair value can be reliably measured.  |
| 3. <b>Noncontrolling interest</b> is recorded at fair value and is presented in equity.  | 3. Noncontrolling interest can be recorded either at fair value or at the proportionate share of the net assets acquired. Also presented in equity.  |
| 4. <b>Special purpose entities</b> (SPEs) are consolidated if the most significant activities of the SPE are controlled. Qualified SPEs (QSPEs) are no longer exempted from consolidation rules.   | 4. Special purpose entities (SPEs) are consolidated if controlled. QSPEs are not addressed.  |
| 5. <b>Direct acquisition costs</b> (excluding the costs of issuing debt or equity securities) are expensed.  | 5. IFRS 3R uses the same approach.   |
| 6. <b>Goodwill</b> is not amortized, but is tested for impairment using a two-step process.  | 6. Goodwill is not amortized, but is tested for impairment using a one-step process.   |
| 7. <b>Negative goodwill</b> in an acquisition is recorded as an ordinary gain in income (not extraordinary).   | 7. IAS 36 uses the same approach.  |
| 8. <b>Fair value</b> is based on exit prices, i.e. the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.  | 8. Fair value is the amount for which an asset could be exchanged or a liability settled between knowledgeable, willing parties in an arm's length transaction.                              |
| 9. <b>Purchased in-process R&amp;D</b> is capitalized with subsequent expenditures expensed. The capitalized portion is then amortized.  | 9. Purchased in-process R&D is capitalized with the potential for subsequent expenditures to be capitalized. The capitalized portion is then amortized. <b>IFRS</b>                          |
| 10. Parent and subsidiary <b>accounting policies do not need</b> to conform.   | 10. Parent and subsidiary accounting policies <b>do need</b> to conform.   |
| 11. <b>Restructuring plans</b> are accounted for separately from the business combination and generally expensed.  | 11. Similar accounting under IFRS 3 and amended IAS 27.  |
| 12. <b>Measurement period</b> ends at the earlier of a) one year from the acquisition date, or b) the date when the acquirer receives needed information to consummate the acquisition.  | 12. Similar to U.S. GAAP.  |
| 13. For <b>step acquisitions</b> , all previous ownership interests are adjusted to fair value, with any gain or loss recorded in earnings.  | 13. Similar to U.S. GAAP.  |
| 14. <b>Reporting dates</b> for the parent and subsidiary can be different up to three months. Significant events in that time must be <i>disclosed</i> .   | 14. Permits a three-month difference if impractical to prepare the subsidiary's statements on the same date; however, <i>adjustments are required</i> for significant events in that period. |
| 15. Potential voting rights are generally not considered in determining <b>control</b> .   | 15. Potential voting rights are considered if currently exercisable.   |

\*For complete coverage of the differences between IFRS and U.S. GAAP, see *IFRS 2009, Interpretation and Application of International Financial Reporting Standards*, by Epstein and Jermakowicz, 2009 (John Wiley & Sons, Inc.).

**SUMMARY**

- 1 *Understand the concept of control as used in reference to consolidations.* When one firm (referred to as the parent) effectively controls the activities of another firm (the subsidiary) through the direct or indirect ownership of some or all of its voting stock or by some other means, consolidated financial statements are required.
- 2 *Explain the role of a noncontrolling interest in business combinations.* The noncontrolling interest in a consolidated entity refers to the stock of the subsidiary firm, if any, which is not controlled by the parent. This interest appears as a component of equity in the consolidated balance sheet.
- 3 *Describe the reasons why a company acquires a subsidiary rather than its net assets.* A firm may acquire stock by open market purchases or by cash tender offers to the subsidiary's stockholders, thus avoiding the often lengthy and difficult negotiations that are required in a complete takeover. Control of the subsidiary's operations can be accomplished with a much smaller investment, since not all of the stock need be acquired. Also, the separate legal existence of the individual affiliates provides an element of protection of the parent's assets from attachment by creditors of the subsidiary.
- 4 *Describe the valuation and classification of accounts in consolidated financial statements.* In the consolidated balance sheet, the assets and liabilities of the subsidiary are combined with those of the parent on an item-by-item basis. Assets and liabilities are reflected at their fair market values, as determined at the date of acquisition, including goodwill, if any (and as subsequently depreciated, amortized, or adjusted for impairment).
- 5 *List the requirements for inclusion of a subsidiary in consolidated financial statements.* Essentially all controlled corporations should be consolidated with the controlling entity. Exceptions include those situations where: the subsidiary is in legal reorganization or bankruptcy, or a foreign subsidiary operates in an environment that casts significant doubt about the parent's effective control.
- 6 *Discuss the limitations of consolidated financial statements.* Consolidated financial statements are of limited use to noncontrolling stockholders, to subsidiary creditors, and possibly to regulatory agencies (e.g., if only the subsidiary is regulated). Also, when highly diversified companies operate across several industries, the aggregation of dissimilar data makes analysis difficult.
- 7 *Record the investment in the subsidiary on the parent's books at the date of acquisition.* On the books of the parent company, the investment is recorded as a debit to Investment in Subsidiary and a credit to the appropriate account(s) based on the consideration used in the exchange (cash, debt, stock, or a combination). Any stock issued is recorded at its fair market value, and the investment is thus also recorded at the fair value of consideration paid. Direct and indirect acquisition costs, if any, are recorded (expensed) separately from the acquisition.
- 8 *Prepare the consolidated workpapers and eliminating entries at the date of acquisition.* The consolidated workpapers serve to sum the assets and liabilities of the parent and subsidiary, with adjustments made to assets and liabilities of the subsidiary to "mark" their values to market values, based on the acquisition price implied for the entire subsidiary. These adjustments are accomplished via "eliminating and adjusting" entries, which also serve to eliminate the investment account against the subsidiary's equity accounts, and to recognize the noncontrolling interest in equity.
- 9 *Compute and allocate the difference between implied value and book value of the acquired firm's equity.* The difference between implied and book values of the acquired firm's equity is the amount by which the subsidiary's assets and liabilities must be adjusted in total (including the recognition of goodwill, if any). The use of an account by this name (difference between implied and book values) facilitates this process in the eliminating entries, and the differential account itself is eliminated.
- 10 *Discuss some of the similarities and differences between U.S. GAAP and IFRS with respect to the preparation of consolidated financial statements at the date of acquisition.* Both U.S. GAAP and IFRS now require that all controlled SPEs (special purpose entities) be consolidated, but U.S. GAAP still recognize variable interest entities (VIEs), while IFRS do not. IFRS allow a choice in the valuation of the noncontrolling interest in equity and related goodwill, while FASB requires the implied fair valuation (as evidenced by the acquisition price) for both. IFRS require that parent and subsidiary accounting policies conform; U.S. GAAP do not. Both now require the capitalization of purchased in-process R&D.

Appendix 3A, "Deferred Taxes on the Date of Acquisition," and Appendix 3B, "Consolidation of Variable Interest Entities," are available online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).

**TEST YOUR KNOWLEDGE****3.3**

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

## Multiple Choice

- Parent Company P purchased 90% of Subsidiary Company S for stock worth \$100,000. Subsidiary Company S had a net book value of \$50,000 including: “bonds payable” at a book value of \$10,000 and a fair value of \$15,000; “inventory” with a book value of \$5,000 and a fair value of \$7,000; and “PP&E” with a book value of \$10,000 and a fair value of \$20,000. Assuming the tax rate is 40% (and ignoring any deferred taxes on goodwill), net deferred taxes are:
  - \$2,520
  - \$2,800
  - \$6,120
  - \$6,800
- Assuming an acquisition is not a bargain, the impact of reflecting a net deferred tax liability account is that the firm will also reflect an increased amount of:
  - Land
  - Difference between Implied and Book Value
  - Common Stock
  - Goodwill

**QUESTIONS**

(The letter A or B indicated for a question, exercise, or problem refers to a related appendix.)

- LO 3** 1. What are the advantages of acquiring the *majority* of the voting stock of another company rather than acquiring *all* its voting stock?
- LO 1** 2. What is the justification for preparing consolidated financial statements when, in fact, it is apparent that the consolidated group is not a legal entity?
- LO 6** 3. Why is it often necessary to prepare separate financial statements for each legal entity in a consolidated group even though consolidated statements provide a better economic picture of the combined activities?
- LO 5** 4. What aspects of control must exist before a subsidiary is consolidated?
- LO 8** 5. Why are consolidated workpapers used in preparing consolidated financial statements?
- LO 2** 6. Define noncontrolling (minority) interest. List three methods that might be used for reporting the noncontrolling interest in a consolidated balance sheet, and state which is preferred under current GAAP.
- LO 8** 7. Give several reasons why a parent company would be willing to pay more than book value for subsidiary stock acquired.
- LO 8** 8. What effect do subsidiary treasury stock holdings have at the time the subsidiary is acquired? How should the treasury stock be treated on consolidated workpapers?
- LO 8** 9. What effect does a noncontrolling interest have on the amount of intercompany receivables and payables eliminated on a consolidated balance sheet?
- 10A.** Current rules require that a deferred tax asset or liability be recognized for likely differences between the reported values and tax bases of assets and liabilities recognized in business combinations (for example, in exchanges that are nontaxable to the selling shareholders). Does this decision change the amount of consolidated net income reported in years subsequent to the business combination? Explain. (see Appendix 3A online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter))

**Business Ethics**

**Part I.** You are working on the valuation of accounts receivable, and bad debt reserves for the current year's annual report. The CFO stops by and asks you to reduce the reserve by enough to increase the current year's EPS by 2 cents a share. The company's policy has always been to use the previous year's actual bad debt percentage adjusted for a specific economic index. The CFO's suggested change would still be within acceptable GAAP. However, later, you learn that with the increased EPS, the CFO would qualify for a significant bonus. What do you do and why?

**Part II.** Consider the following:

Accounting firm KPMG created tax shelters called BLIPS, FLIP, OPIS, and SOS that were based largely in the Cayman Islands and allowed wealthy clients (there were 186) to create \$5 billion in losses, which were then deducted from their income for IRS tax purposes. BLIPS (Bond Linked Issue Premium Structures) had clients borrow from an offshore bank for purposes of purchasing currency. The client would then sell the currency back to the

lender for a loss. However, the IRS contends the losses were phony and that there was never any risk to the client in the deals. The IRS has indicted eight former KPMG partners and an outside lawyer alleging that the transactions were shams, illegal methods for avoiding taxes. KPMG has agreed to pay a \$456 million fine, no longer to do tax shelters, and to cooperate with the government in its prosecution of the nine individuals involved in the tax shelter scheme.

Many argue that the courts have not always held that such tax avoidance schemes show criminal intent because the tax laws

permit individuals to minimize taxes. However, the IRS argues that these shelters evidence intent because of the lack of risk.

### Question

In this case, the IRS contends that the losses generated by the tax shelters were phony and that the clients never incurred any risk. Do tax avoidance schemes indicate criminal intent if the tax laws permit individuals to minimize taxes? Justify your answer.

## ANALYZING FINANCIAL STATEMENTS

### AFS3-1 eBay's Acquisitions

During 2005, eBay acquired four different companies. In the schedule below, the acquired companies are listed with the aggregate purchase price and with the estimated acquisition-related costs (dollars in thousands).

| <i>Acquired Company</i>           | <i>Aggregate Purchase Price</i> | <i>Acquisition-related costs</i> |
|-----------------------------------|---------------------------------|----------------------------------|
| Rent.com                          | \$435,365                       | \$2,000                          |
| International classified websites | 81,584                          | 1,300                            |
| Shopping.com                      | 685,285                         | 7,600                            |
| Skype                             | 2,593,426                       | not reported                     |

#### Required:

1. What are acquisition-related costs and how should eBay account for these costs?
2. Compute the ratio of acquisition-related cost to the purchase price of the acquisition for each acquired company with available information.
3. Record the journal entries made on eBay's books on February 23, 2005 when they acquired Rent.com (include entries for the acquisition and acquisition-related costs).
4. eBay acquired Skype on October 14, 2005. eBay's year-end is December 31, 2005, how many months of Skype's revenues and expenses can eBay include in its income statement for 2005?
5. eBay acquired various websites when it acquired International classified websites. The excess of the purchase price over the fair value of net tangible assets and identifiable intangible assets was \$71,771 thousand (or approximately 88% of the purchase price). What does this amount represent and why is this not unusual for an acquisition of this type?

### AFS3-2 eBay's Acquisition of Skype

On October 14, 2005, eBay acquired Skype, paying \$1.3 billion in cash plus \$1.3 billion in stock. However, approximately 60% of the Skype shareholders opted for a lower cash amount and stock up front for the possibility of receiving a potential performance-based payment of up to another \$1.3 billion in 2008 through 2009. In the following schedule, summary pro forma income statement data are prepared showing the performance of eBay as if the Skype acquisition were completed prior to the beginning of 2004. Summary data from the actual reported income statements for the two years are also presented in the following schedule.

#### Income Statement

| <i>Pro Forma (assumed combined)</i> | <i>2004</i> | <i>2005</i> |
|-------------------------------------|-------------|-------------|
| Net Revenue—pro forma               | \$3,277,534 | \$4,594,954 |
| Net Income—pro forma                | 684,905     | 944,057     |
| <i>As Reported by eBay</i>          | <i>2004</i> | <i>2005</i> |
| Net Revenue—actual                  | 3,271,309   | 4,552,401   |
| Net Income—actual                   | 778,223     | 1,082,043   |

**Required:**

1. Using these numbers, evaluate the wisdom of the acquisition of Skype by eBay. Discuss some of the reasons that ratio analyses alone may not tell the entire story.
2. Did the shareholders of Skype who opted for the lower cash amount and contingency payment make a wiser or poorer choice relative to the 40% who made the alternative choice? Why? What other factors might affect your answer?

**EXERCISES****EXERCISE 3-1 Workpaper Elimination Entries: 3 Cases LO 8**

Prepare in general journal form the workpaper entries to eliminate Prancer Company's investment in Saltez Company in the preparation of a consolidated balance sheet at the date of acquisition for each of the following independent cases:

| Cash | Percent of<br>Stock Owned | Investment<br>Cost | Saltez Company Equity Balances |                              |                      |
|------|---------------------------|--------------------|--------------------------------|------------------------------|----------------------|
|      |                           |                    | Common<br>Stock                | Other Contributed<br>Capital | Retained<br>Earnings |
| a.   | 100%                      | \$351,000          | \$160,000                      | \$92,000                     | \$43,000             |
| b.   | 90                        | 232,000            | 190,000                        | 75,000                       | (29,000)             |
| c.   | 80                        | 159,000            | 180,000                        | 40,000                       | (4,000)              |

Any difference between book value of net assets and the value implied by the purchase price relates to subsidiary property plant and equipment except for case (c). In case (c) assume that all book values and fair values are the same.

**EXERCISE 3-2 Stock Purchase Entries LO 7 LO 8**

On January 1, 2014, Polo Company purchased 100% of the common stock of Save Company by issuing 40,000 shares of its (Polo's) \$10 par value common stock with a market price of \$17.50 per share. Polo incurred cash expenses of \$20,000 for registering and issuing the common stock. The stockholders' equity section of the two companies' balance sheets on December 31, 2013, were:

|                              | Polo      | Save      |
|------------------------------|-----------|-----------|
| Common stock, \$10 par value | \$350,000 | \$320,000 |
| Other contributed capital    | 590,000   | 175,000   |
| Retained earnings            | 380,000   | 205,000   |

**Required:**

- A. Prepare the journal entry on the books of Polo Company to record the purchase of the common stock of Save Company and related expenses.
- B. Prepare the elimination entry required for the preparation of a consolidated balance sheet workpaper on the date of acquisition.

**EXERCISE 3-3 Consolidated Balance Sheet, Stock Purchase LO 7 LO 8**

On January 2, 2014, Prunce Company acquired 90% of the outstanding common stock of Sun Company for \$192,000 cash. Just before the acquisition, the balance sheets of the two companies were as follows:

|                             | Prunce           | Sun              |
|-----------------------------|------------------|------------------|
| Cash                        | \$260,000        | \$ 64,000        |
| Accounts receivable (net)   | 142,000          | 23,000           |
| Inventory                   | 117,000          | 54,000           |
| Plant and equipment (net)   | 386,000          | 98,000           |
| Land                        | 63,000           | 32,000           |
| Total asset                 | <u>\$968,000</u> | <u>\$271,000</u> |
| Accounts payable            | \$104,000        | \$ 47,000        |
| Mortgage payable            | 72,000           | 39,000           |
| Common stock, \$2 par value | 400,000          | 70,000           |
| Other contributed capital   | 208,000          | 20,000           |
| Retained earnings           | 184,000          | 95,000           |
| Total equities              | <u>\$968,000</u> | <u>\$271,000</u> |

The fair values of Sun Company's assets and liabilities are equal to their book values with the exception of land.

**Required:**

- A. Prepare a journal entry to record the purchase of Sun Company's common stock.
- B. Prepare a consolidated balance sheet at the date of acquisition.

**EXERCISE 3-4 Purchase, Date of Acquisition LO7 LO8 LO9**

On January 1, 2013, Peach Company issued 1,500 of its \$20 par value common shares with a fair value of \$60 per share in exchange for the 2,000 outstanding common shares of Swartz Company in a purchase transaction. Registration costs amounted to \$1,700, paid in cash. Just prior to the acquisition, the balance sheets of the two companies were as follows:

|                              | <i>Peach Company</i> | <i>Swartz Company</i> |
|------------------------------|----------------------|-----------------------|
| Cash                         | \$ 73,000            | \$ 13,000             |
| Accounts receivable (net)    | 95,000               | 19,000                |
| Inventory                    | 58,000               | 25,000                |
| Plant and equipment (net)    | 95,000               | 43,000                |
| Land                         | 26,000               | 22,000                |
| Total assets                 | <u>\$347,000</u>     | <u>\$122,000</u>      |
| Accounts payable             | \$ 66,000            | \$ 18,000             |
| Notes payable                | 82,000               | 21,000                |
| Common stock, \$20 par value | 100,000              | 40,000                |
| Other contributed capital    | 60,000               | 24,000                |
| Retained earnings            | 39,000               | 19,000                |
| Total equities               | <u>\$347,000</u>     | <u>\$122,000</u>      |

Any difference between the book value of equity and the value implied by the purchase price relates to goodwill.

**Required:**

- A. Prepare the journal entry on Peach Company's books to record the exchange of stock.
- B. Prepare a Computation and Allocation Schedule for the difference between book value and value implied by the purchase price.
- C. Prepare a consolidated balance sheet at the date of acquisition.

**EXERCISE 3-5 Treasury Stock Held by Subsidiary LO8**

Pool Company purchased 90% of the outstanding common stock of Spruce Company on December 31, 2014, for cash. At that time the balance sheet of Spruce Company was as follows:

|   |                    |
|---|--------------------|
| Current assets                            | \$1,050,000        |
| Plant and equipment                       | 990,000            |
| Land                                      | 170,000            |
| Total assets                              | <u>\$2,210,000</u> |
| Liabilities                               | \$ 820,000         |
| Common stock, \$20 par value              | 900,000            |
| Other contributed capital                 | 440,000            |
| Retained earnings                         | 150,000            |
| Total                                     | <u>2,310,000</u>   |
| Less treasury stock at cost, 5,000 shares | <u>100,000</u>     |
| Total equities                            | <u>\$2,210,000</u> |

**Required:**

Prepare the elimination entry required for the preparation of a consolidated balance sheet workpaper on December 31, 2014, assuming:

- (1) The purchase price of the stock was \$1,400,000. Assume that any difference between the book value of net assets and the value implied by the purchase price relates to subsidiary land.
- (2) The purchase price of the stock was \$1,160,000. Assume that the subsidiary land has a fair value of \$180,000, and the other assets and liabilities are fairly valued.

**EXERCISE 3-6 Elimination Entry, Consolidated Balance Sheet LO 8**

On December 31, 2013, Price Company purchased a controlling interest in Shipley Company. The balance sheet of Price Company and the consolidated balance sheet on December 31, 2013, were as follows:

|  | <i>Price Company</i> | <i>Consolidated</i> |
|--|----------------------|---------------------|
| Cash                                       | \$ 22,000            | \$ 37,900           |
| Accounts receivable                        | 35,000               | 57,000              |
| Inventory                                  | 127,000              | 161,600             |
| Investment in Shipley Company              | 212,000              | —0—                 |
| Plant and equipment (net)                  | 190,000              | 337,000             |
| Land                                       | <u>120,000</u>       | <u>220,412</u>      |
| Total                                      | <u>\$706,000</u>     | <u>\$813,912</u>    |
| Accounts payable                           | \$ 42,000            | \$112,500           |
| Note payable                               | 100,000              | 100,000             |
| Noncontrolling interest in Shipley Company | —0—                  | 37,412              |
| Common stock                               | 300,000              | 300,000             |
| Other contributed capital                  | 164,000              | 164,000             |
| Retained earnings                          | <u>100,000</u>       | <u>100,000</u>      |
| Total                                      | <u>\$706,000</u>     | <u>\$813,912</u>    |

On the date of acquisition, the stockholders' equity section of Shipley Company's balance sheet was as follows:

|                           |                  |
|---------------------------|------------------|
| Common stock              | \$ 90,000        |
| Other contributed capital | 90,000           |
| Retained earnings         | <u>56,000</u>    |
| Total                     | <u>\$236,000</u> |

**Required:**

- A. Prepare the investment elimination entry made to complete a consolidated balance sheet workpaper. Any difference between book value and the value implied by the purchase price relates to subsidiary land.
- B. Prepare Shipley Company's balance sheet as it appeared on December 31, 2013.

**EXERCISE 3-7 Intercompany Receivables and Payables LO 8**

Polychromasia, Inc. had a number of receivables from subsidiaries at the balance sheet date, as well as several payables to subsidiaries. Of its five subsidiaries, four are consolidated in the financial statements (Green Company, Black Inc., White & Sons, and Silver Co.). Only the Brown Company is not consolidated with Polychromasia and the other affiliates. The following list of receivables and payables shows balances at 12/31/13.

|  |           |
|--|-----------|
| Interest receivable from the Brown Company | \$ 50,000 |
| Interest payable to Black Inc.             | 75,000    |
| Intercompany payable to Silver Co.         | 105,000   |
| Long-term advance to Green Company         | 150,000   |
| Long-term payable to Silver Co.            | 450,000   |
| Long-term receivable from Brown Company    | 500,000   |

**Required:**

- A. Show the classification and amount(s) that should be reported in the consolidated balance sheet of Polychromasia, Inc. and Subsidiaries at 12/31/13 as receivable from subsidiaries.
- B. Show the classification and amount(s) that should be reported in the consolidated balance sheet of Polychromasia, Inc. and Subsidiaries at 12/31/13 as payable to subsidiaries.

**EXERCISE 3-8 Stock Acquisition, Journal Entry by Parent LO7**

Peep Inc. acquired 100% of the outstanding common stock of Shy Inc. for \$2,500,000 cash and 15,000 shares of its common stock (\$2 par value). The stock's market value was \$40 on the acquisition date.

**Required:**

Prepare the journal entry to record the acquisition.

**EXERCISE 3-9 Acquisition Costs LO7**

Assume the same information from Exercise 3–8. In addition, Peep Inc. incurred the following direct costs:

|   |                 |
|---|-----------------|
| Accounting fees for the purchase            | \$15,000        |
| Legal fees for registering the common stock | 30,000          |
| Other legal fees for the acquisition        | 45,000          |
| Travel expenses to meet with Shy managers   | 5,000           |
| SEC filing fees                             | 2,000           |
|   | <u>\$97,000</u> |

Before the acquisition consummation date, \$90,000 of the direct costs was charged to a deferred charges account pending the completion of the acquisition. The remaining \$7,000 has not been accrued or paid.

**Required:**

Prepare the journal entry to record both the acquisition and the direct costs.

**EXERCISE 3-10A Deferred Tax Effects, Acquisition Entry and Eliminating Entries (See Appendix 3A online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter))**

Patel Company issued 95,000 shares of \$1 par value common stock (market value of \$6/share) for 95% of the common stock of Seely Company on January 1, 2014. Seely Company had the following assets, liabilities, and owners' equity at that time:

|                                      | <i>Book Value/Tax Basis</i> | <i>Fair Value</i> | <i>Difference</i> |
|--------------------------------------|-----------------------------|-------------------|-------------------|
| Cash                                 | \$ 20,000                   | \$ 20,000         | \$—0—             |
| Accounts receivable                  | 112,000                     | 112,000           | —0—               |
| Inventory (LIFO)                     | 82,000                      | 134,000           | 52,000            |
| Land                                 | 30,000                      | 55,000            | 25,000            |
| Plant assets (net)                   | 392,000                     | 463,000           | 71,000            |
| Total assets                         | <u>\$636,000</u>            | <u>\$784,000</u>  | <u>\$148,000</u>  |
| Allowance for uncollectible accounts | \$ 10,000                   | \$ 10,000         | \$—0—             |
| Accounts payable                     | 54,000                      | 54,000            | —0—               |
| Bonds payable                        | 200,000                     | 180,000           | 20,000            |
| Common stock, \$1 par value          | 80,000                      |                   |                   |
| Other contributed capital            | 132,000                     |                   |                   |
| Retained earnings                    | 160,000                     |                   |                   |
| Total equities                       | <u>\$636,000</u>            |                   |                   |

**Required:**

- A. Prepare the stock acquisition entry on the books of Patel Company, taking into account tax effects. Assume an income tax rate of 40%.
- B. Prepare eliminating entries for the preparation of a consolidated balance sheet workpaper on January 1, 2014.

**EXERCISE 3-11A Deferred Tax Effects at Date of Acquisition (See Appendix 3A online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter))**

Profect Company purchased the Starless Company in a nontaxable combination consummated as a stock acquisition. Profect issued 10,000 shares of \$5 par value common stock, with a market value of \$70, in exchange for all the stock of Starless. The following information about Starless Company is available on the combination date.

**Starless Company**

|  |           |
|--|-----------|
| Book value of net assets   | \$600,000 |
| Deferred tax liability from using<br>Modified Accelerated Cost Recover System<br>(MACRS) depreciation for tax purposes | 24,000    |

| <i>Other Items</i>                                     | <i>Book Value</i> | <i>Fair Value</i> |
|--|-------------------|-------------------|
| Fixed assets   | \$410,000         | \$490,000         |
| Long-term debt   | 450,000           | 500,000           |
| The current and future tax rate is expected to be 40%. |                   |                   |

**Required:**

Prepare the journal entry to record the acquisition, taking into account tax effects.

**ASC Exercises:** For all ASC exercises indicate as part of your answer: the Codification topic, subtopic, section, and paragraph upon which your answer is based (unless otherwise specified). All ASC questions require access to the FASB Codification.

- ASC3-1** **Presentation** A company considered displaying negative amounts using red print in a manner that clearly distinguishes the negative attribute. When determining methods of display, does the company need to give consideration to the limitations of reproduction and microfilming processes?
- ASC3-2** **Cross-Reference** Accounting for contingencies was originally addressed in *SFAS No. 5*. Where is this information included in the Codification? Is all the guidance listed within one topic?
- ASC3-3** **Disclosure** There are two specific operating cash payments that are required to be disclosed as supplemental information to the statement of cash flows (if not presented as line items under the direct method). What are they and where is this located in the Codification?
- ASC3-4** **Measurement** Can treasury stock be listed as an asset on the balance sheet?
- ASC3-5** **Measurement** Suppose a firm purchases treasury stock but pays an amount significantly larger than the market value of the stock. Describe the appropriate accounting for the treasury stock.
- ASC3-6** **Cross-Reference** Variable interest entities (VIEs) are discussed in *FASB Interpretation No. 46R*. List all the topics in the Codification where this information can be found (i.e., ASC XXX). (*Hint: There are three main topics.*)

**PROBLEMS****PROBLEM 3-1 Consolidated Workpaper: Two Cases LO 8 LO 9**

The two following separate cases show the financial position of a parent company and its subsidiary company on November 30, 2014, just after the parent had purchased 90% of the subsidiary's stock:

|                         | <i>Case I</i>      |                  | <i>Case II</i>     |                  |
|-------------------------|--------------------|------------------|--------------------|------------------|
|                         | <i>P Company</i>   | <i>S Company</i> | <i>P Company</i>   | <i>S Company</i> |
| Current assets          | \$ 880,000         | \$260,000        | \$ 780,000         | \$280,000        |
| Investment in S Company | 190,000            |                  | 190,000            |                  |
| Long-term assets        | 1,400,000          | 400,000          | 1,200,000          | 400,000          |
| Other assets 90,000     | 40,000             | 70,000           | 70,000             |                  |
| Total                   | <u>\$2,560,000</u> | <u>\$700,000</u> | <u>\$2,240,000</u> | <u>\$750,000</u> |
| Current liabilities     | \$ 640,000         | \$270,000        | \$ 700,000         | \$260,000        |
| Long-term liabilities   | 850,000            | 290,000          | 920,000            | 270,000          |
| Common stock            | 600,000            | 180,000          | 600,000            | 180,000          |
| Retained earnings       | 470,000            | (40,000)         | 20,000             | 40,000           |
| Total                   | <u>\$2,560,000</u> | <u>\$700,000</u> | <u>\$2,240,000</u> | <u>\$750,000</u> |

**Required:**

- A.** Prepare a November 30, 2014, consolidated balance sheet workpaper for each of the foregoing cases. In Case I, any difference between book value of equity and the value implied by the purchase price relates to subsidiary long-term assets. In Case II, assume that any excess of book value over the value implied by purchase price is due to overvalued long-term assets.
- B.** Assume that Company S's balance sheet is the same as the balance sheet used in Case I (from part A). Suppose that there were 50,000 shares of S Company common stock outstanding and that Company P acquired

90% of the shares for \$4.50 a share. Shortly after acquisition, the noncontrolling shares were selling for \$4.25 a share. Prepare a computation and allocation of difference schedule considering this information.

**PROBLEM 3-2 Consolidated Balance Sheet Workpaper LO 8 LO 9**

On January 1, 2014, Perry Company purchased 8,000 shares of Soho Company's common stock for \$120,000. Immediately after the stock acquisition, the statements of financial position of Perry and Soho appeared as follows:

| <i>Assets</i>                         | <i>Perry</i>     | <i>Soho</i>      |
|---------------------------------------|------------------|------------------|
| Cash                                  | \$ 39,000        | \$ 19,000        |
| Accounts receivable                   | 53,000           | 31,000           |
| Inventory                             | 42,000           | 25,000           |
| Investment in Soho Company            | 120,000          |                  |
| Plant assets                          | 160,000          | 110,500          |
| Accumulated depreciation—plant assets | (52,000)         | (19,500)         |
| Total                                 | <u>\$362,000</u> | <u>\$166,000</u> |
| <i>Liabilities and Owners' Equity</i> |                  |                  |
| Current liabilities                   | \$ 18,500        | \$ 26,000        |
| Mortgage notes payable                | 40,000           |                  |
| Common stock, \$10 par value          | 120,000          | 100,000          |
| Other contributed capital             | 135,000          | 16,500           |
| Retained earnings                     | 48,500           | 23,500           |
| Total                                 | <u>\$362,000</u> | <u>\$166,000</u> |

**Required:**

- A. Calculate the percentage of Soho acquired by Perry Company. Prepare a schedule to compute the difference between book value of equity and the value implied by the purchase price. Any difference between the book value of equity and the value implied by the purchase price relates to subsidiary plant assets.
- B. Prepare a consolidated balance sheet workpaper as of January 1, 2014.
- C. Suppose instead that Perry acquired the 8,000 shares for \$20 per share including a \$5 per share control premium. Prepare a computation and allocation of difference schedule.

**PROBLEM 3-3 Intercompany Bond Holdings at Par, 90% Owned Subsidiary LO 8 LO 9**

Balance sheets for P Company and S Company on August 1, 2014, are as follows:

|                               | <i>P Company</i>   | <i>S Company</i> |
|-------------------------------|--------------------|------------------|
| Cash                          | \$ 165,500         | \$106,000        |
| Receivables                   | 366,000            | 126,000          |
| Inventory                     | 261,000            | 108,000          |
| Investment in bonds           | 306,000            | —0—              |
| Investment in S Company stock | 586,500            | —0—              |
| Plant and equipment (net)     | 573,000            | 320,000          |
| Land                          | 200,000            | 300,000          |
| Total                         | <u>\$2,458,000</u> | <u>\$960,000</u> |
| Accounts payable              | \$ 174,000         | \$ 58,000        |
| Accrued expenses              | 32,400             | 26,000           |
| Bonds payable, 8%             | —0—                | 200,000          |
| Common stock                  | 1,500,000          | 460,000          |
| Other contributed capital     | 260,000            | 60,000           |
| Retained earnings             | 491,600            | 156,000          |
| Total                         | <u>\$2,458,000</u> | <u>\$960,000</u> |

**Required:**

Prepare a workpaper for a consolidated balance sheet for P Company and its subsidiary on August 1, 2014, taking into consideration the following:

1. P Company acquired 90% of the outstanding common stock of S Company on August 1, 2014, for a cash payment of \$586,500.

- Included in the Investment in Bonds account are \$40,000 par value of S Company bonds payable that were purchased at par by P Company in 2002. The bonds pay interest on April 30 and October 31. S Company has appropriately accrued interest expense on August 1, 2014; P Company, however, inadvertently failed to accrue interest income on the S Company bonds.
- Included in P Company receivables is a \$35,000 cash advance to S Company that was mailed on August 1, 2014. S Company had not yet received the advance at the time of the preparation of its August 1, 2014.
- Assume that any excess of book value over the value implied by purchase price is due to overvalued plant and equipment.

### PROBLEM 3-4 Parent and Two Subsidiaries, Intercompany Notes

On January 2, 2014, Phillips Company purchased 80% of Sanchez Company and 90% of Thomas Company for \$225,000 and \$168,000, respectively. Immediately before the acquisitions, the balance sheets of the three companies were as follows:

|                           | <i>Phillips</i>  | <i>Sanchez</i>   | <i>Thomas</i>    |
|---------------------------|------------------|------------------|------------------|
| Cash                      | \$400,000        | \$ 43,700        | \$ 20,000        |
| Accounts receivable       | 28,000           | 24,000           | 20,000           |
| Note receivable           | —0—              | 10,000           | —0—              |
| Interest receivable       | —0—              | 300              | —0—              |
| Inventory                 | 120,000          | 96,000           | 43,000           |
| Equipment                 | 60,000           | 40,000           | 30,000           |
| Land                      | 180,000          | 80,000           | 70,000           |
| Total                     | <u>\$788,000</u> | <u>\$294,000</u> | <u>\$183,000</u> |
| Accounts payable          | \$ 28,000        | \$ 20,000        | \$ 18,000        |
| Note payable              | —0—              | —0—              | 10,000           |
| Common stock              | 300,000          | 120,000          | 75,000           |
| Other contributed capital | 300,000          | 90,000           | 40,000           |
| Retained earnings         | 160,000          | 64,000           | 40,000           |
| Total                     | <u>\$788,000</u> | <u>\$294,000</u> | <u>\$183,000</u> |

The note receivable and interest receivable of Sanchez relate to a loan made to Thomas Company on October 1, 2013. Thomas failed to record the accrued interest expense on the note.

#### Required:

Prepare a consolidated balance sheet workpaper as of January 2, 2014. Any difference between book value and the value implied by the purchase price relates to subsidiary land.

### PROBLEM 3-5 Determining Balance Sheet Prior to Consolidation LO 8

On January 1, 2014, Pat Company purchased 90% of the outstanding common stock of Solo Company for \$236,000 cash. The balance sheet for Pat Company just before the acquisition of Solo Company stock, along with the consolidated balance sheet prepared at the date of acquisition, follows.

|                                       | <i>Pat Company</i><br><i>December 31, 2013</i> | <i>Consolidated</i><br><i>January 1, 2014</i> |
|---------------------------------------|--|---|
| Cash                                  | \$ 540,000                                     | \$ 352,000                                    |
| Accounts receivable                   | 272,000  | 346,000                                       |
| Advances to Solo Company              | 10,000   |   |
| Inventory                             | 376,000  | 451,000                                       |
| Plant and equipment                   | 622,000  | 820,000                                       |
| Land                                  | 350,000  | 421,000                                       |
| Total                                 | <u>\$2,170,000</u>                             | <u>\$2,390,000</u>                            |
| Accounts payable                      | \$ 280,000                                     | \$ 386,000                                    |
| Long-term liabilities                 | 520,000  | 605,500                                       |
| Noncontrolling interest in subsidiary |  | 28,500  |
| Common stock                          | 890,000  | 890,000                                       |

| Retained earnings                     | 180,000  | 180,000                                       |
| Total                                 | <u>\$2,170,000</u>                             | <u>\$2,390,000</u>                            |

One week before the acquisition, Pat Company had advanced \$10,000 to Solo Company. Solo Company had not yet recorded the transaction on the date of acquisition. In addition, on the date of acquisition, Solo Company owed Pat Company \$4,000 for purchases of merchandise on account. The merchandise had been sold to outside parties prior to the date of acquisition.

**Required:**

- Determine the amount of cash that appeared on Solo Company's balance sheet immediately prior to the acquisition of its stock by Pat Company.
- Determine the amount of total stockholders' equity on Solo Company's separate balance sheet at the date of acquisition.
- Determine the amount of total assets appearing on Solo Company's separate balance sheet on the date of acquisition.

**PROBLEM 3-6 In-Transit Items LO 8**

On July 31, 2014, Ping Company purchased 90% of Santos Company's common stock for \$2,010,000 cash. Immediately after the acquisition, the two companies' balance sheets were as follows:

|                              | <i>Ping</i>               | <i>Santos</i>             |
|------------------------------|---------------------------|---------------------------|
| Cash                         | \$ 320,000                | \$ 150,000                |
| Accounts receivable          | 600,000                   | 300,000                   |
| Note receivable              | 100,000                   | —0—                       |
| Inventory                    | 1,840,000                 | 400,000                   |
| Advance to Santos Company    | 60,000                    | —0—                       |
| Investment in Santos Company | 2,010,000                 | —0—                       |
| Plant and equipment (net)    | 3,000,000                 | 1,500,000                 |
| Land                         | 90,000                    | 90,000                    |
| <b>Total</b>                 | <b><u>\$8,020,000</u></b> | <b><u>\$2,440,000</u></b> |
| Accounts payable             | \$ 800,000                | \$ 140,000                |
| Notes payable                | 900,000                   | 100,000                   |
| Common stock                 | 2,400,000                 | 900,000                   |
| Other contributed capital    | 2,200,000                 | 680,000                   |
| Retained earnings            | 1,720,000                 | 620,000                   |
| <b>Total</b>                 | <b><u>\$8,020,000</u></b> | <b><u>\$2,440,000</u></b> |

Santos Company has not yet recorded the \$60,000 cash advance from Ping Company. Ping Company's accounts receivable include \$20,000 due from Santos Company. Santos Company's \$100,000 note payable is payable to Ping Company. Neither company has recorded \$7,000 of interest accrued on the note from January 1 to July 31. Any difference between book value and the value implied by the purchase price relates to land.

**Required:**

Prepare a consolidated balance sheet workpaper on July 31, 2014.

**PROBLEM 3-7 Purchase Using Cash and Using Stock LO 8**

Balance sheets for Prego Company and Sprague Company as of December 31, 2013, follow:

|                              | <i>Prego Company</i>      | <i>Sprague Company</i>  |
|------------------------------|---------------------------|-------------------------|
| Cash                         | \$ 700,000                | \$111,000               |
| Accounts receivable (net)    | 892,000                   | 230,000                 |

| Property and equipment (net) | \$1,927,000               | \$468,000               |
| Land                         | 120,000                   | 94,000                  |
| <b>Total assets</b>          | <b><u>\$4,183,000</u></b> | <b><u>\$963,000</u></b> |
| Accounts payable             | \$ 302,000                | \$152,000               |
| Notes payable                | 588,000                   | 61,000                  |
| Long-term debt               | 350,000                   | 90,000                  |
| Common stock                 | 1,800,000                 | 500,000                 |
| Other contributed capital    | 543,000                   | 80,000                  |
| Retained earnings            | 600,000                   | 80,000                  |
| <b>Total equities</b>        | <b><u>\$4,183,000</u></b> | <b><u>\$963,000</u></b> |

The fair values of Sprague Company's assets and liabilities are equal to their book values.

**Required:**

Prepare a consolidated balance sheet as of January 1, 2014, under each of the following assumptions:

- A. On January 1, 2014, Prego Company purchased 90% of the outstanding common stock of Sprague Company for \$594,000.
- B. On January 1, 2014, Prego Company exchanged 11,880 of its \$20 par value common shares with a fair value of \$50 per share for 90% of the outstanding common shares of Sprague Company. The transaction is a purchase.

**PROBLEM 3-8 Intercompany Items, Two Subsidiaries LO7 LO8 LO9**

On February 1, 2014, Punto Company purchased 95% of the outstanding common stock of Sara Company and 85% of the outstanding common stock of Rob Company. Immediately before the two acquisitions, balance sheets of the three companies were as follows:

|                              | <i>Punto</i>     | <i>Sara</i>      | <i>Rob</i>      |
|------------------------------|------------------|------------------|-----------------|
| Cash                         | \$165,000        | \$ 45,000        | \$17,000        |
| Accounts receivable          | 35,000           | 35,000           | 26,000          |
| Notes receivable             | 18,000           | —0—              | —0—             |
| Merchandise inventory        | 106,000          | 35,500           | 14,000          |
| Prepaid insurance            | 13,500           | 2,500            | 500             |
| Advances to Sara Company     | 10,000           |                  |                 |
| Advances to Rob Company      | 5,000            |                  |                 |
| Land                         | 248,000          | 43,000           | 15,000          |
| Buildings (net)              | 100,000          | 27,000           | 16,000          |
| Equipment (net)              | 35,000           | 10,000           | 2,500           |
| <b>Total</b>                 | <u>\$735,500</u> | <u>\$198,000</u> | <u>\$91,000</u> |
| Accounts payable             | \$ 25,500        | \$ 20,000        | \$10,500        |
| Income taxes payable         | 30,000           | 10,000           | —0—             |
| Notes payable                | —0—              | 6,000            | 10,500          |
| Bonds payable                | 100,000          | —0—              | —0—             |
| Common stock, \$10 par value | 300,000          | 144,000          | 42,000          |
| Other contributed capital    | 150,000          | 12,000           | 38,000          |
| Retained earnings (deficit)  | 130,000          | 6,000            | (10,000)        |
| <b>Total</b>                 | <u>\$735,500</u> | <u>\$198,000</u> | <u>\$91,000</u> |

The following additional information is relevant.

1. One week before the acquisitions, Punto Company had advanced \$10,000 to Sara Company and \$5,000 to Rob Company. Sara Company recorded an increase to Accounts Payable for its advance, but Rob Company had not recorded the transaction.
2. On the date of acquisition, Punto Company owed Sara Company \$12,000 for purchases on account, and Rob Company owed Punto Company \$3,000 and Sara Company \$6,000 for such purchases. The goods purchased had all been sold to outside parties prior to acquisition.
3. Punto Company exchanged 13,400 shares of its common stock with a fair value of \$12 per share for 95% of the outstanding common stock of Sara Company. In addition, stock issue fees of \$4,000 were paid in cash. The acquisition was accounted for as a purchase.
4. Punto Company paid \$50,000 cash for the 85% interest in Rob Company.
5. Three thousand dollars of Sara Company's notes payable and \$9,500 of Rob Company's notes payable were payable to Punto Company.
6. Assume that for Sara, any difference between book value and the value implied by the purchase price relates to subsidiary land. However, for Rob, assume that any excess of book value over the value implied by the purchase price is due to overvalued buildings.

**Required:**

- A. Give the book entries to record the two acquisitions in the accounts of Punto Company.
- B. Prepare a consolidated balance sheet workpaper immediately after acquisition.
- C. Prepare a consolidated balance sheet at the date of acquisition for Punto Company and its subsidiaries.

**PROBLEM 3-9 Intercompany Notes, 90% Acquisition LO8 LO9**

On January 1, 2015, Pope Company purchased 90% of Sun Company's common stock for \$5,800,000 cash. Immediately after the acquisition, the two companies' balance sheets were as follows:

|                           | <i>Pope</i>         | <i>Sun</i>         |
|---------------------------|---------------------|--------------------|
| Cash                      | \$ 297,000          | \$ 165,000         |
| Accounts receivable       | 432,000             | 468,000            |
| Notes receivable          | 90,000              |                    |
| Inventory                 | 1,980,000           | 1,447,000          |
| Investment in Sun Company | 5,800,000           |                    |
| Plant and equipment (net) | 5,730,000           | 3,740,000          |
| Land                      | 1,575,000           | 908,000            |
| Total                     | <u>\$15,904,000</u> | <u>\$6,728,000</u> |
| Accounts payable          | \$ 698,000          | \$ 247,000         |
| Notes payable             | 2,250,000           | 110,000            |
| Common stock (\$15 par)   | 4,500,000           | 5,250,000          |
| Other contributed capital | 5,198,000           | 396,000            |
| Treasury stock held       |                     | (1,200,000)        |
| Retained earnings         | 3,258,000           | 1,925,000          |
| Total                     | <u>\$15,904,000</u> | <u>\$6,728,000</u> |

Sun Company's note payable includes a \$90,000 note payable to Pope Company, plus \$20,000 payable to a bank. Any difference between book value and the value implied by the purchase price relates to subsidiary property and equipment.

**Required:**

- A. Prepare a Computation and Allocation Schedule for the difference between book value of equity and the value implied by the purchase price.
- B. Prepare a consolidated balance sheet workpaper on January 1, 2015.

**PROBLEM 3-10A Deferred Tax Effects** (See Appendix 3A online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter))

On January 1, 2015, Pruitt Company issued 25,500 shares of its common stock in exchange for 85% of the outstanding common stock of Shah Company. Pruitt's common stock had a fair value of \$28 per share at that time (par value of \$2 per share). Pruitt Company uses the cost method to account for its investment in Shah Company and files a consolidated income tax return. A schedule of the Shah Company assets acquired and liabilities assumed at book values (which are equal to their tax bases) and fair values follows.

| <i>Item</i>               | <i>Book Value/<br/>Tax Basis</i> | <i>Fair Value</i>  | <i>Excess</i>    |
|---------------------------|----------------------------------|--------------------|------------------|
| Receivables (net)         | \$125,000                        | \$ 125,000         | \$ —0—           |
| Inventory                 | 167,000                          | 195,000            | 28,000           |
| Land                      | 86,500                           | 120,000            | 33,500           |
| Plant assets (net)        | 467,000                          | 567,000            | 100,000          |
| Patents                   | 95,000                           | 200,000            | 105,000          |
| Total                     | <u>\$940,500</u>                 | <u>\$1,207,000</u> | <u>\$266,500</u> |
| Current liabilities       | \$ 89,500                        | \$ 89,500          | \$ —0—           |
| Bonds payable             | 300,000                          | 360,000            | 60,000           |
| Common stock              | 120,000                          |                    |                  |
| Other contributed capital | 164,000                          |                    |                  |
| Retained earnings         | 267,000                          |                    |                  |
| Total                     | <u>\$940,500</u>                 |                    |                  |

**Additional Information:**

1. Pruitt's income tax rate is 35%.
2. Shah's beginning inventory was all sold during 2015.
3. Useful lives for depreciation and amortization purposes are:

|              |          |
|--------------|----------|
| Plant assets | 10 years |
| Patents      | 8 years  |
| Bond premium | 10 years |
4. Pruitt uses the straight-line method for all depreciation and amortization purposes.

**Required:**

- A. Prepare the stock acquisition entry on Pruitt Company's books.
- B. Prepare the eliminating entries for a consolidated statements workpaper on January 1, 2015, immediately after acquisition.

*Note:* See Chapter 5, Problem 5-18 for an expanded version of this problem on the effects of deferred taxes in subsequent periods.

# Chapter 3

## APPENDIX 3A – DEFERRED TAXES ON THE DATE OF ACQUISITION (ONLINE)

If a purchase acquisition is tax-free to the seller, the tax bases of the acquired assets and liabilities are carried forward at historical book values. However, the assets and liabilities of the acquired company are recorded on the consolidated books at adjusted fair value. Under current guidelines, the tax effects of the difference between consolidated book values and the tax bases must be recorded as deferred tax liabilities or assets.

Consider the following example. Suppose that Purchasing Company acquires 90% of Selling Company by issuing stock valued at \$800,000. The only difference between book value and fair value relates to depreciable plant and equipment. Plant and equipment has a market value of \$400,000 and a book value of \$250,000. All other book values approximate market values. Assume that the combination qualifies as a nontaxable exchange. On the date of acquisition, Selling Company's book value of equity is \$600,000, which includes \$150,000 of common stock and \$450,000 of retained earnings. Assume a 30% tax rate. Consider the following Computation and Allocation Schedule with and without considering deferred taxes.

### Computation and Allocation of Difference Schedule (without Consideration of Deferred Taxes)

|   | <i>Parent Share</i> | <i>Noncontrolling Share</i> | <i>Total Value</i> |
|---|---------------------|-----------------------------|--------------------|
| Purchase price and implied value          | <b>\$800,000</b>    | <b>88,889</b>               | 888,889            |
| Less: Book value of subsidiary equity     | <u>540,000</u>      | <u>60,000</u>               | <u>600,000</u>     |
| Difference between implied and book value | 260,000             | 28,889                      | <b>288,889</b>     |
| Adjust plant and equipment upward         | <u>(135,000)</u>    | <u>(15,000)</u>             | <u>(150,000)</u>   |
| Balance                                   | 125,000             | 13,889                      | 138,889            |
| Goodwill                                  | <u>(125,000)</u>    | <u>(13,889)</u>             | <u>(138,889)</u>   |
| Balance                                   | <u><u>—0—</u></u>   | <u><u>—0—</u></u>           | <u><u>—0—</u></u>  |

**Computation and Allocation of Difference Schedule  
(with Consideration of Deferred Taxes)**

|  | <i>Parent Share</i> | <i>Noncontrolling Share</i> | <i>Total Value</i> |
|--|---------------------|-----------------------------|--------------------|
| Purchase price and implied value   | <b>\$800,000</b>    | <b>88,889</b>               | 888,889            |
| Less: Book value of subsidiary equity                                      | 540,000             | 60,000                      | 600,000            |
| Difference between implied and book value                                  | 260,000             | 28,889                      | <b>288,889</b>     |
| Adjust plant and equipment upward  | (135,000)           | (15,000)                    | <b>(150,000)</b>   |
| Deferred tax liability on plant and equipment<br>(400,000 – 250,000) (30%) | 40,500              | 4,500                       | <b>45,000</b>      |
| Balance  | 165,500             | 18,389                      | 183,889            |
| Goodwill   | (165,500)           | (18,389)                    | <b>(183,889)</b>   |
| Balance  | <u>—0—</u>          | <u>—0—</u>                  | <u>—0—</u>         |

Notice that goodwill is increased when deferred taxes are computed on the timing difference related to the depreciable bases of plant and equipment. This occurs because the additional future depreciation from the write-up of plant and equipment is reported on the consolidated income statement but is nondeductible for tax purposes, creating a timing difference between book and tax. Recall that deferred taxes are classified in the balance sheet according to the item that gave rise to them. Since plant and equipment are long-term assets, the deferred tax liability would also be *long-term*.

## ACCOUNTING FOR UNCERTAIN TAX POSITIONS

### Reasons for Change

In June 2006, the FASB issued Interpretation No. 48, *Accounting for Uncertain Tax Positions—an Interpretation of FASB Statement No. 109* (now included in FASB ASC topic 740 [Income Taxes]). The main reason FASB stated for the issuance of this interpretation was to clarify the accounting for uncertain tax positions and reduce diverse accounting practices, which had developed due to the lack of an explicitly defined confidence level to be met before recognizing benefits from an uncertain tax position.

For example, some enterprises recognize all tax positions taken or anticipated to be taken in a tax return and include the effects of any uncertainty about the detection and sustainability of the positions in the deferred tax asset valuation allowance, or in their analysis of the adequacy of the income tax liability. Other enterprises use a predetermined confidence threshold for initial recognition of benefits from tax positions and a probable loss threshold to provide for contingent losses related to uncertain tax positions. Still other enterprises have identified uncertain tax positions based on certain attributes, and then applied the guidance for gain contingencies in FASB ASC subtopic 450–30 [Contingencies—gain contingencies] [ASC 320–10–45].

According to FASB, this diversity in practice results in non-comparability in reporting income tax expense; thus the issues addressed in their interpretation should improve financial reporting by defining a criterion that an individual tax position must meet before the benefit is recognized in an enterprise's financial statements. The IASB has acknowledged similar diversity in the application of international standards on this topic.

The issued Interpretation has been criticized by power companies, as well as by the Edison Electric Institute, who claimed that the new rule is likely to result in overstated tax liabilities and a greater workload, while not improving financial reporting.<sup>16</sup>

<sup>16</sup> *Electric Utility Week*, September 26, 2005, "Power Commenters Question Need for FASB 'Uncertain Tax Positions' Rule."

## Main Issues and Changes

**Initial Recognition** Under the Interpretation, the recognition of a tax benefit would occur when it is “more likely than not” that the position would be sustained upon audit by the relevant taxing authority, including final resolution of any related litigation or appeals process. The “more-likely-than-not” criterion means a likelihood of more than 50 percent.

**Classification** In general, the Board concluded that the liability arising from the difference between the tax position and the amount recognized and measured should be classified as a current liability if anticipated to be paid within one year or the operating cycle. Only a liability related to a taxable temporary difference, as defined in FASB ASC section 740–10–45 should be classified as a deferred liability.

**Subsequent Recognition** Under the Interpretation, a tax position that fails to meet the “more-likely-than-not” threshold for initial recognition can be recognized in the first interim period that meets any one of the following conditions: a) the more-likely-than-not recognition threshold is met by the reporting date, b) the tax position is effectively settled, or c) the statute of limitations for the relevant taxing authority to examine and challenge the tax position has expired.

**Derecognition** Previously recognized tax benefits from positions that no longer meet the more-likely-than-not threshold would be derecognized by recording an income tax liability or eliminating a deferred tax asset.

Use of a valuation allowance as described in FASB ASC 740–10–30, or a valuation account as described in *SFAC No. 6, Elements of Financial Statements*, is not an appropriate substitute for the derecognition of a tax position when the derecognition threshold is met.

**Interest and Penalties** The Interpretation notes that if the payment of interest on the underpayment of income taxes is required by the relevant tax law, the accrual of interest should be based on the difference between the tax benefit recognized in the financial statements and the tax position. Interest should be accrued in the period the interest is incurred. If a penalty applies to a tax position, the liability for the penalty should be recognized in the period the penalty is deemed to have been incurred.

**Disclosures** The Board also concluded that liabilities recognized in financial statements pursuant to this Interpretation for tax positions for which it is reasonably possible that the total amounts of unrecognized tax benefits will significantly increase or decrease within 12 months of the reporting date should be disclosed (i.e., the nature of the uncertainty, the nature of the event that might cause the event to change, and an estimate of the range of the reasonably possible change).

The workpaper entry to eliminate the investment account is as follows:

|     |  |         |         |
|-----|--|---------|---------|
| (1) | Common Stock—Selling Company               | 150,000 |         |
|     | Retained Earnings—Selling Company          | 450,000 |         |
|     | Difference between Implied and Book Values | 288,889 |         |
|     | Investment in S Company                    |         | 800,000 |
|     | Noncontrolling Interest in Equity          |         | 88,889  |

The entry to allocate the difference between implied and book values is affected by the deferred tax amounts. The following entries show the allocation with and without deferred taxes.

|     |  | <i>Without Deferred Taxes</i> | <i>With Deferred Taxes</i> |
|-----|--|-------------------------------|----------------------------|
| (2) | Plant and Equipment                              | 150,000                       | 150,000                    |
|     | Goodwill   | 138,889                       | 183,889                    |
|     | Deferred tax liability<br>(Long-term)            |                               | 45,000                     |
|     | Difference between<br>Implied and<br>Book Values | 288,889                       | 288,889                    |

Of the two entries above, only the entry *with* deferred taxes is complete. Thus a deferred tax liability or asset should be recorded for each adjustment in the Computation and Allocation Schedule that creates a timing difference. For instance, if inventory value is increased, a *current* deferred tax liability would be created.

## APPENDIX 3B – CONSOLIDATION OF VARIABLE INTEREST ENTITIES

FASB has issued guidance for the consolidation of special-purpose entities (SPEs) through Interpretation No. 46(R) “Consolidation of Variable Interest Entities” and *SFAS No. 167*, “Amendments to FASB Interpretation No. 46(R) [see FASB ASC subtopic 810–10].”

An enterprise shall consolidate a variable interest entity (VIE) when that enterprise has a variable interest (or combination of variable interests) that provides the enterprise with a controlling financial interest on the basis of certain provisions (listed below). The enterprise that consolidates a variable interest entity is called the primary beneficiary of that entity.

*FASB Statement No. 167* requires ongoing reassessments of whether an enterprise is the primary beneficiary of a variable interest entity. Previously, Interpretation 46(R) required reconsideration of whether an enterprise is the primary beneficiary of a variable interest entity only when specific events occurred. *SFAS No. 167* eliminates the quantitative approach previously required for determining the primary beneficiary of a variable interest entity, which was based on determining which enterprise absorbs the majority of the entity’s expected losses, receives a majority of the entity’s expected residual returns, or both. *SFAS No. 167* requires enhanced disclosures that will provide users of financial statements with more transparent information about an enterprise’s involvement in a variable interest entity.

An enterprise with a variable interest in a variable interest entity shall assess whether the enterprise has a controlling financial interest in the entity and, thus, is the entity’s primary beneficiary. An enterprise shall be deemed to have a *controlling financial interest* in a variable interest entity *if* it has *both* of the following characteristics:

- a. The power to direct the activities of a variable interest entity that most significantly impact the entity’s economic performance.
- b. The obligation to absorb losses of the entity that could potentially be significant to the variable interest entity or the right to receive benefits from the entity that could potentially be significant to the variable interest entity.

The primary beneficiary of a VIE is required to disclose the following:

- The carrying amounts and classification of the variable interest entity’s assets and liabilities in the statement of financial position that are consolidated in accordance with this Interpretation, including qualitative information about the relationship(s) between those assets and liabilities. For example, if the variable interest entity’s assets can be used only to settle obligations of the variable interest entity, the enterprise shall disclose qualitative information about the nature of the restrictions on those assets.
- Lack of recourse if creditors (or beneficial interest holders) of a consolidated variable interest entity have no recourse to the general credit of the primary beneficiary.
- Terms of arrangements, giving consideration to both explicit arrangements and implicit variable interests that could require the enterprise to provide financial support (for example, liquidity arrangements and obligations to purchase assets) to the variable interest entity, including events or circumstances that could expose the enterprise to a loss.

In addition to disclosures required by other pronouncements, an enterprise that holds a variable interest in a variable interest entity, but is not the variable interest entity's primary beneficiary, shall disclose:

- (a) The carrying amounts and classification of the assets and liabilities in the enterprise's statement of financial position that relate to the enterprise's variable interest in the variable interest entity.
- (b) The enterprise's maximum exposure to loss as a result of its involvement with the variable interest entity, including how the maximum exposure is determined and the significant sources of the enterprise's exposure to the variable interest entity. If the enterprise's maximum exposure to loss as a result of its involvement with the variable interest entity cannot be quantified, that fact shall be disclosed.
- (c) A tabular comparison of the carrying amounts of the assets and liabilities, as required by (a) above, and the enterprise's maximum exposure to loss, as required by (b) above. An enterprise shall provide qualitative and quantitative information to allow financial statement users to understand the differences between the two amounts.
- (d) Information about any liquidity arrangements, guarantees, and/or other commitments by third parties that may affect the fair value or risk of the enterprise's variable interest in the variable interest entity is encouraged.

### Chapter 3 – Review Questions

The review questions accompanying this course are designed to assist you in achieving the course learning objectives. The review section is not graded; do not submit it in place of your qualified assessment. While completing the review questions, it may be helpful to study any unfamiliar terms in the glossary in addition to course content. After completing the review questions, proceed to the review question answers and rationales.

13. In a stock acquisition:
  - a. The acquiring company, referred to as the parent, will record its share of the acquired company's (the subsidiary's) assets and liabilities on its own balance sheet.
  - b. The party or parties holding any remaining stock in an acquired subsidiary are referred to as the non-controlling interest.
  - c. At acquisition, the acquired company will cease to exist and the acquiring company will account for any minority interest.
  - d. There is no longer a need for the acquired company to maintain separate financial statements other than for unit or division reporting.
  
14. All of the following statements regarding variable interest entities (VIEs) are accurate with the **EXCEPTION** of:
  - a. In a thinly capitalized entity, the company that owns a majority of the stock may not actually have financial control of the entity.
  - b. Variable interest entities have historically been a vehicle for avoiding rules of consolidation, delaying reporting incurred losses or to report illusory gains.
  - c. FASB has determined that all interests in VIEs should be consolidated unless such interest is "insignificant."
  - d. The identification of variable interests requires an economic analysis of the rights and obligation of a legal entity's assets, liabilities, equity, and other contracts.
  
15. With respect to "control":
  - a. IFRS differentiates between voting interest entities which are not VIEs and VIEs when determining the definition of control.
  - b. U.S. GAAP defines control for VIEs as the power to direct the activities that impact economic performance, the obligation to absorb the expected losses, and the right to receive expected residual returns.
  - c. U.S. GAAP defines control for all entities as the power to govern the entities' financial and operating policies so as to obtain benefits from its activities.
  - d. IFRS defines control for voting interest entities as the direct or indirect ability to determine the direction of management and policies through ownership, contract, or otherwise.

16. The first step in the consolidation process is to:
- Determine the difference between implied value and book value.
  - Eliminate the intercompany account.
  - Eliminate the investment in subsidiary account.
  - Convert the subsidiary's account from cost basis to fair value.
17. Which of the following is accurate about limitations and advantages of consolidated financial statements?
- Financial analysts usually favor consolidated financial statements over segment reporting.
  - The SEC has limited use for segment reporting despite FASB's requirement that it be shown in GAAP financial statements.
  - Consolidated financial statements of highly diversified companies operating across industries can be hard to interpret and compare to other companies.
  - FASB is considering a proposal to do away with segment reporting because there is so little need for it among financial statement users.

## **Chapter 4 – Consolidated Financial Statements After Acquisition**

### **Learning Objectives**

After completing this section of the course, you will be able to:

- Recognize differences between current accounting treatment for varying levels of influence and control by investors.
- Identify the appropriate accounting for investments under various different methods.
- Identify the approach to consolidating financial statements and computing implied book values.
- Cite the rules for accounting for interim acquisitions of subsidiary stock.
- Identify similarities and differences in consolidated cash flows depending on the method used to finance the acquisition.
- Recognize differences between GAAP and IFRS with respect to preparation of consolidated financial statements.

# CONSOLIDATED FINANCIAL STATEMENTS AFTER ACQUISITION

## CHAPTER CONTENTS

- 4.1 ACCOUNTING FOR INVESTMENTS BY THE COST, PARTIAL EQUITY, AND COMPLETE EQUITY METHODS
- 4.2 CONSOLIDATED STATEMENTS AFTER ACQUISITION—COST METHOD
- 4.3 RECORDING INVESTMENTS IN SUBSIDIARIES—EQUITY METHOD (PARTIAL OR COMPLETE)
- 4.4 ELIMINATION OF INTERCOMPANY REVENUE AND EXPENSE ITEMS
- 4.5 INTERIM ACQUISITIONS OF SUBSIDIARY STOCK
- 4.6 CONSOLIDATED STATEMENT OF CASH FLOWS
- 4.7 ILLUSTRATION OF PREPARATION OF A CONSOLIDATED STATEMENT OF CASH FLOWS—YEAR OF ACQUISITION
- 4.8 COMPARE U.S. GAAP AND IFRS REGARDING EQUITY METHOD

### IN THE NEWS

Intel announced its biggest acquisition in its 42-year history when it agreed to buy giant McAfee for \$7.68 billion in August 2010. McAfee, founded in 1987, was No. 2 in antivirus software with 21.9% of the market according to Infonetics Research. The move was designed to jump-start the chip giant's uphill effort to move its technology beyond computers and also improve the security of the chip. Intel is paying \$48 in cash for each McAfee share. The deal sent off shock waves on Wall Street and in Silicon Valley because of a lofty 60% premium.<sup>1</sup>

Investments in voting stock of other companies may be consolidated, or they may be separately reported in the financial statements at cost, at fair value, or carrying value of equity. The method of reporting adopted depends on a number of factors including the size of the investment, the extent to which the investor exercises control over the activities of the

<sup>1</sup> WSJ.com, "Intel Bets Its Chips on McAfee," by Don Clark, 8/19/10.

investee, and the marketability of the securities. **Investor** refers to a *business entity that holds an investment in voting stock of another company*. **Investee** refers to a *corporation that issued voting stock held by an investor or investors*.

## 4.1 ACCOUNTING FOR INVESTMENTS BY THE COST, PARTIAL EQUITY, AND COMPLETE EQUITY METHODS

**Lo 1** Varying levels of ownership are accounted for differently.

### RELATED CONCEPTS

When available for sale securities are adjusted to market, the unrealized gain or loss is recorded as *other comprehensive income* rather than a component of net income.

Generally speaking, there are three levels of influence or control by an investor over an investee, which determine the appropriate accounting treatment. There are no absolute percentages to distinguish among these levels, but there are guidelines. The three levels and the corresponding accounting treatments are summarized as follows:

| <i>Level</i>                       | <i>Guideline Percentages</i> | <i>Usual Accounting Treatment</i>   |
|------------------------------------|------------------------------|---|
| No significant influence           | Less than 20%                | Investment carried at fair value at current year-end (trading or available for sale securities)—method traditionally referred to as <i>cost</i> method with an adjustment for market changes. |
| Significant influence (no control) | 20 to 50% <sup>a</sup>       | Investment measured under the equity method; may be elected to be carried at fair value under an irrevocable option. <sup>b</sup>   |
| Effective control                  | Greater than 50%             | Consolidated statements required (investment eliminated, combined financial statements): investment recorded under <i>cost</i> , <i>partial equity</i> , or <i>complete equity</i> method.    |

<sup>a</sup> The IASB defines control as ‘the ability of an entity to direct the activities of another entity to generate returns for the reporting entity.’

<sup>b</sup> FASB ASC paragraph 825–10–25–4.

**IFRS**

The focus in this chapter is on presenting financial statements for consolidated entities (i.e., those in the third category above). Nonetheless, the parent company must account for its investment income from the subsidiary in its own books by one of the methods used for accounting for investments. Investment income will subsequently be eliminated, as will the investment account itself, when the two sets of books are merged into one consolidated set of financial data. Thus, so long as the eliminating process is carried out accurately, the parent has a certain amount of discretion in choosing how it accounts for its investment. This discretion exists because the consolidated financial statements will be identical, regardless of which method is used. However, ***if the parent issues parent-only financial statements for any purpose, the complete equity method should be used on those statements for investees over which the parent has either significant influence or effective control.***

To understand the effect of the earnings of the subsidiary on the consolidated entity, and on the noncontrolling interest, the reader needs to understand the mechanics that lead to the blending of two sets of books (income statement, retained earnings statement, and balance sheet) into one. Thus, we begin this chapter with a general discussion of accounting for investments, keeping in mind that our purpose is to prepare consolidated financial statements where appropriate.

In distinguishing among the three levels of influence/control, an investor is generally presumed not to have significant influence if the percentage owned is less than 20% of the investee’s outstanding common stock. Exceptions are possible; for example, the investor might own only 18% but be the single largest investor, with the remaining 82% spread among a large number of very small investors, in which case the 18% would represent significant influence, and the equity method would be appropriate. In general, however, an investor owning less than 20% of the investee’s stock accounts for the investment account at its fair value, under a method traditionally referred to as the “cost” method but with adjustments for changes in the fair value over time.

When a company owns a sufficient amount of another company's stock to have significant influence (usually at least 20%), but not enough to effectively control the other company (less than 50% in most cases), the equity method is required. Under FASB ASC paragraph 825-10-25-2, these equity investments may alternatively be carried at fair value under an irrevocable election to do so. Once the investor is deemed to have effective control over the other company (with or without a majority of stock ownership), consolidated statements are required.

In Chapter 3, we focused on the preparation of the consolidated balance sheet at the date of acquisition. With the passage of time, however, consolidating procedures are needed to prepare not only the consolidated balance sheet, but also a consolidated income statement, a consolidated statement of retained earnings, and a consolidated statement of cash flows. In this chapter we address the preparation of these statements subsequent to the date of acquisition.

When consolidated financial statements are appropriate (the investor has effective control over the investee), then the investment account, which is carried on the books of the parent company, will be eliminated in the consolidation process. Thus, it is not relevant to the consolidated statements whether the investor measures the investment account using the cost method or using the equity method, so long as the eliminating entries are properly prepared. When prepared correctly, the resulting consolidated financial statements will be identical, regardless of how the investment was carried in the books of the parent company (investor). At least three possible methods exist and are used in practice on the books of the parent company: the cost method, the partial equity method, and the complete equity method. Recognition of which of these methods is being used is important because the appropriate eliminating entries will vary depending on that choice. Further, because all three are used in practice, it is worthwhile to compare and contrast the three briefly at this point.

Of the three methods, only the complete equity method is acceptable for those investments where *significant influence but not control* is present. Our focus, however, is on investments that will be consolidated (for example, majority ownership). *Nonetheless, from an internal decision-making standpoint, if the parent firm relies upon the unconsolidated statements for any purposes, the complete equity method might be considered superior to the other two in terms of approximating the operating effects of the investment.* In contrast, the cost method is the simplest of the three to prepare on the books of the parent and is the most commonly used method in practice. The partial equity method might be viewed as a compromise, being somewhat easier to prepare on the books of the parent than the complete equity method but also providing a rough approximation of the operating effects of the investment. When decisions are based solely on the consolidated statements, the primary consideration is ease and cost of preparation; this may explain why many companies choose the simplest method (cost method).

***Under all three methods, the investment account is initially recorded at its cost. The differences among the three methods then lie in subsequent entries.*** If the cost method is used, the investment account is adjusted only when additional shares of stock in the investee are purchased or sold (or in the event of a liquidating dividend).<sup>2</sup> Fair value adjustments will be made periodically as needed, but these are generally accomplished using a separate account, Fair Value Adjustment, thus preserving historical cost in the investment account. (The Fair Value Adjustment account has a debit balance when fair value is higher than historical cost, and a credit balance when fair value is lower than historical cost.) Since these fair value adjustments have no impact on the consolidated financial statements (they would have to be reversed if made), we do not make such adjustments in this text.

Under the equity method, more frequent entries appear in the investment account on the books of the parent. Under the partial equity method, the investor adjusts the investment account upward for its share of the investee's earnings and downward for its share of the investee's dividends declared. Under the complete equity method, additional adjustments are made to the investment account for the effects of unrealized intercompany profits, the depreciation or amortization of any differences between market and book values, and

---

<sup>2</sup> A liquidating dividend occurs when the investee has paid cumulative dividends in excess of cumulative earnings (since acquisition). Such excess dividends are treated as a return of capital and, upon their receipt, are recorded by the investor as a decrease in the investment account under the cost method.

possible impairment losses on any goodwill implied in the acquisition price. **Remember, the cost method and various forms of the equity method are methods to record investments after acquisition.** All acquisitions reflect cost at the date of acquisition.

Because all three methods have advantages and disadvantages, and because individual preferences will vary as to which method(s) are most important to the student, book entries and workpaper eliminating entries assuming the use of each of the three methods are discussed and illustrated in separate sections throughout this text. In *some* portions of this chapter, however, partial equity and complete equity methods are indistinguishable given the assumptions of the example, in which case they are illustrated only once to conserve space. Icons in the margin of the pages are used to distinguish between the cost and equity methods. To distinguish between partial and complete equity, the word “complete” or “partial” appears on the icon when needed. In addition, blue print is used to help identify those sections of text that distinguish the equity method from the cost method.

First, though, every student should have a basic understanding of the differences among the three methods in accounting for the investment on the books of the parent. These are illustrated below, and are also summarized in Illustration 4-1, presented at the end of this section.

## Cost Method on Books of Investor

To illustrate the accounting for an investment in a subsidiary accounted for by the **cost method**, assume that P Company acquired 90% of the outstanding voting stock of S Company at the beginning of Year 1 for \$800,000. As mentioned previously, icons in the margin of the pages are used to distinguish between the cost and equity methods. Income (loss) of S Company and dividends declared by S Company during the next three years are listed below. During the third year, the firm pays a liquidating dividend (i.e., the cumulative dividends declared exceeds the cumulative income earned).

| Year | Income<br>(Loss) | Dividends<br>Declared | Cumulative Income over<br>(under) Cumulative Dividends |
|------|------------------|-----------------------|--|
| 1    | \$90,000         | \$30,000              | \$60,000   |
| 2    | (20,000)         | 30,000                | 10,000   |
| 3    | 10,000           | 30,000                | (10,000)   |

Journal entries on the books of P Company to account for the investment in S Company during the three years follow:

**LO 2** Journal entries for Parent using cost method.

### Year 1—P's Books

|   |         |         |
|---|---------|---------|
| Investment in S Company                                 | 800,000 |         |
| Cash  |         | 800,000 |
| To record the initial investment.                       |         |         |
| Cash  | 27,000  |         |
| Dividend Income   |         | 27,000  |
| To record dividends received ( $0.9 \times \$30,000$ ). |         |         |

### Year 2—P's Books

|   |        |        |
|---|--------|--------|
| Cash  | 27,000 |        |
| Dividend Income   |        | 27,000 |
| To record dividends received ( $0.9 \times \$30,000$ ). |        |        |

### Year 3—P's Books

|   |        |        |
|---|--------|--------|
| Cash  | 27,000 |        |
| Dividend Income   |        | 18,000 |
| Investment in S Company   |        | 9,000  |
| To record dividends received, \$9,000 of which represents a return of investment. |        |        |

After these entries are posted, the investment account will appear as follows:

| Investment in S Company (Cost Method) |         |                             |
|---------------------------------------|---------|-----------------------------|
| Year 1 Cost                           | 800,000 |                             |
|                                       |         | Year 3 Liquidating dividend |
|                                       |         | 9,000                       |
| Year 3 Balance                        | 791,000 |                             |

Year 1 entries record the initial investment and the receipt of dividends from S Company. In year 2, although S Company incurred a \$20,000 loss, there was a \$60,000 excess of earnings over dividends from Year 1. Consequently, the dividends received are recognized as income by P Company. In year 3, however, a **liquidating dividend** occurs. From the point of view of a parent company, a purchased subsidiary is deemed to have distributed a liquidating dividend when the cumulative amount of its dividends declared exceeds its cumulative reported earnings after its acquisition. Such excess dividends are treated as a return of capital and are recorded as a reduction of the investment account rather than as dividend income. The liquidating dividend is 90% of the excess of dividends paid over cumulative earnings since acquisition (90% of \$10,000).

## Partial Equity Method on Books of Investor

**LO 2** Journal entries for Parent using partial equity method.

Next, assume that P Company has elected to use the partial equity method to record the investment in S Company above. The entries for the first three years would appear as follows:

### Year 1—P's Books

|  |         |         |
|--|---------|---------|
| Investment in S Company                    | 800,000 |         |
| Cash                                       |         | 800,000 |
| To record the initial investment.          |         |         |
| Investment in S Company                    | 81,000  |         |
| Equity in Subsidiary Income .9 (\$90,000)  |         | 81,000  |
| To record P's share of subsidiary income.  |         |         |
| Cash                                       | 27,000  |         |
| Investment in S Company                    |         | 27,000  |
| To record dividends received .9 (\$30,000) |         |         |

*Note:* The entries to record equity in subsidiary income and dividends received may be combined into one entry, if desired.

### Year 2—P's Books

|  |        |        |
|--|--------|--------|
| Equity in Subsidiary Loss                          | 18,000 |        |
| Investment in S Company                            |        | 18,000 |
| To record equity in subsidiary loss .9 (\$20,000). |        |        |
| Cash   | 27,000 |        |
| Investment in S Company                            |        | 27,000 |
| To record dividends received .9 (\$30,000).        |        |        |

### Year 3—P's Books

|  |        |        |
|--|--------|--------|
| Investment in S Company                              | 9,000  |        |
| Equity in Subsidiary Income                          |        | 9,000  |
| To record equity in subsidiary income .9 (\$10,000). |        |        |
| Cash   | 27,000 |        |
| Investment in S Company                              |        | 27,000 |
| To record dividends received .9 (\$30,000).          |        |        |

After these entries are posted, the investment account will appear as follows:

### Investment in S Company (Partial Equity Method)

|                                    |         |                                    |        |
|------------------------------------|---------|------------------------------------|--------|
| Year 1 Cost                        | 800,000 | Year 1 Share of dividends declared | 27,000 |
| Year 1 Equity in subsidiary income | 81,000  |                                    |        |
| Year 1 Balance                     | 854,000 | Year 2 Equity in subsidiary loss   | 18,000 |
|                                    |         | Year 2 Share of dividends declared | 27,000 |
| Year 2 Balance                     | 809,000 |                                    |        |
| Year 3 Equity in subsidiary income | 9,000   | Year 3 Share of dividends declared | 27,000 |
| Year 3 Balance                     | 791,000 |                                    |        |

## Complete Equity Method on Books of Investor

### IN THE NEWS

“BlackRock, a U.S.-based investment management firm with approximately \$342 billion in assets under management, acquired Merrill Lynch’s investment management business in exchange for a 49 percent ownership interest. Upon the closing of this transaction, PNC Financial Services continued to own 44.5 million shares of BlackRock, representing an ownership interest of approximately 34 percent. Thereafter, BlackRock was deconsolidated from PNC’s financial statements and was accounted for using the equity method.”<sup>3</sup>

1. Although Merrill Lynch did not own more than 50% of BlackRock, would you consider Merrill to have “control” of BlackRock? Why or why not?
2. Does PNC have “control” of BlackRock, as defined by FASB?

### LO 2 Journal entries for Parent using complete equity method.

The complete equity method is usually required to report common stock investments in the 20% to 50% range, assuming the investor has the ability to exercise significant influence over the operating activities of the investee and does *not* have effective control over the investee. In addition, a parent company may use, in its own books, the complete equity method to *account for* investments in subsidiaries that will be consolidated. This method is similar to the partial equity method up to a point, but it requires additional entries in most instances.

Continuing the illustration above, assume additionally that the \$800,000 purchase price exceeded the book value of the underlying equity of S Company by \$100,000; and that the difference was attributed half to goodwill (\$50,000) and half to an excess of market over book values of depreciable assets (\$50,000). Under current FASB regulations, goodwill would be capitalized and not amortized. The additional depreciation expense implied by the difference between market and book values, however, must still be accounted for. The depreciation of the excess, if spread over a remaining useful life of 10 years, would result in a charge to earnings of \$5,000 per year. This charge has the impact of lowering the equity in subsidiary income, or increasing the equity in subsidiary loss, recorded by the parent.

The entries for the first three years under the complete equity method are as follows:

#### Year 1—P’s Books

|   |         |         |
|---|---------|---------|
| Investment in S Company   | 800,000 |         |
| Cash  |         | 800,000 |
| To record the initial investment.                                 |         |         |
| Investment in S Company   | 81,000  |         |
| Equity in Subsidiary Income .9 (\$90,000)                         |         | 81,000  |
| To record equity in subsidiary income.                            |         |         |
| Equity in Subsidiary Income                                       | 5,000   |         |
| Investment in S Company (\$50,000/10 years)                       |         | 5,000   |
| To adjust equity in subsidiary income for the excess depreciation |         |         |
| Cash  | 27,000  |         |
| Investment in S Company   |         | 27,000  |
| To record dividends received .9 (\$30,000).                       |         |         |

*Note:* The entries to record equity in subsidiary income and dividends received may be combined into one entry, if desired.

#### Year 2—P’s Books

|  |        |        |
|--|--------|--------|
| Equity in Subsidiary Loss  | 18,000 |        |
| Investment in S Company  |        | 18,000 |
| To record equity in subsidiary loss .9 (\$20,000).               |        |        |
| Equity in Subsidiary Loss (\$50,000/10 years)                    | 5,000  |        |
| Investment in S Company  |        | 5,000  |
| To adjust equity in subsidiary loss for the excess depreciation. |        |        |

<sup>3</sup> PNC Financial Services Group press release, “PNC to Report \$1.6 Billion Gain on the Merger of BlackRock and Merrill Lynch Investment Managers,” 2/15/06.

|   |        |        |

| Cash  | 27,000 |        |
| Investment in S Company                     |        | 27,000 |
| To record dividends received .9 (\$30,000). |        |        |

|  |        |        |
|--|--------|--------|
| <b>Year 3—P's Books</b>  |        |        |
| Investment in S Company  | 9,000  |        |
| Equity in Subsidiary Income  |        | 9,000  |
| To record equity in subsidiary income .9 (\$10,000).               |        |        |
| Equity in Subsidiary Income (\$50,000/10 years)                    | 5,000  |        |
| Investment in S Company  |        | 5,000  |
| To adjust equity in subsidiary income for the excess depreciation. |        |        |
| Cash   | 27,000 |        |
| Investment in S Company  |        | 27,000 |
| To record dividends received .9 (\$30,000).                        |        |        |

After these entries are posted, the investment account will appear as follows:

| <b>Investment in S Company (Complete Equity Method)</b> |         |                                    |        |
|---|---------|------------------------------------|--------|
| Year 1 Cost   | 800,000 |                                    |        |
| Year 1 Equity in subsidiary income                      | 81,000  | Year 1 Excess depreciation         | 5,000  |
|   |         | Year 1 Share of dividends declared | 27,000 |
| Year 1 Balance  | 849,000 |                                    |        |
|   |         | Year 2 Equity in subsidiary loss   | 18,000 |
|   |         | Year 2 Excess depreciation         | 5,000  |
|   |         | Year 2 Share of dividends declared | 27,000 |
| Year 2 Balance  | 799,000 |                                    |        |
| Year 3 Equity in subsidiary income                      | 9,000   | Year 3 Excess depreciation         | 5,000  |
|   |         | Year 3 Share of dividends declared | 27,000 |
| Year 3 Balance  | 776,000 |                                    |        |

The additional entry to adjust the equity in subsidiary income for the additional depreciation in Year 1 may be viewed as reversing out a portion of the income recognized; the result is a net equity in subsidiary income for Year 1 of \$76,000 (\$81,000 minus \$5,000). In Year 2, however, since the subsidiary showed a loss for the period, the additional depreciation has the effect of increasing the loss from the amount initially recorded (\$18,000) to a larger loss of \$23,000.

A solid understanding of the entries made on the books of the investor (presented above) will help greatly in understanding the eliminating entries presented in the following sections. In some sense these entries may be viewed as “undoing” the above entries. It is important to realize, however, that the eliminating entries are not “parent-only” entries. In many cases an eliminating entry will affect certain accounts of the parent and others of the subsidiary. For example, the entry to eliminate the investment account (a parent company account) against the equity accounts of the subsidiary affects both parent and subsidiary accounts. Some accounts do not need elimination because the effects on parent and subsidiary are offsetting. For example, in the entries above, we saw that the parent debited cash when dividends were received from the subsidiary. We know that cash on the books of the subsidiary is credited when dividends are paid. The net effect on cash of the consolidated entry is thus zero. No entry is made to the cash account in the consolidating process. See Illustration 4-1 for a comparison of the three methods on the books of the parent.

**ILLUSTRATION 4-1****Comparison of the Investment T-Accounts  
(Cost vs. Partial Equity vs. Complete Equity Method)**

| Investment in S Company—Cost Method |         |  |       |
|-------------------------------------|---------|--|-------|
| Year 1 Acquisition cost             | 800,000 |  |       |

**TEST YOUR KNOWLEDGE****4.1**

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

**True or False**

- \_\_\_\_\_ a. Under the cost method for recording investments, dividends are recorded by reducing the Investment in Subsidiary asset account.  
\_\_\_\_\_ b. Under *current GAAP* additional depreciation due to market values in excess of book values no longer necessitates a reduction in the equity in subsidiary income (on the books of the parent) under the complete equity method.

**Multiple Choice**

- Assuming that the acquisition price of Company S includes some differences between market and book values of depreciable assets, differences arise between the complete equity method and the partial equity method in how the accounts of the parent reflect:
  - Dividends
  - Income
  - Retained Earnings
  - Both B and C
- Which of the following statements regarding methods to record investments after acquisition is incorrect?
  - It is not relevant to the consolidated financial statements whether the parent company measures its investment account using the cost method or using one of the equity methods so long as the eliminating entries are properly prepared.
  - Initial recording of the investment (at its cost) is identical in all three methods, i.e., cost, partial equity, or complete equity method.
  - Under the partial equity method, the investor adjusts the investment account upward for its share of the investee's earnings and dividends declared.
  - For periods subsequent to acquisition, both the investment account and the equity in subsidiary income will be larger under the partial equity method than under the complete equity method if the subsidiary carries depreciable assets with market values greater than book values.

## 4.2 CONSOLIDATED STATEMENTS AFTER ACQUISITION—COST METHOD

The preparation of consolidated financial statements after acquisition is not materially different in concept from preparing them at the acquisition date in the sense that reciprocal accounts are eliminated and remaining balances are combined. The process is more complex, however, because time has elapsed and business activity has taken place between the date of acquisition and the date of consolidated statement preparation. On the date of acquisition, the only relevant financial statement is the consolidated balance sheet; after acquisition, a complete set of consolidated financial statements—income statement, retained earnings statement, balance sheet, and statement of cash flows—must be prepared for the affiliated group of companies. Deferred tax issues are presented in Appendix 4B found online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).

### Workpaper Format

#### LO 3 Use of workpapers.

Accounting workpapers are used to accumulate, classify, and arrange data for a variety of accounting purposes, including the preparation of financial reports and statements. Although workpaper style and technique vary among firms and individuals, we have adopted a three-section workpaper for illustrative purposes in this book. The format includes a separate section for each of three basic financial statements—income statement, retained earnings statement, and balance sheet. In some cases the input to the workpaper comes from the individual financial statements of the affiliates to be consolidated, in which case the three-section workpaper is particularly appropriate. At other times, however, input may be from affiliate trial balances, and the data must be arranged in financial statement form before the workpaper can be completed. Organizing the data provides a useful review for students, however, and emphasizes the linkages among these three financial statements. An alternative format to preparing the workpaper is provided in Appendix A in this chapter (using the information in Illustration 4-5).

The fourth statement, the statement of cash flows, is prepared from the information in the consolidated income statement and from two comparative consolidated balance sheets. It will be presented later in this chapter.

#### ILLUSTRATION 4-2

##### P Company and S Company Trial Balances December 31, 2015

The discussion and illustrations that follow are based on trial balances at December 31, 2015, for P Company and S Company given in Illustration 4-2. Throughout this chapter, any difference between the cost of the investment and the book value of the equity interest acquired is assumed to relate to the under- or over-valuation of subsidiary goodwill or to land and is, therefore, assigned to goodwill or land in the second eliminating entry. Because neither goodwill nor land is subject to depreciation or amortization under current GAAP, this serves to defer at least one complication to Chapter 5. More realistic assumptions, and the resulting complications, will be dealt with fully in Chapter 5.

## Year of Acquisition—Cost Method

Assume that P Company purchased 80% of the outstanding shares of S Company common stock on January 1, 2015, for \$165,000. The underlying book value of S company's net assets on that date was \$190,000. P Company made the following entry:

| P's Books               |         |         |
|-------------------------|---------|---------|
| Investment in S Company | 165,000 |         |
| Cash                    |         | 165,000 |

On June 6, 2015, S Company paid a \$10,000 dividend and made the following entry:

| S's Books          |        |        |
|--------------------|--------|--------|
| Dividends Declared | 10,000 |        |
| Cash               |        | 10,000 |

(Recall that the Dividends Declared account is a temporary account that is closed to retained earnings at year-end. An alternative is to debit retained earnings directly when dividends are declared.) Since P Company owns 80% of S Company's common stock, the receipt of the dividend was recorded by P Company as follows:

| P's Books                        |       |       |
|----------------------------------|-------|-------|
| Cash                             | 8,000 |       |
| Dividend Income (80% × \$10,000) |       | 8,000 |

### LO 4 Preparing Computation and Allocation Difference (CAD) Schedule

Note that the trial balance data in Illustration 4-2 reflect the effects of both the investment and dividend transactions. Also note that the existing balances in goodwill on the books of both companies indicate that both firms have been involved in previous net asset acquisitions (as discussed in Chapter 2).

Begin the consolidating process, as always, by preparing a Computation and Allocation Schedule, as follows:

#### Computation and Allocation of Difference Schedule

|   | Parent Share     | Noncontrolling Share | Total Value     |
|---|------------------|----------------------|-----------------|
| Purchase price and implied value          | <u>\$165,000</u> | <u>41,250</u>        | <u>206,250</u>  |
| Less: Book value of equity acquired:      |                  |                      |                 |
| Common stock                              | 80,000           | 20,000               | <b>100,000</b>  |
| Other contributed capital                 | 40,000           | 10,000               | <b>50,000</b>   |
| Retained earnings                         | 32,000           | 8,000                | <b>40,000</b>   |
| Total book value                          | <u>152,000</u>   | <u>38,000</u>        | <u>190,000</u>  |
| Difference between implied and book value | 13,000           | 3,250                | <b>16,250</b>   |
| Record new goodwill                       | <u>(13,000)</u>  | <u>(3,250)</u>       | <u>(16,250)</u> |
| Balance                                   | <u>—0—</u>       | <u>—0—</u>           | <u>—0—</u>      |

### RELATED CONCEPTS

The *historical cost principle* allows for the recording of goodwill only when a purchase transaction occurs. Whether or not the total value implied by the purchase price should extend to the NCI is a subject of much debate.

Because the difference between implied and book values is established only at the date of acquisition, *this schedule will not change in future periods*. Thus, there will be \$16,250 to distribute each year, although the makeup of that distribution may shift over time. Since it is attributed to goodwill in this example, the distribution will not change unless the goodwill is subsequently impaired.

A workpaper for the preparation of consolidated financial statements at December 31, 2015, the end of the year of acquisition, is presented in Illustration 4-3.

Data from the trial balances are arranged in statement form and entered on the workpaper. Consolidated financial statements should include only balances resulting from transactions with outsiders. Eliminating techniques are designed to accomplish this end. The consolidated income statement is essentially a combination of the revenue, expense, gain, and loss accounts of all consolidated affiliates after elimination of amounts representing the effect of transactions among the affiliates. The combined income of the affiliates, after eliminating any intercompany transactions, is referred to as **consolidated net income**. This amount is allocated to the controlling and noncontrolling interests. In the workpaper, consolidated net income is reduced by the noncontrolling interest's share (if any) of the net income of the subsidiaries to arrive at the **controlling interest in consolidated net income**. Note that in the past, the controlling interest has often been referred to as consolidated net income. The terminology used here and by the FASB reflects the change from the parent concept to the economic entity concept for consolidated financial statements. The controlling interest in consolidated net income consists of parent company net income plus (minus) its share of the affiliate's income (loss) resulting from transactions with outside parties. The consolidated retained earnings statement consists of beginning consolidated retained earnings plus the controlling interest in consolidated net income (or minus the controlling interest in a consolidated loss), minus parent company dividends declared. The net balance represents consolidated retained earnings at the end of the period. The noncontrolling interest in net assets is reflected as a separate component of equity.

## Workpaper Observations

### Lo 5 Workpaper eliminating entries.

Several observations should be noted concerning the workpaper presented in Illustration 4-3.

1. *Each section of the workpaper represents one of three consolidated financial statements:* Note that the **entire bottom line** of the income statement, which represents net income, is transferred to the Net Income line on the retained earnings statement. Similarly, the **entire bottom line** of the retained earnings statement, which represents ending retained earnings, is transferred to the Retained Earnings line on the balance sheet.
2. *Elimination of the investment account:* The elimination of the investment account at the end of the first year is the same one that would be made at the date of acquisition for the preparation of a consolidated balance sheet. One exception is that S Company's beginning retained earnings is eliminated in the **retained earnings section** of the workpaper, rather than in the balance sheet section. In subsequent years, the debit to Retained Earnings—S Company will always be for the subsidiary retained earnings balance at the **beginning of the current year**. Changes in retained earnings during the current year are always reflected in the retained earnings statement section of the workpaper. Also note that in subsequent years, there will be an additional entry preceding the elimination of the investment account, and this entry will arise from changes in the Retained Earnings account of the subsidiary from the date of acquisition to the beginning of the current year. This entry is not needed in year 1 because no such change has occurred yet.

It is useful to formulate eliminating entries in **general journal entry form**, even though they are not recorded in the general journal, to be sure that they balance before entering them in the workpaper. Be sure to number each entry as it is entered in the workpaper. This helps to keep the eliminating entries in balance as well. It may also be helpful to think of each entry by a shortened name, as indicated in quotation marks after the following entries.

|  |         |         |
|--|---------|---------|
| (1) Common Stock—S Company                 | 100,000 |         |
| Other Contributed Capital—S Company        | 50,000  |         |
| 1/1 Retained Earnings—S Company            | 40,000  |         |
| Difference between Implied and Book Values | 16,250  |         |
| Investment in S Company                    |         | 165,000 |
| Noncontrolling Interest in Equity          |         | 41,250  |
| “The investment entry”                     |         |         |

| Common Stock  |                |                |                |                |                         |                       |
| P Company   | 200,000        |                |                |                |                         | 200,000               |
| S Company   |                | 100,000        | (1)            | 100,000        |                         |                       |
| Other Contributed Capital                                     |                |                |                |                |                         |                       |
| P Company   | 40,000         |                |                |                |                         | 40,000                |
| S Company   |                | 50,000         | (1)            | 50,000         |                         |                       |
| Retained Earnings from above                                  | 253,000        | 60,000         | 48,000         | 8,000          | 4,000                   | 269,000               |
| 1/1 Noncontrolling Interest in Net Assets                     |                |                |                |                |                         |                       |
|   |                |                |                | (1)            | 41,250                  | 41,250                |
| 12/31 Noncontrolling Interest in Net Assets                   |                |                |                |                |                         |                       |
|   |                |                |                |                | <u>45,250</u>           | <u>45,250</u>         |
| Total   | <u>590,000</u> | <u>271,000</u> | <u>230,500</u> | <u>230,500</u> |                         | <u>712,250</u>        |

\* .2(\$30,000) = \$6,000

(1) To eliminate the investment in S Company and create noncontrolling interest account.

(2) To allocate the difference between implied and book value to goodwill.

(3) To eliminate intercompany dividends.

## RELATED CONCEPTS

When control is achieved with a relatively low percentage ownership (55% for example), a *conservative* view might question whether it is appropriate to record the entire (100%) implied value of \$16,250 of goodwill.

## IFRS

3. *Allocation of the difference between implied and book value:* The second elimination entry is also identical to that which would have been made at the date of acquisition. It serves to distribute the difference between implied and book values of subsidiary equity to the appropriate account(s), in this case to goodwill.

|     |   |        |        |
|-----|---|--------|--------|
| (2) | Goodwill                                  | 16,250 |        |
|     | Difference between Implied and Book Value |        | 16,250 |
|     | <i>“The differential entry”</i>           |        |        |

It is worth noting that the recording of goodwill is one of the more controversial of the topics addressed by FASB in its decisions regarding business combinations. Some respondents during the comment period expressed a preference to conform to the International Accounting model used in the past for business combinations, which has marked the identifiable net assets entirely to their fair value at the date of the acquisition (as here), but has recorded goodwill only to the extent of the parent’s percentage of the subsidiary. In other words, goodwill would be recorded for only  $80\% \times \$16,250$ , or \$13,000, and the noncontrolling interest would be lowered by \$3,250 if the choice allowed under IFRS, which permits recognition of goodwill using either the “full” goodwill method or “parent-only” goodwill method, were followed.

4. *Intercompany dividends:* The elimination of intercompany dividends is made by a debit to Dividend Income and a credit to Dividends Declared. In placing this entry into the Eliminations columns of the workpaper, note that the Dividend Income debit appears in the *Income Statement* section, while the Dividends Declared credit appears in the *Retained Earnings Statement* section. It is commonly the case that an eliminating entry will affect more than one of the three statements, as here (and also in entry (1)).

|     |                              |       |       |
|-----|------------------------------|-------|-------|
| (3) | Dividend Income              | 8,000 |       |
|     | Dividends Declared—S Company |       | 8,000 |
|     | <i>“The dividend entry”</i>  |       |       |

This eliminating entry also serves to prevent the double counting of income, since the subsidiary’s individual income and expense items are combined with the parent’s in the determination of consolidated income.

5. *Noncontrolling interest in consolidated net income:* There is one number on the workpaper that is calculated and then inserted directly into the income statement, and does not flow from the trial balance columns. That number is the *noncontrolling interest in consolidated net income*. To facilitate the calculation of the noncontrolling and controlling interests in consolidated income, a t-account approach is helpful. In later chapters, the presence of intercompany profits and other complications will make the calculation more complex than it is at this point. It is, therefore, useful to form the habit of using the t-accounts now.

**Noncontrolling Interest in Consolidated Net Income**

|  |            |
|--|------------|
| Internally generated income of S Company | \$30,000   |
| Any needed adjustments (see Chapter 5)   | <u>0</u>   |
| Adjusted income of subsidiary            | 30,000     |
| Noncontrolling percentage owned          | <u>20%</u> |
| Noncontrolling interest in income        | 6,000      |

The first t-account (above) calculates the distribution of consolidated net income to the noncontrolling interest. This number can be inserted directly into the next-to-bottom line of the **Income Statement** Section. When this amount is subtracted from the consolidated income of \$85,000, the resulting amount of \$79,000 represents the **controlling interest in consolidated net income**. (\$30,000).8

The parent company t-account serves as a useful check of the controlling interest in consolidated net income. The 80% controlling percentage in the adjusted income of subsidiary (\$30,000 from t-account above) will appear in P Company’s t-account as part of the controlling interest. For the parent company, the internally generated income represents the amount from the first column of the trial balance (\$63,000) minus any income which came from the subsidiary (dividend income, in this case, of \$8,000), or \$55,000 income from P Company’s independent operations.

**Controlling Interest in Consolidated Net Income**

|  |               |
|--|---------------|
| Internally generated income of P Company<br>(\$63,000 income minus \$8,000 dividend<br>income from subsidiary) | \$55,000      |
| Any needed adjustments (see Chapter 5)   | 0             |
| Percentage of subsidiary adjusted income<br>(80%)(30,000)  | <u>24,000</u> |
| Controlling interest in income   | \$79,000      |

6. *Consolidated retained earnings:* Consolidated retained earnings on December 31, 2015, of \$269,000 can be determined as follows:

|  |                  |
|--|------------------|
| P Company’s reported retained earnings, 1/1                    | \$210,000        |
| Plus: controlling interest in consolidated net income for 2015 | 79,000           |
| Less: P Company’s dividends declared during 2015               | <u>(20,000)</u>  |
| Consolidated Retained Earnings, 12/31                          | <u>\$269,000</u> |

The calculation above appears in the final column of the workpaper in the Retained Earnings Statement section. Alternatively, or as a check, consolidated retained earnings may be determined as:

|  |                  |
|--|------------------|
| P Company’s reported retained earnings, 12/31  | \$253,000        |
| Plus P Company’s share of the increase in S Company’s<br>retained earnings from the date of acquisition to the<br>end of 2015: .8(\$60,000 – \$40,000) | <u>16,000</u>    |
| Consolidated Retained Earnings, 12/31  | <u>\$269,000</u> |

7. The eliminations columns in each section do not balance, since individual eliminations made involve more than one section. The total eliminations for all three sections, however, must be in balance.

8. Noncontrolling interest in consolidated net assets or equity at the beginning of the year (\$41,250) can be obtained from the first line of the CAD schedule, or can be determined directly by multiplying the noncontrolling interest percentage times the implied value of the subsidiary at acquisition. Thus, noncontrolling interest in consolidated net assets can be computed as  $\$206,250 \times 20\%$  at this date. To calculate the noncontrolling interest at year-end, sum the following components:

The sum of the noncontrolling interest column is transferred to the consolidated balance sheet as one amount since it reflects the noncontrolling stockholders’ interest in the net assets of the consolidated group.

| <i>Total Noncontrolling Interest</i> |   |
|--------------------------------------|---|
| \$41,250                             | Noncontrolling interest at the date of acquisition, representing 20% of the implied value of the subsidiary.  |
| 6,000                                | A \$6,000 (20% × \$30,000) interest in the amount of S Company income that is included in consolidated net income. The \$6,000 is considered an allocation of consolidated net income to the noncontrolling shareholders. |
| (2,000)                              | A \$2,000 (20% × \$10,000) decrease for dividends distributed to the noncontrolling stockholders during the year. The other \$8,000 in dividends represents parent company dividend income and is, therefore, eliminated. |
| <u>\$45,250</u>                      | Total Noncontrolling Interest   |

### After Year of Acquisition—Cost Method

**Lo 5** Workpaper eliminating entries after acquisition (cost method).

For illustrative purposes, assume continuation of the previous example with data updated to the following year. Trial balances for P Company and S Company at December 31, 2016, are given in Illustration 4-4. Because we are using the cost method, the Investment in S Company account still reflects the cost of the investment, \$165,000. The beginning retained earnings balances for P and S Companies on January 1, 2016, are the same as the ending retained earnings balances on December 31, 2015 (confirmed in Illustration 4-3, first two columns). Although the trial balance is dated December 31, 2016, the retained earnings balance is dated January 1, 2016, because the income statement and Dividends Declared accounts are still open.

A workpaper for the preparation of consolidated financial statements for P and S Companies for the year ended December 31, 2016, is presented in Illustration 4-5. Note that the detail comprising cost of goods sold is provided in Illustration 4-3. (beginning inventory plus purchases minus ending inventory). In Illustration 4-5 and subsequent illustrations in this chapter, the detail will be collapsed into one item, Cost of Goods Sold. In later chapters, however, we will use the detailed accounts when the focus is more directly upon inventory and the calculation of cost of goods sold (in the presence of intercompany profit, for instance).

#### ILLUSTRATION 4-4

##### P Company and S Company Trial Balances December 31, 2016

|                              | <i>P Company</i> |                  | <i>S Company</i> |                  |
|------------------------------|------------------|------------------|------------------|------------------|
|                              | <i>Dr.</i>       | <i>Cr.</i>       | <i>Dr.</i>       | <i>Cr.</i>       |
| Cash                         | \$ 74,000        |                  | \$ 41,000        |                  |
| Accounts Receivable (net)    | 71,000           |                  | 33,000           |                  |
| Inventory, 1/1               | 67,000           |                  | 43,000           |                  |
| Investment in S Company      | 165,000          |                  |                  |                  |
| Property and Equipment (net) | 245,000          |                  | 185,000          |                  |
| Goodwill                     | 35,000           |                  | 17,000           |                  |
| Accounts Payable             |                  | \$ 61,000        |                  | \$ 30,000        |
| Other Liabilities            |                  | 70,000           |                  | 45,000           |
| Common Stock, \$10 par value |                  | 200,000          |                  | 100,000          |
| Other Contributed Capital    |                  | 40,000           |                  | 50,000           |
| Retained Earnings, 1/1       |                  | 253,000          |                  | 60,000           |
| Dividends Declared           | 30,000           |                  | 10,000           |                  |
| Sales                        |                  | 350,000          |                  | 190,000          |
| Dividend Income              |                  | 8,000            |                  |                  |
| Purchases                    | 215,000          |                  | 90,000           |                  |
| Expenses                     | 80,000           |                  | 56,000           |                  |
|                              | <u>\$982,000</u> | <u>\$982,000</u> | <u>\$475,000</u> | <u>\$475,000</u> |
| Inventory, 12/31             | \$ 82,000        |                  | \$ 39,000        |                  |

The workpaper entries in years after the year of acquisition are essentially the same as those made for the year of acquisition (Illustration 4-3) with one major exception. Before the elimination of the investment account, a workpaper entry, (1) in Illustration 4-5, is made to the investment account and P Company’s beginning retained earnings to recognize P Company’s share of the cumulative undistributed income or loss of S Company from the *date of acquisition to the beginning of the current year* as follows:

|     |  |        |        |
|-----|--|--------|--------|
| (1) | Investment in S Company  | 16,000 |        |
|     | 1/1 Retained Earnings—P Company<br>(Consolidated Retained Earnings)<br>[80% × (\$60,000 – \$40,000)] |        | 16,000 |

This entry may be viewed as either *the entry to convert from the cost method to the equity method or the entry to establish reciprocity*. The following two points explain these essentially complementary views of the entry.

1. The reciprocity entry adjusts P Company’s beginning retained earnings balance on the workpaper to the appropriate beginning consolidated retained earnings amount. As indicated earlier, consolidated retained earnings on January 1, 2016, consists of P Company’s reported retained earnings plus P Company’s share of the undistributed earnings (income less dividends) of S Company from the date of stock acquisition to the beginning of 2016. Note that, after the reciprocity entry is made, the beginning (1/1/16) consolidated retained earnings of \$269,000 (Illustration 4-5) equals the ending (12/31/15) consolidated retained earnings amount (Illustration 4-3).
2. If this entry is viewed as a conversion to the equity method, the following question might well arise: Why should we convert to the equity method if all methods are acceptable and all yield the same final results? Recall that under the equity method, the parent records its equity in the subsidiary income in its income statement and thus ultimately in its retained earnings. If we consider the two accounts in the conversion entry, it is true that the investment is going to be eliminated to zero anyway; but the retained earnings account of the parent company, which must ultimately reflect the equity in subsidiary income, will not be eliminated. Instead, it needs to be adjusted if the cost method is used.

Although it is true that the investment account must be eliminated after it is adjusted, the reciprocity (conversion) entry facilitates this elimination. The amount needed for the workpaper entry to establish reciprocity can be most accurately computed by multiplying the parent company’s percentage of ownership times the increase or decrease in the subsidiary’s retained earnings from the date of stock acquisition to the beginning of the current year. This approach adjusts for complications that might arise where the subsidiary may have made direct entries to its retained earnings for prior period adjustments.

This approach is also the most efficient because it provides a shortcut in lieu of making separate entries for each year’s income and each year’s dividend declarations. Recall that the workpaper entries are just that, workpaper only, and as such they do not get posted to the accounts of either the parent or subsidiary company. Hence entries that were made on a previous year’s workpaper must be “caught up” in subsequent periods. If income and dividend entries were made separately for each year, imagine the number of entries in year 9 or year 20!

After the investment account is adjusted by workpaper entry (1), P Company’s share of S Company’s equity is eliminated against the **adjusted investment account** in entry (2) below:

|     |  |         |         |
|-----|--|---------|---------|
| (2) | Common Stock—S Company   | 100,000 |         |
|     | Other Contributed Capital—S Company                                | 50,000  |         |
|     | 1/1 Retained Earnings—S Company                                    | 60,000  |         |
|     | Difference between Implied and Book Value                          | 16,250  |         |
|     | Investment in S Company [\$165,000 + .8(60,000 – 40,000)]          |         | 181,000 |
|     | Noncontrolling Interest in Equity [\$41,250 + .2(60,000 – 40,000)] |         | 45,250  |

| Other Contributed Capital                   |                |   |                |                |                         |                       |
| P Company                                   | 40,000         |   |                |                |                         | 40,000                |
| S Company                                   |                | 50,000  | (2) 50,000     |                |                         |                       |
| Retained Earnings from above                | 301,000        | 90,000  | 68,000         | 24,000         | 6,000                   | 341,000               |
| 1/1 Noncontrolling Interest in Net Assets   |                |   |                | (2) 45,250**   | 45,250                  |                       |
| 12/31 Noncontrolling Interest in Net Assets |                |   |                |                | 51,250                  | 51,250                |
| Total                                       | <u>672,000</u> | <u>315,000</u>  | <u>266,500</u> | <u>266,500</u> |                         | <u>838,250</u>        |

\*  $.2(\$40,000) = \$8,000$ .

\*\*  $\$41,250 + (\$60,000 - \$40,000) \times .2 = \$45,250$ .

(1) To recognize P Company's share (80%) of S Company's undistributed income from date of acquisition to beginning of the current year. (Also referred to as "To establish reciprocity" or "to convert to equity method".)

(2) To eliminate the investment in S Company and create noncontrolling interest account.

(3) To allocate the difference between implied and book value to goodwill.

(4) To eliminate intercompany dividends.

Entry (3) distributes the difference between implied and book values, as follows:

|  |        |        |
|--|--------|--------|
| (3) Goodwill                               | 16,250 |        |
| Difference between Implied and Book Values |        | 16,250 |

Next, intercompany dividend income is eliminated as follows:

|                              |       |       |
|------------------------------|-------|-------|
| (4) Dividend Income          | 8,000 |       |
| Dividends Declared—S Company |       | 8,000 |

Consolidated balances are then determined in the same manner as in previous illustrations. Remember that the entry to establish reciprocity (convert to equity) is a cumulative one that recognizes the parent's share of the change in the subsidiary's retained earnings from the date of acquisition to the beginning of the current year. Thus, for example, the reciprocity entry for the *third year* in the December 31, 2017, workpaper is as follows:

|  |        |        |
|--|--------|--------|
| Investment in S Company                                  | 40,000 |        |
| 1/1 Retained Earnings—P Company .8(\$90,000 – \$40,000)  |        | 40,000 |
| <i>“The reciprocity/conversion entry for year three”</i> |        |        |

An example of a consolidated statement of income and retained earnings and a consolidated balance sheet (based on Illustration 4-5) is presented in Illustration 4-6. Notice that *all*

| Accounts payable                           | \$ 91,000               |
| Other liabilities                          | <u>115,000</u>          |
| Total liabilities                          | 206,000                 |
| Stockholders' equity:                      |                         |
| Noncontrolling interest in net assets      | 51,250                  |
| Common Stock, \$10 par value               | 200,000                 |
| Other contributed capital                  | 40,000                  |
| Retained earnings                          | <u>341,000</u>          |
| Total liabilities and stockholders' equity | <u><u>\$838,250</u></u> |

(100%) of *S Company's revenues and expenses* are included in the consolidated income statement. The noncontrolling interest's share of the subsidiary's income is shown as a separate component of consolidated net income and is deducted from consolidated net income (NI) to arrive at the controlling interest. Likewise, *all of S Company's assets and liabilities* are included with those of P Company in the consolidated balance sheet. The noncontrolling interest's share of the net assets is then included as a separate item within the stockholders' equity section of the consolidated balance sheet.

### TEST YOUR KNOWLEDGE 4.2

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

#### Multiple Choice

- The entry to establish reciprocity or convert from the cost to the equity method usually involves a debit to Investment in Subsidiary and a credit to what account?
  - Subsidiary's end-of-the-year Retained Earnings
  - Parent's end-of-the-year Retained Earnings
  - Parent's beginning-of-the-year Retained Earnings
  - Subsidiary's beginning-of-the-year Retained Earnings

## 4.3 RECORDING INVESTMENTS IN SUBSIDIARIES—EQUITY METHOD (PARTIAL OR COMPLETE)

Companies may elect to use the equity method to record their investments in subsidiaries to estimate the operating effects of their investments for internal decision-making purposes. As with the cost method, the investment is recorded initially at its cost under the equity method. Subsequent to acquisition, the major differences between the cost and equity methods pertain to the period in which subsidiary income is formally recorded on the books of the parent company and the amount of income recognized. Under the assumptions of this chapter, partial and complete equity methods are indistinguishable. Thus, the differences between the two do not become important until Chapter 5. In Chapter 5, we will explore alternative assumptions regarding the disposition of the difference between implied value and book value, which will necessitate amortization, depreciation, or impairment adjustments. In subsequent chapters, we will explore other complications that may arise under the complete equity method. **To facilitate an understanding of the differences among the methods, the sections of text that differ depending on the method choice are presented in blue for the equity method.**

One frequent complication occurs when the parent and subsidiary have different year-ends. The SEC allows the parent to use a different year-end for its subsidiary provided the subsidiary data are not more than 93 days old. The parent simply combines the data for the subsidiary's 12 months with its own, just as though the year-ends were the same. The SEC requirement has become broadly acceptable in practice. In some cases, firms find it desirable for the subsidiary's year to end earlier to facilitate the adjusting, closing, and consolidating procedures in a timely fashion. However, the preference is to use the "best available data," weighing the tradeoffs between reliability and timeliness. Thus, in some cases, the best alternative may be to combine the subsidiary's interim data with the parent's year-end data.

As illustrated in previous sections of this chapter, no income from the subsidiary is recorded by the parent company under the cost method until it is distributed as dividends. When distributed, the parent records its share of the dividends as dividend income. Under the equity method, income is recorded in the books of the parent company in the same accounting period that it is reported by the subsidiary company, whether or not such income is distributed to the parent company.

Assume that P Company purchased 80% of the outstanding shares of S Company common stock on January 1, 2015, for \$165,000. The underlying book value of S Company's net assets (100%) on that date was \$190,000. P Company made the following entry:

| P's Books               |         |         |
|-------------------------|---------|---------|
| Investment in S Company | 165,000 |         |
| Cash                    |         | 165,000 |

EQUITY

P Company would record income in the first year based not on dividends received, but on its share of the subsidiary's income. Under the partial equity method, this amount will be based on income *reported* by the subsidiary. Under the complete equity method, the subsidiary's reported income will be adjusted under certain circumstances, as illustrated at the beginning of this chapter. Throughout the remainder of this chapter, however, we assume that those adjustments will not be needed. Hence adjusted income will equal reported income. The "adjustments" concept will be introduced very briefly in this chapter and developed in later chapters.

Assuming a current period income of \$30,000 reported by S Company, P Company would make the following entry on its books:

| P's Books                                |        |        |
|--|--------|--------|
| Investment in S Company                  | 24,000 |        |
| Equity in subsidiary income .8(\$30,000) |        | 24,000 |

Dividends received from the subsidiary (parent's share assumed to be \$8,000) are then *credited* to the Investment account, as follows:

| P's Books                      |       |       |
|--------------------------------|-------|-------|
| Cash (or Dividends Receivable) | 8,000 |       |
| Investment in S Company        |       | 8,000 |

Consequently, the parent company's share of the *cumulative undistributed income (income less dividends)* of the subsidiary is accumulated over time as an addition to the investment account. In this example, the parent's share of undistributed income for the year was \$16,000 (i.e., the same amount as the reciprocity entry for firms using the cost method!).

## Investment Carried at Equity—Year of Acquisition

**Lo 5** Workpaper eliminating entries (equity method).

In this section we illustrate the consolidated workpaper used to prepare consolidated financial statements under the equity method. Keep in mind that workpapers are just that, a means to an end, with the real goal being the preparation of correct financial statements. Regardless of whether the parent's books are kept using the cost method or one of the equity methods, the consolidated financial statements should be identical. The eliminating entries needed to achieve the correct balances, however, are not identical.

Assume that at the end of the first year, the trial balances of P Company and S Company appear as shown in Illustration 4-7. Begin the consolidating process, as always, by preparing a Computation and Allocation (CAD) Schedule, as follows:

EQUITY

### Computation and Allocation of Difference Schedule

|   | Parent Share    | Noncontrolling Share | Total Value     |
|---|-----------------|----------------------|-----------------|
| Purchase price and implied value          | <u>165,000</u>  | <u>41,250</u>        | <u>206,250</u>  |
| Less: Book value of equity acquired:      |                 |                      |                 |
| Common stock                              | 80,000          | 20,000               | <b>100,000</b>  |
| Other contributed capital                 | 40,000          | 10,000               | <b>50,000</b>   |
| Retained earnings                         | <u>32,000</u>   | <u>8,000</u>         | <b>40,000</b>   |
| Total book value                          | <u>152,000</u>  | <u>38,000</u>        | <u>190,000</u>  |
| Difference between implied and book value | 13,000          | 3,250                | <b>16,250</b>   |
| Record new goodwill                       | <u>(13,000)</u> | <u>(3,250)</u>       | <u>(16,250)</u> |
| Balance                                   | <u>—0—</u>      | <u>—0—</u>           | <u>—0—</u>      |

## ILLUSTRATION 4-7

## P Company and S Company Trial Balances December 31, 2015

| Accounts Payable             |                  | \$ 35,000        |                  | \$ 24,000        |
| Other Liabilities            |                  | 62,000           |                  | 37,000           |
| Common Stock, \$10 par value |                  | 200,000          |                  | 100,000          |
| Other Contributed Capital    |                  | 40,000           |                  | 50,000           |
| Retained Earnings, 1/1       |                  | 210,000          |                  | 40,000           |
| Dividends Declared           | 20,000           |                  | 10,000           |                  |
| Sales                        |                  | 300,000          |                  | 160,000          |
| Equity in Subsidiary Income  |                  | 24,000           |                  |                  |
| Purchases                    | 186,000          |                  | 95,000           |                  |
| Expenses                     | 70,000           |                  | 46,000           |                  |
|                              | <u>\$871,000</u> | <u>\$871,000</u> | <u>\$411,000</u> | <u>\$411,000</u> |
| Inventory, 12/31             | \$ 67,000        |                  | \$ 43,000        |                  |

Because the difference between implied and book values is established only at the date of acquisition, this schedule will not change in future periods.

Note that the trial balance data in Illustration 4-7 reflect the effects of the investment, equity in subsidiary income, and dividend transactions presented above. These balances are next arranged into *income statement*, *retained earnings statement*, and *balance sheet statement* sections as they are entered into the first two columns of the consolidated workpaper presented in Illustration 4-8.

When the investment account is carried on the Equity basis, it is necessary first to make a workpaper entry reversing the effects of the parent company's entries to the Investment account for subsidiary income and dividends during the current year. Here the entry differs from that under the Cost Method.

To eliminate the account "equity in subsidiary income" from the consolidated income statement, the following workpaper entry, presented in general journal form, is made:

|                                 |        |        |
|---------------------------------|--------|--------|
| (1) Equity in Subsidiary Income | 24,000 |        |
| Investment in S Company         |        | 24,000 |

Next, to eliminate intercompany dividends under the equity method, this workpaper entry is made:

|                             |       |       |
|-----------------------------|-------|-------|
| (2) Investment in S Company | 8,000 |       |
| Dividends Declared          |       | 8,000 |

Alternatively, these two entries may be collapsed into one entry, as follows:

|                                     |        |        |
|-------------------------------------|--------|--------|
| (1)–(2) Equity in Subsidiary Income | 24,000 |        |
| Investment in S Company             |        | 16,000 |
| Dividends Declared                  |        | 8,000  |

EQUITY

This reversal has two effects. First, it eliminates the equity in subsidiary income and dividends recorded by P Company. Second, it returns the investment account to its balance as of the beginning of the year. This is necessary because it is the parent company's share of

| Equity Method                               |                | ILLUSTRATION 4-8  |                |                |                           |                       |

\* 20% × \$30,000 = \$6,000.

- (1) To reverse the effect of parent company entry during the year for subsidiary income.
- (2) To reverse the effect of parent company entry during the year for subsidiary dividends.
- (3) To eliminate the investment in S Company and create noncontrolling interest.
- (4) To allocate the excess of implied over book value to goodwill.

the subsidiary's retained earnings at the *beginning of the year* that is eliminated in the investment elimination entry.

A third eliminating entry must then be made to eliminate the Investment account against subsidiary equity, and the fourth entry distributes the difference between implied and book values of equity, as follows:

|     |  |         |         |
|-----|--|---------|---------|
| (3) | Common Stock—S Company                     | 100,000 |         |
|     | Other Contributed Capital—S Company        | 50,000  |         |
|     | 1/1 Retained Earnings—S Company            | 40,000  |         |
|     | Difference between Implied and Book Values | 16,250  |         |
|     | Investment in S Company                    |         | 165,000 |
|     | Noncontrolling Interest in Equity          |         | 41,250  |
|     | <i>“The investment entry”</i>              |         |         |
| (4) | Goodwill                                   | 16,250  |         |
|     | Difference between Implied and Book Value  |         | 16,250  |
|     | <i>“The differential entry”</i>            |         |         |

The next few paragraphs relate to basic workpaper concepts that do not differ between the cost and equity methods. Thus, for those who have already read the section of the chapter on the cost method, this will serve as a review.

To complete the worksheet, the account balances are extended from left to right. Two lines merit attention. First, the *entire bottom line* of the income statement, which represents net income, is transferred to the Net Income line on the retained earnings statement. Similarly, the *entire bottom line* of the retained earnings statement, which represents ending retained earnings, is transferred to the retained earnings line on the balance sheet. Throughout this and future chapters on consolidation, we will see that *any eliminating entries to the account Retained Earnings will be entered in the Beginning Balance on the retained earnings statements (not on the balance sheet, ending balance)*. Because the Current Year Income and Dividends Declared accounts are still open, current year changes in Retained Earnings will be adjusted through those accounts (or in the retained earnings section of the workpaper).

There is one number on the workpaper that is calculated and then inserted directly into the income statement, and does not flow from the trial balance columns. That number is the *noncontrolling interest in consolidated net income*. To facilitate the calculation of the noncontrolling and controlling interests in consolidated net income, a t-account approach is helpful. In later chapters, the presence of intercompany profits and other complications will make the calculation more complex than it is at this point. It is, nonetheless, useful to form the habit of using the t-accounts now.

The first t-account (below) calculates the distribution of consolidated net income to the noncontrolling interest. This number can be inserted directly into the next-to-bottom line of the Income Statement section. When this amount is subtracted from the consolidated income of \$85,000, the resulting amount of \$79,000 represents the *controlling interest in consolidated net income*. It is interesting to note that this is the very same amount that the parent reported in its trial balance originally. In future chapters, we will see that this is the case only if the parent uses the complete equity method. For example, if profit or loss on intercompany sales between parent and subsidiary must be eliminated at the balance sheet date, an adjustment will be required to reconcile the two numbers under the partial equity method. Similarly, if any difference between implied and book values is attributed to depreciable assets, an adjustment will also be needed under the partial equity method. Hence it is useful to check the calculation of the controlling interest in consolidated net income.

### Noncontrolling Interest in Consolidated Net Income

|  |            |
|--|------------|
| Internally generated income of S Company | \$30,000   |
| Any needed adjustments (see Chapter 5)   | <u>0</u>   |
| Adjusted income of subsidiary            | 30,000     |
| Noncontrolling percentage owned          | <u>20%</u> |
| Noncontrolling interest in income        | 6,000      |

The next t-account serves as a check of the controlling interest in consolidated income. The 80% controlling percentage in the adjusted income of subsidiary (\$30,000 from t-account above) will appear in P Company's t-account as part of the controlling interest. For the parent company, the internally generated income represents the amount from the first column of the trial balance (\$79,000) minus any income which came from the subsidiary (equity in subsidiary income, in this case, of \$24,000), or \$55,000 income from P Company's independent operations.

(\$30,000).8

### Controlling Interest in Consolidated Net Income

|  |               |
|--|---------------|
| Internally generated income (\$79,000 income minus \$24,000 equity in subsidiary income) | \$55,000      |
| Any needed adjustments (see Chapter 5)   | 0             |
| Percentage of subsidiary adjusted income (80%) (\$30,000)                                | <u>24,000</u> |
| Controlling interest in income   | \$79,000      |

**Consolidated retained earnings** on December 31, 2015, of \$269,000 can be determined as follows:

|   |                  |
|---|------------------|
| P Company's reported retained earnings, 1/1                   | \$210,000        |
| Plus controlling interest in consolidated net income for 2015 | 79,000           |
| Less P Company's dividends declared during 2015               | <u>(20,000)</u>  |
| Consolidated Retained Earnings, 12/31                         | <u>\$269,000</u> |

The calculation above appears in the final column of the workpaper in the Retained Earnings Statement section.

Under the complete equity method (or the partial equity method if there are no complicating adjustments, as here), the ending Consolidated Retained Earnings equals Retained Earnings—P at the end of the year as shown in the first column of the workpaper.

Note that the eliminations columns in each section do not balance, since individual eliminations often involve more than one section. The total eliminations for all three sections, however, must be in balance.

Noncontrolling interest in consolidated net assets or equity at the beginning of the year (\$41,250) can be obtained from the first line of the CAD schedule, or can be determined directly by multiplying the noncontrolling interest percentage times the implied value of the subsidiary at acquisition. Thus, noncontrolling interest in consolidated net assets can be computed as  $\$206,250 \times 20\%$  at this date. To calculate the noncontrolling interest at year-end, sum the following components:

#### Total Noncontrolling Interest

|                 |   |
|-----------------|---|
| \$41,250        | Noncontrolling interest at the date of acquisition, representing 20% of the implied value of the subsidiary.  |
| 6,000           | A \$6,000 ( $20\% \times \$30,000$ ) interest in the amount of S Company income that is included in consolidated net income. The \$6,000 is considered an allocation of consolidated net income to the noncontrolling shareholders. |
| (2,000)         | A \$2,000 ( $20\% \times \$10,000$ ) decrease for dividends distributed to the noncontrolling stockholders during the year. The other \$8,000 in dividends represents parent company dividend income and is, therefore, eliminated. |
| <u>\$45,250</u> | Total Noncontrolling Interest   |

Comparison of Illustration 4-3 and Illustration 4-8 brings out an important observation. **The consolidated column of the workpaper is the same under the cost and equity methods. Thus, the decision to use the cost or equity method to record investments in subsidiaries that will be consolidated has no impact on the consolidated financial statements. Only the elimination process is affected.**

Note once more that P Company's reported net income of \$79,000 (Illustration 4-8) and consolidated net income are identical. Likewise, P Company's December 31, 2015, retained earnings equal consolidated retained earnings at that date. In later chapters we will see that this will always be true under the complete equity method, but not under the partial equity method. We obtain this result here because P Company has recorded its share of S Company's earnings, and because of the absence of complicating assumptions.

## Investment Carried at Equity—After Year of Acquisition

To illustrate the preparation of a consolidated workpaper for years after the year of acquisition under the equity method, assume the data given in Illustration 4-9, and the use of the equity method rather than the cost method. After P Company has recorded its share of S Company's income (\$32,000) and dividends declared (\$8,000), the Investment in S Company account appears as follows:

The preparation of the Computation and Allocation (CAD) Schedule is the same as it was in the year of acquisition; that is, it does not need to be prepared again. The elimination process also follows the same procedures as in the year of acquisition (with current year amounts). A consolidated statements workpaper in this case is presented in Illustration 4-10. We next review the workpaper entries in general journal entry form. Note that although the CAD Schedule does not change, the third eliminating entry (to eliminate the Investment account against the equity accounts of the subsidiary) will change to reflect the Retained Earnings balance of the subsidiary at the *beginning of the current year* and the corresponding change in the Investment account  $(\$60,000 - \$40,000) \times 80\%$  and in the noncontrolling interest  $(\$60,000 - \$40,000) \times 20\%$ .

As in the year of acquisition, the Equity in Subsidiary account must be eliminated against the Investment in Subsidiary account. The amount of this entry is obtained from the trial balance column for P Company, and it equals the parent's percentage (80%) of S Company's reported net income (\$40,000):

**Lo 5** Workpaper eliminating entries after acquisition (equity method).

|     |                             |        |        |
|-----|-----------------------------|--------|--------|
| (1) | Equity in Subsidiary Income | 32,000 |        |
|     | Investment in S Company     |        | 32,000 |

Next, to eliminate intercompany dividends under the equity method, this workpaper entry is made:

|     |                         |       |       |
|-----|-------------------------|-------|-------|
| (2) | Investment in S Company | 8,000 |       |
|     | Dividends Declared      |       | 8,000 |

EQUITY

|                              | <u>\$1,022,000</u> | <u>\$1,022,000</u> | <u>\$475,000</u> | <u>\$475,000</u> |
| Inventory, 12/31             | \$ 82,000          |                    | \$ 39,000        |                  |

|          |                   | Investment in S Company |                 |
|----------|-------------------|-------------------------|-----------------|
| 12/31/13 | Balance           | 181,000                 | Dividends 8,000 |
|          | Subsidiary income | 32,000                  |                 |
| 12/31/14 | Balance           | 205,000                 |                 |

Alternatively, these two entries may be collapsed into one entry, as follows:

|         |                             |        |        |
|---------|-----------------------------|--------|--------|
| (1)–(2) | Equity in Subsidiary Income | 32,000 |        |
|         | Investment in S Company     |        | 24,000 |
|         | Dividends Declared          |        | 8,000  |

As in the year of acquisition, these entries eliminate the equity in subsidiary income and dividends recorded by P Company, and return the investment account to its balance as of the beginning of the year. This is necessary because it is the subsidiary's retained earnings at the *beginning of the year* that is eliminated in the third or investment elimination entry.

The third eliminating entry eliminates the Investment account against subsidiary equity and recognizes the noncontrolling interest as of the beginning of the current year. The fourth entry distributes the difference between implied and book values of equity, as follows:

|     |  |         |         |
|-----|--|---------|---------|
| (3) | Common Stock—S Company   | 100,000 |         |
|     | Other Contributed Capital—S Company                                | 50,000  |         |
|     | 1/1 Retained Earnings—S Company                                    | 60,000  |         |
|     | Difference between Implied and Book Value                          | 16,250  |         |
|     | Investment in S Company $\$165,000 + .8(60,000 - 40,000)$          |         | 181,000 |
|     | or $(\$205,000 - \$24,000, \text{ from entries (1) and (2)})$      |         |         |
|     | Noncontrolling Interest in Equity $\$41,250 + .2(60,000 - 40,000)$ |         | 45,250  |
| (4) | Goodwill   | 16,250  |         |
|     | Difference between Implied and Book Values                         |         | 16,250  |

The only differences in the affiliates' account data as compared to the cost method workpaper appear in P Company's statements. The Investment account in P Company's balance sheet shows a balance of \$205,000 rather than \$165,000; and equity in subsidiary income of \$32,000, rather than dividend income of \$8,000, is listed in P Company's income statement. In addition, P Company's beginning and ending retained earnings are \$16,000 and \$40,000 larger, respectively, which reflects the effect of recording its share (80%) of S Company's income in 2015 and 2016 rather than recording only its share of dividends distributed by S Company.

EQUITY

Also, observe that the consolidated columns in Illustration 4-5 and Illustration 4-10 are the same; regardless of the method used (cost or equity), the consolidated results are unaffected.

## Investment Carried at Complete Equity

**LO 5** Workpaper eliminating entries (complete equity method).

Under the assumptions of the preceding illustration, the complete equity method and the partial equity method are identical, not only in the end result but also in the steps to consolidate. Under other assumptions, however, the two may differ in the steps (though not in the end result).

Recall that the complete equity method is quite similar to the partial equity method, but involves additional entries to the investment account on the books of the parent. These additional adjustments are made to the investment account for the amortization, depreciation, or impairment of differences between market and book values, for the effects of unrealized intercompany profits, and for stockholders' equity transactions undertaken by the subsidiary.

In the absence of these types of transactions, the complete equity method is identical to the partial equity method, both on the books of the parent and in the workpaper eliminating entries, as in the preceding illustration.

Let us assume that no unrealized intercompany profits are involved (neither the parent nor the subsidiary made sales to the other party), and the subsidiary did not participate in any stockholders' equity transactions. In this situation we need only consider the possible amortization, depreciation, or impairment of differences between market and book values,

| Total  | <u>712,000</u> | <u>315,000</u> | <u>282,500</u> | <u>282,500</u> |                            | <u>838,250</u>           |

\* 20% × \$40,000 = \$8,000.

\*\* \$41,250 + (\$60,000 − \$40,000) × .2 = \$45,250.

- (1) To reverse the effect of parent company entry during the year for subsidiary income.
- (2) To reverse the effect of parent company entry during the year for subsidiary dividends.
- (3) To eliminate the investment in S Company and create noncontrolling interest account.
- (4) To allocate the excess of implied over book value to goodwill.

in addition to the concepts presented in the preceding illustration. In that illustration, we assumed that any difference between purchase price and the book value of equity acquired related to goodwill. Under generally accepted accounting principles, we do not amortize, depreciate, or appreciate goodwill over time. Instead it is reviewed for impairment. In Chapter 5, we will explore alternative assumptions regarding the disposition of the difference between implied value and book value, which will necessitate amortization or depreciation adjustments. In subsequent chapters, we will explore other complications that may result in differences between the partial and complete equity methods.

## Summary of Workpaper Eliminating Entries

Basic workpaper consolidating (eliminating/adjusting) entries depend on whether (1) the cost method or equity method is used to record the investment on the books of the parent company, and (2) the workpaper is being prepared at the end of the year of acquisition or at the end of periods after the year of acquisition. Workpaper eliminating entries for the alternatives are summarized in Illustration 4-11.

### ILLUSTRATION 4-11

#### Summary of Basic Workpaper Eliminating Entries

| To eliminate P Company's share of S Company's stockholders' equity against the investment account, and recognize NCI.  |  |  |

## 4.4 ELIMINATION OF INTERCOMPANY REVENUE AND EXPENSE ITEMS

Discussion and illustrations to this point have emphasized the procedures used to eliminate the parent company's interest in subsidiary equity against the investment account at the end of the year of stock acquisition and for subsequent periods. Before proceeding with a discussion of some special topics relating to consolidated statements in succeeding chapters, it should be noted that several types of intercompany revenue and expense items must be eliminated in the preparation of a consolidated income statement.

Affiliates often engage in numerous sale/purchase transactions with other affiliates, such as the sale of merchandise or equipment by a subsidiary to its parent, or vice versa. Procedures used to eliminate these intercompany sales (purchases), as well as any unrealized profit remaining in inventories, are discussed and illustrated in Chapters 6 and 7. Eliminating workpaper entries are also needed for such intercompany revenue and expense items as interest, rent, and professional services. For example, the workpaper entry to eliminate intercompany interest revenue and expense takes the following form:

|                  |       |       |
|------------------|-------|-------|
| Interest Revenue | 8,000 |       |
| Interest Expense |       | 8,000 |

### TEST YOUR KNOWLEDGE 4.3

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

#### Multiple Choice

- In periods subsequent to acquisition and in *the absence of intercompany profits or other complicating transactions*, the noncontrolling interest (as shown in the consolidated balance sheet) can be determined by summing the noncontrolling interest in equity at acquisition *and*:
  - The noncontrolling percentage of the book value of the subsidiary's net assets.
  - The noncontrolling percentage of the fair value of the subsidiary's net assets.
  - The noncontrolling percentage of the subsidiary's year-end retained earnings.
  - The noncontrolling percentage of the change in subsidiary retained earnings from acquisition to the end of the current year.

## 4.5 INTERIM ACQUISITIONS OF SUBSIDIARY STOCK

**LO 6** Two approaches for interim acquisitions.

Discussion and illustrations to this point have been limited to situations in which the parent company acquired its interest in a subsidiary at the beginning of the subsidiary's fiscal period. That condition is unrealistic because many stock acquisitions are made during the subsidiary's fiscal period. Thus, the proper treatment in consolidated financial statements of the subsidiary's revenue and expense items for the partial period *before* acquisition must be considered.

For example, suppose that P Company acquires 90% of the outstanding common stock of S Company on April 1, 2015. Both companies close their books on December 31. Consider S's income statement in Illustration 4-12. In this illustration, the revenues and expenses for S Company are presented in total, and also separately for the periods before and after the acquisition. S Company earns \$36,000 of income for the entire year. P Company is entitled to 90% of the income earned since April (90% of \$27,000 or \$24,300). As mentioned earlier, *under acquisition accounting, revenues and expenses of the acquired company are included with those of the acquiring company only from the date of acquisition forward*. In essence, the amounts to be combined with the parent in the year of acquisition are shown in the third column of Illustration 4-12. However, the totals from column 1 are often shown as the starting point for two reasons: (1) the revenue and expense accounts in the books of the subsidiary are likely to reflect the entire year, and (2) users may be interested in preacquisition information.

## ILLUSTRATION 4-12

**S Company**  
**Income Statement and Allocation to Various Interests**  
**for the Year Ended December 31, 2015**

|  | (1)<br><i>Entire Year</i> | (2)<br><i>January to April</i> | (3)<br><i>April to December</i> |
|--|---------------------------|--------------------------------|---------------------------------|
| <i>Income Statement</i>  |                           |                                |                                 |
| Sales  | 160,000                   | 40,000                         | 120,000                         |
| Dividend Income  |                           |                                |                                 |
| Total Revenue  | <u>160,000</u>            | <u>40,000</u>                  | <u>120,000</u>                  |
| Cost of Goods Sold   | 80,000                    | 20,000                         | 60,000                          |
| Other Expenses   | 44,000                    | 11,000                         | 33,000                          |
| Total Cost and Expense   | <u>124,000</u>            | <u>31,000</u>                  | <u>93,000</u>                   |
| Net Income   | <u>36,000</u>             | <u>9,000</u>                   | 27,000                          |
| Noncontrolling Interest in Income (10%) after Purchase           |                           |                                | 2,700                           |
| Controlling Interest in Consolidated Net Income (after Purchase) |                           |                                | <u>24,300</u>                   |

Note: P acquires S Company on April 1, 2015.

FASB requires that the consolidated financial statements include the subsidiary's revenues, expenses, gains, and losses only from the date of acquisition (FASB ASC paragraph 810-10-45-4). To accomplish this, the subsidiary usually closes the books on the date of acquisition (i.e., preacquisition income is closed to retained earnings). In Illustration 4-12, the third column shows the revenues and expenses to be reported under this approach.

## Interim Acquisition under the Cost Method

Assume that P Company acquired 90% of the outstanding common stock of S Company on April 1, 2015, for a cash payment of \$290,700. The difference between implied and book value relates to the undervaluation of S Company land. Trial balances at December 31, 2015, for P and S companies appear below.

COST

|                           | <i>P Company</i>   |                    | <i>S Company</i> |                  |
|---------------------------|--------------------|--------------------|------------------|------------------|
|                           | <i>Dr.</i>         | <i>Cr.</i>         | <i>Dr.</i>       | <i>Cr.</i>       |
| Current Assets            | \$ 145,300         |                    | \$ 71,000        |                  |
| Investment in S Company   | 290,700            |                    |                  |                  |
| Plant and Equipment (net) | 326,000            |                    | 200,000          |                  |
| Land                      | 120,000            |                    | 90,000           |                  |
| Liabilities               |                    | \$ 100,000         |                  | \$ 65,000        |
| Common Stock              |                    | 500,000            |                  | 200,000          |
| Retained Earnings, 1/1    |                    | 214,000            |                  | 80,000           |
| Dividends Declared, 11/1  | 50,000             |                    | 20,000           |                  |
| Sales                     |                    | 600,000            |                  | 160,000          |
| Dividend Income           |                    | 18,000             |                  |                  |
| Cost of Goods Sold        | 380,000            |                    | 80,000           |                  |
| Other Expense             | 120,000            |                    | 44,000           |                  |
|                           | <u>\$1,432,000</u> | <u>\$1,432,000</u> | <u>\$505,000</u> | <u>\$505,000</u> |

In the computation of subsidiary income before acquisition, it is assumed that S Company's income of \$36,000 was earned evenly throughout the year. Because one-fourth of the year had expired by April 1, the date of acquisition, net income prior to the acquisition date was  $\$36,000 \times \frac{1}{4}$  or \$9,000. Only three-fourths of S Company's sales, cost of goods sold, and other expense are included in the consolidated income statement as if S Company's books had been closed on April 1, 2015. These are the amounts shown in column 3 of Illustration 4-12.

If the books are actually closed on April 1, 2015, this alternative is facilitated. The following entry should be made on S's books:

| <b>S's Books</b>  |       |       |
|-------------------|-------|-------|
| Income Summary    | 9,000 |       |
| Retained Earnings |       | 9,000 |

If this occurs, the balance in the retained earnings account on the books of the subsidiary (after closing entries on 4/1) is: \$80,000 (balance at 1/1) + \$9,000 (income for first three months of the year, column 2 of Illustration 4-12), or \$89,000.

#### Computation and Allocation of Difference Schedule

|   | <i>Parent Share</i> | <i>Noncontrolling Share</i> | <i>Total Value</i> |
|---|---------------------|-----------------------------|--------------------|
| Purchase price and implied value          | <u>290,700</u>      | <u>32,300</u>               | <u>323,000</u>     |
| Less: Book value of equity:               |                     |                             |                    |
| Common stock                              | 180,000             | 20,000                      | <b>200,000</b>     |
| Retained earnings, 4/1                    | 80,100              | 8,900                       | <b>89,000</b>      |
| Total book value                          | <u>260,100</u>      | <u>28,900</u>               | <u>289,000</u>     |
| Difference between implied and book value | 30,600              | 3,400                       | <b>34,000</b>      |
| Adjust land upward (mark to market)       | (30,600)            | (3,400)                     | <b>(34,000)</b>    |
| Balance                                   | <u>—0—</u>          | <u>—0—</u>                  | <u>—0—</u>         |

COST

A workpaper for the preparation of consolidated financial statements on December 31, 2015, is presented in Illustration 4-13.

The workpaper entry to eliminate the investment account is:

|     |  |         |         |
|-----|--|---------|---------|
| (1) | Common Stock—S Company                     | 200,000 |         |
|     | 4/1 Retained Earnings—S Company            | 89,000  |         |
|     | Difference between Implied and Book Values | 34,000  |         |
|     | Investment in S Company                    |         | 290,700 |
|     | Noncontrolling Interest in Equity          |         | 32,300  |

Note that S Company's beginning retained earnings is \$9,000 greater than it is in Illustration 4-12, reflecting the effect of the closing to retained earnings of income earned during the first three months. Noncontrolling interest in net income included in consolidated net income is 10% of \$27,000, or \$2,700 earned subsequent to acquisition. Note that consolidated net income, consolidated retained earnings, and the consolidated balance sheet are identical to those in Illustration 4-13. Only the detail included in the consolidated income statement is different.

## Interim Acquisition: The Equity Method

The preceding discussion assumed that the parent company recorded its investment using the cost method. If the equity method had been used, P Company would have recognized (in actual entries posted to the general ledger) its share of subsidiary income earned *after* acquisition. On the books of the parent company, dividends would be treated as usual as a reduction in the investment account. Thus, still using the example introduced in Illustration 4-12, P Company would make the following dividend and earnings entries relative to its investment in S Company for the year 2015.

EQUITY

| <b>P's Books</b>                           |        |        |
|--|--------|--------|
| Investment in S Company                    | 24,300 |        |
| Equity in Subsidiary Income .9(\$27,000)   |        | 24,300 |
| To record equity in subsidiary income.     |        |        |
| Cash                                       | 18,000 |        |
| Investment in S Company                    |        | 18,000 |
| To record dividends received .9(\$20,000). |        |        |

A workpaper for the preparation of consolidated financial statements on December 31, 2015, is presented in Illustration 4-14. Workpaper elimination entries are then as follows:

|  |         |         |
|--|---------|---------|
| (1) Equity in Subsidiary Income            | 24,300  |         |
| Investment in S Company                    |         | 24,300  |
| (2) Investment in S Company                | 18,000  |         |
| Dividends Declared—S Company               |         | 18,000  |
| (3) Common Stock—S Company                 | 200,000 |         |
| 4/1 Retained Earnings—S Company            | 89,000  |         |
| Difference between Implied and Book Values | 34,000  |         |
| Investment in S Company                    |         | 290,700 |
| Noncontrolling Interest in Equity          |         | 32,300  |
| (4) Land                                   | 34,000  |         |
| Difference between Implied and Book Value  |         | 34,000  |

To verify the amount of income reported, prepare t-accounts for the noncontrolling and controlling interests as follows:

#### Noncontrolling Interest in Consolidated Net Income

|   |              |                |
|---|--------------|----------------|
| Internally generated income of S Company<br>(after acquisition) | \$27,000     |                |
| Any needed adjustments (Chapter 5)                              | 0            |                |
| Adjusted income of subsidiary                                   | 27,000       |                |
| Noncontrolling percentage owned                                 | 10%          |                |
| Noncontrolling interest in income                               | <u>2,700</u> |                |
|   |              | (90%) (27,000) |

#### Controlling Interest in Consolidated Income

|   |                  |  |
|---|------------------|--|
| Internally generated income of P Company<br>(entire year: \$124,300 – \$24,300) | \$100,000        |  |
| Any needed adjustments (Chapter 5)  | 0                |  |
| Percentage of subsidiary adjusted<br>income (90%) (\$27,000)                    | <u>24,300</u>    |  |
| Controlling interest in income  | <u>\$124,300</u> |  |

### TEST YOUR KNOWLEDGE 4.4

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

#### Multiple Choice

- Cash spent or received in consummating an acquisition should be reflected in which of the following sections of the statement of cash flows:
  - Operating
  - Investing
  - Financing
  - Notes to the statement of cash flows

\*NCI = .10(\$27,000) = \$2,700.

- (1) To reverse the effect of parent company entry during the year for subsidiary income.
- (2) To reverse the effect of parent company entry during the year for subsidiary dividends.
- (3) To eliminate the investment in S Company and create noncontrolling interest account.
- (4) To allocate the excess of implied over book value to land.

## 4.6 CONSOLIDATED STATEMENT OF CASH FLOWS

### LO 7 Peculiarities of Consolidated Statement of Cash Flows.

The procedures followed in the preparation of a statement of cash flows are discussed in most intermediate accounting texts. When the company is reporting on a consolidated basis, the statement of cash flows must also be presented on a consolidated basis. The starting point for the consolidated cash flow statement is the consolidated income statement and comparative consolidated balance sheets (beginning and end of current year). Thus the preparation of the consolidated statement of cash flows will be the same, regardless of how the parent accounts for its investment (cost method, partial equity method, or complete equity method). This is true because the final product (the consolidated financial statements) is always the same if the consolidating procedures are done correctly.

We will first discuss years subsequent to the year of acquisition, and then the preparation of the consolidated statement of cash flows in the year of acquisition. In years subsequent to the year of acquisition, a consolidated balance sheet should be available for both the beginning and end of the current year. The consolidated statement of cash flows reflects all cash outlays and inflows of the consolidated entity except those between parent and subsidiary. Therefore, we are interested in explaining 100% of the changes in balance sheet accounts of parent and subsidiary (not just the portion of the subsidiary controlled by the parent). Because the consolidated balance sheet reflects 100% of the assets and liabilities of both parent and subsidiary, the preparation of a consolidated statement of cash flows is quite similar in most respects to that of a single (unconsolidated) firm. At least three aspects of the statement do, however, differ (or require modification). They are:

1. *Noncontrolling interest in consolidated net income.* Accounting standards require the disclosure of cash flows from operating activities for the reporting period. Like the consolidated balance sheet and the consolidated income statement, the consolidated statement of cash flows presents **combined** information for the parent and its subsidiaries (i.e., combined cash flows). Cash flows from operating activities may be presented by either the direct or the indirect method. Under the indirect method, we begin with net income for the period and add back (or deduct) any items recognized in determining that net income that did not result in an outflow (or inflow) of cash. These adjustments normally include such items as depreciation and amortization. ***If the statement of cash flows starts with consolidated net income, then the noncontrolling interest is already included and need not be added back.*** However, if the starting amount (net income) reflects only the **controlling interest** in consolidated net income (often the “bottom line” on the consolidated income statement), an additional adjustment for a consolidated statement of cash flows is the **add-back of the noncontrolling interest in consolidated net income** (or deduction of the noncontrolling interest’s share of a loss).
2. *Subsidiary dividends paid:* Because we are interested in reflecting 100% of cash outlays and inflows between the consolidated entity and outsiders, any subsidiary dividends **paid to the noncontrolling stockholders** must be included with dividends paid by the parent company when calculating cash outflow from financing activities. The dividends paid by the subsidiary to the parent do not involve cash flows to or from outsiders and thus are not reported on the consolidated statement of cash flows.
3. *Parent company acquisition of additional subsidiary shares:* The cost of the acquisition of additional shares in a subsidiary by the parent company may or may not constitute a cash outflow from investing activities. If the acquisition is an open market purchase, it does represent such an outflow.

### Illustration of Preparation of a Consolidated Statement of Cash Flows—Year after Acquisition

As an illustration of the preparation of a consolidated statement of cash flows, a consolidated income statement and comparative consolidated balance sheets for P Company and its 90% owned subsidiary, S Company, along with other information, are presented in Illustration 4–15.

#### Other Information for the Current Year:

1. Depreciation expense of \$26,000 is included in operating expenses.
2. Manufacturing equipment was acquired for cash of \$185,000.
3. Investments include a 30% common stock investment in Zorn Company on which \$6,000 of equity in investee income was recognized. No dividends were received during the year.

| Total Liabilities and Equity          | <u>\$679,000</u>   | <u>\$900,000</u> |

- Noncontrolling interest in consolidated net income was \$4,000. However, \$2,000 was distributed to noncontrolling stockholders as dividends during the year. Thus noncontrolling interest in net assets on the balance sheet increased by only \$2,000.
- Ten thousand shares of common stock were issued by P Company on the open market for cash at \$12 per share.
- Dividend payments totaled \$38,000, of which \$36,000 were to P Company stockholders (thereby reducing consolidated retained earnings), and \$2,000 were to S Company noncontrolling stockholders.

A consolidated statement of cash flows, using the indirect method of presenting cash flows from operating activities, is shown in Illustration 4-16.

| Equity in income of Zorn Company  |                 | (6,000)                |
| Net cash flow from operating activities                                       |                 | <u>\$140,000</u>       |
| <b>Cash flows from investing activities:</b>                                  |                 |                        |
| Payments for purchase of plant assets   |                 | (185,000)              |
| <b>Cash flows from financing activities:</b>                                  |                 |                        |
| Proceeds from the issuance of common stock                                    | \$120,000       |                        |
| Cash dividends declared and paid  | <u>(38,000)</u> |                        |
| Net cash flow from financing activities                                       |                 | <u>82,000</u>          |
| Increase in cash  |                 | \$37,000               |
| Cash Balance, beginning   |                 | 60,000                 |
| Cash Balance, ending  |                 | <u><u>\$97,000</u></u> |

If the direct method is used to report cash from operations on the consolidated statement of cash flows, the statement would be identical to Illustration 4-16 with one exception. The “cash flows from operating activities” would be replaced with the following:

|   |                |                    |
|---|----------------|--------------------|
| Cash flows from operating activities:   |                |                    |
| Cash received from customers (1)        |                | \$512,000          |
| Less cash paid for:                     |                |                    |
| Purchases of merchandise (2)            | \$252,000      |                    |
| Operating expenses (3)                  | <u>120,000</u> | 372,000            |
| Net cash flow from operating activities |                | <u>\$140,000</u>   |
| (1) Beginning accounts receivable       |                | \$ 92,000          |
| Sales                                   |                | 540,000            |
| Ending accounts receivable              |                | (120,000)          |
| Cash received from customers            |                | <u>(\$512,000)</u> |
| (2) Cost of goods sold                  |                | \$294,000          |
| Beginning inventory                     |                | (110,000)          |
| Ending inventory                        |                | <u>101,000</u>     |
| Accrual basis purchases                 |                | 285,000            |
| Beginning accounts payable              |                | 60,000             |
| Ending accounts payable                 |                | (93,000)           |
| Cash basis purchases                    |                | <u>\$252,000</u>   |
| (3) Operating expenses                  |                | \$136,000          |
| Depreciation expense                    |                | (26,000)           |
| Beginning accrued expenses              |                | 99,000             |
| Ending accrued expenses                 |                | <u>(89,000)</u>    |
| Cash paid for operating expenses        |                | <u>\$120,000</u>   |

## 4.7 ILLUSTRATION OF PREPARATION OF A CONSOLIDATED STATEMENT OF CASH FLOWS—YEAR OF ACQUISITION

### LO 8 Stock issued as Consideration in Statement of Cash Flows.

The preparation of the consolidated statement of cash flows in the year of acquisition is complicated slightly because the comparative balance sheets at the beginning and end of the current year are dissimilar. Specifically, the balance sheet at the *end* of the year of acquisition reflects consolidated balances, while the beginning of the year reflects parent-only balances. Thus the net change in cash that investors wish to interpret is the change from the parent's beginning-of-year balance to the combined (consolidated) end-of-year cash balance. To accomplish this reconciliation, two realizations are important.

1. Any cash spent or received in the acquisition itself should be reflected in the *Investing* activities section of the consolidated statement of cash flows. For example, if the parent paid total cash of \$1,000,000 to acquire a subsidiary, which brought \$300,000 cash to the consolidated entity, the net decrease in cash would appear as a \$700,000 outlay. On the other hand, if the parent issued only stock or debt (no cash) to acquire the same subsidiary, the net increase would appear as a \$300,000 cash inflow. The issuance of stock or debt would appear in the notes to the financial statements as a significant non-cash investing and financing activity.
2. To explain the change in cash successfully, the assets and liabilities of the subsidiary *at the date of acquisition* must be added to those of the parent at the beginning of the current year. For example, assume that P Company had \$1,500,000 in long-term notes payable at the beginning of the year, S Company had \$500,000 in long-term notes payable at the date of acquisition, and the consolidated entity had \$3,000,000 in long-term notes payable at the end of the year. To explain the net change, the *Financing* section of the statement of cash flows might reflect a cash inflow of \$1,000,000 from borrowing activities.

To illustrate the preparation of a consolidated statement of cash flows in the year of acquisition, consider the information in Illustration 4-17. In this problem, P Company acquires 80% of S Company on April 1, 2016 for \$200,000 cash. In this illustration the last six columns are the familiar columns used to prepare the consolidated balance sheet and income statement at the end of 2016. However, two additional columns have been added: one showing the beginning-of-year balances (January 1, 2016) for the balance sheet accounts for P Company and one showing the balances on the date of acquisition (April 1, 2016) for S Company. The information in these columns is needed to prepare the consolidated statement of cash flows for 2016, but does not affect any of the extensions or calculations needed to complete the worksheet in Illustration 4-17. Other information used in the example includes the following:

1. Total consolidated depreciation expense is \$30,000.
2. The companies issued \$205,000 of debt.
3. The companies purchased \$95,000 of property, plant, and equipment.
4. The excess of implied over book value is attributable to land ( $\$200,000 - .8(\$160,000 + \$80,000) = \$8,000$ ).
5. The partial-year alternative is used for presenting subsidiary income and expense accounts.

The comparative consolidated balance sheet, prepared from Illustration 4-17, is shown in Illustration 4-18. Notice that the beginning of the year balance sheet amounts are the same as P Company's beginning of the year balance sheet (or the first column in the worksheet in Illustration 4-17). Therefore, the change in cash in the consolidated statement of cash flows is an increase of \$35,000, calculated as the \$115,000 ending consolidated balance less the \$80,000 beginning balance.

| Common Stock                                |             |             |             |             |              |              |              |              |              |         |                             |          |
| P Company                                   | 240,000     |             | 240,000     | 160,000     |              |              |              |              | (1)          | 160,000 |                             | 240,000  |
| S Company                                   | 90,000      | 80,000      | 139,600     | 108,000     |              |              |              |              | 89,600       | 9,600   | 5,600                       | 162,000  |
| Retained Earnings                           |             |             |             |             |              |              |              |              |              |         |                             |          |
| 4/1 Noncontrolling Interest in Net Assets   |             |             |             |             |              |              |              |              | (1)          | 50,000  |                             | 50,000   |
| 12/31 Noncontrolling Interest in Net Assets |             |             |             |             |              |              |              |              |              |         |                             | 55,600   |
| Total                                       | 430,000     | 321,000     | 711,600     | 335,000     |              |              |              |              | 269,600      | 269,600 |                             | 856,600  |

\* .2 (\$40,000) = \$8,000

(1) To eliminate the investment in S Company and create noncontrolling interest account.

(2) To allocate the difference between implied and book value to land.

(3) To eliminate intercompany dividends.

Now consider the two points made above. How is the \$200,000 cash acquisition reported on the statement of cash flows? The acquisition is listed in the investing activities section and represents the net assets acquired. But since S Company had \$28,000 cash on hand on the date of acquisition, the net effect on cash from the acquisition is the \$200,000 paid less the \$28,000 acquired or \$172,000. Hence, on the statement of cash flows, the acquisition is listed as a \$172,000 cash outflow. The consolidated statement of cash flows is shown in Illustration 4-19.

Second, all calculations of changes in balance sheet accounts require that assets and liabilities acquired from S Company be added to the beginning P Company balances. For instance, on the comparative balance sheets shown in Illustration 4-18, accounts receivable has a beginning balance of \$65,000 and an ending balance of \$123,000. Because accounts receivable of \$38,000 were acquired on April 1, 2016, the change in receivables is the ending consolidated amount of \$123,000 less the beginning balance of \$65,000 and the amount purchased in the acquisition of \$38,000. (See Illustration 4-17.) This gives the correct increase in accounts receivable of \$20,000. As a result, in published annual reports, the changes in the working capital accounts from the previous year's balance sheet do not reconcile to the amounts shown on the statement of cash flows in the year of acquisition. Similar reasoning is used for all the remaining changes in balance sheet accounts, such as property, plant, and equipment.

Another point about the consolidated statement of cash flows concerns the \$12,000 dividends paid by S Company. Since P Company purchased 80% of S Company, \$9,600 of the dividends must be eliminated. However, the \$2,400 remaining dividends paid by S Company to the noncontrolling shareholders must be subtracted as a financing item. We have shown this separately on the cash flow statement in Illustration 4-19 even though in practice the dividend amounts paid by P Company and S Company are often combined.

| Total Liabilities and Equity          | <u>\$430,000</u>   | <u>\$856,600</u> |

**ILLUSTRATION 4-19****P Company and Subsidiary Consolidated Statement of Cash Flows  
for the Year Ended December 31, 2016**

|  |           |             |
|--|-----------|-------------|
| <b>Cash flows from operating activities:</b>   |           |             |
| Consolidated Net Income  | 110,000   |             |
| Adjustments to convert net income to net cash flow<br>from operating activities:               |           |             |
| Depreciation expense   | 30,000    |             |
| Increase in accounts receivable (\$123,000 – 65,000 – 38,000)                                  | (20,000)  |             |
| Increase in inventories (\$126,600 – 70,000 – 53,000)  | (3,600)   |             |
| Increase in accounts payable (\$82,000 – 35,000 – 34,000)                                      | 13,000    |             |
| Net cash flow from operating activities  |           | \$129,400   |
| <b>Cash flows from investing activities:</b>   |           |             |
| Payments for purchase of plant assets  | (95,000)  |             |
| Cash paid (net) for acquisition of S (\$200,000 less<br>cash acquired of \$28,000)             | (172,000) |             |
| Net cash flow from investing activities  |           | (\$267,000) |
| <b>Cash flows from financing activities:</b>   |           |             |
| Proceeds from the issuance of debt   | \$205,000 |             |
| Cash dividends declared and paid by P Company  | (30,000)  |             |
| Cash dividends declared and paid by S Company to<br>noncontrolling shareholders (.2)(\$12,000) | (2,400)   |             |
| Net cash flow from financing activities  |           | \$172,600   |
| Increase in cash (\$115,000 – \$80,000)  |           | 35,000      |
| Cash Balance, beginning  |           | 80,000      |
| Cash Balance, ending   |           | \$115,000   |

Finally, the preparation of the consolidated statement of cash flows is the same regardless of whether the parent uses the cost method, partial equity method, or complete equity method to account for its investment in any subsidiaries that are consolidated. This is true because the preparation is based on the consolidated income statement and consolidated balance sheets, and these are identical under the three methods.

## 4.8 COMPARE U.S. GAAP AND IFRS REGARDING EQUITY METHOD

### IFRS

In the following table, we provide a comparison of the similarities and differences between the equity method used for investments in the United States and the accounting for associates (IASB term for equity investments) under IFRS.

**LO 9** Describe some of the differences between U.S. GAAP and IFRS in accounting for equity investments.

### Application of the Equity Method

| <i>Issue</i>                              | <i>U.S. GAAP</i>  | <i>IFRS</i>  |
|---|---|--|
| <b>Relevant standards</b>                 | FASB ASC 323 [Investments—Equity] Method and ASC 825 [Financial Instruments]  | IAS 28   |
| <b>Terminology</b>                        | Equity method investments.  | Investments in associates.   |
| <b>Requirement to apply equity method</b> | Corporate entities that exert significant influence (but not control) must use the equity method (unless the investor has elected the fair value option). | An <b>associate</b> is an entity in which the investor has significant influence (excluding subsidiaries and joint ventures). Investments in associates are accounted for using the equity method. |
| <b>Significant influence</b>              | Presumed if the investor has 20% or more of the voting rights in a corporate investee.  | Same as in the United States.  |
| <b>Potential voting rights</b>            | Generally not considered.   | Consider the existence and effects of potential voting rights on currently exercisable or convertible instruments.   |
| <b>Joint ventures</b>                     | Equity method is required for jointly controlled entities.  | Use proportionate consolidation. The equity method may be used, but is not recommended (there is a current proposal to eliminate proportionate consolidation).                                     |
| <b>Limited partnerships</b>               | The equity method is generally applied to investments of more than 3 to 5%.   | Equity method is applied to investments using the “significant influence” principle.   |
| <b>Carrying value of the investment</b>   | Increased (decreased) with the investor’s share of profit (loss) of the investee after the date of acquisition.   | Same as in the United States.  |
| <b>Uniform accounting policies</b>        | Not required.   | Uniform accounting policies are required (use top-side adjustments when policies are different).   |
| <b>Different reporting dates</b>          | Permits a three-month difference (and disclose significant events)  | Permits a three-month difference if it is impractical to change; however, investors must adjust for significant events.  |
| <b>Exemptions from the equity method</b>  | FASB ASC 825–10–25–1 gives entities the option to account for equity investments at fair value.   | Associates classified as held for sale.  |

## SUMMARY

- 1 Describe the accounting treatment required under current GAAP for varying levels of influence or control by investors. With few exceptions, all **subsidiaries** (investments in which the investor has a controlling interest), as well as other entities controlled by the investor, either directly or indirectly, must be consolidated and may not be reported as separate investments in the consolidated financial statements. The equity method is used to account for investments in investees in which the investor has significant influence but **not control** (usually more than 20%) unless the fair value option is chosen at acquisition. For investments in investees where the investor does not have significant influence (normally less than 20%), the investment should be reported at its fair value.
- 2 Prepare journal entries on the parent’s books to account for an investment using the cost method, the partial equity method, and the complete equity method. The most important difference between the cost and equity methods pertains to the period in which the parent recognizes subsidiary income on its books. If the cost method is in use, the parent recognizes its share of subsidiary income only when dividends are declared by the subsidiary. Under the partial equity method, the investor will recognize its share of the subsidiary’s income when reported by the subsidiary, regardless of whether dividends have been distributed. A debit to cash and a credit to the investment account record the receipt of dividends under the partial equity method. The complete equity method differs from the partial

equity method in that the share of subsidiary income is often adjusted from the amount reported by the subsidiary (e.g., for depreciation on the excess of market over book values).

- 3 **Understand the use of the workpaper in preparing consolidated financial statements.** Accounting workpapers are helpful in accumulating, classifying, and arranging data for the preparation of consolidated financial statements. The three-section workpaper format used in this text includes a separate section for each of three basic financial statements—income statement, retained earnings statement, and balance sheet. In some cases the input to the workpaper comes from the individual financial statements of the affiliates to be consolidated, in which case the three-section workpaper is particularly appropriate. At other times, however, input may be from affiliate trial balances, and the data must be arranged in financial statement form before the workpaper can be completed.
- 4 **Prepare a schedule for the computation and allocation of the difference between implied and book values.** The schedule begins with the cost (or purchase price) and divides this amount by the percentage acquired to compute the implied value of the subsidiary. Next, the book value of the subsidiary's equity at the date of acquisition is subtracted from the implied value. This difference is then allocated to adjust the assets and/or liabilities of the subsidiary for differences between their book values and fair values. Any remaining excess is labeled as goodwill. Special rules apply for bargain purchases.
- 5 **Prepare the workpaper eliminating entries for the year of acquisition (and subsequent years) for the cost and equity methods.** Under the cost method, dividends declared by the subsidiary are eliminated against dividend income recorded by the parent. The investment account is eliminated against the equity accounts of the subsidiary, and an account is created for the noncontrolling interest in equity. The difference between implied and book values is recorded in a separate account by that name. The difference is then allocated to adjust underlying assets and/or liabilities, and to record goodwill in some cases. Under the equity method, the dividends declared by the subsidiary are eliminated against the investment account, as is the equity in subsidiary income. In subsequent years, the cost method requires an initial entry to establish reciprocity or convert to equity. This entry debits the investment account and credits retained earnings of the parent (for the change in retained earnings of the subsidiary from the date of acquisition to the beginning of the current year multiplied by the parent's ownership percentage).
- 6 **Describe how to account for interim acquisitions of subsidiary stock at the end of the first year.** If an investment in the common stock of a subsidiary is made during the year rather than on the first day, only the subsidiary revenues, expenses, gains, and losses for the period after acquisition are included in the consolidated income statement.
- 7 **Explain how the consolidated statement of cash flows differs from a single firm's statement of cash flows.** In the preparation of a consolidated statement of cash flows, the starting point under the indirect approach should be **consolidated net income** (including the noncontrolling interest). Subsidiary dividend payments to noncontrolling shareholders represent a **Financing** outflow of cash. Subsidiary dividend payments to the parent company represent an intercompany transfer and thus are not reflected on the consolidated statement of cash flows. The cost of acquiring additional subsidiary shares of common stock is an **Investing** outflow of cash if the purchase is made from outsiders, but not if made directly from the subsidiary.
- 8 **Understand how the reporting of an acquisition on the consolidated statement of cash flows differs when stock is issued rather than cash.** Any cash spent or received in the acquisition itself should be reflected in the **Investing** activities section of the consolidated statement of cash flows. The issuance of stock or debt would appear in the **Notes to the Financial Statements** as a significant noncash investing and financing activity.
- 9 **Describe some of the differences between IFRS and U.S. GAAP in the accounting for equity investments.** In the United States, the investments are referred to as "equity investments"; under international standards, the investments are referred to as "investments in associates." Potential voting rights are considered under international standards in determining significant influence, while potential voting rights are not explicitly considered under U.S. GAAP.

## QUESTIONS

(The letter A or B indicated for a question, exercise, or problem refers to a related appendix.)

- LO 1** 1. How should nonconsolidated subsidiaries be reported in consolidated financial statements?
- LO 2** 2. How are liquidating dividends treated on the books of an investor, assuming the investor uses the cost method? Assuming the investor uses the equity method?
- LO 5** 3. How are dividends declared and paid by a subsidiary during the year eliminated in the consolidated workpapers under each method of accounting for investments?
- LO 2** 4. How is the income reported by the subsidiary reflected on the books of the investor under each of the methods of accounting for investments?
- LO 2** 5. Define: Consolidated net income; consolidated retained earnings.
- LO 5** 6. At the date of an 80% acquisition, a subsidiary had common stock of \$100,000 and retained earnings of \$16,250. Seven years later, at December 31, 2015, the subsidiary's retained earnings had increased to \$461,430. What adjustment will be made on the consolidated workpaper at December 31, 2016, to recognize the parent's share of the cumulative undistributed profits (losses) of its subsidiary? Under which method(s) is this adjustment needed? Why?
- LO 5** 7. On a consolidated workpaper for a parent and its partially owned subsidiary, the noncontrolling interest column accumulates the noncontrolling interests' share of several account balances. What are these accounts?
- LO 5** 8. If a parent company elects to use the partial equity method rather than the cost method to record its investments in subsidiaries, what effect will this choice have on the consolidated financial statements? If the parent company elects the complete equity method?
- LO 6** 9. Describe two methods for treating the preacquisition revenue and expense items of a subsidiary purchased during a fiscal period.
- LO 1** 10. A principal limitation of consolidated financial statements is their lack of separate financial information about the assets, liabilities, revenues, and expenses of the individual companies included in the consolidation. Identify some problems that the reader of consolidated financial statements would encounter as a result of this limitation.
11. In the preparation of a consolidated statement of cash flows, what adjustments are necessary because of the existence of a noncontrolling interest? (*AICPA adapted*)
12. What do potential voting rights refer to, and how do they affect the application of the equity method for investments under IFRS? Under U.S. GAAP? What is the term generally used for equity method investments under IFRS?
- LO 7** **LO 9** 13B. Is the recognition of a deferred tax asset or deferred tax liability when allocating the difference between book value and the value implied by the purchase price affected by whether or not the affiliates file a consolidated income tax return? (See online appendix 4B available at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter))
- 14B. What assumptions must be made about the realization of undistributed subsidiary income when the affiliates file separate income tax returns? Why? (See online appendix 4B available at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter))
- 15B. The FASB elected to require that deferred tax effects relating to unrealized intercompany profits be calculated based on the income tax paid by the selling affiliate rather than on the future tax benefit to the purchasing affiliate. Describe circumstances where the amounts calculated under these approaches would be different. (See online appendix 4B available at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter))
- 16B. Identify two types of temporary differences that may arise in the consolidated financial statements when the affiliates file separate income tax returns. (See online appendix 4B available at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter))

### Business Ethics

On April 5, 2006, the New York State Attorney sued a New York online advertising firm for surreptitiously installing spyware advertising programs on consumers' computers. The Attorney General claimed that consumers believed they were downloading free games or 'browser' enhancements.

The company claimed that the spyware was identified as 'advertising-supported' and that the software is easy to remove and doesn't collect personal data.

Is there an ethical issue for the company? Comment on and justify your position.

## ANALYZING FINANCIAL STATEMENTS

- AFS4-1** In the following table, General Electric's Balance Sheet from its 2005 annual report is shown. There are six columns of numbers. In the first two columns, GE's consolidated balance sheets for 2010 and 2009, respectively, are reported. The middle set of columns (listed under GE) represents GE's unconsolidated balance sheet, which treats all controlled subsidiaries as investments. Finally, the last two columns, listed under GECS (General Electric Credit Services), represent the balance sheet for GE's 100% owned subsidiary, GECS.

## General Electric (GE) 2005 Balance Sheet

| <i>Assets</i>   | <i>Consolidated</i> |                  | <i>GE</i>        |                  | <i>GECS</i>      |                  |
|---|---------------------|------------------|------------------|------------------|------------------|------------------|
|   | <i>2010</i>         | <i>2009</i>      | <i>2010</i>      | <i>2009</i>      | <i>2010</i>      | <i>2009</i>      |
| Cash and equivalents  | \$ 78,958           | \$ 70,488        | \$ 19,241        | \$ 8,654         | \$ 60,272        | \$ 62,584        |

| <b>Total GE shareowner's equity</b>   | <b>118,936</b>      | <b>117,291</b>   | <b>118,936</b>   | <b>117,291</b>   | <b>68,984</b>    | <b>70,833</b>    |
| Noncontrolling interests  | 5,262               | 7,845            | 4,098            | 5,797            | 1,164            | 2,048            |
| <b>Total equity</b>   | <b>124,198</b>      | <b>125,136</b>   | <b>123,034</b>   | <b>123,088</b>   | <b>70,148</b>    | <b>72,881</b>    |
| <b>Total liabilities and equity</b>   | <b>\$751,216</b>    | <b>\$781,901</b> | <b>\$218,763</b> | <b>\$209,942</b> | <b>\$608,678</b> | <b>\$650,324</b> |

**Required:**

- A.** Examine the middle set of columns showing GE's unconsolidated numbers. GE reports \$68,984 as the investment in GECS. Which method does GE use to account for this investment, cost or equity method? Explain your answer.
- B.** Compare the consolidated totals for assets, liabilities, and equity to the totals for GE's numbers unconsolidated. Which totals are different between the consolidated and the unconsolidated

numbers? Explain why some numbers are the same when consolidated and why some numbers are different.

- C. If the acquisition were to result in noncontrolling interest (NCI) under current GAAP, how would that NCI be valued in the consolidated balance sheet?
- NCI percentage times the book value of identifiable net assets
  - NCI percentage times the fair value of identifiable net assets
  - NCI percentage times the book value of tangible net assets
  - NCI percentage times the fair value of tangible net assets
- D. In addition to reporting the consolidated numbers, GE also reports separate information on GE and GECS. What do we learn from this increased disclosure beyond what we might learn if only the consolidated numbers were reported? Suppose that GE reported on GECS using the equity method and did not consolidate the subsidiary. Would this be misleading to the users of the financial statements? Why, or why not?

#### AFS4-2 eBay Acquires Skype

On October 14, 2005, eBay acquired all of the outstanding securities of Skype Technologies S.A. ("Skype"), for a total initial consideration of approximately \$2.6 billion, plus potential performance-based payments of approximately \$1.3 billion (based on the euro-dollar exchange rate at the time of the acquisition and using an income approach to estimating the value of the earnout). The initial consideration of approximately \$2.6 billion was comprised of approximately \$1.3 billion in cash and 32.8 million shares of eBay's common stock. For accounting purposes, the stock portion of the initial consideration was valued at approximately \$1.3 billion based on the average closing price of eBay common stock surrounding the acquisition announcement date of September 12, 2005.

##### Required:

- Prepare the journal entry on eBay's books to record the acquisition.
- Where are the three components of the purchase price reported on the statement of cash flows? Be specific as to category and amount, and include required note disclosures in your answer.

#### AFS4-3 Various Acquisitions

During 2005, eBay acquired 100% of four different companies as follows (assume all companies have a December 31 year-end). Net income amounts are stated in thousands of dollars; assume that the net income is earned uniformly throughout the year 2005.

| <i>Company</i>                    | <i>Acquired on</i> | <i>2005 Annual<br/>Net Income</i> |
|-----------------------------------|--------------------|-----------------------------------|
| Rent.com                          | February 1, 2005   | \$12,000                          |
| International classified websites | April 1, 2005      | 5,000                             |
| Shopping.com                      | September 1, 2005  | 20,000                            |
| Skype                             | October 14, 2005   | 120,000                           |

##### Required:

- How much of the income earned by each of these companies will be recorded in consolidated net income in the year of acquisition?
- In addition to reported earnings for the year of acquisition, GAAP requires certain pro forma earnings disclosures for the consolidated entity. What amount of earnings from each of these acquisitions would be included in proforma earnings disclosures?

## EXERCISES

### EXERCISE 4-1 Parent Company Entries, Liquidating Dividend LO 2

Percy Company purchased 80% of the outstanding voting shares of Song Company at the beginning of 2014 for \$387,000. At the time of purchase, Song Company's total stockholders' equity amounted to \$475,000. Income and dividend distributions for Song Company from 2014 through 2016 are as follows:

|                       | <i>2014</i> | <i>2015</i> | <i>2016</i> |
|-----------------------|-------------|-------------|-------------|
| Net income (loss)     | \$63,500    | \$52,500    | (\$55,000)  |
| Dividend distribution | 25,000      | 50,000      | 35,000      |

**Required:**

Prepare journal entries on the books of Percy Company from the date of purchase through 2016 to account for its investment in Song Company under each of the following assumptions:

- A. Percy Company uses the cost method to record its investment.
- B. Percy Company uses the partial equity method to record its investment.
- C. Percy Company uses the complete equity method to record its investment. The difference between book value of equity acquired and the value implied by the purchase price was attributed solely to an excess of market over book values of depreciable assets, with a remaining life of 10 years.

**EXERCISE 4-2 Workpaper Eliminating Entries, Cost Method LO 5**

Park Company purchased 90% of the stock of Salt Company on January 1, 2014, for \$465,000, an amount equal to \$15,000 in excess of the book value of equity acquired. This excess payment relates to an undervaluation of Salt Company's land. On the date of purchase, Salt Company's retained earnings balance was \$50,000. The remainder of the stockholders' equity consists of no-par common stock. During 2018, Salt Company declared dividends in the amount of \$10,000, and reported net income of \$40,000. The retained earnings balance of Salt Company on December 31, 2017, was \$160,000. Park Company uses the cost method to record its investment.

**Required:**

Prepare in general journal form the workpaper entries that would be made in the preparation of a consolidated statements workpaper on December 31, 2018.

**EXERCISE 4-3 Workpaper Eliminating Entries, Equity Method LO 5**

At the beginning of 2009, Presidio Company purchased 95% of the common stock of Succo Company for \$494,000. On that date, Succo Company's stockholders' equity consisted of the following:

|                           |                  |
|---------------------------|------------------|
| Common stock              | \$300,000        |
| Other contributed capital | 100,000          |
| Retained earnings         | <u>120,000</u>   |
| Total                     | <u>\$520,000</u> |

During 2017, Succo Company reported net income of \$40,000 and distributed dividends in the amount of \$19,000. Succo Company's retained earnings balance at the end of 2016 amounted to \$160,000. Presidio Company uses the equity method.

**Required:**

Prepare in general journal form the workpaper entries necessary in the compilation of consolidated financial statements on December 31, 2017. Explain why the partial and complete equity methods would result in the same entries in this instance.

**EXERCISE 4-4 Workpaper Eliminating Entries, Losses by Subsidiary LO 5**

Poco Company purchased 85% of the outstanding common stock of Serena Company on December 31, 2014, for \$310,000 cash. On that date, Serena Company's stockholders' equity consisted of the following:

|                           |                  |
|---------------------------|------------------|
| Common stock              | \$240,000        |
| Other contributed capital | 55,000           |
| Retained earnings         | <u>50,000</u>    |
|                           | <u>\$345,000</u> |

During 2017, Serena Company distributed a dividend in the amount of \$12,000 and at year-end reported a net loss of \$10,000. During the time that Poco Company has held its investment in Serena Company, Serena Company's retained earnings balance has decreased \$29,500 to a net balance of \$20,500 after closing on December 31, 2017. Serena Company did not declare or distribute any dividends in 2015 or 2016. The difference between book value and the value implied by the purchase price relates to goodwill.

**Required:**

- A. Assume that Poco Company uses the equity method. Prepare in general journal form the entries needed in the preparation of a consolidated statements workpaper on December 31, 2017. Explain why the partial and complete equity methods would result in the same entries in this instance.
- B. Assume that Poco Company uses the cost method. Prepare in general journal form the entries needed in the preparation of a consolidated statements workpaper on December 31, 2017.

**EXERCISE 4-5 Eliminating Entries, Noncontrolling Interest LO2**

On January 1, 2014, Plate Company purchased a 90% interest in the common stock of Set Company for \$650,000, an amount \$20,000 in excess of the book value of equity acquired. The excess relates to the understatement of Set Company's land holdings.

Excerpts from the consolidated retained earnings section of the consolidated statements workpaper for the year ended December 31, 2014, follow:

|   | <i>Set Company</i> | <i>Consolidated Balances</i> |
|---|--------------------|------------------------------|
| 1/1/14 retained earnings                        | 190,000            | 880,000                      |
| Net income from above                           | 132,000            | 420,000                      |
| Dividends declared                              | (50,000)           | (88,000)                     |
| 12/31/14 retained earnings to the balance sheet | <u>272,000</u>     | <u>1,212,000</u>             |

Set Company's stockholders' equity is composed of common stock and retained earnings only.

**Required:**

- A. Prepare the eliminating entries required for the preparation of a consolidated statements workpaper on December 31, 2014, assuming the use of the cost method.
- B. Prepare the eliminating entries required for the preparation of a consolidated statements workpaper on December 31, 2014, assuming the use of the equity method.
- C. Determine the total noncontrolling interest that will be reported on the consolidated balance sheet on December 31, 2014. How does the noncontrolling interest differ between the cost method and the equity method?

**EXERCISE 4-6 Parent Entries and Eliminating Entries, Equity Method, Year of Acquisition LO2 LO5**

On January 1, 2014, Pert Company purchased 85% of the outstanding common stock of Sales Company for \$350,000. On that date, Sales Company's stockholders' equity consisted of common stock, \$100,000; other contributed capital, \$40,000; and retained earnings, \$140,000. Pert Company paid more than the book value of net assets acquired because the recorded cost of Sales Company's land was significantly less than its fair value.

During 2014 Sales Company earned \$148,000 and declared and paid a \$50,000 dividend. Pert Company used the partial equity method to record its investment in Sales Company.

**Required:**

- A. Prepare the investment-related entries on Pert Company's books for 2014.
- B. Prepare the workpaper eliminating entries for a workpaper on December 31, 2014.

**EXERCISE 4-7 Equity Method, Year Subsequent to Acquisition LO2 LO5**

Continue the situation in Exercise 4-6 and assume that during 2015 Sales Company earned \$190,000 and declared and paid a \$50,000 dividend.

**Required:**

- A. Prepare the investment-related entries on Pert Company's books for 2015.
- B. Prepare the workpaper eliminating entries for a workpaper on December 31, 2015.

**EXERCISE 4-8 Interim Purchase of Stock, Cost Method LO6**

On May 1, 2015, Peters Company purchased 80% of the common stock of Smith Company for \$50,000. Additional data concerning these two companies for the years 2015 and 2016 are:

|                           | <i>2015</i>   |              | <i>2016</i>   |              |
|---------------------------|---------------|--------------|---------------|--------------|
|                           | <i>Peters</i> | <i>Smith</i> | <i>Peters</i> | <i>Smith</i> |
| Common stock              | \$100,000     | \$25,000     | \$100,000     | \$25,000     |
| Other contributed capital | 40,000        | 10,000       | 40,000        | 10,000       |
| Retained earnings, 1/1    | 80,000        | 10,000       | 129,000       | 53,000       |
| Net income (loss)         | 64,000        | 45,000       | 37,500        | (5,000)      |
| Cash dividends (11/30)    | 15,000        | 2,000        | 5,000         | —0—          |

Any difference between book value and the value implied by the purchase price relates to Smith Company's land. Peters Company uses the cost method to record its investment.

**Required:**

- A. Prepare the workpaper entries that would be made on a consolidated statements workpaper for the years ended December 31, 2015 and 2016 for Peters Company and its subsidiary, assuming that Smith Company's income is earned evenly throughout the year.
- B. Calculate consolidated net income and consolidated retained earnings for 2015 and 2016.

**EXERCISE 4-9 Interim Purchase, Equity Method LO2 LO6**

On October 1, 2015, Para Company purchased 90% of the outstanding common stock of Star Company for \$210,000. Additional data concerning Star Company for 2015 follows:

|                                     |          |
|-------------------------------------|----------|
| Common stock                        | \$70,000 |
| Other contributed capital           | 30,000   |
| Retained earnings, 1/1              | 70,000   |
| Net income                          | 60,000   |
| Dividends declared and paid (12/15) | 10,000   |

Any difference between book value and the value implied by the purchase price relates to goodwill. Para Company uses the partial equity method to record its investment in Star Company.

**Required:**

- Prepare on Para Company's books journal entries to record the investment-related activities for 2015.
- Prepare workpaper eliminating entries for a workpaper on December 31, 2015. Star Company's net income is earned evenly throughout the year.

**EXERCISE 4-10 Cash Flow from Operations LO7**

A consolidated income statement and selected comparative consolidated balance sheet data for Palano Company and subsidiary follow:

**Palano Company and Subsidiary  
Consolidated Income Statement  
for the Year Ended December 31, 2015**

|   |               |                |
|---|---------------|----------------|
| Sales   |               | \$701,000      |
| Cost of sales   |               | <u>263,000</u> |
| Gross profit  |               | 438,000        |
| Operating expenses:                                     |               |                |
| Depreciation expense                                    | \$ 76,000     |                |
| Selling expenses  | 122,000       |                |
| Administrative expenses                                 | <u>85,000</u> | <u>283,000</u> |
| Consolidated net income                                 |               | 155,000        |
| Less noncontrolling interest in consolidated net income |               | <u>38,750</u>  |
| Controlling interest in consolidated net income         |               | \$116,250      |

|                                 | <i>December 31</i> |             |
|---------------------------------|--------------------|-------------|
|                                 | <u>2014</u>        | <u>2015</u> |
| Accounts receivable             | \$229,000          | \$318,000   |
| Inventory                       | 194,000            | 234,000     |
| Prepaid selling expenses        | 26,000             | 30,000      |
| Accounts payable                | 99,000             | 79,000      |
| Accrued selling expenses        | 96,000             | 84,000      |
| Accrued administrative expenses | 56,000             | 39,000      |

**Required:**

Prepare the cash flow from operating activities section of a consolidated statement of cash flows assuming use of the:

- Direct method.
- Indirect method.

**EXERCISE 4-11 Allocation of Difference between Book Value and the Value Implied by the Purchase Price, Parent Company Entries, Three Methods LO2 LO4 LO5**

On January 1, 2017, Plutonium Corporation acquired 80% of the outstanding stock of Sulfurst Inc. for \$268,000 cash. The following balance sheet shows Sulfurst Inc.'s book values immediately prior to acquisition, as well as the appraised values of its assets and liabilities by Plutonium's experts.

|                                | <i>Sulfurst Inc.'s Book Values</i> | <i>Sulfurst Inc.'s Market Values</i> |
|--------------------------------|------------------------------------|--------------------------------------|
| Current assets                 | \$ 90,000                          | \$ 90,000                            |
| Property, plant & equipment:   |                                    |                                      |
| Land                           | 80,000                             | 100,000                              |
| Building & machinery (net)     | 170,000                            | 170,000                              |
| Total assets                   | <u>\$340,000</u>                   |                                      |
| Total liabilities              | \$100,000                          | \$100,000                            |
| Common stock, \$5 par value    | 100,000                            |                                      |
| Additional paid-in-capital     | 20,000                             |                                      |
| Retained earnings              | 120,000                            |                                      |
| Total liabilities and equities | <u>\$340,000</u>                   |                                      |

**Required:**

- A. Prepare a Computation and Allocation Schedule for the Difference between Book Value and the Value Implied by the Purchase Price.
- B. Prepare the entry to be made on the books of Plutonium Corporation to record its investment in Sulfurst Inc.  
Assume that during the first two years after acquisition of Sulfurst Inc., Sulfurst reports the following changes in its retained earnings:

|                                      |                  |
|--------------------------------------|------------------|
| Retained earnings, January 1, 2017   | \$120,000        |
| Net income, 2017                     | 40,000           |
| Less: dividends, 2017                | (24,000)         |
| Net income, 2018                     | 45,000           |
| Less: dividends, 2018                | (21,600)         |
| Retained earnings, December 31, 2018 | <u>\$159,400</u> |

- C. Prepare journal entries under each of the following methods to record the information above on the books of Plutonium Corporation for the years 2017 and 2018, assuming that all depreciable assets have a remaining life of 20 years.
  - (1) Plutonium uses the cost method to account for its investment in Sulfurst.
  - (2) Plutonium uses the partial equity method to account for its investment in Sulfurst.
  - (3) Plutonium uses the complete equity method to account for its investment in Sulfurst.

**EXERCISE 4-12 Subsidiary Loss LO 5**

The following accounts appeared in the separate financial statements at the end of 2014 for Pressing Inc. and its wholly-owned subsidiary, Stressing Inc. Stressing was acquired in 2009.

|                                  | <i>Pressing Inc.</i> | <i>Stressing Inc.</i> |
|----------------------------------|----------------------|-----------------------|
| Investment in subsidiary         | 660,000              |                       |
| Dividends receivable             | 5,000                |                       |
| Dividends payable                | 20,000               | 5,000                 |
| Common stock                     | 300,000              | 20,000                |
| Additional paid-in-capital       | 500,000              | 380,000               |
| Retained earnings, 12/31/14      | 500,000              | 260,000               |
| Dividends declared               | (75,000)             | (24,000)              |
| Equity in net loss of subsidiary | (55,000)             |                       |
| Retained earnings at 1/1/14      | 380,000              |                       |

**Required:**

1. How can you determine whether Pressing is using the cost or equity method to account for its investment in Stressing?
2. Compute controlling interest in consolidated income.
3. How much income did Pressing Inc. earn from its own independent operations?
4. Compute consolidated retained earnings at 12/31/14.
5. What are consolidated dividends?
6. Compute retained earnings at 1/1/14 for Stressing Inc.
7. Was there any difference between book value and the value implied by the purchase price at acquisition? Prepare workpaper entries needed at the end of 2014.
8. If Pressing used the cost method instead of the equity method, how would Pressing Inc.'s retained earnings change at the end of 2014? Describe in words.
9. If Pressing uses the cost method instead of the equity method, what workpaper entries would be required at the end of 2014? Describe in words.

**EXERCISE 4-13 Cash Flow Statement, Year of Acquisition LO 7**

Badco Inc. purchased a 90% interest in Lazytoo Company for \$600,000 cash on January 1, 2016. Any excess of implied over book value was attributed to depreciable assets with a 15-year remaining life (straight-line depreciation). To help pay for the acquisition, Badco issued \$300,000, 20-year, 12% bonds at par value. Lazytoo's balance sheet on the date of acquisition was as follows:

| <i>Assets</i>      |                  | <i>Liabilities and Equity</i> |                  |
|--------------------|------------------|-------------------------------|------------------|
| Cash               | \$ 10,000        | Accrued payables              | \$ 90,000        |
| Inventory          | 140,000          | Bonds payable                 | 100,000          |
| Fixed assets (net) | 540,000          | Common stock (\$10 par)       | 200,000          |
|                    |                  | Retained earnings             | 300,000          |
| Total assets       | <u>\$690,000</u> | Total liabilities and equity  | <u>\$690,000</u> |

Consolidated net income for 2016 was \$155,889. Badco declared and paid dividends of \$10,000 and Lazytoo declared and paid dividends of \$5,000. There were no purchases or sales of property, plant, and equipment during the year.

At the end of 2016, the following information was also available:

|                            | <i>Badco Company 12/31/15</i> |                    | <i>Consolidated 12/31/16</i> |                    |
|----------------------------|-------------------------------|--------------------|------------------------------|--------------------|
|                            | <i>Debits</i>                 | <i>Credits</i>     | <i>Debits</i>                | <i>Credits</i>     |
| Cash                       | \$ 390,000                    |                    | \$ 63,500                    |                    |
| Inventory                  | 190,000                       |                    | 454,000                      |                    |
| Fixed Assets               | 750,000                       |                    | 1,385,555                    |                    |
| Accrued payables           |                               | 150,000            |                              | 111,000            |
| Bonds payable              |                               | 200,000            |                              | 600,000            |
| Noncontrolling interest    |                               |                    |                              | 73,055             |
| Common Stock, (\$10 par)   |                               | 200,000            |                              | 200,000            |
| Additional paid-in-capital |                               | 550,000            |                              | 550,000            |
| Retained earnings          |                               | 230,000            |                              | 369,000            |
| Total                      | <u>\$1,330,000</u>            | <u>\$1,330,000</u> | <u>\$1,903,055</u>           | <u>\$1,903,055</u> |

**Required:**

Prepare a consolidated statement of cash flows using the indirect method for Badco and its subsidiary for the year ended December 31, 2016.

**EXERCISE 4-14B Entries for Deferred Taxes from Undistributed Income, Cost and Equity (See appendix 4B online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter))**

On January 1, 2014, Plenty Company purchased a 70% interest in the common stock of Set Company for \$650,000, an amount \$20,000 in excess of the book value of equity acquired. The excess relates to the understatement of Set Company's land holdings.

Excerpts from both company's financial statements for the year ended December 31, 2014, follow:

|                                    | <i>Set Company</i> | <i>Plenty Company</i> |
|------------------------------------|--------------------|-----------------------|
| 1/1/14 retained earnings           | 190,000            | 880,000               |
| Income from independent operations | 132,000            | 420,000               |
| Dividends declared                 | (50,000)           | (88,000)              |

Set Company's stockholders' equity is composed of common stock and retained earnings only. Both companies file separate tax returns, and the expected tax rate is 40%. The capital gains tax rate is 20%, and there is an 80% dividend exclusion rate.

**Required:**

A. Prepare the entry(s) needed at the end of 2014 to report the income tax consequences of undistributed income assuming the use of the cost method, under each of the following assumptions. Indicate whether the entry is recorded on the books of Set, Plenty, or worksheet only.

- (1) Plenty expects the undistributed income will be realized in the form of future dividends.
- (2) Plenty expects the undistributed income will be realized only when the stock is sold, in the form of capital gains.

- B.** Prepare the entry(s) needed at the end of 2014 to report the income tax consequences of undistributed income assuming the use of the partial equity method, under each of the following assumptions. Indicate whether the entry is recorded on the books of Set, Plenty, or worksheet only.
- (1) Plenty expects the undistributed income will be realized in the form of future dividends.
  - (2) Plenty expects the undistributed income will be realized only when the stock is sold, in the form of capital gains.
- C.** Prepare the entry(s) needed at the end of 2014 to report the income tax consequences of undistributed income assuming the use of the complete equity method, under each of the following assumptions. Indicate whether the entry is recorded on the books of Set, Plenty, or worksheet only.
- (1) Plenty expects the undistributed income will be realized in the form of future dividends.
  - (2) Plenty expects the undistributed income will be realized only when the stock is sold, in the form of capital gains.

**ASC EXERCISES:** For all ASC exercises indicate as part of your answer: the Codification topic, subtopic, section, and/or paragraph upon which your answer is based (unless otherwise specified). All ASC questions require access to the FASB Codification.

- ASC4-1** **Presentation** A company reported net income of \$15,000, including an extraordinary loss of \$3,000. Another company owns 40% of this company and uses the equity method to account for the investment. On the investee company's books, does the investee report the net income of \$15,000 as a single amount on its income statement?
- ASC4-2** **Glossary** Is a correction of an error in the financial statements considered an accounting change?
- ASC4-3** **Presentation** A company changed its method of accounting for inventory and determined that it was impractical to determine the cumulative effect for all prior periods. The company decided to use the new method on a prospective basis. Is this acceptable under current GAAP?
- ASC4-4** **Scope** Describe the equity method for accounting for investments. In order to qualify for the equity method, describe the conditions that must be met.
- ASC4-5** **Measurement** Suppose that a company accounts for an investment using the equity method. Describe the appropriate accounting if the combined loss reported by the investee exceeds the investor's balance in the investment account.
- ASC4-6** **Recognition** Can a firm choose a fair value option for reporting some of its investments on the balance sheet? If so, describe the conditions that must be met.

## PROBLEMS

### PROBLEM 4-1 Parent Company Entries, Three Methods LO2

On January 1, 2011, Perelli Company purchased 90,000 of the 100,000 outstanding shares of common stock of Singer Company as a long-term investment. The purchase price of \$4,972,000 was paid in cash. At the purchase date, the balance sheet of Singer Company included the following:

|                              |             |
|------------------------------|-------------|
| Current assets               | \$2,926,550 |
| Long-term assets             | 3,894,530   |
| Other assets                 | 759,690     |
| Current liabilities          | 1,557,542   |
| Common stock, \$20 par value | 2,000,000   |
| Other contributed capital    | 1,891,400   |
| Retained earnings            | 1,621,000   |

Additional data on Singer Company for the four years following the purchase are:

|                            | 2011        | 2012      | 2013        | 2014        |
|----------------------------|-------------|-----------|-------------|-------------|
| Net income (loss)          | \$1,997,800 | \$476,000 | \$(179,600) | \$(323,800) |
| Cash dividends paid, 12/30 | 500,000     | 500,000   | 500,000     | 500,000     |

#### Required:

Prepare journal entries under each of the following methods to record the purchase and all investment-related subsequent events on the books of Perelli Company for the four years, assuming that any excess of purchase price

over equity acquired was attributable solely to an excess of market over book values of depreciable assets (with a remaining life of 15 years). (Assume straight-line depreciation.)

- A. Perelli uses the cost method to account for its investment in Singer.
- B. Perelli uses the partial equity method to account for its investment in Singer.
- C. Perelli uses the complete equity method to account for its investment in Singer.

**PROBLEM 4-2 Determine Method, Consolidated Workpaper, Wholly Owned Subsidiary LO5**

Parry Corporation acquired a 100% interest in Sent Company on January 1, 2011, paying \$140,000. Financial statement data for the two companies for the year ended December 31, 2011 follow:

| <i>Income Statement</i>            | <i>Parry</i> | <i>Sent</i> |
|------------------------------------|--------------|-------------|
| Sales                              | \$476,000    | \$154,500   |
| Cost of goods sold                 | 285,600      | 121,000     |
| Other expense                      | 45,500       | 29,500      |
| Dividend income                    | 3,500        | —0—         |
| <i>Retained Earnings Statement</i> |              |             |
| Balance, 1/1                       | 76,000       | 19,500      |
| Net income                         | 148,400      | 4,000       |
| Dividends declared                 | 17,500       | 3,500       |
| <i>Balance Sheet</i>               |              |             |
| Cash                               | 84,400       | 29,000      |
| Accounts receivable                | 76,000       | 56,500      |
| Inventory                          | 49,500       | 36,500      |
| Investment in Sent Company         | 140,000      | —0—         |
| Land                               | 4,000        | 12,000      |
| Accounts payable                   | 27,000       | 14,000      |
| Common stock                       | 120,000      | 100,000     |
| Retained earnings                  | 206,900      | 20,000      |

**Required:**

- A. What method is being used by Parry to account for its investment in Sent Company? How can you tell?
- B. Prepare a workpaper for the preparation of consolidated financial statements on December 31, 2011. Any difference between the book value of equity acquired and the value implied by the purchase price relates to subsidiary land.

**PROBLEM 4-3 Consolidated Workpaper, Wholly Owned Subsidiary**

Perkins Company acquired 100% of Schultz Company on January 1, 2012, for \$161,500. On December 31, 2012, the companies prepared the following trial balances:

|                               | <i>Perkins</i>   | <i>Schultz</i>   |
|-------------------------------|------------------|------------------|
| Cash                          | \$ 25,000        | \$ 30,000        |
| Inventory                     | 105,000          | 97,500           |
| Investment in Schultz Company | 222,000          | —0—              |
| Land                          | 111,000          | 97,000           |
| Cost of Goods Sold            | 225,000          | 59,500           |
| Other Expense                 | 40,000           | 40,000           |
| Dividends Declared            | 15,000           | 10,000           |
| Total Debits                  | <u>\$743,000</u> | <u>\$334,000</u> |
| Accounts Payable              | \$ 72,500        | \$ 17,500        |
| Capital Stock                 | 160,000          | 75,000           |
| Other Contributed Capital     | 35,000           | 17,500           |
| Retained Earnings, 1/1        | 25,000           | 54,000           |
| Sales                         | 380,000          | 170,000          |
| Equity in Subsidiary Income   | 70,500           | —0—              |
| Total Credits                 | <u>\$743,000</u> | <u>\$334,000</u> |

**Required:**

- A. What method is being used by Perkins to account for its investment in Schultz Company? How can you tell?
- B. Prepare a workpaper for the preparation of consolidated financial statements on December 31, 2012. Any difference between the book value of equity acquired and the value implied by the purchase price relates to goodwill.

**PROBLEM 4-4 Consolidated Workpaper, Partially Owned Subsidiary, Cost Method LO5**

Place Company purchased 92% of the common stock of Shaw, Inc. on January 1, 2012, for \$400,000. Trial balances at the end of 2012 for the companies were:

|                               | <i>Place</i>       | <i>Shaw</i>      |
|-------------------------------|--------------------|------------------|
| Cash                          | \$ 80,350          | \$ 87,000        |
| Accounts and Notes Receivable | 200,000            | 210,000          |
| Inventory, 1/1                | 70,000             | 50,000           |
| Investment in Shaw, Inc.      | 400,000            | —0—              |
| Plant Assets                  | 300,000            | 200,000          |
| Dividends Declared            | 35,000             | 22,000           |
| Purchases                     | 240,000            | 150,000          |
| Selling Expenses              | 28,000             | 20,000           |
| Other Expenses                | 15,000             | 13,000           |
|                               | <u>\$1,368,350</u> | <u>\$752,000</u> |
| Accounts and Notes Payable    | \$ 99,110          | \$ 38,000        |
| Other Liabilities             | 45,000             | 15,000           |
| Common Stock, \$10 par        | 150,000            | 100,000          |
| Other Contributed Capital     | 279,000            | 149,000          |
| Retained Earnings, 1/1        | 225,000            | 170,000          |
| Sales                         | 550,000            | 280,000          |
| Dividend Income               | 20,240             | —0—              |
|                               | <u>\$1,368,350</u> | <u>\$752,000</u> |

Inventory balances on December 31, 2012, were \$25,000 for Place and \$15,000 for Shaw, Inc. Shaw's accounts and notes payable contain a \$15,000 note payable to Place.

**Required:**

Prepare a workpaper for the preparation of consolidated financial statements on December 31, 2012. The difference between book value of equity acquired and the value implied by the purchase price relates to subsidiary land, which is included in plant assets.

**PROBLEM 4-5 Consolidated Workpaper, Partially Owned Subsidiary—Subsequent Years**

On January 1, 2012, Perez Company purchased 90% of the capital stock of Sanchez Company for \$85,000. Sanchez Company had capital stock of \$70,000 and retained earnings of \$12,000 at that time. On December 31, 2016, the trial balances of the two companies were:

|                               | <i>Perez</i>     | <i>Sanchez</i>   |
|-------------------------------|------------------|------------------|
| Cash                          | \$ 13,000        | \$ 14,000        |
| Accounts receivable           | 22,000           | 36,000           |
| Inventory, 1/1                | 14,000           | 8,000            |
| Advance to Sanchez Company    | 8,000            | —0—              |
| Investment in Sanchez Company | 85,000           | —0—              |
| Plant and equipment           | 50,000           | 44,000           |
| Land                          | 17,800           | 6,000            |
| Dividends declared            | 10,000           | 12,000           |
| Purchases                     | 84,000           | 20,000           |
| Other expense                 | 10,000           | 16,000           |
| Total debits                  | <u>\$313,800</u> | <u>\$156,000</u> |
| Accounts payable              | \$ 6,000         | \$ 6,000         |
| Other liabilities             | 37,000           | —0—              |
| Advance from Perez Company    | —0—              | 8,000            |
| Capital stock                 | 100,000          | 70,000           |
| Retained earnings             | 50,000           | 30,000           |
| Sales                         | 110,000          | 42,000           |
| Dividend income               | 10,800           | —0—              |
| Total credits                 | <u>\$313,800</u> | <u>\$156,000</u> |
| Inventory, 12/31              | <u>\$ 40,000</u> | <u>\$ 15,000</u> |

Any difference between book value and the value implied by the purchase price relates to goodwill.

**Required:**

- A. What method is being used by Perez to account for its investment in Sanchez Company? How can you tell?  
 B. Prepare a workpaper for the preparation of consolidated financial statements on 12/31/16.

**PROBLEM 4-6****Consolidated Workpaper, Partially Owned Subsidiary—Subsequent Years LO 5**

On January 1, 2011, Plank Company purchased 80% of the outstanding capital stock of Scoba Company for \$53,000. At that time, Scoba's stockholders' equity consisted of capital stock, \$55,000; other contributed capital, \$5,000; and retained earnings, \$4,000. On December 31, 2015, the two companies' trial balances were as follows:

|                             | <i>Plank</i>     | <i>Scoba</i>     |
|-----------------------------|------------------|------------------|
| Cash                        | \$ 42,000        | \$ 22,000        |
| Accounts Receivable         | 21,000           | 17,000           |
| Inventory                   | 15,000           | 8,000            |
| Investment in Scoba Company | 69,800           | —0—              |
| Land                        | 52,000           | 48,000           |
| Dividends Declared          | 10,000           | 8,000            |
| Cost of Goods Sold          | 85,400           | 20,000           |
| Other Expense               | 10,000           | 12,000           |
|                             | <u>\$305,200</u> | <u>\$135,000</u> |
| Accounts Payable            | \$ 12,000        | \$ 6,000         |
| Other Liabilities           | 5,000            | 4,000            |
| Capital Stock               | 100,000          | 55,000           |
| Other Contributed Capital   | 20,000           | 5,000            |
| Retained Earnings, 1/1      | 48,800           | 15,000           |
| Sales                       | 105,000          | 50,000           |
| Equity in Subsidiary Income | 14,400           | —0—              |
|                             | <u>\$305,200</u> | <u>\$135,000</u> |

The accounts payable of Scoba Company include \$3,000 payable to Plank Company.

**Required:**

- A. What method is being used by Plank to account for its investment in Scoba Company? How can you tell?  
 B. Prepare a consolidated statements workpaper at December 31, 2015. Any difference between book value and the value implied by the purchase price relates to subsidiary land.

**PROBLEM 4-7****Consolidated Workpaper, Partially Owned Subsidiary—Subsequent Years, Cost Method**

Price Company purchased 90% of the outstanding common stock of Score Company on January 1, 2011, for \$450,000. At that time, Score Company had stockholders' equity consisting of common stock, \$200,000; other contributed capital, \$160,000; and retained earnings, \$90,000. On December 31, 2015, trial balances for Price Company and Score Company were as follows:

|                              | <i>Price</i>       | <i>Score</i>       |
|------------------------------|--------------------|--------------------|
| Cash                         | \$ 109,000         | \$ 78,000          |
| Accounts Receivable          | 166,000            | 94,000             |
| Note Receivable              | 75,000             | —0—                |
| Inventory                    | 309,000            | 158,000            |
| Investment in Score Company  | 450,000            | —0—                |
| Plant and Equipment          | 940,000            | 420,000            |
| Land                         | 160,000            | 70,000             |

| Treasury Stock (10,000 shares at cost) | —0—                | 20,000             |
| Total Debits                           | <u>\$2,009,600</u> | <u>\$1,140,000</u> |
| Accounts Payable                       | \$ 96,000          | \$ 79,000          |
| Accrued Expenses                       | 31,000             | 18,000             |
| Notes Payable                          | 100,000            | 200,000            |
| Common Stock, \$1 par value            | 300,000            | 100,000            |
| Other Contributed Capital              | 150,000            | 80,000             |
| Retained Earnings, 1/1                 | 422,000            | 320,000            |
| Sales                                  | 880,000            | 340,000            |
| Dividend and Interest Income           | 30,600             | 3,000              |
| Total Credits                          | <u>\$2,009,600</u> | <u>\$1,140,000</u> |

Pledge Company purchased 72,000 shares of Stom Company's common stock on January 1, 2011, for \$300,000. On that date, Stom Company's stockholders' equity was as follows:

|  |                  |
|--|------------------|
| Common Stock, \$1 par value            | \$100,000        |
| Other Contributed Capital              | 80,000           |
| Retained Earnings                      | 160,000          |
| Treasury Stock (10,000 shares at cost) | <u>(20,000)</u>  |
| Total                                  | <u>\$320,000</u> |

**Additional information:**

1. Receivables of Pledge Company include a \$55,000, 12% note receivable from Stom Company.
2. Interest amounting to \$6,600 has been accrued by each company on the note payable from Stom to Pledge. Stom Company has not yet paid this interest.
3. The difference between book value and the value implied by the purchase price relates to subsidiary land.

**Required:**

Prepare a consolidated statements workpaper for the year ended December 31, 2014.

**PROBLEM 4-10 Consolidated Workpaper, Equity Method LO5**

Poco Company purchased 80% of Solo Company's common stock on January 1, 2012, for \$250,000. On December 31, 2012, the companies prepared the following trial balances:

|                             | <i>Poco</i>        | <i>Solo</i>      |
|-----------------------------|--------------------|------------------|
| Cash                        | \$ 161,500         | \$125,000        |
| Inventory                   | 210,000            | 195,000          |
| Investment in Solo Company  | 402,000            | —0—              |
| Land                        | 75,000             | 150,000          |
| Cost of Goods Sold          | 410,000            | 125,000          |

| Dividends Declared          | 30,000             | 15,000           |
| Total Debits                | <u>\$1,388,500</u> | <u>\$690,000</u> |
| Accounts Payable            | \$ 154,500         | \$ 35,000        |
| Common Stock                | 200,000            | 150,000          |
| Other Contributed Capital   | 60,000             | 35,000           |
| Retained Earnings, 1/1      | 50,000             | 60,000           |
| Sales                       | 760,000            | 410,000          |
| Equity in Subsidiary Income | 164,000            | —0—              |
| Total Credits               | <u>\$1,388,500</u> | <u>\$690,000</u> |

**Required:**

Prepare a consolidated statements workpaper on December 31, 2012. Any difference between book value and the value implied by the purchase price relates to goodwill.

**PROBLEM 4-11 Consolidated Workpaper, Equity Method LO5**

(Note that this is the same problem as Problem 4-7, but assuming the use of the partial equity method.)

Price Company purchased 90% of the outstanding common stock of Score Company on January 1, 2011, for \$450,000. At that time, Score Company had stockholders' equity consisting of common stock, \$200,000; other contributed capital, \$160,000; and retained earnings, \$90,000. On December 31, 2015, trial balances for Price Company and Score Company were as follows:

|                             | <i>Price</i>       | <i>Score</i>       |
|-----------------------------|--------------------|--------------------|
| Cash                        | \$ 109,000         | \$ 78,000          |
| Accounts Receivable         | 166,000            | 94,000             |
| Note Receivable             | 75,000             | —0—                |
| Inventory                   | 309,000            | 158,000            |
| Investment in Score Company | 633,600            | —0—                |
| Plant and Equipment         | 940,000            | 420,000            |
| Land                        | 160,000            | 70,000             |
| Dividends Declared          | 70,000             | 50,000             |
| Cost of Goods Sold          | 822,000            | 242,000            |
| Operating Expenses          | 250,500            | 124,000            |
| Total Debits                | <u>\$3,535,100</u> | <u>\$1,236,000</u> |
| Accounts Payable            | \$ 132,000         | \$ 46,000          |
| Notes Payable               | 300,000            | 120,000            |
| Common Stock                | 500,000            | 200,000            |
| Other Contributed Capital   | 260,000            | 160,000            |
| Retained Earnings, 1/1      | 795,000            | 210,000            |
| Sales                       | 1,420,000          | 500,000            |
| Equity in Subsidiary Income | 120,600            | —0—                |
| Interest Income             | 7,500              | —0—                |
| Total Credits               | <u>\$3,535,100</u> | <u>\$1,236,000</u> |

Price Company's note receivable is receivable from Score Company. Interest of \$7,500 was paid by Score to Price during 2015. Any difference between book value and the value implied by the purchase price relates to goodwill.

**Required:**

Prepare a consolidated statements workpaper on December 31, 2015.

**PROBLEM 4-12 Equity Method, Two Consecutive Years LO5**

On January 1, 2012, Parker Company purchased 90% of the outstanding common stock of Sid Company for \$180,000. At that time, Sid's stockholders' equity consisted of common stock, \$120,000; other contributed capital, \$20,000; and retained earnings, \$25,000. Assume that any difference between book value of equity and the value implied by the purchase price is attributable to land. On December 31, 2012, the two companies' trial balances were as follows:

|                              | <i>Parker</i>    | <i>Sid</i>       |
|------------------------------|------------------|------------------|
| Cash                         | \$ 65,000        | \$ 35,000        |
| Accounts Receivable          | 40,000           | 30,000           |

| Accounts Payable                       | \$ 96,000          | \$ 79,000          |
| Accrued Expenses                       | 31,000             | 18,000             |
| Notes Payable                          | 100,000            | 200,000            |
| Common Stock, \$1 par value            | 300,000            | 100,000            |
| Other Contributed Capital              | 150,000            | 80,000             |
| Retained Earnings, 1/1                 | 550,000            | 320,000            |
| Sales                                  | 880,000            | 340,000            |
| Equity in Subsidiary Income            | 74,400             | —0—                |
| Interest Income                        | <u>6,600</u>       | <u>3,000</u>       |
| Total Credits                          | <u>\$2,188,000</u> | <u>\$1,140,000</u> |

Pledge Company purchased 72,000 shares of Stom Company's common stock on January 1, 2011, for \$300,000. On that date, Stom Company's stockholders' equity was as follows:

|  |                  |
|--|------------------|
| Common Stock, \$1 par value            | \$100,000        |
| Other Contributed Capital              | 80,000           |
| Retained Earnings                      | 160,000          |
| Treasury Stock (10,000 shares at cost) | <u>(20,000)</u>  |
| Total                                  | <u>\$320,000</u> |

**Other information:**

1. Receivables of Pledge Company include a \$55,000, 12% note receivable from Stom Company.
2. Interest amounting to \$6,600 has been accrued by each company on the note payable from Stom to Pledge. Stom Company has not yet paid this interest.
3. The difference between book value and the value implied by the purchase price relates to subsidiary land.

**Required:**

Prepare a consolidated statements workpaper for the year ended December 31, 2014. Note that the percentage purchased is based on outstanding shares of Stom and not issued shares.

**PROBLEM 4-14 Interim Purchase, Cost Method LO 6**

Punca Company purchased 85% of the common stock of Surrano Company on July 1, 2012, for a cash payment of \$590,000. December 31, 2012, trial balances for Punca and Surrano were:

|                                    | <i>Punca</i>       | <i>Surrano</i>     |
|------------------------------------|--------------------|--------------------|

SCR, Inc. declared and paid an \$8,000 dividend during 2014.

**Required:**

Prepare a consolidated statement of cash flows using the direct method.

**PROBLEM 4-18 Consolidated Statement of Cash Flows—Interim Acquisition—Cost Method**

On April 1, Year 1, Company P purchased 85% of S Company for total consideration of \$357,000, which included \$30,000 of contingent consideration as measured according to GAAP at fair value. Each company has a December 31 year-end. The cost method is used to account for the investment in S. The income statements, balance sheets, and the statements of cash flows for relevant time periods are reported below along with consolidated numbers. On the acquisition date, land on Company S's books is undervalued by \$40,000. Any remaining excess of purchase price over fair value of net assets is attributed to goodwill. At the end of Year 1, Company S declared, but did not pay, a \$30,000 dividend. The contingent consideration had increased in fair value to \$36,600 as of December 31, Year 1. The financial statements are presented below.

| <i>Income Statement</i>           | <i>Three Months ending</i> |                | <i>For the Year ending</i> |                | <i>Consolidated</i> |

**Required:**

1. Prepare the computation and allocation of difference between implied and book value acquired schedule on the date of acquisition.
2. Prepare the consolidated workpaper for year 1.
3. Examine the consolidated statement of cash flows prepared using the indirect format.

Determine how the following amounts were computed and indicate the direction of the change in the account and the effect of the change on cash from operations.

- a. Controlling interest in income, \$148,620
- b. Cash paid for acquisitions, \$320,400
- c. The change in accounts receivable, \$15,300
- d. The change in inventory, (\$15,600)
- e. The change in accounts and notes payable, \$61,500

**PROBLEM 4-19 Consolidated Statement of Cash Flows—Interim Acquisition—Complete Equity Method**

On April 1, Year 1, Company P purchased 85% of S Company for total consideration of \$357,000, which included \$30,000 of contingent consideration as measured according to GAAP at fair value. Each company has a December 31 year-end. The complete equity method is used to account for the investment in S. The income statements, balance sheets, and the statements of cash flows for relevant time periods are reported below along with consolidated numbers. On the acquisition date, land on Company S's books is undervalued by \$40,000. Any remaining excess of purchase price over fair value of net assets is attributed to goodwill. At the end of Year 1, Company S declared, but did not pay, a \$30,000 dividend. The contingent consideration had increased in fair value to \$36,600 as of December 31, Year 1. The financial statements are presented below.

- Prepare the computation and allocation of difference between implied and book value acquired schedule on the date of acquisition.
- Prepare the consolidated workpaper for year 1.
- Examine the consolidated statement of cash flows prepared using the indirect format. Determine how the following amounts were computed and indicate the direction of the change in the account and the effect of the change on cash from operations.
  - Controlling interest in income, \$148,620
  - Cash paid for acquisitions, \$320,400
  - The change in accounts receivable, \$15,300
  - The change in inventory, (\$15,600)
  - The change in accounts and notes payable, \$61,500

**PROBLEM 4-20 Interim Acquisition, Contingent Consideration, Cost Method**

Pcost Company purchased 85% of the common stock of Scost Company on April 1, Year 1. The fair value of the consideration transferred consisted of a cash payment of \$545,000 and contingent consideration as described in the earnout agreement below. Under the agreement, Pcost Company agrees to pay an earn-out (contingent consideration) to the stockholders of Scost as part of the consideration for their shares. The Company has the option of paying any earn-out in cash and/or shares of its common stock and has estimated the fair value of the contingent consideration to be \$50,000. Acquisition-related costs of \$20,000 are included in other expenses. Scost will become a reportable segment for consolidated purposes. No control premium was included in the offer price.

Both companies have a December 31 year-end. Trial balances for Pcost and Scost on April 1, Year 1 were:

| Dividends Payable                  | —0—                       | —0—                 |
| Common Stock, \$5 par value        | 270,000                   | 40,000              |
| Other Contributed Capital          | 900,000                   | 250,000             |
| Retained Earnings, 1/1             | 355,000                   | 241,000             |
| Sales                              | 525,000                   | 325,000             |
| Dividend Income                    | —0—                       | —0—                 |
| Total                              | <u>\$2,315,000</u>        | <u>\$1,012,000</u>  |

On the acquisition date, the book values and fair values of Scost's assets and liabilities were equal with the following exceptions.

|                        | <u><i>Book Value</i></u> | <u><i>Fair Value</i></u> |
|------------------------|--------------------------|--------------------------|
| Inventory              | 116,000                  | 146,000                  |
| Property and Equipment | 465,000                  | 507,000                  |

The increase in Property and Equipment will be depreciated over seven years. All fair value estimates will be considered final (no measurement period adjustments).

**Earnout (Contingent Consideration) Agreement—Pcost and Scost Company April 1, Year 1**

The agreed-upon earn-out has three components. If the yearly revenue of Scost exceeds a target level at the end of years 1, 2, and 3, Pcost will pay the shareholders of Scost an amount equal to 50% of the excess, up to \$85,000 per year for a maximum earn-out payment of \$255,000 in total.

The initial target revenue level for year 1 is \$1,300,000 and increases in amount by 5% per year. Target levels in years 2 and 3 will be \$1,365,000 and \$1,433,250. Pcost estimates the fair value of the earn-out using the present value of expected payments and its incremental borrowing rate adjusted for risk of 20%. The fair value of the three earn-outs was estimated to be \$50,000 on the date of acquisition, computed as follows:

**Fair Value of Contingent Consideration**

|                             | <i>Year 1</i>    | <i>Year 2</i>    | <i>Year 3</i>    | <i>Total</i> |
|-----------------------------|------------------|------------------|------------------|--------------|
| Estimated Revenues of Scost | \$1,300,000      | \$1,415,600      | \$1,541,250      |              |
| Target level Revenues       | <u>1,300,000</u> | <u>1,365,000</u> | <u>4,433,250</u> |              |
| Estimated excess            | 0                | 50,600           | 108,000          |              |
| Reduced by 50%              | <u>0.50</u>      | <u>0.50</u>      | <u>0.50</u>      |              |
| Potential payout            | 0                | 25,300           | 54,000           |              |
| Present value factor        | <u>0.876</u>     | <u>0.719</u>     | <u>0.589</u>     |              |
| Fair value of earn-out      | 0                | 18,180           | 31,820           | \$50,000     |

Changes in fair value and interest charges are included in “other expense (income)” on the income statement.

**Required:**

1. Prepare a consolidated balance sheet on the date of acquisition. You can assume that Scost closes its books on this date to facilitate consolidation.
2. Suppose that a control premium was included in the 85% interest acquired by Scost, and that a level 3 estimation of the valuation of Scost shares amounted to \$79 per share (Pcost’s purchase price of \$595,000 implies a purchase price of \$87.50 per share). Prepare the journal entry needed to eliminate the investment account on the date of acquisition. Highlight the changes from part 1.

**PROBLEM 4-21 Interim Acquisition, Contingent Consideration, Complete Equity Method**

Pequity Company purchased 85% of the common stock of Sequity Company on April 1, Year 1. The fair value of the consideration transferred consisted of a cash payment of \$545,000 and contingent consideration as described in the earnout agreement below. Under the agreement, Pequity Company agrees to pay an earn-out (contingent consideration) to the stockholders of Sequity as part of the consideration for their shares. The Company has the option of paying any earn-out in cash and/or shares of its common stock and has estimated the fair value of the contingent consideration to be \$50,000. Acquisition-related costs of \$20,000 are included in other expenses. Sequity will become a reportable segment for consolidated purposes. No control premium was included in the offer price.

Both companies have a December 31 year-end. Trial balances for Pequity and Sequity on April 1, Year 1 were:

|                                    | <i>At April 1, Year 1</i> |                       |
|------------------------------------|---------------------------|-----------------------|
|                                    | <u><i>Pequity</i></u>     | <u><i>Sequity</i></u> |
| Cash                               | \$ 28,000                 | \$ 11,000             |
| Accounts Receivables               | 124,000                   | 121,000               |
| Inventory                          | 229,000                   | 116,000               |

| Dividends Payable                  | —0—                       | —0—                   |
| Common Stock, \$5 par Value        | 270,000                   | 40,000                |
| Other Contributed Capital          | 900,000                   | 250,000               |
| Retained Earnings, 1/1             | 355,000                   | 241,000               |
| Sales                              | 525,000                   | 325,000               |
| Dividend Income                    | —0—                       | —0—                   |
| Total                              | <u>\$2,315,000</u>        | <u>\$1,012,000</u>    |

On the acquisition date, the book values and fair values of Sequity's assets and liabilities were equal with the following exceptions.

|                        | <u>Book Value</u> | <u>Fair Value</u> |
|------------------------|-------------------|-------------------|
| Inventory              | 116,000           | 146,000           |
| Property and Equipment | 465,000           | 507,000           |

The increase in Property and Equipment will be depreciated over seven years. All fair value estimates were considered final (no measurement period adjustments).

**Earnout (Contingent Consideration) Agreement—Pequity and Sequity Company April 1, Year 1**

The agreed-upon earn-out has three components. If the yearly revenue of Sequity exceeds a target level at the end of years 1, 2, and 3, Pequity will pay the shareholders of Sequity an amount equal to 50% of the excess, up to \$85,000 per year for a maximum earn-out payment of \$255,000 in total.

The initial target revenue level for year 1 is \$1,300,000 and increases in amount by 5% per year. Target levels in years 2 and 3 will be \$1,365,000 and \$1,433,250. Pequity estimates the fair value of the earn-out using the present value of expected payments and its incremental borrowing rate adjusted for risk of 20%. The fair value of the three earn-outs was estimated to be \$50,000 on the date of acquisition, computed as follows:

**Fair Value of Contingent Consideration**

|                               | <u>Year 1</u>    | <u>Year 2</u>    | <u>Year 3</u>    | <u>Total</u> |
|-------------------------------|------------------|------------------|------------------|--------------|
| Estimated Revenues of Sequity | \$1,300,000      | \$1,415,600      | \$1,541,250      |              |
| Target level Revenues         | <u>1,300,000</u> | <u>1,365,000</u> | <u>4,433,250</u> |              |
| Estimated Excess              | 0                | 50,600           | 108,000          |              |
| Reduced by 50%                | <u>0.50</u>      | <u>0.50</u>      | <u>0.50</u>      |              |
| Potential Payout              | 0                | 25,300           | 54,000           |              |
| Present Value Factor          | <u>0.876</u>     | <u>0.719</u>     | <u>0.589</u>     |              |
| Fair value of Earn-Out        | <u>0</u>         | <u>18,180</u>    | <u>31,820</u>    | \$50,000     |

Changes in fair value and interest charges are included in "other expense (income)" on the income statement.

**Required:**

1. Prepare a consolidated balance sheet on the date of acquisition. You can assume that Sequity closes its books on this date to facilitate consolidation.
2. Suppose that a control premium was included in the 85% interest acquired by Sequity, and that a level 3 estimation of the valuation of Sequity shares amounted to \$79 per share (Pequity's purchase price of \$595,000 implies a price of \$87.50 per share). Prepare the journal entry needed to eliminate the investment account on the date of acquisition. Highlight the changes from part 1.

# Chapter 4

## APPENDIX 4A – ALTERNATIVE WORKPAPER FORMAT (ONLINE)

---

A variety of workpaper formats may be used in the preparation of consolidated financial statements. They may be classified generally into two categories, the three-division workpaper format used in this text, and the trial balance format. In the three-divisional format the account balances of the individual firms are first arranged into financial statement format. In contrast, in the trial balance format, columns are provided for the trial balances, the elimination entries, and normally, each financial statement to be prepared, except for the statement of cash flows.

The consolidated balances derived in a workpaper are the same regardless of the format selected. The statement preparer with a sound understanding of consolidation principles should be able to adapt quite easily to alternative workpaper formats. However, the reader may want to develop a familiarity with the trial balance format, since this format may be used by some companies.

To illustrate the trial balance workpaper format, and at the same time to verify that the results are the same as they would be if the three-divisional format were used, the same facts used in the preparation of Illustration 4-5 are assumed in Illustration 4-20.

The steps in the preparation of the workpaper are: (1) The trial balances of the individual affiliates are entered in the first two columns. In this case, the debit account balances are separated from the credit account balances. Or the accounts can be listed as they appear in the ledger. A debit column and a credit column may be provided for each firm or one column may be used and the credit balances identified by parentheses. (2) The account balances are analyzed, and the required adjustments and eliminations are entered in the next two vertical columns. (3) The net adjusted balances are extended to the appropriate columns. Separate columns are provided to accumulate the account balances needed for the preparation of the consolidated income statement, retained earnings statement, and balance sheet. In addition, an optional column is provided for the identification of the noncontrolling interest. (4) Once the accounts are extended, the consolidated net income is computed from the income statement column and allocated between the noncontrolling and controlling interests. (5) The consolidated retained earnings balance and total noncontrolling interest in equity can now be computed. The amounts are extended to the final column and should balance the liabilities and equities with the total assets. The reader will observe that these procedures are similar to the preparation of an eight-column worksheet developed to facilitate the preparation of financial statements for an individual firm.

A comparison of the elimination entries in Illustration 4-20 with those of Illustration 4-5 will reveal that the entries are the same, regardless of the form of workpaper used to accumulate the consolidated balances.

| Cost Method  |                | ILLUSTRATION 4-20   |                |                |                                     |   |                            |                                  |

(1) To establish reciprocity as of 1/1/2016 [(\$60,000 - \$40,000) × .80].

(2) To eliminate the investment account and create noncontrolling interest account.

(3) To allocate the difference between implied and book value to land.

(4) To eliminate intercompany dividends.

## APPENDIX 4B – DEFERRED TAX CONSEQUENCES WHEN AFFILIATES FILE SEPARATE INCOME TAX RETURNS—UNDISTRIBUTED INCOME

When a parent company owns at least 80% of a domestic subsidiary, the companies generally elect to file a consolidated income tax return. If they do not elect to file a joint return or parent company owns less than 80%, the companies file separate tax returns. In these cases, the parent includes the amount of dividends received from the investment on its own tax return. In the main body of this text, we have assumed that the affiliates (80% or more ownership levels) file a consolidated income tax return. Deferred tax issues are discussed in the appendices.

What happens when the companies do not file consolidated tax returns and file separate tax returns? Deferred tax consequences can arise since differences usually exist between the time income is reported in the consolidated financial statements and the time such income is included in the taxable income of the separate affiliates. Two major topics require attention in addressing the treatment of deferred income tax consequences when the affiliates each file separate income tax returns:

1. Undistributed subsidiary income (Appendix B of Chapter 4).
2. Elimination of unrealized intercompany profit (discussed in the appendices to Chapters 6 and 7).

### Consolidated Tax Returns—Affiliated Companies (80% or More Ownership Levels)

When affiliated companies elect to file one consolidated return, the tax expense amount is computed on the consolidated workpapers rather than on the individual books of the parent and subsidiary. The amount of tax expense attributed to each company is computed from combined income and allocated back to each company's books.

When consolidated income tax returns are filed, temporary differences generally do not arise in the preparation of consolidated financial statements. For example, unrealized intercompany profit is generally treated the same way in calculating both consolidated taxable income and consolidated net income on the consolidated income statement. Thus, no timing differences arise because of the elimination of unrealized intercompany profit.

### Separate Tax Returns—Deferred Tax Consequences Arising Because of Undistributed Subsidiary Income

When separate tax returns are filed, the parent company will include dividends received from the subsidiary in its taxable income, while the subsidiary's reported income is included in **consolidated net income**. Thus the difference between the subsidiary's income and dividends paid represents a temporary difference because eventually this undistributed amount will be realized through future dividends or upon sale of the subsidiary. Deferred taxes must be recorded on the books of the parent or in the consolidating workpaper for the economic entity in the amount of undistributed income to the **consolidated entity**. Whether the deferred taxes are recorded by the parent company or are only recorded in the workpaper consolidated entries depends on how the parent accounts for its investment in the subsidiary—cost versus equity. Both methods are illustrated in the following sections of this appendix.

The measurement of the deferred tax consequences of the undistributed income of a subsidiary depends on assumptions as to the nature of the transaction(s) that result in the future taxation of the undistributed income. If the parent company's equity in the undistributed income is expected to be realized in the form of a taxable dividend, the deferred tax amount is computed considering all available tax credits and exclusions. Federal income tax rules permit a portion of the dividends received from a domestic

subsidiary to be excluded from taxable income. Under current federal income tax rules, the following amount of dividends can be excluded from taxable income for a given level of ownership:

| <i>Ownership Percentage<br/>in Subsidiary</i> | <i>Amount of Dividends Excluded<br/>from Taxable Income</i> |
|---|---|
| 80% or more                                   | 100% of Dividends Excluded                                  |
| 20% up to 80%                                 | 80% of Dividends Excluded                                   |
| Less than 20%                                 | 70% of Dividends Excluded                                   |

Thus, when the undistributed income of the subsidiary is expected to be received in the form of future dividend distributions, the dividends-received exclusion must be considered. On the other hand, if the undistributed earnings of the subsidiary is not expected to be realized until the subsidiary is sold, the dividends-received exclusion is not used in computing deferred taxes. In this case, the capital gains tax rate is used to compute deferred taxes.

*APB (Accounting Principles Board) Opinion No. 23* allowed firms to demonstrate that undistributed subsidiary earnings are permanently reinvested and no timing differences are created. This indefinite reversal rule was eliminated by *SFAS No. 109*, which requires deferred taxes to be recorded for undistributed income.

## The Cost Method—Separate Tax Returns

Assume that the parent uses the cost method to account for the investment and that both the parent and the subsidiary file separate tax returns. This means each company records a tax provision based on the items reported on its individual books. Tax consequences relating to undistributed income are not recorded on the books of the parent company when the investment in the subsidiary is recorded using the cost method. This is because dividends are recognized as income on the parent's income statement and tax return. Therefore, no timing differences occur. However, for consolidation purposes, equity income is recognized on the income statement, while dividends are included on the tax return, creating a timing difference for consolidation purposes. Thus, **workpaper** entries are necessary each year to report the income tax consequences of past and current undistributed income.

To illustrate, assume that P Company owns 75% of the voting stock of S Company. The stock was acquired on January 1, 2016, when S Company's retained earnings amounted to \$150,000. In the year of acquisition (2016), S Company reported net income of \$90,000 and paid dividends of \$30,000. Since P Company is filing a separate tax return, P Company reports \$22,500 of dividend income (75% of S Company's dividends of \$30,000) as income on its tax return. However, on the consolidated income statement, 75% of S Company's income, or \$67,500, is reported as income. Assume that the undistributed income of \$45,000 (75% of \$90,000 less \$30,000) is expected to be paid as a future dividend and is expected to be included on the tax return in some future years. Because the \$45,000 will become future income, deferred taxes must be computed using this amount after considering the dividend exclusion rules (80% of dividends are excluded for 75% ownership).<sup>4</sup> The tax rate is assumed to be 40%, and the capital gains rate is assumed to be 25% in this example.

<sup>4</sup> Note that P Company pays taxes of \$1,800 on the \$22,500 of dividends received from S Company ( $40\% \times 20\%$  not excluded  $\times$  \$22,500). Therefore, combining the taxes paid on the dividend income of \$1,800 and the tax expense of \$3,600 recognized on the undistributed income totals a tax amount of \$5,400. This equals the amount of taxes that would be owed if the entire amount of S Company's income was paid in dividends during the year ( $\$90,000 \times 75\% \times 20\% \times 40\%$ ).

The following workpaper entry is needed at the end of 2016:

| <b>Workpaper Entry—Cost Method—Year of Acquisition (2016)</b>          |       |       |
|--|-------|-------|
| <b>Undistributed Income Expected to Be Received as Future Dividend</b> |       |       |
| Tax Expense*   | 3,600 |       |
| Deferred Tax Liability   |       | 3,600 |

*\*Undistributed Income Expected to Be Received as Future Dividends*

|   |          |
|---|----------|
| P Company's share of undistributed income expected to be received as a future dividend (75% × \$60,000) | \$45,000 |
| Percent of future dividends that are taxed  | 20%      |
| Future dividends that will be taxed   | \$ 9,000 |
| Income tax rate   | 40%      |
| Deferred tax liability  | \$ 3,600 |

At the end of the next year (2017), suppose that S Company's ending retained earnings is \$320,000. Total undistributed earnings since acquisition are \$170,000, or \$320,000 less \$150,000. P Company's share of undistributed earnings is \$127,500 (or 75% of \$170,000), including \$45,000 from year 2016 and \$82,500 from year 2017. Therefore, the amount of total deferred tax liability at the end of the second year can be computed as follows:

| <i>Undistributed Income Expected to Be Received as Future Dividends</i>        |                  |                  |                  |
|--|------------------|------------------|------------------|
|  | <i>Year 2016</i> | <i>Year 2017</i> | <i>Total</i>     |
| P Company's share of undistributed income expected to be received as dividends | \$45,000         | \$82,500         | \$127,500        |
| Percent of future dividends that are taxed                                     | 20%              | 20%              | 20%              |
| Future dividends that will be taxed  | \$ 9,000         | \$16,500         | \$ 25,500        |
| Tax rate   | 40%              | 40%              | 40%              |
| Deferred tax liability   | <u>\$ 3,600</u>  | <u>\$ 6,600</u>  | <u>\$ 10,200</u> |

The workpaper entry for the subsequent year is as follows:

| <b>Workpaper Entry—Cost Method—Year Subsequent to Acquisition (2017)</b> |       |        |
|--|-------|--------|
| <b>Undistributed Income Expected to Be Received as Future Dividend</b>   |       |        |
| Beginning Retained Earnings—P Company (prior year deferred taxes)        | 3,600 |        |
| Tax Expense (current year deferred taxes)                                | 6,600 |        |
| Deferred Tax Liability   |       | 10,200 |

The debit to the beginning balance of P Company's retained earnings for each subsequent year reflects the sum of the debits from the *prior year's* deferred tax workpaper entry to tax expense and beginning retained earnings, if any. This is the estimated tax on P Company's share of the undistributed income of S Company from the date of acquisition to the beginning of the current year. If tax rates change, the adjustment to the deferred tax liability flows through the current deferred tax expense. Thus, the debit to beginning retained earnings is still the same as the credit made to the deferred tax liability in the prior year's workpaper.

## Undistributed Income Is Expected to Be Realized When the Subsidiary Is Sold

If the undistributed income is not expected to be received as a future dividend but is expected to be realized when the investment is sold, the undistributed income is taxed at the capital gains rate as shown below:

| <i>Undistributed Income Expected to Be Received as Future Capital Gain</i>                        |                  |                  |                  |
|---|------------------|------------------|------------------|
|   | <i>Year 2016</i> | <i>Year 2017</i> | <i>Total</i>     |
| P Company's share of undistributed income expected to be realized in the future as a capital gain | \$45,000         | \$82,500         | \$127,500        |
| Capital Gains Tax rate  | 25%              | 25%              | 25%              |
| Deferred tax liability  | <u>\$11,250</u>  | <u>\$20,625</u>  | <u>\$ 31,875</u> |

Note that the 80% dividend exclusion is ignored. In addition, the appropriate tax rate to use is the capital gains tax rate.

The workpaper entries at the end of 2016 and 2017 to report the income tax consequences are as follows:

**Workpaper Entry—Cost Method—Year of Acquisition and Year Subsequent to Acquisition (2016 and 2017)**

**Undistributed Income Expected to Be Received as Gain upon Sale of Subsidiary**

**Year 2016**

|                        |        |        |
|------------------------|--------|--------|
| Tax Expense            | 11,250 |        |
| Deferred Tax Liability |        | 11,250 |

**Year 2017**

|  |        |        |
|--|--------|--------|
| Beginning Retained Earnings 1/1—P Company (prior year) | 11,250 |        |
| Tax Expense (current year deferred taxes)              | 20,625 |        |
| Deferred Tax Liability                                 |        | 31,875 |

A similar workpaper entry is needed every year.

## The Partial and Complete Equity Methods—Separate Tax Returns

If the equity method is used to account for the investment, there is a timing difference between books and tax on the books of the parent. Equity income is reported on the parent's income statement while dividends are included on the tax return. Therefore, deferred taxes on the parent's books must reflect the amount of undistributed income in the subsidiary. Generally, the parent will only make deferred tax entries if less than 80% of the subsidiary is owned since there is a 100% dividend exclusion for higher ownership percentages (regardless of whether the undistributed income is expected to be realized as a dividend or as a capital gain).

Consider the following example. P Company owns 75% of the voting stock of S Company. The stock was acquired on January 1, 2016, when S Company's retained earnings amounted to \$150,000. In the year of acquisition (2016), S Company reported net income of \$90,000 and paid dividends of \$30,000. Since P Company is filing a separate tax return, P Company's income earned from the investment reported on the tax return is not the equity income but the amount of dividends received, \$22,500 (75% of S Company's dividends of \$30,000).

However, on the consolidated income statement, 75% of S Company's income, or \$67,500, is reported as equity income. Assume that the undistributed income of \$45,000 (75% of \$90,000 less \$30,000) is expected to be paid as a future dividend and will be included on the tax return in some future years. Because the \$45,000 is reported as current period equity income and is expected to be included on future tax returns when received either as a dividend or a capital gain, deferred taxes on this timing difference must be computed. If expected as a future dividend, the timing difference is computed after considering any dividend exclusion rules (80% excluded for 75% ownership). The current tax rate is assumed to be 40% and the capital gains tax rate to be 25%.

The entries on P Company's books for equity income and the receipt of dividends are as follows:

**P Company Books—Partial and Complete Equity Methods**

|  |        |        |
|--|--------|--------|
| Investment in S Company  | 67,500 |        |
| Equity in S Company Income   |        | 67,500 |
| To record 75% of S Company income (\$90,000).                          |        |        |
| Cash   | 22,500 |        |
| Investment in S Company  |        | 22,500 |
| To record the receipt of 75% of S Company's dividends paid (\$30,000). |        |        |

Because P Company prepares its own tax return, the undistributed earnings of \$45,000 (the \$67,500 income less the dividends of \$22,500) represents a timing difference.

The following entry assumes that the undistributed income is expected to be received as a future dividend and only 20% is taxable (80% dividend exclusion). This entry adjusts tax expense and the deferred tax liability on P Company's books:

| <b>P Company Books—Partial and Complete Equity Methods</b>                      |       |       |
|---|-------|-------|
| <b><i>Undistributed Income Expected to Be Received as a Future Dividend</i></b> |       |       |
| Tax expense ( $45,000 \times .2 \times .4$ )                                    | 3,600 |       |
| Deferred Tax Liability  |       | 3,600 |

Note that this entry is an adjustment of P Company's tax expense and not the equity income account. Because of this, no special workpaper entries are needed for deferred taxes if the equity method is used to account for the investment.

If the undistributed income is expected to be realized as a capital gain when the subsidiary is sold, the following entry would be made on P Company's books:

| <b>P Company Books—Partial and Complete Equity Methods</b>                   |        |        |
|--|--------|--------|
| <b><i>Undistributed Income Expected to Be Received as a Capital Gain</i></b> |        |        |
| Tax Expense ( $45,000 \times .25$ )  | 11,250 |        |
| Deferred Tax Liability   |        | 11,250 |

In this case, the 80% dividend exclusion is ignored. Because the entry is made on the books of P Company, again no workpaper entry is needed for deferred taxes in this instance under the equity method.

## Chapter 4 – Review Questions

The review questions accompanying this course are designed to assist you in achieving the course learning objectives. The review section is not graded; do not submit it in place of your qualified assessment. While completing the review questions, it may be helpful to study any unfamiliar terms in the glossary in addition to course content. After completing the review questions, proceed to the review question answers and rationales.

18. Which of the following is accurate regarding the requirements on a parent company for accounting for the subsidiary?
  - a. If the investor owns less than 20%, they are considered to have no significant influence but would need to use the equity method if they owned between 10% and 20%.
  - b. Any ownership percentage greater than 40% is presumed to be effective control unless a single shareholder owns a block in excess of 40%.
  - c. “Significant influence” ranges from 10% to 40% depending on the facts and circumstances.
  - d. The parent company has a certain amount of discretion over how it accounts for its investment in the subsidiary internally unless the parent issues parent-only financial statements for any reason.
  
19. A liquidating dividend:
  - a. Occurs when the investee company repurchases some of its stock from the investor.
  - b. Occurs when the cumulative amount of its dividends declared exceed its cumulative reported earnings after acquisition.
  - c. Is treated as a gain if the amount per share exceeds the original cost per share.
  - d. Is recorded as dividend income on the books of the investor company.
  
20. The computation and allocation difference schedule:
  - a. Will only be calculated at the acquisition date and will remain unchanged over time.
  - b. Will change at each balance sheet date.
  - c. Will reflect the same difference between implied value and book value as at the acquisition date; however, the makeup of that distribution may shift over time.
  - d. Is only necessary when recording the investment at acquisition.

21. Which of the following statements is accurate about preparing the consolidation workpapers?
- It is best to prepare three separate workpapers, one for each financial statement.
  - Elimination entries should be documented in journal entry form, numbered, and “nicknamed” to describe the reason for the entry.
  - Only the controlling interest share of net income from the income statement is transferred to the retained earnings statement.
  - In the years after acquisition, the retained earnings of the subsidiary is eliminated in the balance sheet section of the workpapers.
22. The entry to establish reciprocity or convert from the cost to the equity method usually involves a debit to investment in subsidiary and a credit to:
- Subsidiary end-of-year retained earnings.
  - Parent end-of-year retained earnings.
  - Parent beginning-of-year retained earnings.
  - Subsidiary beginning-of-year retained earnings.
23. Under the cost method:
- Income is recorded by the parent company when it is distributed as dividends.
  - Income is recorded on the books of the parent during the same accounting period that it is reported by the subsidiary.
  - The parent records dividends as a reduction in the investment in subsidiary account.
  - Income will be recognized by the parent whether or not it is distributed by the subsidiary.
24. In periods subsequent to acquisition and in the absence of intercompany profits or other complicating transactions, the noncontrolling interest (as shown on the consolidated balance sheet) can be determined by summing the noncontrolling interest in equity at acquisition and:
- The noncontrolling percentage of the book value of the subsidiary’s net assets.
  - The noncontrolling percentage of the fair value of the subsidiary’s net assets.
  - The noncontrolling percentage of the subsidiary’s year-end retained earnings.
  - The noncontrolling percentage of the change in subsidiary retained earnings from acquisition to the end of the current year.

25. When a company acquires another company in the middle of the year:
- The acquiring company will reflect the income and expense activity prior to the acquisition because in effect, they bought those earnings.
  - The acquiring company will reflect the revenue and expenses of the pre-acquisition period if such period is 3 months or less.
  - The subsidiary will close their books to retained earnings as of the acquisition date and then reflect the post-acquisition results from that day forward.
  - The acquired company will need to maintain the balances of their income statement accounts as of the acquisition date so the revenue and expenses pre-acquisition can be adjusted out of their full annual results.
26. Which of the following statements is accurate regarding the comparison of U.S. GAAP and IFRS accounting for investments in other companies?
- GAAP requires consideration of potential voting rights on currently exercisable or convertible instruments while IFRS does not consider them.
  - IFRS requires the use of the equity method whenever the investor has “significant influence” except as it relates to subsidiaries and joint ventures.
  - IFRS requires use of the equity method for lower levels of ownership than does U.S. GAAP.
  - IFRS considers there to be significant influence at 10% of the voting rights in a corporate investee.
27. Which of the following is accurate regarding IFRS and U.S. GAAP similarities and differences?
- IFRS and the U.S. use the equity method for joint ventures.
  - IFRS uses the proportionate consolidation for joint ventures while the U.S. uses the equity method.
  - In the U.S., the significant influence principle is applied to the determination of account method for limited partnerships.
  - IFRS uses the equity method for limited partnerships where the investment is more than 3-5%.

## **Chapter 5 – Allocation and Depreciation of Differences Between Implied and Book Values**

### **Learning Objectives**

After completing this section of the course, you will be able to:

- Calculate the difference between implied and book values and allocate to the subsidiary's assets and liabilities.
- Identify the FASB's position on accounting for bargain acquisitions.
- Identify how goodwill is measured at the time of the acquisition.
- Recognize differences between the allocation process when a company acquires 100% of the subsidiary and when they acquire less than 100%.
- Record the entry needed to account for the investment under the various methods.
- Recall how to prepare workpapers for the year of acquisition and subsequent years under various methods.
- Allocate the difference between implied value and book value to long-term debt.
- Identify the accounting for the difference between implied value and book value when assets have fair values below book values or liabilities have fair values greater than book values.
- Note the application of push accounting to client situations.

## ALLOCATION AND DEPRECIATION OF DIFFERENCES BETWEEN IMPLIED AND BOOK VALUES

### CHAPTER CONTENTS

- 5.1 COMPUTATION AND ALLOCATION OF THE DIFFERENCE BETWEEN IMPLIED AND BOOK VALUES TO ASSETS AND LIABILITIES OF SUBSIDIARY—ACQUISITION DATE
- 5.2 EFFECT OF DIFFERENCES BETWEEN IMPLIED AND BOOK VALUES ON CONSOLIDATED NET INCOME—YEAR SUBSEQUENT TO ACQUISITION
- 5.3 CONSOLIDATED STATEMENTS WORKPAPER—USING THE COST METHOD
- 5.4 CONTROLLING AND NONCONTROLLING INTERESTS IN CONSOLIDATED NET INCOME AND RETAINED EARNINGS—USING THE COST METHOD
- 5.5 CONSOLIDATED STATEMENTS WORKPAPER—USING PARTIAL EQUITY METHOD
- 5.6 CONTROLLING AND NONCONTROLLING INTERESTS IN CONSOLIDATED NET INCOME AND RETAINED EARNINGS—USING PARTIAL EQUITY METHOD
- 5.7 CONSOLIDATED STATEMENTS WORKPAPER—USING COMPLETE EQUITY METHOD
- 5.8 CONTROLLING INTEREST IN CONSOLIDATED NET INCOME AND RETAINED EARNINGS—USING COMPLETE EQUITY METHOD
- 5.9 ADDITIONAL CONSIDERATIONS RELATING TO TREATMENT OF DIFFERENCE BETWEEN IMPLIED AND BOOK VALUES
- 5.10 PUSH DOWN ACCOUNTING
- 5.11 IFRS vs. U.S. GAAP ON RESEARCH & DEVELOPMENT COSTS

guaranteed any compensation; i.e., no break-up fee. In contrast, AT&T Inc. paid \$4 billion to T-Mobile when their deal fell through due to antitrust pressures. Also, the TWC–Comcast proposal does not include a protective “collar” in the event Comcast share price should plummet (such a collar would require Comcast to issue additional shares). Statistics reveal the use of collars in approximately thirteen percent of public company acquisitions (in which stock was the primary consideration) between 2006 and 2014 in the U.S.<sup>1</sup>

When a company pays a large premium to consummate an acquisition, the allocation of that premium to the accounts in the balance sheet becomes a crucial issue under acquisition accounting rules. As they mature, the balance sheet accounts will impact the income statement via depreciation, cost of goods sold, impairment charges, and so on, affecting the patterns and trends in reported earnings for years to come. These effects on earnings provide incentives for firms to use creative means to avoid depressing future earnings. A popular technique used in past years was to charge large amounts to *in-process research and development* expense.

Historically, goodwill was amortized over a period not to exceed 40 years. Current GAAP now treats goodwill as an asset with an indefinite life on the balance sheet, and the account is not adjusted unless an impairment exists. Tests for impairment involve an initial assessment of qualitative factors, see Chapter 2 for details.

The common complaint from past years that acquisition or purchase accounting “drained” future earnings via the amortization of goodwill was replaced with other concerns. Instead of being expensed through the income statement via the amortization process, goodwill now remains on the balance sheet at the value determined as of the acquisition date, except when impairment is deemed to have occurred.

Further, the current standards of the FASB require that *in-process research and development (R&D)* acquired as part of a business combination must be capitalized, rather than expensed. Thus, the dynamics of the games, companies are often accused of playing have shifted, and are continuing to shift, dramatically.

IN  
THE  
NEWS

Europe’s biggest defense contractor, BAE Systems PLC, said it reported a loss of 467 million pounds (\$890 million) in 2004, largely due to a one-time charge reflecting its reduced appraisal of the value of companies it acquired as long as five years ago. BAE said the impairment charges, which totaled 1.04 billion pounds (\$1.98 billion), were related to avionics and defense communications businesses that were acquired in 1999 as part of the Marconi Electronic Systems purchase and in its deal with Italy’s Finmeccanica SpA to create Eurosystems, a defense electronic group. Other goodwill charges related to the Integrated Defense Solutions business in North America and BAE Systems’ naval ships business.<sup>2</sup>

1. What might cause such a large decrease in the valuation of businesses purchased by BAE Systems?
2. What can BAE do in the future to avoid such large impairment charges?

Opinions are mixed, however, as to how informative the goodwill impairment disclosures really are. One critic writes: “Even newly revised accounting standards don’t adequately address the nature of knowledge-intensive enterprises . . . Analysts and management will discount the charge as an accounting rules change and largely ignore it.”<sup>3</sup>

The ultimate impact of the changes in the accounting for R&D, goodwill, and other creative maneuvers has yet to be determined.

 IN  
THE  
NEWS

The 2006 sale of BlackRock, Inc. by PNC Financial Services Group to Merrill Lynch PNC could generate \$3.2 billion in unrealized pretax gains which owned roughly 34% of BlackRock after the deal, must account for the holding based on BlackRock's book value, not its market value. This rule applies regardless of whether PNC consolidates the holding on its balance sheet, which it does now as a 70% owner, or uses the equity method of accounting, which will be the case after the deal closes. A new rule by FASB, however, allows PNC to choose to value its holding based on market value when using the equity method. If PNC chooses this valuation method, it will see a pretax gain of \$3.2 billion based on BlackRock's current share price. However, using this method presents bookkeeping headaches as the value of the holding would have to be adjusted regularly.<sup>4</sup>

1. What consequences could PNC face by adjusting the value of its holding in BlackRock on a quarterly basis?
2. How would you recommend PNC account for its holding? Discuss advantages and disadvantages of consolidating the financial statements versus reporting the investment using the equity method.

In the preceding chapter, it was often assumed that any difference between implied and book values of the subsidiary's equity was entirely attributable to the under or overvaluation of land, a nonamortizable asset, on the books of the subsidiary. This chapter focuses on a more complex and realistic allocation of the difference to various assets and liabilities in the consolidated balance sheet, and the depreciation or amortization of the difference in the consolidated income statement. In the following pages, we first provide examples of the allocation of the difference between implied and book values *on the acquisition date*. We next extend the examples to deal with the *subsequent* effects on the consolidated financial statements under the three methods of accounting for investments that we reviewed in Chapter 4.

## 5.1 COMPUTATION AND ALLOCATION OF THE DIFFERENCE BETWEEN IMPLIED AND BOOK VALUES TO ASSETS AND LIABILITIES OF SUBSIDIARY—ACQUISITION DATE

### LO 1 Computation and Allocation of Difference (CAD).

When consolidated financial statements are prepared, asset and liability values must be adjusted by allocating the difference between implied and book values to specific recorded or unrecorded tangible and intangible assets and liabilities. In the case of a **wholly owned** subsidiary, the implied value of the subsidiary equals the acquisition price. The following two steps are taken.

### LO 3 Measurement of goodwill.

- a. *Step One:* The difference between the implied value and book value is used first to adjust the individual assets and liabilities to their fair values on the date of acquisition.
- b. *Step Two:* If, after adjusting identifiable assets and liabilities to fair values, a residual amount of difference remains, it is treated as follows:
  1. When the implied value exceeds the aggregate fair values of *identifiable*\* assets less liabilities, the residual amount will be *positive* (a debit balance). A positive residual difference is evidence of an unspecified intangible and is accounted for as goodwill.
  2. When the implied value is below the aggregate fair value of identifiable assets less liabilities, the residual amount will be *negative* (a credit balance). A negative residual difference is evidence of a bargain purchase, with the difference between acquisition cost and fair value designating the amount of the bargain.\*\* When a bargain acquisition occurs, some of the acquired assets have, in the past, been reduced below their fair values (as reflected after step 1). However, under *FASB Statement No. 141R*, "Business Combinations," [ASC 805-30-25-2], the negative (or credit) balance should be recognized as an ordinary gain in the year of acquisition. Under this standard, no assets should be recorded below their fair values.

\* The term identifiable refers to all assets and liabilities (that are recorded under GAAP) except goodwill.

(Continued)

<sup>4</sup> *WSJ*, "PNC's Gain in Merrill-BlackRock Deal May Grow," by David Reilly, 2/22/06, p. C3.

\*\* Note that the following situation is possible and, technically, would be a bargain purchase:  $FV$  (of identifiable Net Assets)  $>$  Implied Value  $>$  BV. Because the fair value is higher than the value implied by the purchase price, the bargain acquisition rules apply, even though the implied value is higher than the book value of the underlying equity. In practice, this situation is less likely to be referred to as a “bargain” than the situation where  $BV > FV >$  Implied Value. Nonetheless it is the comparison between  $FV$  and Implied Value that determines a bargain, regardless of the level of BV (book value).

**Lo 2** Current and past treatment of bargain acquisitions.

A true bargain is not likely to occur except in situations where nonquantitative factors play a role; for example, a closely held company wishes to sell quickly because of the health of a family member.

For *historical* acquisitions only, we next present the **Bargain Rules** under *prior GAAP* (before the 2007 standard): (1) Current assets, long-term investments in marketable securities (other than those accounted for by the equity method), assets to be disposed of by sale, deferred tax assets, prepaid assets relating to pension or other postretirement benefit plans, and assumed liabilities were always recorded at fair market value. (2) Any previously recorded goodwill on the seller’s books was eliminated (and no new goodwill was recorded). (3) Long-lived assets (including in-process research and development and excluding those specified in (1) above) were recorded at fair market value minus an adjustment for the bargain. (4) An extraordinary gain was recorded only in the event that all long-lived assets (other than those specified in (1) above) were reduced to zero (or to the noncontrolling portion, rather than zero, if the subsidiary was not wholly owned).

When needed, the reduction of noncurrent assets (with the exceptions noted above) was made in proportion to their fair values in determining their assigned values. **However, to reiterate, current GAAP eliminates the above rules and requires an ordinary gain to be recognized instead.**

**IN  
THE  
NEWS**

Private equity firms buy companies, restructure them, and then sell

them, often financing their deals with borrowed money. Deal-making reached heady levels in 2006 and 2007, before the financial crisis struck, and then took a nosedive. By 2010, however, private equity had made at least a partial comeback. Industry analysts predicted big firms to start raising money for new buyout funds early in 2011. Blackstone, for instance, was completing a new \$15 billion fund.

Acquisitions leading to the recording of goodwill have been far more common in recent years than bargain acquisitions. The impact of goodwill on future earnings has drawn a great deal of attention, with standard setters ultimately lightening the burden by no longer requiring the amortization of goodwill. Other acquired intangibles with *finite* useful lives, such as franchises, patents, and software, must still be amortized over their estimated useful lives. The examples presented in this chapter focus primarily on depreciable assets and goodwill. Note, however, that other identified intangibles with finite lives would be accounted for in the same manner as depreciable assets, with the term **amortization expense** replacing the term **depreciation expense**.

The FASB requires that R&D incurred in the regular course of business be expensed, and the Board initially interpreted the standard to allow the expensing of certain types of R&D transferred in corporate acquisitions. The Board went on to state that the R&D expense, or write-off, amount would be based on the amount paid by the acquiring firm rather than its historical cost to the acquired firm. By allocating large amounts to R&D in the period of the acquisition, firms have sometimes taken a large one-time hit to earnings to avoid an increased asset base (e.g., for return on asset calculations). This practice became increasingly popular in the late 1990s among high-technology firms, drawing the attention of the SEC and causing the firms to complain that they were being singled out for scrutiny. As stated previously, the current *FASB* position on business combinations requires that in-process R&D acquired should be recorded as an asset and amortized over the period of expected benefit.

## Case 1: Implied Value “in Excess of” Fair Value of Identifiable Net Assets of a Subsidiary

To illustrate the allocation of the difference between implied and book values to individual assets and liabilities of a subsidiary, assume that on January 1, 2015, S Company has capital stock and retained earnings of \$1,500,000 and \$500,000, respectively, and identifiable assets and liabilities as presented in Illustration 5-1.

**ILLUSTRATION 5-1****Identifiable Assets and Liabilities of S Company—January 1, 2015**

|                         | <i>Fair Value</i>  | <i>Book Value</i>  | <i>Difference between Fair Value and Book Value</i> |
|-------------------------|--------------------|--------------------|---|
| Inventory               | \$ 350,000         | \$ 300,000         | \$ 50,000   |
| Other Current Assets    | 450,000            | 450,000            | —0—   |
| Equipment (net)         | 600,000            | 300,000            | 300,000   |
| Land                    | 400,000            | 250,000            | 150,000   |
| Other Noncurrent Assets | 1,000,000          | 1,000,000          | —0—   |
| Liabilities             | (300,000)          | (300,000)          | —0—   |
| Identifiable Net Assets | <u>\$2,500,000</u> | <u>\$2,000,000</u> | <u>\$500,000</u>                                    |

**Adjustment of Assets and Liabilities: Wholly Owned Subsidiaries** Assume further that P Company acquires a 100% interest in S Company on January 1, 2015, for \$2,750,000. The Computation and Allocation Schedule would appear as follows:

**Computation and Allocation of  
Difference between Implied and Book Values**

|   |                  |
|---|------------------|
| Cost (purchase price/100%) = Implied Value  | \$2,750,000      |
| Book value of equity                        | <u>2,000,000</u> |
| Difference between implied and book value   | 750,000          |
| Adjust to fair value                        |                  |
| Inventory (assume FIFO)                     | (50,000)         |
| Equipment (with remaining life of 10 years) | (300,000)        |
| Land  | <u>(150,000)</u> |
| Balance                                     | 250,000          |
| Record goodwill                             | <u>250,000</u>   |
| Balance                                     | <u>\$ 0</u>      |

The consolidated statements workpaper entry to eliminate the investment balance on January 1, 2015, will result in a debit to Difference between Implied and Book Value in the amount of \$750,000 as follows:

|   |           |           |
|---|-----------|-----------|
| Capital Stock—S Company                   | 1,500,000 |           |
| Retained Earnings—S Company               | 500,000   |           |
| Difference between Implied and Book Value | 750,000   |           |
| Investment in S Company                   |           | 2,750,000 |

Referring to the Computation and Allocation (CAD) Schedule, the workpaper entry to allocate the difference between implied and book value to specific consolidated assets takes the following form:

|   |         |         |
|---|---------|---------|
| Inventory                                 | 50,000  |         |
| Equipment (net)                           | 300,000 |         |
| Land                                      | 150,000 |         |
| Goodwill                                  | 250,000 |         |
| Difference between Implied and Book Value |         | 750,000 |

The amount of the difference between implied and book values that is not allocated to specific identifiable assets and liabilities of the subsidiary is recognized as goodwill. As defined earlier, goodwill is the excess of implied value over the *fair value* of the identifiable net assets of the subsidiary on the acquisition date [ $\$2,750,000 - \$2,500,000 = \$250,000$ ].

**LO 4** Allocation of difference in a partially owned subsidiary.

**Adjustment of Assets and Liabilities: Less than Wholly Owned Subsidiaries** When P Company exchanges \$2,750,000 for a 100% interest in S Company, the implication is that the fair value of the net assets, *including unspecified intangible assets*, of S Company is \$2,750,000. As illustrated earlier, if the recorded book value of those net assets is

\$2,000,000, adjustments totaling \$750,000 are made to specific assets and liabilities, including goodwill, in the consolidated financial statements, serving to recognize the total implied fair value of the subsidiary assets and liabilities.

Assume now that rather than acquiring a 100% interest for \$2,750,000, P Company pays \$2,200,000 for an 80% interest in S Company. The fair value of the net assets, including unspecified intangible assets, of S Company implied by this transaction is still \$2,750,000 ( $\$2,200,000 / .80$ ), and the implication remains that the net assets, including unspecified intangible assets, of S Company are understated by \$750,000. In the case of a less than wholly owned subsidiary, prior GAAP and practice have restricted the write-up of the net assets of S Company in the consolidated financial statements to the extent of P's acquisition percentage. Current GAAP, however, differ markedly, and require that here, too, the consolidated net assets should be reflected at their entire fair value.

To illustrate the existence of a noncontrolling interest in the context of, first, a **positive** difference between implied and book value and, later, a **negative** difference, refer again to Illustration 5-1.

Assume first that P Company acquires an 80% interest in S Company for \$2,200,000. The Computation and Allocation (CAD) Schedule is prepared in Illustration 5-2. The implied value is  $\$2,200,000 / 80\% = \$2,750,000$ .<sup>5</sup>

In this case, goodwill is equal to the excess of implied value over the fair value of the identifiable net assets of the subsidiary [ $\$2,750,000 - \$2,500,000 = \$250,000$ ]. The following entries made to eliminate the investment, to recognize the noncontrolling interest (NCI) in equity, and to allocate the difference between implied and book values are worksheet-only entries:

**RELATED CONCEPTS**

The characteristic of comparability suggests that the inventory be written up for the entire difference of \$50,000 (see Illustrations 5-1 and 5-2), even if the percentage acquired is less than 100%. Otherwise the NCI remains at book value while the controlling share is adjusted to fair value.

|   |           |           |
|---|-----------|-----------|
| Retained Earnings—S Company               | 500,000   |           |
| Capital Stock—S Company                   | 1,500,000 |           |
| Difference between Implied and Book Value | 750,000   |           |
| Investment in S Company                   |           | 2,200,000 |
| Noncontrolling Interest in Equity         |           | 550,000   |

Referring to the Computation and Allocation Schedule, the worksheet entry to allocate the difference between implied and book value is:

|   |         |         |
|---|---------|---------|
| Inventory                                 | 50,000  |         |
| Equipment (net)                           | 300,000 |         |
| Land                                      | 150,000 |         |
| Goodwill                                  | 250,000 |         |
| Difference between Implied and Book Value |         | 750,000 |

**ILLUSTRATION 5-2**

**Computation and Allocation of the Difference between Implied and Book Value Excess of Implied over Fair Value**

|   | Parent Share       | Noncontrolling Share | Entire Value     |
|---|--------------------|----------------------|------------------|
| Purchase Price and Implied Value            | <b>\$2,200,000</b> | <b>\$550,000</b>     | \$2,750,000      |
| Book Value of Equity Acquired               | <u>1,600,000</u>   | <u>400,000</u>       | <u>2,000,000</u> |

| Balance (Excess of Implied over Fair Value) | \$ 200,000         | \$ 50,000            | \$ 250,000       |
| Goodwill                                    | <u>(200,000)</u>   | <u>(50,000)</u>      | <u>(250,000)</u> |
| Balance                                     | <u>\$ —0—</u>      | <u>\$ —0—</u>        | <u>\$ —0—</u>    |

<sup>5</sup> This calculation assumes that the amount paid by P Company does not reflect a control premium or other reason to value the noncontrolling interest differently from the controlling interest.

These amounts are all found in the right-hand column of the CAD Schedule.

As pointed out in Chapter 3, when the acquisition is for less than 100% of the subsidiary, the fair value of both the controlling interest and the noncontrolling interest must be determined. The fair value of the controlling interest is generally assumed to equal the amount paid by the acquirer. Determination of the fair value of the noncontrolling interest is not always this straightforward. For instance, as noted in FASB ASC paragraphs 805-20-30-7 and 8, the per-share amount paid by the acquirer could include a “control premium.” If the acquirer is able to measure the fair value of the noncontrolling interest on the basis of active market prices for the shares not obtained by the acquirer at the acquisition date, this will provide the basis for valuing the noncontrolling interest. If not, other valuation techniques must be applied.

To illustrate, suppose an investor acquires 80% of another company for \$70 per share and the remaining shares actively trade at \$65 per share immediately following the acquisition. This would imply a control premium of \$5 per share, and it would be appropriate to value the noncontrolling shares at \$65 rather than \$70 per share.

However, throughout this textbook, we assume the value of the controlling and noncontrolling shares to be equal unless explicitly stated otherwise. Thus, the fair value of the noncontrolling interest can be inferred from the value implied by the acquisition price. This approach is illustrated next.

## Case 2: Acquisition Cost “Less Than” Fair Value of Identifiable Net Assets of a Subsidiary

**Less than Wholly Owned Subsidiaries** Refer to Illustration 5-1 and assume that P Company acquires an 80% interest in S Company for \$1,900,000. The implied value of S is  $\$1,900,000/80\% = \$2,375,000$ . The difference between *implied* and *book value* is \$375,000 [ $\$2,375,000 - \$2,000,000$ ]. However, the *fair value* of the identifiable net assets of the subsidiary (\$2,500,000) exceeds the implied value of \$2,375,000 by \$125,000. The Computation and Allocation Schedule is started as usual, but a negative balance requires the recording of a gain after adjusting the identifiable assets and liabilities to their fair values. The excess of fair value over implied value represents the initial difference between implied and book values of \$375,000 minus the adjustments to net assets of \$500,000, or \$125,000. The excess is allocated between the noncontrolling and controlling interests in the consolidated entity. The noncontrolling share of this excess (\$25,000) serves to adjust the noncontrolling interest in equity to fair value, while the parent’s share (\$100,000) is recorded as a gain to the acquirer. As in all CAD schedules in the text, the items in bold represent workpaper entry amounts.

**Lo 4** CAD Schedule for less than wholly owned subsidiary.

### Computation and Allocation of Difference Schedule

|  | Parent Share          | Noncontrolling Share | Entire Value            |
|--|-----------------------|----------------------|-------------------------|
| Purchase price and implied value                         | <b>\$1,900,000</b>    | <b>475,000</b>       | 2,375,000               |
| Less: Book value of equity acquired                      | <u>1,600,000</u>      | <u>400,000</u>       | <u>2,000,000*</u>       |
| Difference between implied and book value                | 300,000               | 75,000               | <b>375,000</b>          |
| Adjust to Fair Value                                     |                       |                      |                         |
| Inventory  | (40,000)              | (10,000)             | <b>(50,000)</b>         |
| Equipment  | (240,000)             | (60,000)             | <b>(300,000)</b>        |
| Land   | <u>(120,000)</u>      | <u>(30,000)</u>      | <u><b>(150,000)</b></u> |
| Balance (excess of FV over implied value)                | (100,000)             | (25,000)             | (125,000)               |
| P’s gain   | <u><b>100,000</b></u> |                      |                         |
| Increase noncontrolling interest to fair value of assets |                       | <u><b>25,000</b></u> |                         |
| Total allocated bargain                                  |                       |                      | <u>125,000</u>          |
| Balance  | <u><u>—0—</u></u>     | <u><u>—0—</u></u>    | <u><u>—0—</u></u>       |

\*In the workpaper, this is decomposed into Capital Stock and Retained Earnings.

Note that the amounts in bold in parentheses in the Computation and Allocation Schedule require debits in the workpaper entry (to increase assets/decrease liabilities).

The workpaper entries to eliminate the investment account and to allocate the difference between implied and book values may be summarized in general journal form as follows:

|  |           |           |
|--|-----------|-----------|
| Retained Earnings—S Company                    | 500,000   |           |
| Capital Stock—S Company                        | 1,500,000 |           |
| Difference between Implied and Book Value      | 375,000   |           |
| Investment in S Company                        |           | 1,900,000 |
| Noncontrolling Interest in Equity (NCI)        |           | 475,000   |
| Inventory                                      | 50,000    |           |
| Equipment (net)                                | 300,000   |           |
| Land   | 150,000   |           |
| Gain on Acquisition (income statement account) |           | 100,000   |
| Noncontrolling Interest in Equity              |           | 25,000    |
| Difference between Implied and Book Value      |           | 375,000   |

**Implied Value Less than Book Value Less than Fair Value of Identifiable Net Assets**

It is possible for the value implied by the parent’s acquisition cost to be less than the book value as well as the fair value of the net assets of the subsidiary. In that case, the difference between implied and book value initially will be credited in the investment elimination workpaper entry. The analysis of the allocation of this credit balance, however, takes the same form as that just illustrated; that is, we begin by adjusting assets upward first and then determine the necessary gain recognition. For example, refer to Illustration 5-1 and assume that P Company acquired an 80% interest in S Company on January 1, 2015, for \$1,500,000. See Illustration 5-3.

The workpaper entries to eliminate the investment account and to allocate the difference between implied and book values are presented next in general journal form.

**ILLUSTRATION 5-3**

**Computation & Allocation of the Difference between Implied and Book Value (Book Value of Interest Acquired Exceeds Implied Value)**

|   | Parent Share        | Noncontrolling Share | Entire Value       |
|---|---------------------|----------------------|--------------------|
| Purchase Price and Implied Value          | <b>\$1,500,000</b>  | <b>375,000</b>       | 1,875,000          |
| Book Value of Equity                      | 1,600,000           | 400,000              | <b>2,000,000</b>   |
| Difference between Implied and Book Value | \$ (100,000)        | \$ (25,000)          | \$(125,000)        |
| Adjust to Fair Value                      |                     |                      |                    |
| Inventory                                 | \$ (40,000)         | \$ (10,000)          | \$ (50,000)        |
| Equipment (net)                           | (240,000)           | (60,000)             | <b>(300,000)</b>   |
| Land                                      | (120,000)           | (30,000)             | <b>(150,000)</b>   |

## 5.2 EFFECT OF DIFFERENCES BETWEEN IMPLIED AND BOOK VALUES ON CONSOLIDATED NET INCOME—YEAR SUBSEQUENT TO ACQUISITION

Depreciation and amortization in the consolidated income statement should be based on the values allocated to depreciable and amortizable assets in the consolidated balance sheet. When any portion of the difference between implied and book values is allocated to such assets, recorded income must be adjusted in determining consolidated net income in current and future periods. ***This adjustment is needed to reflect the difference between the amount of amortization and/or depreciation recorded by the subsidiary and the appropriate amount based on consolidated carrying values.***

To illustrate, assume that on January 1, 2015, P Company acquires an 80% interest in S Company for \$2,200,000, at which time S Company has net assets of \$2,000,000 as presented in Illustration 5-1. As previously shown in Illustration 5-2, the implied value of S is \$2,200,000/80%, or \$2,750,000. The difference between implied and book values in the amount of \$750,000 is allocated as follows:

|   |                  |
|---|------------------|
| Inventory                                 | \$ 50,000        |
| Equipment (net)                           | 300,000          |
| Land                                      | 150,000          |
| Goodwill                                  | 250,000          |
| Difference between Implied and Book Value | <u>\$750,000</u> |

A comparison of the recorded and consolidated carrying values of the assets and liabilities of S Company on January 1, 2015, is presented in Illustration 5-4.

Assume now that all the inventory is sold during 2015 and that the equipment has a remaining life of 10 years from January 1, 2015. Adjustments in the computation of consolidated net income that result from the allocation, amortization, and depreciation of the differences between implied and book values are summarized in Illustration 5-5.

As a result of the sale of the inventory in 2015, S Company will include \$300,000 in cost of goods sold, whereas from a consolidated point of view the cost of goods sold should be \$350,000 (inventory from Illustration 5-4). Hence, the recorded cost of goods sold must be increased by \$50,000 in determining consolidated net income in 2015. This adjustment to cost of goods sold is necessary only in the year(s) the inventory is sold.

S Company will record on its books \$30,000 (\$300,000/10 years) in depreciation of the equipment each year. Consolidated annual depreciation, however, should be \$60,000 (\$600,000/10 years). Accordingly, depreciation expense must be increased each year by \$30,000 in determining consolidated net income. Note that this amount may be computed directly from the Calculation and Allocation Schedule simply by dividing the adjustment to Equipment (\$300,000) by the remaining life (10 years).

Note: Inventory is expensed in 2015 assuming the FIFO method and equipment is depreciated over 10 years.

Goodwill arising in the acquisition is not recorded by S Company. *It remains in the consolidated balance sheet indefinitely, and it is adjusted only in the event of impairment.* In the event of impairment, an adjustment to recorded income would be needed to determine consolidated net income. The allocation of a portion of the difference between implied and book values to land does not require an adjustment to recorded income in determining consolidated net income until it is sold, since land is not a depreciable (or amortizable) asset.

The worksheet entries needed to ensure that all balance sheet and income statement accounts reflect the correct consolidated balances differ depending on which method the parent company uses to account for its investment: complete equity, partial equity, or cost. The correct consolidated balances will not differ, but the means of arriving at them will. Thus, after the worksheet entries are made, the resulting balances should be identical under the three methods.

Much of the consolidating process is the same for all three methods, but important differences exist. Each of the following stand-alone sections presents the entire process, including an impairment loss on goodwill in one year. For those who are interested in focusing on only one or two of the three methods, the other sections may be omitted without loss of continuity. To facilitate this choice, icons in the margin of the pages are used to distinguish between the cost and equity methods when needed. To distinguish between partial and complete equity, separate icons are used. First, however, it is worth noting that *only three basic accounts are reported differently in the books of the parent*. A brief review of the entries made by the parent under the three methods (see opening of Chapter 4) reveals two of these accounts: the *investment account* itself and the *income recognized from the subsidiary* (dividend income or equity in subsidiary income). Since the amount of income recognized from the subsidiary is added into the retained earnings of the parent each year, it follows that the third important account that differs among these methods is the *retained earnings of the parent*. To further facilitate an understanding of the differences among the methods, or to aid in skipping redundant sections, we present the cost method first and then we present the sections of the text that *differ* depending on the method choice in blue for the equity methods.

Under all three methods, the worksheet entries will separate current year effects from the effects of the previous years because the current year income statement accounts are open and need to be reported separately and correctly. Hence, worksheet entries to retained earnings (and to the noncontrolling interest in net assets) will always adjust the balance at the *beginning* of the current year (or the date of acquisition, if it is the first year) under the cost and partial equity methods. Under the complete equity method, beginning retained earnings of the parent is the same as beginning consolidated retained

earnings and therefore needs no adjustment (the noncontrolling interest in equity still requires adjustment). Illustrations 5-6 through 5-8 present three years of entries for a parent company and for a consolidating worksheet under all three methods. In the following sections, we explain these entries in detail.

### 5.3 CONSOLIDATED STATEMENTS WORKPAPER—USING THE COST METHOD

In the preparation of consolidated financial statements, the recorded balances of individual assets, liabilities, and expense accounts must be adjusted to reflect the allocation, amortization, and depreciation of the differences between implied and book values, as well as any impairment of goodwill. These adjustments are accomplished through the use of *workpaper entries* in the preparation of the consolidated statements workpaper.

**TEST YOUR KNOWLEDGE**

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

**Multiple Choice**

1. In the event of a bargain acquisition (after carefully considering the fair valuation of all subsidiary assets and liabilities), FASB requires the following accounting:
  - a. an ordinary gain is reported in the financial statements of the consolidated entity.
  - b. an ordinary loss is reported in the financial statements of the consolidated entity.
  - c. negative goodwill is reported on the balance sheet.
  - d. assets are written down to zero value, if needed.

To illustrate, assume the following:

1. P Company acquires an 80% interest in S Company on January 1, 2015, for \$2,200,000, at which time S Company has capital stock of \$1,500,000 and retained earnings of \$500,000. P Company uses the cost method to record its investment in S Company.
2. The allocation of the difference between implied and book values in the amount of \$750,000  $[(\$2,200,000/80\%) - \$2,000,000]$ , as previously presented in Illustration 5-5, includes \$50,000 to Inventory, \$300,000 to Equipment (10-year life), \$150,000 to Land, and \$250,000 to Goodwill.
3. In 2015, S Company reported net income of \$125,000 and declared and paid dividends of \$20,000. During the annual review of its goodwill, the determination is made that the goodwill is currently worth \$255,000.

COST

4. In 2016, S Company reported net income of \$140,000 and declared and paid dividends of \$60,000. During the annual review of its goodwill, the determination is made that the goodwill is currently worth \$230,000 (after performing the two step process described in Chapter 2).
5. In 2017, S Company reported net income of \$200,000 and declared and paid dividends of \$75,000. During the annual review of its goodwill, the determination is made that the goodwill is currently worth \$250,000.

### Year of Acquisition

**LO 5** Recording investment on books of Parent.

**Entries on Books of P Company—2015 (Year of Acquisition)** Entries recorded on the books of the P Company under the cost method to reflect the acquisition of its interest in S Company and the receipt of dividends in 2015 are as follows:

|   |           |           |
|---|-----------|-----------|
| Investment in S Company   | 2,200,000 |           |
| Cash  |           | 2,200,000 |
| To record purchase of an 80% interest in S Company.             |           |           |
| Cash  | 16,000    |           |
| Dividend Income   |           | 16,000    |
| To record receipt of dividends from S Company (.80 × \$20,000). |           |           |

**Workpaper Entries—2015 (Year of Acquisition)** The consolidated statements workpaper for the year ended December 31, 2015, is presented in Illustration 5-9. An analysis of the workpaper elimination entries in Illustration 5-9 is presented here:

|                                      |        |        |
|--------------------------------------|--------|--------|
| (1) Dividend Income                  | 16,000 |        |
| Dividends Declared                   |        | 16,000 |
| To eliminate intercompany dividends. |        |        |

**LO 6** Workpaper entries (cost method).

|   |           |           |
|---|-----------|-----------|
| (2) Beginning Retained Earnings—S Company   | 500,000   |           |
| Capital Stock—S Company   | 1,500,000 |           |
| Difference between Implied and Book Value   | 750,000   |           |
| Investment in S Company   |           | 2,200,000 |
| Noncontrolling Interest in Equity   |           | 550,000   |
| To eliminate the investment account against the equity accounts of S Company using equity balances at the <b>beginning of the current year</b> , and recognize the Noncontrolling Interest in Equity. |           |           |

|  |         |         |
|--|---------|---------|
| (3a) Cost of Goods Sold (beginning inventory)  | 50,000  |         |
| Equipment (net) (10-year remaining life)   | 300,000 |         |
| Land   | 150,000 |         |
| Goodwill   | 250,000 |         |
| Difference between Implied and Book Value  |         | 750,000 |
| To allocate the amount of difference between implied and book value at date of acquisition to specific assets and liabilities, see Illustration 5-2. |         |         |

COST

By the end of the first year, under a *FIFO* (*first-in, first-out*) cost flow assumption, the inventory that necessitated the \$50,000 adjustment would have been sold. Recall that at the date of acquisition, this adjustment was to Inventory. At the end of the first year, however, the entry is to Cost of Goods Sold (or to Beginning Inventory, as a subcomponent of the Cost of Goods Sold). Since S Company will not have included the additional \$50,000 allocated to inventory in its reported *Cost of Goods Sold* (*COGS*), consolidated Cost of Goods Sold must be increased by this workpaper entry. If the inventory were still on hand on December 31, 2015 (for example, if a LIFO flow were assumed), the \$50,000 would be allocated to ending inventory in the balance sheet rather than to Cost of Goods Sold.

This entry to Cost of Goods Sold is appropriate only in the year of acquisition. In subsequent years, consolidated Cost of Goods Sold will have been reflected in the 2015

| Cost Method                                  |                  | ILLUSTRATION 5-9                  |                  |                  |                         |                       |

| Total Liabilities and Equity                 | <u>6,932,000</u> | <u>2,405,000</u>                  | <u>3,546,000</u> | <u>3,546,000</u> |                         | <u>7,807,000</u>      |

(\*)  $20\% \times [\$125,000 - \$50,000 \text{ COGS} - \$30,000 \text{ Depreciation}] = \$9,000$ .

(1) To eliminate intercompany dividends.

(2) To eliminate investment account and create noncontrolling interest account.

(3a) To allocate differences between implied and book value.

(3b) To depreciate the difference between implied and book value assigned to equipment (300,000/10).

consolidated net income and hence consolidated retained earnings at the end of 2015. Thus, the adjustment (\$50,000 debit) in future years will be to Beginning Retained Earnings-P Company (80%) and to the Noncontrolling Interest in Equity (20%).

|   |        |        |
|---|--------|--------|
| (3b) Depreciation Expense (\$300,000/10 years)  | 30,000 |        |
| Equipment (net) <sup>6</sup>  |        | 30,000 |
| To depreciate the amount of difference between implied and book value allocated to equipment, see Illustration 5-5. |        |        |

As previously noted, depreciation in the consolidated income statement should be based on the value assigned to the equipment in the consolidated balance sheet. Since the depreciation recorded by S Company is based on the book value of the equipment in its records, consolidated depreciation must be increased by a workpaper entry.

The amount of the difference between implied and book values not allocated to specific identifiable assets or liabilities is treated in the consolidated financial statements as goodwill. Companies are not currently required to amortize goodwill. Instead it is adjusted only when impaired. In the year 2015, goodwill is assessed to be worth \$255,000, which is more than its carrying value of \$250,000. Thus, no impairment entry is needed.

It is possible, of course, to combine the workpaper entries relating to the allocation and depreciation of the differences between implied and book values into one entry. In Illustration 5-9, for example, workpaper entries (3a) and (3b) could be presented in one combined entry as follows:

|  |         |         |
|--|---------|---------|
| (3) Cost of Goods Sold (Beginning Inventory) | 50,000  |         |
| Depreciation Expense                         | 30,000  |         |
| Equipment (net) (\$300,000 – \$30,000)       | 270,000 |         |
| Land   | 150,000 |         |
| Goodwill                                     | 250,000 |         |
| Difference between Implied and Book Value    |         | 750,000 |

COST

In Illustration 5-9, the calculation of Noncontrolling Interest is also affected by the depreciation of the differences between implied and book values. Since the difference between implied and book values is distributed between the controlling and noncontrolling interests, 20% of the charges to COGS and depreciation expense reduce the noncontrolling interest (NCI) in consolidated earnings. Thus, the noncontrolling interest in earnings is computed as 20% of: [S earnings of \$125,000 – \$50,000 additional COGS – \$30,000 excess depreciation], or \$9,000. The other 80% reduces the controlling interest in consolidated net income.

## Year Subsequent to Acquisition

**Lo 5** P company entries after acquisition.

**Entries on Books of P Company—2016 (Year Subsequent to Acquisition)** In 2016, P Company will record dividend income as follows:

|  |        |        |
|--|--------|--------|
| Cash   | 48,000 |        |
| Dividend Income  |        | 48,000 |
| To record receipt of dividends from S Company (.8 × \$60,000). |        |        |

Under the Cost Method, the parent company makes no entry for the reported income of the subsidiary.

**Workpaper Entries—2016 (Year Subsequent to Acquisition)** The consolidated statements workpaper for the year ended December 31, 2016, is presented in Illustration 5-10.

<sup>6</sup>The credit to this entry could alternatively be accumulated depreciation.

| Total Liabilities and Equity                   | <u>7,297,000</u>     | <u>2,690,000</u>     | <u>3,817,000</u>    | <u>3,817,000</u> |                                    | <u>8,407,000</u>                 |                  |

(\*)  $20\% \times (140,000 - 30,000 - 20,000) = 18,000$ .(\*\*)  $\$550,000 + [20\% \times (\$605,000 - \$500,000)] = \$571,000$ .(1) To establish reciprocity/convert to equity as of 1/1/14 [ $.80 \times (\$605,000 - \$500,000)$ ].

(2) To eliminate intercompany dividends.

(3) To eliminate investment account and create Noncontrolling Interest account.

(4a) To assign the difference between implied and book value at the date of acquisition to specific assets and liabilities.

(4b) To depreciate the amount of the difference between implied and book value assigned to equipment.

(4c) To record goodwill impairment.

Workpaper elimination entries in Illustration 5-10 are presented in general journal form as follows:

**LO 6** Workpaper entries after acquisition, subsequent years (cost method).

|     |  |        |        |
|-----|--|--------|--------|
| (1) | Investment in S Company  | 84,000 |        |
|     | Beginning Retained Earnings—P Company  |        | 84,000 |
|     | To convert to equity/establish reciprocity as of 1/1/16 $[(\$605,000 - \$500,000) \times .80]$ . |        |        |

This entry represents the change in retained earnings of S Company from the date of acquisition to the beginning of the current year. This also converts retained earnings to the value that would be recorded if the partial equity method had been used.

COST

|     |   |        |        |
|-----|---|--------|--------|
| (2) | Dividend Income   | 48,000 |        |
|     | Dividends Declared  |        | 48,000 |
|     | To eliminate the intercompany dividends. $(\$60,000 \times 80\%)$ . |        |        |

In the investment elimination entry, the amount debited or credited to the Difference between Implied and Book Values is equal to the amount of the difference between implied and book values on the date of acquisition. The amount does not change subsequent to acquisition and may be obtained from the Computation and Allocation Schedule (Illustration 5-2). Both the entry to Investment in S and Noncontrolling Interest reflect one year of change since acquisition. For example, the Noncontrolling Interest was valued at \$550,000 at acquisition and increased in the first year by  $20\% \times [\$125,000 - \$20,000 \text{ (Dividends Declared)}] = \$21,000$ . The noncontrolling interest must also be adjusted for the noncontrolling share in depreciation expense and Cost of Goods Sold from 2015, but those adjustments will be shown in separate entries below.

|     |  |           |           |
|-----|--|-----------|-----------|
| (3) | Beginning Retained Earnings—S Company  | 605,000   |           |
|     | Capital Stock—S Company  | 1,500,000 |           |
|     | Difference between Implied and Book Value                                    | 750,000   |           |
|     | Investment in S Company $(\$2,200,000 + \$84,000)$                           |           | 2,284,000 |
|     | Noncontrolling Interest $[\$550,000 + 20\% \text{ } (\$125,000 - \$20,000)]$ |           | 571,000   |

Workpaper entry (4) is presented next, first in a combined single entry and then (alternatively) in its components. The authors find the second approach (components) easier to understand, though less space efficient.

|     |  |         |         |
|-----|--|---------|---------|
| (4) | Beginning Retained Earnings—P Company (beginning consolidated retained earnings) $(40,000 + 24,000)$ | 64,000  |         |
|     | Noncontrolling Interest  | 16,000  |         |
|     | Depreciation Expense $(\$300,000/10)$  | 30,000  |         |
|     | Impairment Loss on Goodwill $(\$250,000 - \$230,000)$  | 20,000  |         |
|     | Equipment (net) $(\$300,000 - \$30,000 - \$30,000)$  | 240,000 |         |
|     | Land   | 150,000 |         |
|     | Goodwill   | 230,000 |         |
|     | Difference between Implied and Book Value  |         | 750,000 |
|     | To allocate and depreciate the difference between implied and book values.                           |         |         |

COST

**Beginning consolidated retained earnings and the noncontrolling interest must be adjusted each year for the cumulative amount of depreciation and other deductions that have been made from consolidated net income because of the depreciation of the difference between implied and book values in the consolidated statements workpapers of prior years.** By reducing previously reported consolidated net income, these workpaper adjustments also reduce previously reported consolidated retained earnings and noncontrolling interest. The reduction of beginning consolidated retained earnings and noncontrolling interest is accomplished by debits to the beginning retained earnings of the

parent company and to Noncontrolling Interest in Equity in the consolidated statements workpaper. The \$64,000 debit to beginning retained earnings is equal to the  $80\% \times (\$50,000 \text{ charged to cost of goods sold plus } \$30,000 \text{ charged to depreciation expense})$ . The \$16,000 debit to Noncontrolling Interest in Equity is equal to the  $20\% \times (\$50,000 \text{ charged to cost of goods sold plus } \$30,000 \text{ charged to depreciation expense})$ . Where part of the difference between implied and book values is allocated to depreciable assets, the workpaper adjustments to the beginning retained earnings of the parent company and to noncontrolling interest will become progressively larger each year.

To separate the preceding entry into its more digestible components, begin with the allocation of the difference between implied and book values and then proceed to record excess depreciation and goodwill impairment as follows:

|      |  |         |         |
|------|--|---------|---------|
| (4a) | Beginning Retained Earnings—P Company (previous year's cost of goods sold $\times$ 80%)  | 40,000  |         |
|      | Noncontrolling Interest (20% of previous year's cost of goods sold)  | 10,000  |         |
|      | Equipment  | 300,000 |         |
|      | Land   | 150,000 |         |
|      | Goodwill   | 250,000 |         |
|      | Difference between Implied and Book Value  |         | 750,000 |
|      | To allocate the amount of difference between implied and book values at date of acquisition to specific assets and liabilities (see Illustration 5-2). |         |         |

Entry (4a) is identical to that recorded in the preceding year, with the exception that the entry to Cost of Goods Sold is appropriate only in the year of acquisition. Thus, the adjustment in year 2 (and future years) is split between the controlling and noncontrolling interests in equity (80% to Beginning Retained Earnings of P and 20% to Noncontrolling Interest).

|      |  |        |        |
|------|--|--------|--------|
| (4b) | Depreciation Expense (current year)  | 30,000 |        |
|      | Beginning Retained Earnings—P Company (80% of previous year's depreciation expense)            | 24,000 |        |
|      | Noncontrolling Interest (20% of previous year's depreciation expense)                          | 6,000  |        |
|      | Equipment (net) or Accumulated Depreciation  |        | 60,000 |
|      | To depreciate the amount of difference between implied and book values allocated to equipment. |        |        |

This entry differs from the first-year entry in that the excess depreciation from the year 2015 is now reflected in Beginning Retained Earnings—P Company. Although the adjustment to Equipment (net) was already made in the prior-year workpaper for one year's depreciation adjustment, it was not posted to the books of S Company and hence must be made again. If the following year (2017) were being presented, the debit to Depreciation Expense would remain at 30,000, but the debit to Beginning Retained Earnings would be \$48,000 to reflect two prior years of excess depreciation, Noncontrolling Interest in Equity would be debited for \$12,000, and the credit to Net Equipment would total \$90,000.

Entry (4c) is a new entry that is needed in 2016 because goodwill is assessed to have been impaired. Goodwill is still carried in the workpaper for the consolidated entity at its acquisition value of \$250,000, and this amount exceeds its current estimated value of \$230,000 in 2016. Therefore, a workpaper entry is needed to reduce the carrying value to \$230,000, which entails the recording of an impairment loss of \$20,000. This charge, like the excess depreciation, is distributed to the controlling and noncontrolling interests in the income statement for 2016. The impairment loss may be combined with "other expenses" in the consolidating workpaper. In subsequent years, the charge to earnings (like excess depreciation) will flow 80% to the Beginning Retained Earnings of P and 20% to Noncontrolling Interest in Equity.

|      |   |        |        |
|------|---|--------|--------|
| (4c) | Impairment loss (current year)  | 20,000 |        |
|      | Goodwill  |        | 20,000 |
|      | To reflect the impairment of goodwill recorded in the acquisition of 2015 due to a decline in value as of 2016. |        |        |

Clearly, if entries (4a), (4b), and (4c) are recorded separately, the combined entry (4) is not needed.

The amounts charged to expense each year were calculated in Illustration 5-5. Since inventory was sold in 2015, no part of the difference between implied and book value is allocated to inventory in the years after its sale. The amounts allocated to assets (and liabilities) are the unamortized amounts at the end of the year. Thus, the amounts allocated to depreciable assets in the balance sheet will become progressively smaller each year.

In the consolidated statements worksheet for the third year after acquisition (December 31, 2017), for example, the worksheet elimination entry will be as follows (if combined into one entry):

**At December 31, 2017:**

|     |  |         |         |
|-----|--|---------|---------|
| (4) | Beginning Retained Earnings—P Company (beginning consolidated retained earnings [80%(\$50,000 + \$30,000) from 2015 + 80%(\$30,000 + \$20,000) from 2014]) | 104,000 |         |
|     | Beginning Noncontrolling Interest in Equity [20%(\$50,000 + \$30,000) from 2015 + 20%(\$30,000 + \$20,000) from 2014]                                      | 26,000  |         |
|     | Depreciation Expense (\$300,000/10)  | 30,000  |         |
|     | Equipment (net) (\$300,000 – \$30,000 – \$30,000 – \$30,000)   | 210,000 |         |
|     | Land   | 150,000 |         |
|     | Goodwill   | 230,000 |         |
|     | Difference between Implied and Book Value  |         | 750,000 |

COST

Note in the entry for 2017 that the goodwill remains at the \$230,000 carrying value, even though it is currently valued at \$250,000. Once impairment has been recorded, no recovery is permitted to be recorded in subsequent years under GAAP.

The debit to the beginning retained earnings of the parent company in 2017 (\$64,000 + \$40,000) is equal to the amount by which the controlling interest in consolidated net income and consolidated retained earnings had been reduced because of the depreciation and impairment of the difference between implied and book values. These charges amounted to \$64,000 for the parent's share in the year 2015 (COGS \$40,000 + Depreciation \$24,000) and to \$40,000 for the parent's share in the year 2016 (Goodwill Impairment \$16,000 + Depreciation \$24,000), and were reflected in the consolidated statements worksheets for those years. **However, recall that they were not posted to the ledgers of either P or S Company, thus necessitating the adjustments to Beginning Retained Earnings and Noncontrolling Interest in Equity in subsequent years.** [See Illustration 5-5; also see entries (3a and 3b) in Illustration 5-9 and entries (4b and 4c) in Illustration 5-10]. The calculation of the debit to Noncontrolling Interest is analogous, reflecting the remaining 20% of the charges to consolidated net income. This entry [(4) for 2017] can also be simplified by breaking it into its components.

Illustration 5-6 (on page 196) presents the entries in their separate components for all three years side by side for the cost method.

## 5.4 CONTROLLING AND NONCONTROLLING INTERESTS IN CONSOLIDATED NET INCOME AND RETAINED EARNINGS—USING THE COST METHOD

COST

In the preceding chapter, a t-account approach to the calculation of the controlling and noncontrolling interests in consolidated net income was presented. This approach must now be refined to accommodate the effect of the allocation and depreciation of the difference between implied and book values.

*Consolidated net income is the parent company's income from its independent operations plus (minus) the reported subsidiary income (loss) plus or minus adjustments for the period relating to the depreciation/amortization/impairment of the difference between implied and book values.*

The calculation of *controlling and noncontrolling interests in consolidated net income* for the year ended December 31, 2016, presented in Illustration 5-11, is based on Illustration 5-10. These amounts are, of course, the same as the controlling and noncontrolling interests in consolidated net income shown in the consolidated financial statements workpaper.

**ILLUSTRATION 5-11****Calculation of the Noncontrolling Interest in Consolidated Income—Cost Method for Year Ended December 31, 2016**

| Noncontrolling Interest in Consolidated Income  |  |
|---|--|
| Additional depreciation and amortization of the difference between implied and book value related to: |  |
| Depreciation Expense (\$300,000/10)   | 30,000   |
| Impairment of Goodwill (\$250,000 – \$230,000)  | 20,000   |
|   | Net income reported by S Company   |
|   | 140,000  |
|   | Adjusted Net Income  |
|   | 90,000   |
|   | Noncontrolling Ownership Percentage Interest   |
|   | 20%  |
|   | Noncontrolling Interest in Consolidated Income   |
|   | <u>18,000</u>  |
|   | <b>80% (\$90,000)</b>  |
| Controlling Interest in Consolidated Income   |  |
|   | P Company's net income from its independent operations (\$429,000 reported net income less \$48,000 dividend income from S Company included therein) |
|   | \$381,000  |
|   | P Company's share of the reported income of S Company (.8 × \$90,000)  |
|   | 72,000   |
|   | Controlling Interest in Consolidated Net Income  |
|   | <u>\$453,000</u>   |

*Consolidated retained earnings is the parent company's cost basis retained earnings plus (minus) the parent company's share of the increase (decrease) in reported subsidiary retained earnings from the date of acquisition to the current date plus or minus the cumulative effect of adjustments to date relating to the depreciation/amortization of the difference between implied and book values.*

The calculation of **consolidated retained earnings** on December 31, 2016, presented in Illustration 5-12, is based on Illustration 5-10. This is the same amount of consolidated retained earnings as that shown in the consolidated statements workpaper presented in Illustration 5-10 and may be used as a means of checking the balance.

**ILLUSTRATION 5-12****Analytical Calculation of Consolidated Retained Earnings: Cost Method  
December 31, 2016**

|   |               |               |                    |
|---|---------------|---------------|--------------------|
| P Company's retained earnings on<br>December 31, 2016   |               |               | \$2,077,000        |
| P Company's share of the increase in<br>S Company's retained earnings from date of<br>acquisition to December 31, 2016<br>[.8(\$685,000 – \$500,000)]   |               |               | 148,000            |
| Less cumulative effect to December 31, 2016, of the amortization of the difference between implied and<br>book value (parent's share):  |               |               |                    |
|   | <b>2015</b>   | <b>2016</b>   |                    |
| Inventory (to cost of goods sold)   | \$40,000      | \$—0—         |                    |
| Depreciation from Equipment   | 24,000        | 24,000        |                    |
| Impairment of Goodwill  | <u>—0—</u>    | <u>16,000</u> |                    |
|   | <u>64,000</u> | <u>40,000</u> | (104,000)          |
| Consolidated Retained Earnings on December 31, 2016   |               |               | <u>\$2,121,000</u> |
| Alternatively, consolidated retained earnings can be computed by adding beginning consolidated retained earnings to the controlling interest in net income and subtracting dividends declared by P Company. |               |               |                    |
| Beginning Consolidated Retained Earnings  |               |               | \$1,818,000        |
| Plus: Controlling Interest in Consolidated Net Income   |               |               | 453,000            |
| Less: Dividends Declared by P Company   |               |               | <u>(150,000)</u>   |
| Ending Consolidated Retained Earnings   |               |               | <u>\$2,121,000</u> |
| Similarly, the noncontrolling interest in equity can be computed as follows:  |               |               |                    |
| Beginning Noncontrolling Interest in Equity   |               |               | \$555,000          |
| Plus: Noncontrolling Interest in Consolidated Net Income  |               |               | 18,000             |
| Less: Dividends Declared by S Company to Outsiders  |               |               | <u>(12,000)</u>    |
| Ending Noncontrolling Interest in Equity  |               |               | <u>\$561,000</u>   |

**TEST YOUR KNOWLEDGE****5.2**

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

**Multiple Choice**

- The difference between implied and book values that is not allocated to specific identifiable assets or liabilities is treated as goodwill, which is:
  - Expensed completely
  - Capitalized and amortized over 20 years
  - Capitalized and amortized over the expected useful life, not to exceed 40 years
  - Capitalized and checked periodically for impairment.

**5.5 CONSOLIDATED STATEMENTS WORKPAPER—USING PARTIAL EQUITY METHOD**

In the preparation of consolidated financial statements, the recorded balances of individual assets, liabilities, and expense accounts must be adjusted to reflect the allocation, depreciation, amortization, and potential impairment of the difference between implied and book values.

Although the equity methods (partial and complete) reflect the effects of certain transactions more fully than the cost method on the books of the parent, the adjustments have not been made to individual underlying asset or income statement accounts. For example, under the partial equity method, the parent records its equity in subsidiary income in its books, but it does not record the underlying revenue and expense accounts that combine to form that total. Also, under this method, the parent does not record excess depreciation, amortization,

PARTIAL

or impairment of identifiable intangibles arising in the acquisition in its investment account. These adjustments must be accomplished through the use of workpaper entries in the preparation of the consolidated statements workpaper. To illustrate, assume the following:

1. P Company acquires an 80% interest in S Company on January 1, 2015, for \$2,200,000, at which time S Company has capital stock of \$1,500,000 and retained earnings of \$500,000. P Company uses the partial equity method to record its investment in S Company.
2. The allocation of the difference between implied and book values in the amount of \$750,000 [ $(\$2,200,000/80\%) - \$2,000,000$ ], as previously presented in Illustration 5-5, includes \$50,000 to Inventory, \$300,000 to Equipment (10-year life), \$150,000 to Land, and \$250,000 to Goodwill.
3. In 2015, S Company reported net income of \$125,000 and declared and paid dividends of \$20,000. During the annual review of its goodwill, the determination is made that the goodwill is currently worth \$255,000.
4. In 2016, S Company reported net income of \$140,000 and declared and paid dividends of \$60,000. During the annual review of its goodwill, the determination is made that the goodwill is currently worth \$230,000 (after performing the two-step process described in Chapter 2).
5. In 2017, S Company reported net income of \$200,000 and declared and paid dividends of \$75,000. During the annual review of its goodwill, the determination is made that the goodwill is currently worth \$250,000.

**Lo 5** Recording investment by Parent, partial equity method.

*Entries on the Books of P Company—2015 (Year of Acquisition)* Entries recorded on the books of P Company under the partial equity method are as follows:

PARTIAL

|  |           |           |
|--|-----------|-----------|
| (1) Investment in S Company                              | 2,200,000 |           |
| Cash   |           | 2,200,000 |
| To record purchase of 80% interest in S Company.         |           |           |
| (2) Cash   | 16,000    |           |
| Investment in S Company                                  |           | 16,000    |
| To record dividends received (.80 × \$20,000).           |           |           |
| (3) Investment in S Company                              | 100,000   |           |
| Equity in Subsidiary Income                              |           | 100,000   |
| To record equity in subsidiary income (.80 × \$125,000). |           |           |

*Entries on the Books of P Company—2016 (Year Subsequent to Acquisition)*

|  |         |         |
|--|---------|---------|
| (4) Cash   | 48,000  |         |
| Investment in S Company                                  |         | 48,000  |
| To record dividends received (.80 × \$60,000).           |         |         |
| (5) Investment in S Company                              | 112,000 |         |
| Equity in Subsidiary Income                              |         | 112,000 |
| To record equity in subsidiary income (.80 × \$140,000). |         |         |

After these entries are posted, the Investment account will appear as follows:

| Investment in S Company |           |               |        |
|-------------------------|-----------|---------------|--------|
| (1) Cost                | 2,200,000 | (2) Dividends | 16,000 |
| (3) Subsidiary Income   | 100,000   | (4) Dividends | 48,000 |
| 12/31/15 Balance        | 2,284,000 |               |        |
| (5) Subsidiary Income   | 112,000   |               |        |
| 12/31/16 Balance        | 2,348,000 |               |        |

**LO 6** Workpaper entries, year of acquisition, partial equity method.

**Workpaper Entries—2015 (Year of Acquisition)** A consolidated statements workpaper under the partial equity method for the year ended December 31, 2015, is presented in Illustration 5-13. Workpaper entries in Illustration 5-13 are presented in general journal form as follows:

|     |   |           |           |
|-----|---|-----------|-----------|
| (1) | Beginning Retained Earnings—S Company   | 500,000   |           |
|     | Capital Stock—S Company   | 1,500,000 |           |
|     | Difference between Implied and Book Value   | 750,000   |           |
|     | Investment in S Company   |           | 2,200,000 |
|     | Noncontrolling Interest in Equity   |           | 550,000   |
|     | To eliminate the investment account against the equity accounts of S Company using equity balances at the <i>beginning of the current year</i> and recognize the noncontrolling interest in equity. |           |           |

|      |  |         |         |
|------|--|---------|---------|
| (2a) | Cost of Goods Sold (beginning inventory)   | 50,000  |         |
|      | Equipment (net) (10 year remaining life)   | 300,000 |         |
|      | Land   | 150,000 |         |
|      | Goodwill   | 250,000 |         |
|      | Difference between Implied and Book Value  |         | 750,000 |
|      | To allocate the amount of difference between implied and book values at date of acquisition to specific assets and liabilities (see Illustration 5-2). |         |         |

By the end of the first year, under a FIFO cost flow assumption, the inventory that necessitated the \$50,000 adjustment would have been sold. Recall that at the date of acquisition, this adjustment was to Inventory. At the end of the first year, however, the entry is to Cost of Goods Sold (or to Beginning Inventory, as a subcomponent of the Cost of Goods Sold). Since S Company will not have included the additional \$50,000 allocated to inventory in its reported Cost of Goods Sold (COGS), consolidated Cost of Goods Sold must be increased by this workpaper entry. If the inventory were still on hand on December 31, 2015 (for example, if a LIFO flow were assumed), the \$50,000 would be allocated to ending inventory in the balance sheet rather than to Cost of Goods Sold.

This entry to Cost of Goods Sold is appropriate only in the year of acquisition. In subsequent years, consolidated Cost of Goods Sold will have been reflected in the 2015 consolidated net income. Thus, the adjustment (\$50,000 debit) in future years will be split between Beginning Retained Earnings—P Company (80%, or \$40,000) and Noncontrolling Interest in Equity (20%, or \$10,000).

|      |   |        |        |
|------|---|--------|--------|
| (2b) | Depreciation Expense (\$300,000/10 years) | 30,000 |        |
|      | Equipment (net)                           |        | 30,000 |

To depreciate the amount of difference between implied and book value allocated to equipment (see Illustration 5-5).

As previously noted, depreciation in the consolidated income statement should be based on the value assigned to the equipment in the consolidated balance sheet. Since the depreciation recorded by S Company is based on the book value of the equipment in its records, consolidated depreciation must be increased by a workpaper entry.

It is possible, of course, to combine the workpaper entries relating to the allocation, amortization, and depreciation of the difference between implied and book value into one entry. In Illustration 5-13, for example, workpaper entries (2a) and (2b) could be presented in one combined entry as follows:

|     |   |         |         |
|-----|---|---------|---------|
| (2) | Cost of Goods Sold (beginning inventory)  | 50,000  |         |
|     | Depreciation Expense                      | 30,000  |         |
|     | Equipment (net) (\$300,000—\$30,000)      | 270,000 |         |
|     | Land                                      | 150,000 |         |
|     | Goodwill                                  | 250,000 |         |
|     | Difference between Implied and Book Value |         | 750,000 |

| 12/31 Noncontrolling Interest in<br>Net Assets  |                  |                  |                  |                  |                               | <u>555,000</u>           |
| Total Liabilities and Equity                    | <u>7,016,000</u> | <u>2,405,000</u> | <u>3,646,000</u> | <u>3,646,000</u> |                               | <u>7,807,000</u>         |

\*20% × (\$125,000 – \$30,000 – \$50,000) = \$9,000.

(1) To eliminate the investment account against the equity accounts of S Company at the date of acquisition and create noncontrolling interest account.

(2a) To allocate the difference between implied and book value at the date of acquisition to specific assets and liabilities.

(2b) To depreciate the amount of the difference between implied and book value assigned to equipment (\$300,000/10 years).

(3a) To reverse the effect of subsidiary income recognized on the books of the parent.

(3b) To reverse the effects of dividends declared by the subsidiary and received by the parents.

Next, the workpaper entries to reverse the effect of the parent company entries during the year for subsidiary dividends and income may be separated to record the reversal of dividends in one entry and the reversal of income in another, as follows (and as shown in Illustration 5-13):

|   |         |         |
|---|---------|---------|
| (3a) Equity in Subsidiary Income  | 100,000 |         |
| Investment in S Company   |         | 100,000 |
| To reverse the effect of subsidiary income recognized in the books of the parent. |         |         |

|   |        |        |
|---|--------|--------|
| (3b) Investment in S Company  | 16,000 |        |
| Dividends Declared  |        | 16,000 |
| To reverse the effect of dividends declared by the subsidiary and received by the parent. |        |        |

Alternatively, the effects of entries (3a) and (3b) may be combined into one entry.

The calculation of noncontrolling interest in Illustration 5-13 is affected by the amortization/depreciation of the differences between implied and book value (20% accrues to the noncontrolling interest).

**LO 6** Workpaper entries, subsequent year, partial equity.

**Workpaper Entries—2016 (Year Subsequent to Acquisition)—Partial Equity Method**  
Next, a consolidated statements workpaper under the partial equity method for the year ended December 31, 2016, is presented in Illustration 5-14. Workpaper entries in Illustration 5-14 are presented in general journal form below.

PARTIAL

|   |           |           |
|---|-----------|-----------|
| (1) Beginning Retained Earnings—S Company                                 | 605,000   |           |
| Capital Stock—S Company   | 1,500,000 |           |
| Difference between Implied and Book Value                                 | 750,000   |           |
| Investment in S Company (\$2,200,000 + \$84,000)                          |           | 2,284,000 |
| Noncontrolling Interest in Equity [\$550,000 + 20%(\$125,000 - \$20,000)] |           | 571,000   |

For those who have read the cost method discussion, note that *under the partial equity method, there is no need to establish reciprocity*. That feature was unique to the cost method and, in fact, may be viewed as a sort of conversion to the equity method.

In the investment elimination entry, the amount debited or credited to the Difference between Implied and Book Value is equal to the amount of the Difference between Implied and Book Value on the date of acquisition. The amount does not change subsequent to acquisition and may be obtained from the Computation and Allocation Schedule (Illustration 5-2).

Workpaper entry (2) is presented next, first in a combined single entry and then (alternatively) in its components. The authors find the second approach (components) easier to understand, though less compact.

|  |         |         |
|--|---------|---------|
| (2) Beginning Retained Earnings—P Company (Beginning Consolidated Retained Earnings) (40,000 + 24,000) | 64,000  |         |
| Noncontrolling Interest  | 16,000  |         |
| Depreciation Expense (\$300,000/10)  | 30,000  |         |
| Impairment Loss on Goodwill (\$250,000 - \$230,000)  | 20,000  |         |
| Equipment (net) (\$300,000 - \$30,000 - \$30,000)  | 240,000 |         |
| Land   | 150,000 |         |
| Goodwill   | 230,000 |         |
| Difference between Implied and Book Value  |         | 750,000 |
| To allocate and depreciate the difference between implied and book values.                             |         |         |

| Retained Earnings from above                 | 2,225,000        | 685,000          | 831,000                   | 48,000                      | 6,000                          | 2,121,000                    |
| 1/1 Noncontrolling Interest in Net Assets    |                  |                  | (2a) 10,000<br>(2b) 6,000 | (1) 571,000**               | 555,000                        |                              |
| 12/31 Noncontrolling Interest in Net Assets  |                  |                  |                           |                             | <u>561,000</u>                 | <u>561,000</u>               |
| Total Liabilities and Equity                 | <u>7,445,000</u> | <u>2,690,000</u> | <u>3,797,000</u>          | <u>3,797,000</u>            |                                | <u>8,407,000</u>             |

\*20% × (\$140,000 - \$30,000 - \$20,000) = \$18,000.

\*\*\$550,000 + [20% × (\$605,000 - \$500,000)] = \$571,000.

(1) To eliminate the investment account and create noncontrolling interest account.

(2a) To allocate the difference between implied and book value at the date of acquisition to specific assets and liabilities.

(2b) To depreciate the amount of the difference between implied and book value assigned to equipment (\$300,000/10 years).

(2c) To record goodwill impairment.

(3) To reverse the effect of parent company entries during the year for subsidiary dividends and income.

To separate the preceding entry into its more digestible components, begin with the allocation of the difference between implied and book value and then proceed to record excess depreciation as follows:

|      |  |         |         |
|------|--|---------|---------|
| (2a) | Beginning Retained Earnings—P Company (80% of previous year's cost of goods sold)  | 40,000  |         |
|      | Noncontrolling Interest (20% of previous year's cost of goods sold)  | 10,000  |         |
|      | Equipment  | 300,000 |         |
|      | Land   | 150,000 |         |
|      | Goodwill   | 250,000 |         |
|      | Difference between Implied and Book Value  |         | 750,000 |
|      | To allocate the amount of difference between implied and book values at date of acquisition to specific assets and liabilities (see Illustration 5-2). |         |         |

Entry (2a) is identical to that recorded in the preceding year, with the exception that the entry to Cost of Goods Sold is appropriate only in the year of acquisition. Thus, the adjustment in year 2 (and future years) is split between the controlling and noncontrolling interests in equity (80% to Beginning Retained Earnings of P Company and 20% to Noncontrolling Interest).

|      |  |        |        |
|------|--|--------|--------|
| (2b) | Depreciation Expense (current year)  | 30,000 |        |
|      | Beginning Retained Earnings—P Company (previous year's depreciation expense $\times$ 80%)      | 24,000 |        |
|      | Noncontrolling Interest (previous year's depreciation expense $\times$ 20%)                    | 6,000  |        |
|      | Equipment (net) or Accumulated Depreciation  |        | 60,000 |
|      | To depreciate the amount of difference between implied and book values allocated to equipment. |        |        |

This entry differs from the first-year entry in that the excess depreciation from the year 2015 is now reflected in Beginning Retained Earnings—P Company and Noncontrolling Interest. Although the adjustment to Equipment was already made in the prior year workpaper for one year's depreciation adjustment, it was not posted to the books of S Company and hence must be made again. If the following year (2017) were being presented, the debit to Depreciation Expense would remain at \$30,000, but the debit to Beginning Retained Earnings would be \$48,000 to reflect two prior years of excess depreciation (with a \$12,000 debit to Noncontrolling Interest and a credit to Equipment of \$90,000 for all three years).

Entry (2c) is a new entry that is needed in 2016 because goodwill is assessed to have been impaired. Goodwill is still carried in the workpaper for the consolidated entity at its acquisition value of \$250,000, and this amount exceeds its current estimated value of \$230,000 in 2016. Therefore, a workpaper entry is needed to reduce the carrying value to \$230,000, which entails the recording of an impairment loss of \$20,000. This charge, like the excess depreciation, is distributed to the controlling and noncontrolling interests in the income statement for 2016. The impairment loss may be combined with "other expenses" in the consolidating workpaper. In subsequent years, the charge to earnings (like excess depreciation) will flow 80% to the Beginning Retained Earnings of P and 20% to Noncontrolling Interest.

## RELATED CONCEPTS

FASB Concept No. 5 suggests that losses be recognized when previously recognized economic benefits are reduced, as is the case with goodwill impairment. This *loss of benefit* approach attempts to *match* or *time* the recording of expenses or losses in the Income Statement.

|      |  |        |        |
|------|--|--------|--------|
| (2c) | Impairment loss (current year)   | 20,000 |        |
|      | Goodwill   |        | 20,000 |
|      | To reflect the impairment of goodwill recorded in the acquisition of 2013 due to a decline in estimated value in 2016. |        |        |

Clearly, if entries (2a), (2b), and (2c) are recorded separately, the combined entry (2) is not needed.

|   |         |        |
|---|---------|--------|
| (3) Equity in Subsidiary Income   | 112,000 |        |
| Dividends Declared  |         | 48,000 |
| Investment in S Company   |         | 64,000 |
| To reverse the effect of parent company entries during the year 2016 for subsidiary dividends and income. |         |        |

PARTIAL

Observe that the consolidated balances in Illustration 5-14 are the same as those in Illustration 5-10 (cost method workpaper). The workpaper entries to eliminate the investment account and to allocate and depreciate the difference between implied and book values are the same regardless of whether the investment is recorded using the cost method or the partial equity method. Only the entries for intercompany dividends and income and for reciprocity differ.

Illustration 5-7 (on page 197) presents the entries in their separate components for all three years (2015 through 2017) side by side for the partial equity method.

### TEST YOUR KNOWLEDGE 5.3

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

#### Multiple Choice

- Assuming a FIFO cost flow, which account should normally be debited for the inventory adjustment (assuming market value of subsidiary's inventory to be higher than its book value) when allocating the difference between implied and book values at the end of the year of acquisition?
  - Inventory
  - Beginning Retained Earnings—Parent
  - Cost of Goods Sold
  - Depreciation Expense

## 5.6 CONTROLLING AND NONCONTROLLING INTERESTS IN CONSOLIDATED NET INCOME AND RETAINED EARNINGS—USING PARTIAL EQUITY METHOD

The t-account calculation of consolidated net income (as well as the controlling and noncontrolling interests therein) does not differ between the cost and partial equity methods. As stated earlier, *consolidated net income is the parent company's income from its independent operations plus (minus) the reported subsidiary income (loss) plus or minus adjustments for the period relating to the depreciation/amortization of the difference between implied and book value.*

PARTIAL

The calculation of consolidated net income for the year ended December 31, 2016, presented in Illustration 5-15, is based on Illustration 5-14. This, of course, is the same amount of consolidated net income as that calculated in the consolidated statements workpaper presented in Illustration 5-14.

When the parent company uses the partial equity method to account for its investment, the parent company's share of subsidiary income since acquisition is already included in the parent company's reported retained earnings. Consequently, *consolidated retained earnings are calculated as the parent company's recorded partial equity basis retained earnings plus or minus the cumulative effect of the adjustments to date relating to the depreciation/amortization of the difference between implied and book value.*

The analytical calculation of consolidated retained earnings on December 31, 2016, presented in Illustration 5-16, is based on Illustration 5-14. This, too, is the same amount of consolidated retained earnings as that shown in the consolidated statements workpaper presented in Illustration 5-14.

Alternatively, consolidated retained earnings can be computed by adding beginning consolidated retained earnings to the controlling interest in consolidated net income and subtracting dividends declared by Company P.

|   |                    |
|---|--------------------|
| Beginning consolidated retained earnings              | \$1,818,000        |
| Plus: controlling interest in consolidated net income | 453,000            |
| Less: dividends declared by P Company                 | <u>(150,000)</u>   |
| Ending consolidated retained earnings                 | <u>\$2,121,000</u> |

Similarly, the Noncontrolling Interest in Equity can be computed as follows:

|  |                  |
|--|------------------|
| Beginning Noncontrolling Interest in Equity              | \$555,000        |
| Plus: Noncontrolling Interest in Consolidated Net Income | 18,000           |
| Less: Dividends Declared by S Company to Outsiders       | <u>(12,000)</u>  |
| Ending Noncontrolling Interest in Equity                 | <u>\$561,000</u> |

**ILLUSTRATION 5-15**

**T-account Calculation of Controlling and Noncontrolling Interest in Consolidated Income for Year Ended December 31, 2016**

| Noncontrolling Interest in Consolidated Income   |        |  |                  |
|--|--------|--|------------------|
| Additional depreciation and amortization of the difference between implied and book value related to: Depreciation Expense (\$ 300,000/10) | 30,000 | Net income reported by S Company   | 140,000          |
| Impairment of goodwill (\$250,000 – \$230,000)   | 20,000 |  |                  |
|  |        | Adjusted Net Income  | 90,000           |
|  |        | Noncontrolling Ownership percentage interest   | 20%              |
|  |        | Noncontrolling Interest  | <u>18,000</u>    |
|  |        | Consolidated Income  | <u>18,000</u>    |
| <b>Controlling Interest in Consolidated Income</b>   |        |  |                  |
|  |        | P Company’s net income from its independent operations (\$493,000 reported net income less \$112,000 equity in subsidiary income included therein) | \$381,000        |
|  |        | P Company’s share of the reported income of S company (.8 × \$90,000)  | 72,000           |
|  |        | Controlling interest in Consolidated Net Income  | <u>\$453,000</u> |

## 5.7 CONSOLIDATED STATEMENTS WORKPAPER—USING COMPLETE EQUITY METHOD

In the preparation of consolidated financial statements, the recorded balances of individual assets, liabilities, and expense accounts must be adjusted to reflect the allocation and depreciation of the differences between implied and book values.

When the parent accounts for its investment using the complete equity method, the parent records excess depreciation, amortization, and impairment arising in the acquisition in its investment account. The income statement effects are recorded as adjustments to the amount recognized as “equity in subsidiary income” each year. Even under this method, however, adjustments are needed to record the effects in the proper accounts for the consolidated entity. For example, the account “equity in subsidiary income” will be eliminated in the consolidated financial statements, and the effects need to be shown directly in “depreciation expense.” Similarly, the investment account will be eliminated, and the adjustments for any differences between implied and book values need to be shown directly in the appropriate asset (inventory, land, equipment, goodwill, etc.) and/or liability accounts. These adjustments must be accomplished through the use of *workpaper entries* in the preparation of the consolidated statements workpaper.

COMPLETE

To illustrate, assume the following:

1. P Company acquires an 80% interest in S Company on January 1, 2015, for \$2,200,000, at which time S Company has capital stock of \$1,500,000 and retained earnings of \$500,000. P Company uses the complete equity method to record its investment in S Company.
2. The allocation of the difference between implied and book values in the amount of \$750,000  $[(\$2,200,000/80\%) - \$2,000,000]$ , as previously presented in Illustration 5-5, includes \$50,000 to Inventory, \$300,000 to Equipment (10-year life), \$150,000 to Land, and \$250,000 to Goodwill.
3. In 2015, S Company reported net income of \$125,000 and declared and paid dividends of \$20,000. During the annual review of its goodwill, the determination is made that the goodwill is currently worth \$255,000.
4. In 2016, S Company reported net income of \$140,000 and declared and paid dividends of \$60,000. During the annual review of its goodwill, the determination is made that the goodwill is currently worth \$230,000 (after performing the two-step process described in Chapter 2).
5. In 2017, S Company reported net income of \$200,000 and declared and paid dividends of \$75,000. During the annual review of its goodwill, the determination is made that the goodwill is currently worth \$250,000.

**Lo 5** Recording investment by Parent, complete equity method.

**Entries on Books of P Company—2015 (year of acquisition) and 2016 (subsequent year)** Entries recorded on the books of P Company under the complete equity method are as follows:

| 2015—Year of Acquisition |   |           |           |
|--------------------------|---|-----------|-----------|
| (1)                      | Investment in S Company   | 2,200,000 |           |
|                          | Cash  |           | 2,200,000 |
|                          | To record purchase of 80% interest in S Company.  |           |           |
| (2)                      | Cash  | 16,000    |           |
|                          | Investment in S Company   |           | 16,000    |
|                          | To record dividends received $(.80 \times \$20,000)$ .  |           |           |
| (3)                      | Investment in S Company   | 100,000   |           |
|                          | Equity in Subsidiary Income   |           | 100,000   |
|                          | To record equity in subsidiary income $(.80 \times \$125,000)$ .  |           |           |
| (4)                      | Equity in Subsidiary Income   | 64,000    |           |
|                          | Investment in S Company   |           | 64,000    |
|                          | To adjust equity in subsidiary income for excess depreciation $(80\% \times \$30,000, \text{ or } \$24,000)$ and the higher value placed on inventory and thus on cost of goods sold $(80\% \times \$50,000, \text{ or } \$40,000)$ . No impairment of goodwill in 2015 since its estimated value > carrying value. See Illustration 5-5. |           |           |

Entries (3) and (4) could be collapsed into one combined entry of \$36,000 (\$100,000 minus \$64,000).

| 2016—Year Subsequent to Acquisition |  |         |         |
|-------------------------------------|--|---------|---------|
| (1)                                 | Cash   | 48,000  |         |
|                                     | Investment in S Company  |         | 48,000  |
|                                     | To record dividends received (.80 × \$60,000).   |         |         |
| (2)                                 | Investment in S Company  | 112,000 |         |
|                                     | Equity in Subsidiary Income  |         | 112,000 |
|                                     | To record equity in subsidiary income (.80 × \$140,000).   |         |         |
| (3)                                 | Equity in Subsidiary Income  | 40,000  |         |
|                                     | Investment in S Company  |         | 40,000  |
|                                     | To reduce equity in subsidiary income for excess depreciation (\$30,000 × 80%) plus impairment of goodwill (\$20,000 × 80%). |         |         |

COMPLETE

Again, entries (2) and (3) could be collapsed into one combined entry of \$72,000 (\$112,000 minus \$40,000).

Note also that the inventory adjustment was needed only in the first year under a first-in, first-out (FIFO) cost flow assumption.

After these entries are posted, the Investment account will appear as follows:

| Investment in S Company |                  |  |        |
|-------------------------|------------------|--|--------|
| (1) Cost                | 2,200,000        | (2) Dividends                                      | 16,000 |
| (3) Subsidiary Income   | 100,000          | (4) Excess depreciation, and<br>Cost of Goods Sold | 64,000 |
| <b>12/31/15 Balance</b> | <b>2,220,000</b> | (1) Dividends                                      | 48,000 |
| (2) Subsidiary Income   | 112,000          | (3) Excess depreciation and<br>goodwill impairment | 40,000 |
| <b>12/31/16 Balance</b> | <b>2,244,000</b> |  |        |

**LO 6** Workpaper entries, year of acquisition, complete equity.

**Workpaper Entries—2015 (Year of Acquisition)** A consolidated statements workpaper under the complete equity method for the year ended December 31, 2015, is presented in Illustration 5-17. Workpaper entries in Illustration 5-17 are presented in general journal form as follows:

|     |   |           |           |
|-----|---|-----------|-----------|
| (1) | Beginning Retained Earnings—S Company     | 500,000   |           |
|     | Capital Stock—S Company                   | 1,500,000 |           |
|     | Difference between Implied and Book Value | 750,000   |           |
|     | Investment in S Company                   |           | 2,200,000 |
|     | Noncontrolling Interest in Equity         |           | 550,000   |

To eliminate the investment account against the equity accounts of S Company using equity balances at the *beginning of the current year*, and recognize the noncontrolling interest in equity.

|      |   |         |         |
|------|---|---------|---------|
| (2a) | Cost of Goods Sold (beginning inventory)  | 50,000  |         |
|      | Equipment (net) (10-year remaining life)  | 300,000 |         |
|      | Land                                      | 150,000 |         |
|      | Goodwill                                  | 250,000 |         |
|      | Difference between Implied and Book Value |         | 750,000 |

COMPLETE

By the end of the first year, under a FIFO cost flow assumption, the inventory that necessitated the \$50,000 adjustment would have been sold. Recall that at the date of acquisition, this adjustment was to Inventory. At the end of the first year, however, the entry is to Cost of Goods Sold (or to Beginning Inventory, as a subcomponent of the Cost of Goods Sold). Since S Company will not have included the additional \$50,000 allocated to inventory in its reported Cost of Goods Sold (COGS), consolidated Cost of Goods Sold must be

| Complete Equity Method                       |                  | ILLUSTRATION 5-17                 |                  |                  |                         |                       |

\*20% × (\$125,000 – \$30,000 – \$50,000) = \$9,000.

(1) To eliminate the investment account and create noncontrolling interest account.

(2a) To allocate differences between implied and book value.

(2b) To depreciate the difference between implied and book value assigned to equipment (300,000/10).

(3a) To eliminate equity in subsidiary income.

(3b) To eliminate intercompany dividends.

(3c) To reverse the adjustments to subsidiary income recognized by the parent.

increased by this workpaper entry. If the inventory were still on hand on December 31, 2015 (for example, if a LIFO flow were assumed), the \$50,000 would be allocated to ending inventory in the balance sheet rather than to Cost of Goods Sold.

This entry to Cost of Goods Sold is appropriate only in the year of acquisition. In subsequent years, consolidated COGS will have been reflected in the 2015 consolidated net income and hence consolidated retained earnings at the end of 2015. On the books of P Company, the adjustment is reflected in equity in subsidiary income (and thus in ending retained earnings) and in the investment account. Because the investment account must be eliminated in the consolidating process, the entry to COGS is replaced in future years by entries to Investment in S Company (\$40,000 debit) and to Noncontrolling Interest (\$10,000 debit). These workpaper entries serve to facilitate the elimination of the investment account by reversing an adjustment made by the parent, and to adjust Beginning Noncontrolling Interest in Equity downward for its share (20%) of the charge.

|      |  |        |        |
|------|--|--------|--------|
| (2b) | Depreciation Expense (\$300,000/10 years)  | 30,000 |        |
|      | Equipment (net) <sup>7</sup>   |        | 30,000 |
|      | To depreciate the amount of difference between implied and book value allocated to equipment (see Illustration 5-5). |        |        |

COMPLETE

As previously noted, depreciation in the consolidated income statement should be based on the value assigned to the equipment in the consolidated balance sheet. Since the depreciation recorded by S Company is based on the book value of the equipment in its records, consolidated depreciation must be increased by a workpaper entry.

The amount of the difference between implied and book values not allocated to specific identifiable assets or liabilities is treated in the consolidated financial statements as goodwill. Companies are not currently required to amortize goodwill. Instead it is adjusted only when impaired. In the year 2015, goodwill is assessed to be worth \$255,000, which is more than its carrying value of \$250,000. Thus, no impairment entry is needed.

It is possible, of course, to combine the workpaper entries relating to the allocation and depreciation of the differences between implied and book values into one entry. In Illustration 5-17, for example, workpaper entries (2a) and (2b) could be presented in one combined entry as follows:

|     |   |         |         |
|-----|---|---------|---------|
| (2) | Cost of Goods Sold (Beginning Inventory)  | 50,000  |         |
|     | Depreciation Expense                      | 30,000  |         |
|     | Equipment (net) (\$300,000 – \$30,000)    | 270,000 |         |
|     | Land                                      | 150,000 |         |
|     | Goodwill                                  | 250,000 |         |
|     | Difference between Implied and Book Value |         | 750,000 |

Next we reverse the effect of parent company entries during the year for subsidiary dividends and income. Here entries may also be combined or separated to record the reversal of dividends in one entry, the reversal of reported income in a second entry, and the reversal of adjustments to subsidiary income in a third.

|      |   |         |         |
|------|---|---------|---------|
| (3a) | Investment in S Company   | 16,000  |         |
|      | Dividends Declared  |         | 16,000  |
|      | To reverse the effect of dividends declared by the subsidiary and received by the parent.   |         |         |
| (3b) | Equity in Subsidiary Income   | 100,000 |         |
|      | Investment in S Company   |         | 100,000 |
|      | To reverse the effect of subsidiary reported income recognized in the books of the parent.  |         |         |
| (3c) | Investment in S Company   | 64,000  |         |
|      | Equity in Subsidiary Income   |         | 64,000  |
|      | To reverse the adjustments to subsidiary income recognized by the parent $80\% \times (\$50,000 \text{ cost of goods sold and } \$30,000 \text{ depreciation})$ . |         |         |

<sup>7</sup> The credit to this entry could also be accumulated depreciation.

Alternatively, the effects of entries (3a) through (3c) may be combined into one entry, as follows:

|  |        |        |
|--|--------|--------|
| (3) Equity in Subsidiary Income  | 36,000 |        |
| Dividends Declared   |        | 16,000 |
| Investment in S Company  |        | 20,000 |
| To reverse the effect of parent company entries during the year for subsidiary dividends and income. |        |        |

The calculation of noncontrolling interest in Illustration 5-17 is affected by the amortization/depreciation of the differences between implied and book value.

**Entries on Workpapers—2016 (Year Subsequent to Acquisition)** Next, a consolidated statements workpaper under the complete equity method for the year ended December 31, 2016, is presented in Illustration 5-18. Workpaper entries in Illustration 5-18 are presented in general journal form as follows:

|  |           |           |
|--|-----------|-----------|
| (1) Beginning Retained Earnings—S Company                        | 605,000   |           |
| Capital Stock—S Company  | 1,500,000 |           |
| Difference between Implied and Book Value                        | 750,000   |           |
| Investment in S Company (\$2,200,000 + \$84,000)                 |           | 2,284,000 |
| Noncontrolling Interest [\$550,000 + 20% (\$125,000 – \$20,000)] |           | 571,000   |

|  |         |         |
|--|---------|---------|
| (2) Investment in S Company (adjustments from prior year for 80% depreciation and for 80% COGS: 40,000 + 24,000) | 64,000  |         |
| Noncontrolling Interest (adjustments from prior year for 20% depreciation & COGS)                                | 16,000  |         |
| Depreciation Expense (\$300,000/10)  | 30,000  |         |
| Impairment Loss on Goodwill (\$250,000 – \$230,000)  | 20,000  |         |
| Equipment (net) (\$300,000 – \$30,000 – \$30,000)  | 240,000 |         |
| Land   | 150,000 |         |
| Goodwill   | 230,000 |         |
| Difference between Implied and Book Value  |         | 750,000 |
| To allocate and depreciate the difference between implied and book values.                                       |         |         |

To separate the preceding entry into its more digestible components, begin with the allocation of the difference between implied and book values and then proceed to record excess depreciation and goodwill impairment as follows:

|  |         |         |
|--|---------|---------|
| (2a) Investment in S Company (80% of previous year's cost of goods sold)   | 40,000  |         |
| Noncontrolling Interest (20% of previous year's cost of goods sold)  | 10,000  |         |
| Equipment  | 300,000 |         |
| Land   | 150,000 |         |
| Goodwill   | 250,000 |         |
| Difference between Implied and Book Value  |         | 750,000 |
| To allocate the amount of difference between implied and book values at date of acquisition to specific assets and liabilities (see Illustration 5-2). |         |         |

Entry(2a) is identical to that recorded in the preceding year, with the exception that the entry to Cost of Goods Sold is appropriate only in the year of acquisition. Consolidated COGS will have been reflected in the 2015 consolidated net income and hence consolidated retained earnings (80%) and Noncontrolling Interest (20%) at the end of 2015. On the books of P Company, the adjustment was reflected in equity in subsidiary income in 2015 (and thus in ending retained earnings) and in the investment account. Because the investment account must be eliminated in the consolidating process, the entry to COGS is

| 12/31 Noncontrolling Interest in Net Assets  |                  |                  |                     |                  | <u>561,000</u>                 | <u>561,000</u>               |
| Total Liabilities and Equity                 | <u>7,341,000</u> | <u>2,690,000</u> | <u>3,757,000</u>    | <u>3,757,000</u> |                                | <u>8,407,000</u>             |

\* 20% × (\$140,000 - \$30,000 - \$20,000) = \$18,000.

\*\* \$550,000 + [20% × (\$605,000 - \$500,000)] = \$571,000.

(1) To eliminate investment account and create noncontrolling interest account.

(2a) To allocate the amount of difference between implied and book value at date of acquisition to specific assets and liabilities.

(2b) To depreciate the amount of difference between implied and book value allocated to equipment.

(2c) To record goodwill impairment.

(3) To reverse the effect of parent company entries during the year for subsidiary dividends and income.

replaced here and in future years by an entry (\$40,000 debit) to Investment in S Company, and a \$10,000 debit to Beginning Noncontrolling Interest in Equity.

This component of the entry captures one of the basic differences between the Complete Equity method and the other two methods. Only under the Complete Equity method does the parent's beginning retained earnings exactly match the amount reported as consolidated retained earnings at the end of the previous year. Hence fewer workpaper adjustments to Beginning Retained Earnings—P Company are needed under the Complete Equity method. The \$40,000 adjustment in year 2 (and future years) related to inventory valuation is made to Investment in S Company, serving to facilitate the elimination of the investment account (by reversing an adjustment made by the parent).

|      |  |        |        |
|------|--|--------|--------|
| (2b) | Depreciation Expense (current year)  | 30,000 |        |
|      | Investment in S (80% of previous year's depreciation expense)                                  | 24,000 |        |
|      | Noncontrolling Interest (20% of previous year's depreciation expense)                          | 6,000  |        |
|      | Equipment (net) or Accumulated Depreciation  |        | 60,000 |
|      | To depreciate the amount of difference between implied and book values allocated to equipment. |        |        |

This entry differs from the first-year entry in that the excess depreciation from the year 2015 is now reflected in a lowered balance in the Investment account, and this entry serves to reverse that adjustment (again to facilitate eliminating the Investment account). Although the adjustment to Equipment (net) was already made in the prior-year workpaper for one year's depreciation adjustment, it was not posted to the books of S Company and hence must be made again. If the following year (2017) were being presented, the debit to Depreciation Expense would remain at 30,000, but the debit to Investment in S Company would be \$48,000 to reflect two prior years of excess depreciation, Noncontrolling Interest would be debited for \$12,000, and the credit to Net Equipment would total 90,000.

Entry (2c) is a new entry that is needed in 2016 because goodwill is assessed to have been impaired. Goodwill is still carried in the workpaper for the consolidated entity at its acquisition value of \$250,000, and this amount exceeds its current estimated value of \$230,000 in 2016. Therefore, a workpaper entry is needed to reduce the carrying value to \$230,000, which entails the recording of an impairment loss of \$20,000. This charge, like the excess depreciation, is distributed to the controlling and noncontrolling interests in the income statement for 2016. The impairment loss may be combined with "other expenses" in the consolidating workpaper.

In subsequent years, the charge to earnings (like excess depreciation) will flow 80% to the Investment in S Company and 20% to Noncontrolling Interest.

|      |   |        |        |
|------|---|--------|--------|
| (2c) | Impairment loss (current year)  | 20,000 |        |
|      | Goodwill  |        | 20,000 |
|      | To reflect the impairment of goodwill recorded in the acquisition of 2013 due to a decline in value as of 2014. |        |        |

Clearly, if entries (2a) through (2c) are recorded separately, the combined entry (2) is not needed.

|     |   |        |        |
|-----|---|--------|--------|
| (3) | Equity in Subsidiary Income (after depreciation and goodwill impairment adjustments)                      | 72,000 |        |
|     | Dividends Declared  |        | 48,000 |
|     | Investment in S Company   |        | 24,000 |
|     | To reverse the effect of parent company entries during the year 2014 for subsidiary dividends and income. |        |        |

Observe that the consolidated balances in Illustration 5-18 are the same as those in Illustration 5-10 (cost method workpaper) and in Illustration 5-14 (partial equity workpaper). Illustration 5-8 (on page 198) presents the entries in their separate components for all three years side by side for the complete equity method.

## 5.8 CONTROLLING INTEREST IN CONSOLIDATED NET INCOME AND RETAINED EARNINGS—USING COMPLETE EQUITY METHOD

When the parent uses the complete equity method, its reported income equals the controlling interest in consolidated net income. As with the other methods, the amount of consolidated income is *the parent company's income from its independent operations plus (minus) the subsidiary income (loss) plus or minus adjustments for the period relating to the depreciation/amortization and impairment of the difference between implied and book values of depreciable or amortizable assets (and liabilities)*. Note that *consolidated income*, as opposed to the *controlling interest in consolidated income*, includes both the parent's share and the noncontrolling interest in subsidiary income (loss).

COMPLETE

The amount of consolidated net income for the year ended December 31, 2016, is \$471,000, with \$18,000 allocated to the noncontrolling interest and the remaining \$453,000 to the controlling interest. Observe that the \$453,000 is reported both in the farthest left-hand column of Illustration 5-18 (P Company income) and again in the farthest right-hand column, labeled as "Net Income to Retained Earnings" (controlling interest in consolidated net income).

Similarly, the amount of consolidated retained earnings (\$2,121,000) at the end of 2016 is the same as the ending retained earnings reported by P Company. Again compare the amount in the retained earnings section in the farthest left-hand column of Illustration 5-18 (P Company) to the amount in the farthest right-hand column (consolidated retained earnings). The amounts agree because P Company recognizes all adjustments in the income statement account "equity in subsidiary income" and thus in retained earnings.

IN  
THE  
NEWS

Pursuant to the provisions of Accounting Standards Codification topic 350, "Intangibles—Goodwill and Other" ("ASC 350"), our goodwill was tested for impairment annually (or more frequently if impairment indicators arose). As a result of our annual test on January 31, 2009, all of the goodwill of our continuing operations was impaired, and we recorded a resulting charge of \$40.3 million in the fourth quarter of 2008. This impairment was primarily the result of a decrease in fair value due to the material decline in our market capitalization during the fourth quarter of 2008. The charge is categorized as "Goodwill impairment" on our consolidated statements of operations.<sup>8</sup>

## 5.9 ADDITIONAL CONSIDERATIONS RELATING TO TREATMENT OF DIFFERENCE BETWEEN IMPLIED AND BOOK VALUES

We present additional considerations relating to the treatment of the difference between implied and book value in the following sections. These considerations include allocation of the difference between implied and book values to liabilities and to assets with fair values less than book values; the separate disclosure of accumulated depreciation; premature disposals of long-lived assets by the subsidiary; and depreciable assets used in manufacturing.

### Allocation of Difference between Implied and Book Values to Debt

**Adjustment of Contingent Liabilities and Reserves** Often an acquiring firm re-assesses the adequacy of the acquired firm's accounting for contingent liabilities, purchase commitments, reserves, and so on, prior to its allocation of any difference between implied and book values. If the accounting for these items falls into a gray area of GAAP, the purchaser may decide to allocate some of the difference between implied and book values to adjust or create liability accounts. For example, suppose that the purchaser assesses a contingent liability of the acquired firm to be both probable and reasonably estimable, whereas

<sup>8</sup> Borders Group Inc. 10K, 2011.

the acquired firm had previously disclosed it only in a note because it was deemed reasonably possible (but not probable). By adjusting liabilities upward, the difference to be allocated to assets (and potentially to goodwill) is increased.

Interestingly, although many firms have been criticized for manipulating earnings to avoid recording goodwill, the Walt Disney Company, in its acquisition of Capital/ABC, was accused by some sources of managing earnings via liabilities to record *excessive* goodwill. The *increase in recorded liabilities* in such a case could be viewed as providing a sort of cushion or management tool for future earnings manipulation.

IN  
THE  
NEWS

Disney's accountants created \$2.5 billion in liabilities by asserting that Capital Cities/ABC ignored the timing of anticipated cash flows from future programming that the network agreed to finance (at least in part). This implies that after the merger, if programming costs increased, Disney would have an option of writing these amounts off against these liabilities instead of running them through the income statement.<sup>9</sup>

### Allocation of Difference between Implied and Book Values to Long-Term Debt

**LO 7** Allocating difference to long-term debt.

Notes payable, long-term debt, and other obligations of an acquired company should be valued for consolidation purposes at their fair values. The fair value of liabilities is the price that would be paid to transfer a liability in an orderly transaction between market participants at the measurement date. A fair value measurement assumes both, that the liability is transferred to a market participant at the measurement date and that the nonperformance risk relating to that liability is the same before and after its transfer. The fair value of the liability should reflect the nonperformance risk relating to that liability.<sup>10</sup>

The reporting entity should consider the effect of its credit risk (credit standing) on the fair value of the liability. Valuation techniques used to measure fair value should be consistently applied. Valuation techniques consistent with the market approach or income approach should be used to measure fair value. The market approach is defined as a valuation technique that uses prices and other relevant information generated by market transactions involving identical or comparable liabilities. The income approach is defined as an approach that uses valuation techniques to convert future amounts (for example, cash flows or earnings) to a single present amount (discounted). This is the present value technique.

To increase consistency and comparability in fair value measurements and related disclosures, the fair value hierarchy prioritizes the inputs to valuation techniques used to measure fair value into three broad levels. The fair value hierarchy gives the highest priority to quoted prices (unadjusted) in active markets for identical liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). In some cases, the inputs used to measure fair value might fall in different levels of the fair value hierarchy. The level in the fair value hierarchy within which the fair value measurement in its entirety falls should be determined based on the lowest level input that is significant to the entire fair value measurement. Assessing the significance of a particular input to the fair value measurement in its entirety requires judgment, and consideration of factors specific to the asset or liability.

Assume that S Company has outstanding \$500,000 in 6%, 30-year bonds that were issued at par on January 1, 1990, and that interest on the bonds is paid annually. Assume further that on January 1, 2015, when P Company acquires a 100% interest in S Company, the yield rate on bonds with similar risk is 10%. The present value of S Company's bonds

<sup>9</sup> *Barron's*, "Disney's Real Magic," by Abraham Briloff, 3/23/98, pp. 17–20.

<sup>10</sup> FASB ASC topic 820 [Fair Value Measurement] states, "If a present value technique is used, the estimated future cash flows should not ignore relevant provisions of the debt agreement (for example, the right of the issuer to prepay)."

payable determined at the effective yield rate on the acquisition date for five periods (the time until maturity) is calculated as follows:

|   |                  |
|---|------------------|
| (1) Interest Payments $\$30,000 \times 3.79079 =$       | \$113,724        |
| (2) Principal Payment $\$500,000 \times .62092 =$       | <u>310,460</u>   |
| Present Value of Future Cash Payments Discounted at 10% | <u>\$424,184</u> |

(1) The present value of an annuity of one for five periods discounted at 10% is 3.79079.

(2) The present value of an amount of one received five periods hence discounted at 10% is 0.62092.

From the point of view of the consolidated entity, bonds payable are overstated on January 1, 2015, by \$75,816 ( $\$500,000 - \$424,184$ ) and a corresponding amount of the total difference between implied and book values on the date of acquisition must be allocated to “unamortized discount on bonds payable.” In years after acquisition, interest expense reported by the subsidiary will be understated for consolidation purposes. Thus, workpaper entries must be made to amortize the discount in a manner that will reflect consolidated interest expense as a constant rate on the carrying value of the liability to the consolidated entity. An amortization schedule for this purpose is presented in Illustration 5-19. Consolidated statements workpaper entries necessary in the first five years subsequent to P Company’s acquisition of S Company are summarized in the following table.

#### ILLUSTRATION 5-19

##### Bond Discount Amortization Schedule

| Date       | Interest Expense<br>Recorded by S | Consolidated<br>Interest Expense | Discount<br>Amortization | Consolidated<br>Carrying Value |
|------------|-----------------------------------|----------------------------------|--------------------------|--------------------------------|
| 1/1/2015   | \$ —0—                            | \$ —0—                           | \$ —0—                   | \$424,184                      |
| 12/31/2015 | 30,000                            | 42,418(1)                        | 12,418(2)                | 436,602(3)                     |
| 12/31/2016 | 30,000                            | 43,660(4)                        | 13,660                   | 450,262                        |
| 12/31/2017 | 30,000                            | 45,026                           | 15,026                   | 465,288                        |
| 12/31/2018 | 30,000                            | 46,529                           | 16,529                   | 481,817                        |
| 12/31/2019 | <u>30,000</u>                     | <u>48,183</u>                    | <u>18,183</u>            | 500,000                        |
|            | <u>150,000</u>                    | <u>225,816</u>                   | <u>75,816</u>            |                                |

(1)  $.10 \times \$424,184 = \$42,418$ .

(2)  $\$42,418 - \$30,000 = \$12,418$ .

(3)  $\$424,184 + \$12,418 = \$436,602$ .

(4)  $.10 \times \$436,602 = \$43,660$ .

#### Cost and Partial Equity Methods

| Difference between Implied and Book Value                              |        | 75,816 |        | 75,816 |        | 75,816 |        | 75,816 |        | 75,816 |
| Beginning Retained Earnings—P Company (Consolidated Retained Earnings) | —0—    |        | 12,418 |        | 26,078 |        | 41,104 |        | 57,633 |        |
| Interest Expense   | 12,418 |        | 13,660 |        | 15,026 |        | 16,529 |        | 18,183 |        |
| Unamortized Discount on Bonds Payable                                  |        | 12,418 |        | 26,078 |        | 41,104 |        | 57,633 |        | 75,816 |

### Complete Equity Method

| December 31                               | 2015   |        | 2016   |        | 2017   |        | 2018   |        | 2019   |        |
|---|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|
|   | Debit  | Credit | Debit  | Credit | Debit  | Credit | Debit  | Credit | Debit  | Credit |
| Unamortized Discount on Bonds Payable     | 75,816 |        | 75,816 |        | 75,816 |        | 75,816 |        | 75,816 |        |
| Difference between Implied and Book Value |        | 75,816 |        | 75,816 |        | 75,816 |        | 75,816 |        | 75,816 |
| Investment in S Company                   | —0—    |        | 12,418 |        | 26,078 |        | 41,104 |        | 57,633 |        |
| Interest Expense                          | 12,418 |        | 13,660 |        | 15,026 |        | 16,529 |        | 18,183 |        |
| Unamortized Discount on Bonds Payable     |        | 12,418 |        | 26,078 |        | 41,104 |        | 57,633 |        | 75,816 |

At maturity the bonds will be redeemed at par value (\$500,000), which also will be the carrying value to the consolidated entity. In all subsequent years after redemption, \$75,816 of the difference between implied and book value will be debited to the beginning retained earnings of the parent company in the consolidated statements workpaper in order to reduce beginning consolidated retained earnings for the cumulative amount of additional interest expense recognized in the consolidated financial statements in prior years. If the complete equity method is used, the debit will be to the Investment account, as the parent should have already reflected the adjustment to earnings in its equity in subsidiary income and hence in its retained earnings.

The preceding example was based on the assumption that P Company owned a 100% interest in S Company. If P Company owned an 80% interest rather than a 100% interest in S Company, the amount of the difference between implied and book value allocated to unamortized discount on bonds payable on the date of acquisition is still \$75,816. However, the subsequent year debits would be split between beginning retained earnings of the parent company (80%) and Noncontrolling Interest (20%) under the cost and partial equity methods. Under the complete equity method, the subsequent year debits would be split between the Investment account (80%) and Noncontrolling Interest (20%).

### Allocating the Difference to Assets (Liabilities) with Fair Values Less (Greater) than Book Values

**LO 8** Allocation when the fair value is below book value.

Sometimes the fair value of an asset on the date of acquisition is less than the amount recorded on the books of the subsidiary. In this case, the allocation of the difference between the fair value and the book value of the asset will result in a reduction of the asset. If the asset is depreciable, this difference will be amortized over the life of the asset as a reduction of depreciation expense. Likewise, the fair value of the long-term debt may be greater rather than less than its recorded value on the date of acquisition. In this case, entries are necessary to allocate the difference between the fair value and book value of the debt to unamortized bond premium and to amortize it over the remaining life of the debt as a reduction of interest expense.

To illustrate, assume that P Company paid \$2,240,000 for 80% of the outstanding stock of S Company when S Company had identifiable net assets with a fair value of \$2,600,000 and a book value of \$2,150,000. The fair values and book values of identifiable assets and liabilities are presented in Illustration 5-20. The Computation and Allocation (CAD) Schedule is presented next.

Assume that the \$125,000 allocated to bond premium is amortized over five years using the straight-line method<sup>11</sup> and that the equipment has a remaining life of four years.

**ILLUSTRATION 5-20****Allocation of Difference between Implied and Book Value**

|                                    | <i>Fair Value</i> | <i>Book Value</i> | <i>Difference between<br/>Fair Value and Book Value</i> |

| Record Goodwill                           | (160,000)           | (40,000)                        | <b>(200,000)</b>    |
| Balance                                   | <u>—0—</u>          | <u>—0—</u>                      | <u>—0—</u>          |

**End of First Year after Acquisition (Worksheet Entries)** At the end of the first year, the workpaper entries are:

|  |         |         |
|--|---------|---------|
| (1) Securities                             | 150,000 |         |
| Land                                       | 675,000 |         |
| Goodwill                                   | 200,000 |         |
| Equipment (net)                            |         | 250,000 |
| Unamortized Premium on Bonds Payable       |         | 125,000 |
| Difference between Implied and Book Values |         | 650,000 |

To allocate the difference between implied and book value on the date of acquisition.

**Note that the assets accounts increased are recorded by debits and those decreased by credits (Equipment), while a credit records an increase in a liability (increase in Unamortized Premium on Bonds Payable).**

|                      |        |        |
|----------------------|--------|--------|
| (2) Equipment (net)  | 62,500 |        |
| Depreciation expense |        | 62,500 |

To adjust depreciation expense downward (\$250,000/4 years).

|  |        |        |
|--|--------|--------|
| (3) Unamortized premium on bonds payable | 25,000 |        |
| Interest expense                         |        | 25,000 |

To amortize premium on bonds payable (\$125,000/5 years).

<sup>11</sup> The straight-line method is illustrated here as a matter of expediency. Where differences between the straight-line method and the effective interest rate method of amortization are material, the effective interest rate method as shown in Illustration 5-19 should be used.

**End of Second Year after Acquisition (Worksheet Entries)** At the end of the second year the workpaper entries are:

|     |   |  |         |         |
|-----|---|--|---------|---------|
| (1) | Securities                                |  | 150,000 |         |
|     | Land                                      |  | 675,000 |         |
|     | Goodwill                                  |  | 200,000 |         |
|     | Equipment (net)                           |  |         | 250,000 |
|     | Unamortized Premium on Bonds Payable      |  |         | 125,000 |
|     | Difference between Implied and Book Value |  |         | 650,000 |

To allocate the difference between implied and book value on the date of acquisition (this entry is repeated in subsequent years because the year of acquisition entry was recorded only on a workpaper).

| <i>Cost and Partial Equity Methods</i> |                                       |         | <i>Complete Equity Method</i>     |         |        |
|--|---------------------------------------|---------|-----------------------------------|---------|--------|
| (2)                                    | Equipment (net)                       | 125,000 | Equipment (net)                   | 125,000 |        |
|  | Beginning Retained Earnings—Company P | 50,000  | Investment in S Company           |         | 50,000 |
|  | Noncontrolling Interest in Equity     | 12,500  | Noncontrolling Interest in Equity |         | 12,500 |
|  | Depreciation expense                  | 62,500  | Depreciation expense              |         | 62,500 |

To adjust depreciation downward for the current and prior year (\$250,000/4 years)

| <i>Cost and Partial Equity Methods</i> |   |        | <i>Complete Equity Method</i>           |  |        |
|--|---|--------|---|--|--------|
| (3)                                    | Unamortized premium on bond payable     | 50,000 | Unamortized premium on bond payable     |  | 50,000 |
|  | Beginning Retained Earnings—Company P   | 20,000 | Investment in S Company                 |  | 20,000 |
|  | Noncontrolling Interest in Equity (20%) | 5,000  | Noncontrolling Interest in Equity (20%) |  | 5,000  |
|  | Interest expense                        | 25,000 | Interest expense                        |  | 25,000 |

To amortize premium on bond payable for current and prior year (\$125,000/5 years)

In the second year, under the cost or partial equity method, adjustments to the beginning retained earnings of the parent company and Noncontrolling Interest are necessary so that consolidated retained earnings and Noncontrolling Interest at the beginning of the second year will be equal to the consolidated equity balances reported at the end of the first year. The debits and credits are equal to the adjustments to consolidated net income that resulted from the reduction of depreciation expense (\$62,500) and the reduction in interest expense (\$25,000) in the prior year's workpaper. Under the complete equity method, no such adjustment to retained earnings is needed since the parent's retained earnings reflect accurately the consolidated retained earnings each year. Instead, entries are needed to the Investment account to facilitate the elimination of that account (by reversing the adjustments reflected therein), as well as to Noncontrolling Interest in Equity.

## Reporting Accumulated Depreciation in Consolidated Financial Statements as a Separate Balance

**LO 9** Depreciable assets at net and gross values.

In previous illustrations, we have assumed that any particular classification of depreciable assets will be presented in the consolidated financial statements as a single balance net of accumulated depreciation. When accumulated depreciation is reported as a separate balance in the consolidated financial statements, the workpaper entry to allocate and depreciate the difference between implied and book value must be slightly modified. To illustrate, assume that P Company acquires a 90% interest in S Company on January 1, 2015, and that the difference between implied and book value in the amount of \$200,000 is

entirely attributable to equipment with an original life of nine years and a remaining life on January 1, 2015, of five years. Pertinent information regarding the equipment is presented in Illustration 5-21.

In Illustration 5-21, the \$1,200,000 fair value of the equipment (gross) is the replacement cost of the equipment if purchased *new* and is referred to as **replacement cost new**. The \$500,000 in accumulated depreciation in the fair value column is the portion of replacement cost now necessary to bring the net fair market value to \$700,000, which is the fair market value of the subsidiary's *used* equipment. The \$700,000 fair value of the used equipment is sometimes referred to in appraisal reports as the equipment's **sound value**.

If the equipment is to be presented in the consolidated financial statements as one balance net of accumulated depreciation, workpaper elimination entries to allocate and depreciate the difference between implied and book value are similar to those presented in Illustration 5-9 and Illustration 5-10, and are summarized in Illustration 5-22 for three years. However, when equipment and accumulated depreciation are reported as separate balances in the consolidated financial statements, the workpaper elimination entries must be modified as presented in Illustration 5-23. The amount debited to Equipment (gross)

**IN  
THE  
NEWS**

The Valuation Resource Group (VRG) provides support to FASB by offering

information to the staff about implementation issues related to fair value measurements. The VRG includes financial statement preparers, auditors, users, valuation experts, and industry representatives.<sup>12</sup>

minus the amount credited to Accumulated Depreciation in each of the workpaper entries in Illustration 5-23 is the same as the amount debited to Equipment (net) in the workpaper entries in Illustration 5-22, where equipment is presented in the consolidated financial statements net of accumulated depreciation.

To allocate the \$200,000 difference assigned to Net Equipment between Equipment (gross) and Accumulated Depreciation, we need to know the replacement cost new and the sound (used) value of the equipment as shown in the appraisal report.

### Disposal of Depreciable Assets by Subsidiary

Assume that on January 1, 2017, two years after its acquisition by P Company, S Company sells all the equipment referred to in Illustration 5-21 for \$480,000. On January 1, 2017 (the date of the sale), the carrying value of the equipment on the books of the subsidiary is \$300,000 but \$420,000 from the consolidated point of view. These values are presented in Illustration 5-24. S Company reports a gain of \$180,000 on the disposal of the equipment in its books.

## ILLUSTRATION 5-24

**Calculation of Recorded and Consolidated Gain or Loss  
Disposal of Equipment**

|                          | S Company    | Unamortized Difference | Consolidated |
|--------------------------|--------------|------------------------|--------------|
| Cost                     | \$ 900,000   | \$ 300,000             | \$1,200,000  |
| Accumulated depreciation | 600,000      | 180,000*               | 780,000      |
| Undepreciated base       | 300,000      | 120,000                | 420,000      |
| Proceeds                 | (480,000)    |                        | (480,000)    |
| (Gain) loss on sale      | \$ (180,000) | \$ 120,000             | \$ (60,000)  |

\*\$180,000 equals \$100,000 allocated at acquisition plus \$40,000 from year 2013, plus \$40,000 from year 2014.

<sup>12</sup> “Challenges and Solutions,” *Journal of Accountancy*, November 2011, p. 29.

*S Company's Books*

|                          |         |         |
|--------------------------|---------|---------|
| Cash                     | 480,000 |         |
| Accumulated depreciation | 600,000 |         |
| Gain on sale             |         | 180,000 |
| Equipment                |         | 900,000 |

From the point of view of the consolidated entity, however, there is a gain of \$60,000. Recall that the usual workpaper entry to allocate the difference between implied and book value includes:

|   |         |         |
|---|---------|---------|
| Equipment                                 | 300,000 |         |
| Difference between implied and book value |         | 200,000 |
| Accumulated depreciation                  |         | 100,000 |

The workpaper entry necessary to adjust the amounts in the December 31, 2017, consolidated financial statements is as follows (shown first for the cost or partial equity methods and second for the complete equity method):

**Cost or Partial Equity Method**

|  |         |         |
|--|---------|---------|
| Beginning Retained Earnings—Parent Company (90% × \$80,000)<br>(depreciation expense adjustment for years 2015 and 2016) | 72,000  |         |
| Noncontrolling Interest in Equity (10% × \$80,000)   | 8,000   |         |
| Gain on Disposal of Equipment  | 120,000 |         |
| Difference between Implied and Book Value  |         | 200,000 |

**Complete Equity Method**

|   |         |         |
|---|---------|---------|
| Investment in S Company (90% × \$80,000)<br>(depreciation expense adjustment for years 2015 and 2016) | 72,000  |         |
| Noncontrolling Interest in Equity (10% × \$80,000)  | 8,000   |         |
| Gain on Disposal of Equipment   | 120,000 |         |
| Difference between Implied and Book Value   |         | 200,000 |

In the year of sale, any gain or loss recognized by the subsidiary on the disposal of an asset to which any of the difference between implied and book value has been allocated must be adjusted in the consolidated statements workpaper. The preceding entry serves to reduce the gain recorded by the subsidiary to the correct gain to the consolidated entity. It also debits beginning retained earnings—P Company (or **Investment in S Company if the complete equity method is used**) and Noncontrolling Interest to “catch up” the effects to the equity accounts of the consolidated entity of two prior years of depreciation expense.

**Depreciable Assets Used in Manufacturing**

When the difference between implied and book values is allocated to depreciable assets used in manufacturing, workpaper entries necessary to reflect additional depreciation may be more complex because the current and previous years' additional depreciation may need to be allocated among work in process, finished goods on hand at the end of the year, and cost of goods sold. In practice, such refinements are often ignored on the basis of materiality, and all of current year's additional depreciation is charged to cost of goods sold.

**5.10 PUSH DOWN ACCOUNTING**

**Lo10** Push down of accounting to the subsidiary's books.

**Push down accounting** is the establishment of a new accounting and reporting basis for a subsidiary company in its separate financial statements based on the purchase price paid by the parent company to acquire a controlling interest in the outstanding voting stock of

*the subsidiary company.* This accounting method is required for the subsidiary in some instances such as in the banking industry, an industry that has been overwhelmed by the frequency and extent of merger activity in recent years.

The valuation implied by the price of the stock to the parent company is “pushed down” to the subsidiary and used to restate its assets (including goodwill) and liabilities in its separate financial statements. If *all* the voting stock is purchased, the assets and liabilities of the subsidiary company are restated so that the excess of the restated amounts of the assets (including goodwill) over the restated amounts of the liabilities equals the purchase price of the stock. Push down accounting is based on the notion that the basis of accounting for purchased assets and liabilities should be the same regardless of whether the acquired company continues to exist as a separate subsidiary or is merged into the parent company’s operations. Thus, under push down accounting, the parent company’s cost of acquiring a subsidiary is used to establish a new accounting basis for the assets and liabilities of the subsidiary in the subsidiary’s separate financial statements. Because push down accounting has not been addressed in authoritative pronouncements of the FASB or its predecessors, practice has been inconsistent. Some acquired companies have used a new push down basis, and others, in essentially the same circumstances, have used preacquisition book values.

### Arguments for and against Push Down Accounting

Proponents of push down accounting believe that a new basis of accounting should be required following an acquisition transaction that results in a significant change in the ownership of a company’s outstanding voting stock. In essence, they view the transaction as if the new owners had purchased an existing business and established a new company to continue that business. Consequently, they believe that the parent company’s basis should be imputed to the subsidiary because the new basis provides more relevant information for users of the subsidiary’s separate financial statements. In addition, current GAAP requires that assets acquired, liabilities assumed, and any noncontrolling interest in the acquiree at the acquisition date be measured at fair value. To provide symmetry, the separate financial statements of the subsidiary should be presented in the same manner.

Those who oppose push down accounting believe that, under the historical cost concept, a change in ownership of an entity does not justify a new accounting basis in its financial statements. Because the subsidiary did not purchase assets or assume liabilities as a result of the transaction, the recognition of a new accounting basis based on a change in ownership, rather than on a transaction on the part of the subsidiary, represents a breach in the historical cost concept in accounting. They argue further that implementation problems might arise. For example, noncontrolling stockholders may not have meaningful comparative financial statements. In addition, restatement of the financial statements may create problems in determining or maintaining compliance with various financial restrictions under debt agreements.

Push down accounting is an issue only if the subsidiary is required to issue separate financial statements for any reason, for example, because of the existence of noncontrolling interests or financial arrangements with nonaffiliates. Three important factors that should be considered in determining the appropriateness of push down accounting are:

1. Whether the subsidiary has outstanding debt held by the public.
2. Whether the subsidiary has outstanding, a senior class of capital stock not acquired by the parent company.
3. The level at which a major change in ownership of an entity should be deemed to have occurred, for example, 100%, 90%, 51%.

Public holders of the acquired company’s debt need comparative data to assess the value and risk of their investments. These public holders generally have some expressed (or implied) rights in the subsidiary that may be adversely affected by a new basis of accounting. Similarly, holders of preferred stock, particularly if the stock includes a participation feature, may have their rights altered significantly by a new basis of accounting.

Views on the percentage level of ownership change needed to apply a new basis of accounting vary. Some believe that the purchase of substantially all the voting stock (90% or more) should be the threshold level; others believe that the percentage level of ownership change should be that needed for control; for example, more than 50%. A related problem involves the amounts to be allocated to the individual assets and liabilities, noncontrolling interest, and goodwill in the separate statements of the subsidiary. Some believe that values should be allocated on the basis of the fair value of the subsidiary as a whole imputed from the transaction. Thus, if 80% of the voting stock is acquired for \$32 million, the fair value of the net assets would be imputed to be \$40 million ( $\$32 \text{ million} / .80$ ), and values would be allocated on that basis. This approach will result in the assignment of the same values to assets and liabilities on the books of the subsidiary as that previously illustrated in the workpaper entry to allocate the difference between implied and book value in the consolidated statements workpaper. Others believe that values should be allocated on the basis of the proportional interest acquired. They believe that new values should be reflected on the books of the subsidiary only to the extent of the price paid in the transaction. Thus, if 80% of a company is acquired for \$32 million, the basis of the subsidiary's net assets would be adjusted by the difference between the price paid and the book value of an 80% interest.

## Status of Push Down Accounting

On January 17, 2013, FASB's Emerging Issues Task Force discussed push down accounting and concluded that the strategy for the FASB is to pursue developing a model under which push down accounting could be applied when an acquirer obtains control of a reporting entity. The Task Force decided to consider at a future meeting whether push down accounting should be mandatory. The Task Force decided that pushdown accounting would be required for a public business entity if a change-in-control event causes the entity to become substantially wholly owned by the acquirer. The Task Force also tentatively decided that both public business entities and nonpublic entities would have the option to apply push down accounting in their separate financial statements upon occurrence of a change-in-control event.

*As a general rule, the SEC requires push down accounting when the ownership change is greater than 95% and objects to push down accounting when the ownership change is less than 80%.* In addition, the SEC staff expresses the view that the existence of outstanding public debt, preferred stock, or a significant noncontrolling interest in a subsidiary might impact the parent company's ability to control the form of ownership. In these circumstances, push down accounting, though not required, is an acceptable accounting method.

## Push Down Accounting Illustration

To illustrate the application of push down accounting, we use data presented earlier in this chapter, with some modifications, as follows:

1. P Company acquired an 80% interest in S Company on January 1, 2015, for \$2,200,000, at which time S Company had capital stock of \$1,500,000 and retained earnings of \$500,000. The implied value of S Company is  $\$2,200,000 / 80\% = \$2,750,000$ .
2. The difference between implied and book value (\$750,000) is allocated as presented in Illustration 5-25.

In this example, we assume that values are allocated on the basis of the fair value of the subsidiary as a whole, imputed from the transaction.

**ILLUSTRATION 5-25****Allocation of Difference between Implied and Book Value**

|                          | <i>Cost Basis</i> | <i>Implied (100%)<br/>Push Down Base</i> |
|--------------------------|-------------------|--|
| Inventory (FIFO basis)   | \$ 40,000         | \$ 50,000                                |
| Equipment (10-year life) | 240,000           | 300,000                                  |
| Land                     | 120,000           | 150,000                                  |
| Goodwill                 | <u>200,000</u>    | <u>250,000</u>                           |
| Total                    | <u>\$600,000</u>  | <u>\$750,000</u>                         |

3. In 2015, S Company reported net income of \$45,000.

Note that the net income of S Company (\$45,000) is \$80,000 less than the amount of income reported in Illustration 5-9 because the effect of the depreciation of the difference between implied and book value is recorded on the books of S Company under push down accounting. This difference of \$80,000 consists of:

|   |                 |
|---|-----------------|
| Increase in cost of goods sold                        | \$50,000        |
| Increase in depreciation expense (\$300,000/10 years) | 30,000          |
|   | <u>\$80,000</u> |

4. S Company declared a dividend of \$20,000 on November 15, payable on December 1, 2015.
5. P Company uses the cost method to record its investment in S Company.

***S Company Book Entries—2015***

On January 1, 2015, the date of acquisition, S Company would make the following entry to record the effect of the pushed down values implied by the purchase of 80% of its stock by P Company:

|                     |         |         |
|---------------------|---------|---------|
| Inventory, 1/1      | 50,000  |         |
| Equipment           | 300,000 |         |
| Land                | 150,000 |         |
| Goodwill            | 250,000 |         |
| Revaluation Capital |         | 750,000 |

Assume the following: (1) all beginning inventory was sold during the year; and (2) equipment has a remaining useful life of 10 years from 1/1/2015. Given these assumptions, the \$50,000 excess cost allocated to beginning inventory would be included in cost of goods sold when the goods were sold. Similarly, depreciation expense recorded on S Company's books would be \$30,000 greater if the increase in equipment value had not been recorded.

A workpaper for the preparation of consolidated financial statements on December 31, 2015, under push down accounting is presented in Illustration 5-26. Workpaper elimination entries in general journal form are:

|                                   |           |                  |
|-----------------------------------|-----------|------------------|
| (1) Dividend Income               | 16,000    |                  |
| Dividends Declared—S Company      |           | 16,000           |
| (2) Capital Stock—S Company       | 1,500,000 |                  |
| Retained Earnings 1/1—S Company   | 500,000   |                  |
| Revaluation Capital—S Company     | 750,000   |                  |
| Noncontrolling Interest in Equity |           | 550,000          |
| Investment in S Company           |           | <u>2,200,000</u> |

A comparison of Illustration 5-26 with Illustration 5-4 shows that consolidated net income as well as the controlling interest in consolidated net income and consolidated retained earnings are the same. Thus, when values are assigned on the basis of fair

values of the subsidiary as a whole imputed from the transaction, the use of push down accounting has no effect on the consolidated balances.

Note also that no workpaper entries were necessary in Illustration 5-26 to allocate or depreciate the difference between implied and book value since these adjustments have already been made on S Company's books.

| Cost Method                                 |                  | ILLUSTRATION 5-26                 |                  |                  |                |                  |
|---|------------------|-----------------------------------|------------------|------------------|----------------|------------------|
| 80% Owned Subsidiary                        |                  | Consolidated Statements Workpaper |                  |                  |                |                  |
| Push Down Basis                             |                  | P Company and Subsidiary          |                  |                  |                |                  |
| for Year Ended December 31, 2015            |                  |                                   |                  |                  |                |                  |

| Total                                       | <u>6,932,000</u> | <u>3,075,000</u>                  | <u>2,766,000</u> | <u>2,766,000</u> |                | <u>7,807,000</u> |

(\*) 20% × \$45,000 = \$9,000.

(1) To eliminate intercompany dividends.

(2) To eliminate investment account and create noncontrolling interest account.

## 5.11 IFRS VS U.S. GAAP ON RESEARCH & DEVELOPMENT COSTS

**IFRS** As mentioned previously, Research & Development costs that are in process at the time of an acquisition are capitalized at their estimated fair value and expensed over their expected useful life. U.S. GAAP and IFRS are similar in this regard. However, for Research & Development projects undertaken *apart from an acquisition* or *subsequent to the acquisition*, IFRS distinguish between research costs and development costs while U.S. GAAP generally expense both as incurred.

Under U.S. GAAP, development costs are generally expensed as incurred (as part of R&D expense) unless the costs relate to activities for which there is an alternative future use.

Under IFRS, development costs are capitalized if *all* of the following criteria are demonstrated (research costs are expensed):

1. The technical feasibility of completing the intangible asset,
2. The intention to complete the intangible asset,
3. The ability to use or sell the intangible asset,
4. How the intangible asset will generate future economic benefits (the entity should demonstrate the existence of a market or, if for internal use, the usefulness of the intangible asset),
5. The availability of adequate resources to complete the development,
6. The ability to measure reliably the expenditure attributable to the intangible asset during its development.

### SUMMARY

- 1 *Calculate the difference between implied and book values and allocate to the subsidiary's assets and liabilities.* This difference is used first to adjust the individual assets and liabilities to their fair values on the date of acquisition. If implied value exceeds the aggregate fair values of identifiable net assets, the residual amount will be *positive* (a debit balance), providing evidence of an unspecified intangible to be accounted for as goodwill.
- 2 *Describe FASB's position on accounting for bargain acquisitions.* When the value implied by the acquisition price is below the aggregate fair value of identifiable net assets, the residual amount will be negative (a credit balance), designating a bargain purchase. FASB's current position is that no assets are reduced below fair value; instead, the credit balance should be shown as an ordinary gain in the year of acquisition.
- 3 *Explain how goodwill is measured at the time of the acquisition.* Goodwill is measured as the excess of the value implied by the acquisition price over the fair value of the subsidiary's assets less liabilities.
- 4 *Describe how the allocation process differs if less than 100% of the subsidiary is acquired.* Under the economic entity concept adopted by FASB, the consolidated net assets are written up by the entire difference between the implied fair value and the book value of the subsidiary company's net assets. The increase in the portion owned by the noncontrolling interest is reflected in an increase in the equity of the noncontrolling interest.
- 5 *Record the entries needed on the parent's books to account for the investment under the three methods: the cost, the partial equity, and the complete equity methods.* The most important difference between the cost and equity methods pertains to the period in which the parent recognizes subsidiary income on its books. If the cost method is in use, the parent recognizes its share of subsidiary income only when dividends are declared by the subsidiary. If the partial equity method is in use, the investor recognizes its share of the subsidiary's income when reported by the subsidiary. A debit to cash and a credit to the investment account record the receipt of dividends under the partial equity method. The complete equity method differs from the partial equity method in that the share of subsidiary income recognized by the parent may be adjusted from the amount reported by the subsidiary, e.g., for excess depreciation implied by the difference between market and book values of the underlying assets acquired.
- 6 *Prepare workpapers for the year of acquisition and the year(s) subsequent to the acquisition, assuming that the parent accounts for the investment using the cost, the partial equity, and the complete equity methods.* Under the cost method, dividends declared by the subsidiary are eliminated against dividend income recorded by the parent. The investment account is eliminated against the equity accounts of the subsidiary, with the difference between implied and book value recorded in a separate account. The difference is then allocated to adjust underlying assets and/or liabilities, and to record goodwill in some cases. Additional entries are made to record excess depreciation on assets written up (or to decrease depreciation if written down). Under the equity method, the dividends declared by the subsidiary are eliminated against the investment account, as is the equity in subsidiary income. The investment account is eliminated in the same way as under the cost method. In subsequent years, the cost method requires an initial entry to establish reciprocity (convert to equity). This entry (cost method

only) debits the investment account and credits retained earnings of the parent (for the change in retained earnings of the subsidiary from acquisition to beginning of current year multiplied by the parent's ownership percentage). Only under the complete equity method does the parent's beginning retained earnings exactly match the amount reported as consolidated retained earnings at the end of the previous year. See Illustrations 5-6 through 5-8 for a complete summary of the three methods.

- 7** *Understand the allocation of the difference between implied and book value to long-term debt components.* Notes payable, long-term debt, and other obligations of an acquired company should be valued for consolidation purposes at their fair values. Quoted market prices, if available, are the best evidence of the fair value of the debt. If quoted market prices are unavailable, then management's best estimate of the fair value may be based on fair values of debt with similar characteristics or on valuation techniques such as the present value of estimated future cash flows.
- 8** *Explain how to allocate the difference between implied and book value when some assets have fair values below book values.* In this case, the allocation of the parent company's share of the difference between the fair value and the book

value of the asset will result in a reduction of the asset. If the asset is depreciable, this difference will be amortized over the life of the asset as a reduction of depreciation expense.

- 9** *Distinguish between recording the subsidiary depreciable assets at net versus gross fair values.* When the assets are recorded net, no accumulated depreciation account is used initially. When they are recorded gross, an accumulated depreciation account is needed. To allocate the difference assigned to depreciable assets between the asset account (gross) and the accumulated depreciation account, we must know the replacement cost new and the sound (used) value of the asset as shown in the appraisal report. Alternatively, these amounts may be inferred.
- 10** *Understand the concept of push down accounting.* Push down accounting is the establishment of a new accounting and reporting basis for a subsidiary company in its separate financial statements based on the purchase price paid by the parent company to acquire a controlling interest in the outstanding voting stock of the subsidiary company. This accounting method is required for the subsidiary in some instances, usually when the ownership level is over 95% for publicly held companies.

- 5.2** 1. d.
- 5.3** 1. c

**QUESTIONS**

- LO 1** 1. Distinguish among the following concepts:
- LO 2** (a) Difference between book value and the value implied by the purchase price.
- LO 3** (b) Excess of implied value over fair value.  
(c) Excess of fair value over implied value.  
(d) Excess of book value over fair value.
- LO 1** 2. In what account is the difference between book value and the value implied by the purchase price recorded on the books of the investor? In what account is the "excess of implied over fair value" recorded?
- LO 3**
- LO 4** 3. How do you determine the amount of "the difference between book value and the value implied by the purchase price" to be allocated to a specific asset of a less than wholly owned subsidiary?
- LO 2** 4. The parent company's share of the fair value of the net assets of a subsidiary may exceed acquisition cost. How must this excess be treated in the preparation of consolidated financial statements?
- LO 2** 5. What are the arguments for and against the alternatives for the handling of bargain acquisitions? Why are such acquisitions unlikely to occur with great frequency?
- LO 1** 6. P Company acquired a 100% interest in S Company. On the date of acquisition the fair value of the assets and liabilities of S Company was equal to their book value except for land that had a fair value of \$1,500,000 and a

book value of \$300,000. At what amount should the land of S Company be included in the consolidated balance sheet? At what amount should the land of S Company be included in the consolidated balance sheet if P Company acquired an 80% interest in S Company rather than a 100% interest?

- 7. Corporation A purchased the net assets of Corporation B for \$80,000. On the date of A's purchase, Corporation B had no long-term investments in marketable securities and \$10,000 (book and fair value) of liabilities. The fair values of Corporation B's assets, when acquired, were **LO 2**

|                   |                   |
|-------------------|-------------------|
| Current assets    | \$ 40,000         |
| Noncurrent assets | 60,000            |
| Total             | <u>\$ 100,000</u> |

Under *FASB Statement No. 141R* and *No. 160* [Topics 805 and 810], how should the \$10,000 difference between the fair value of the net assets acquired (\$90,000) and the value implied by the purchase price (\$80,000) be accounted for by Corporation A?

- (a) The \$10,000 difference should be credited to retained earnings.
- (b) The noncurrent assets should be recorded at \$50,000.
- (c) The current assets should be recorded at \$36,000, and the noncurrent assets should be recorded at \$54,000.
- (d) A current gain of \$10,000 should be recognized.

- LO 2** 8. Meredith Company and Kyle Company were combined in a purchase transaction. Meredith was able to acquire Kyle at a bargain price. The sum of the market or appraised values of identifiable assets acquired less the fair value of liabilities assumed exceeded the cost to Meredith. A determination was made that some of the appraised values were overstated and those assets were adjusted accordingly. After reducing the overstated assets downward, there was still a “negative balance.” Proper accounting treatment by Meredith is to report the amount as
- An extraordinary item.
  - Part of current income in the year of combination.
  - A deferred credit.
  - Paid in capital.
- LO 4** 9. What is the effect on the noncontrolling share of consolidated income that results from the recording in the consolidated statements workpaper of differences between book value and the value implied by the purchase price (and their allocation to depreciable property, goodwill, etc.)?

### Business Ethics

#### What is insider trading anyway?

Consider the following:

*Many years ago, a student in a consolidated financial statements class came to me and said that Grand Central (a multi-store grocery and variety chain in Salt Lake City and surrounding towns and cities) was going to be acquired and that I should try to buy the stock and make lots of money. I asked him how he knew and he told me that he worked part-time for Grand Central and heard that Fred Meyer was going to acquire it. I did not know whether the student worked in the accounting department at Grand Central or was a custodian at one of the stores. I thanked him for the information but did not buy the stock. Within a few weeks, the announcement was made that Fred Meyer was acquiring Grand Central and the stock price shot up, almost doubling. It was clear that I had missed an opportunity to make a lot of money . . . I don't know to this day whether or not that would have been insider trading. However, I have never gone home at night and asked my wife if the SEC called. From “Don't go to jail and other good advice for accountants,” by Ron Mano, *Accounting Today*, October 25, 1999.*

*Question:* Do you think this individual would have been guilty of insider trading if he had purchased the stock in Grand Central based on this advice? Why or why not? Are there ever instances where you think it would be wise to miss out on an opportunity to reap benefits simply because the behavior necessitated would have been in a gray ethical area, though not strictly illegal? Defend your position.

## ANALYZING FINANCIAL STATEMENTS

### AFSS-1 eBay acquires Rent.com **LO 1**

On February 23, 2005, eBay acquired Viva Group, Inc., which does business under the name Rent.com, for a cash purchase price of approximately \$435.365 million including net cash and investments of approximately \$18 million. Rent.com is an Internet listing website in the apartment and rental housing industry. The motivation for the acquisition was to help expand eBay's presence into the online real estate market. Also, \$2 million in estimated acquisition-related expenses were incurred. The acquisition was treated as a nontaxable purchase transaction and, accordingly, the purchase price has been allocated to the tangible and intangible assets acquired and liabilities assumed on the basis of their respective estimated fair values on the acquisition date, as follows:

|                                |          |           |
|--------------------------------|----------|-----------|
| Purchase price                 |          | \$435,365 |
| Net tangible assets            | 18,050   |           |
| Identifiable intangible assets | 61,800   |           |
| Deferred tax liabilities       | (24,924) | 54,926    |
| Excess                         |          | 380,439   |

Identifiable intangible assets included:

|                      |          |
|----------------------|----------|
| Customer lists       | \$34,500 |
| Trade name           | 18,000   |
| Developed technology | 8,200    |
| User base            | 1,100    |
| Total                | 61,800   |

The estimated useful economic lives of the identifiable intangible assets acquired in the Rent.com acquisition are six years for the customer list, five years for the trade name, three years for the developed technology, and one year for the user base.

#### Required:

- Record the acquisition of [Rent.com](#) on eBay's books (including the acquisition-related costs). (Assume that the net tangible assets of 18,050 equals the book value of [Rent.com](#).)
- Prepare the journal entry to eliminate the investment account and allocate any difference between fair value and purchase price.

- C. Record any amortization of intangibles assuming that the cost basis is used by eBay (assume a full year of amortization for all intangibles). Where are these entries recorded? Would your answer change if the complete equity method were used?
- D. Is it likely in the first year that earnings per share will be dilutive or accretive?

### AFS5-2 LoJack Corporation LO 1

LoJack is a leading global provider of technology products and services for the tracking and recovery of valuable mobile assets and people at risk of wandering. According to a recent Federal Bureau of Investigation Uniform Crime Report for 2009, a motor vehicle is stolen in the United States every 40 seconds. LoJack's business is sensitive to changing economic conditions and is substantially dependent on new vehicle sales levels in the United States.

LoJack acquired Boomerang, SCI, and Locator Systems (now known as LoJack SafetyNet) and recorded goodwill. LoJack adopted an annual measurement date of November 30 for SCI and LoJack SafetyNet for goodwill impairment testing. The tests for impairment are performed on an interim basis if there are triggering events identified. Triggering events are events or changes in circumstance that would more likely than not reduce the fair value of a reporting unit below its carrying amount. Examples of such events or circumstances include: (a) a significant adverse change in legal factors or in the business climate; (b) an adverse action or assessment by a regulator; (c) unanticipated competition; (d) a loss of key personnel; (e) a more-likely-than-not expectation that a reporting unit or a significant portion of a reporting unit will be sold or otherwise disposed of; (f) the testing for recoverability of a significant asset group within a reporting unit; or (g) recognition of a goodwill impairment loss in the financial statements of a subsidiary that is a component of a reporting unit.

In 2009, based upon a review of external economic factors and internal business performance, a triggering event in the Boomerang reporting unit was identified. As such, Boomerang's goodwill was tested for impairment utilizing a discounted cash flow (DCF) model. As a result of the impairment analysis, a goodwill impairment charge of \$13,627 was recognized at June 30, 2009, thus eliminating the goodwill balance attributable to the Boomerang reporting unit. The impairment is included in Impairment of goodwill and intangible assets on the consolidated statement of operations for the year ended December 31, 2009. In 2008, goodwill impairment of \$36,830 related to Boomerang was recorded.

| (\$000)                                      | 12/31/2010 | 12/31/2009 | 12/31/2008 |
|--|------------|------------|------------|
| Revenue                                      | \$146,635  | \$135,013  | \$198,679  |
| Cost of goods sold                           | 72,961     | 64,096     | 94,517     |
| Gross profit                                 | 73,674     | 70,917     | 104,162    |

| Total  | 74,059     | 115,103    | 131,065    |
| Operating loss                               | (385)      | (44,186)   | (26,903)   |

- A. Discuss the current FASB position on goodwill impairment. Do you think this is a better or poorer way of addressing changes in goodwill valuation over time than amortization? Why? Include in your answer a discussion of how the two alternatives (impairment and amortization) affect current and future earnings of the consolidated entity.
- B. In the case of LoJack, discuss possible reasons why the company might have used its discretion either to delay or to expedite the recording of the impairment of goodwill for the Boomerang reporting unit. What effect did the impairment have on earnings for the years 2008 and 2009? What effect will it have on ROA for future years?
- C. How would you expect the stock market to respond to the news of the goodwill impairment? Why?

### AFS5-3 Goodwill and Goodwill Impairment Checklist

The 'goodwill' footnote for American Oriental Bioengineering 2011 10K is shown below. When firms make acquisitions, the goodwill recorded in an acquisition must be assigned to a reportable segment. See Chapter 14 for a complete discussion of segmental reporting. Thus a reportable

segment (such as the manufacturing segment in the footnote below) may include several different acquisitions that have been made over time but are aggregated for disclosure purposes. It can be very difficult to track an acquisition over time if several companies are aggregated. Use the goodwill checklist to assess whether the company is disclosing all required information about goodwill according to GAAP.

**Note 11: Goodwill**

The changes in the carrying amount of goodwill for the year ended December 31, 2011, are as follows.

|                                 | <b>Manufacturing<br/>Segment</b> | <b>Distribution<br/>Segment</b> | <b>Total</b>  |
|---------------------------------|----------------------------------|---------------------------------|---------------|
| Balance as of January 1, 2011   | \$ 27,817,108                    | \$ 5,347,013                    | \$ 33,164,121 |
| Impairment losses               | (27,817,108)                     | (5,347,013)                     | (33,164,121)  |
| Balance as of December 31, 2011 | \$ —                             | \$ —                            | \$ —          |

The manufacturing and distribution segments were tested for impairment after the annual forecasting process. Due to an increase in competition in the generic drug market in China under the health care reform, and the governments' downward pressure on prices, the operating profits and cash flows for the manufacturing segment were lower than expected in the fourth quarter of 2011. Based on that trend, the earnings forecasts for the next five years were revised. For the year ended December 31, 2011, a goodwill impairment loss of \$27,817,108 and \$5,347,013 were recognized in the manufacturing reporting units and distribution reporting units respectively. No impairments occurred with respect to the carrying value of goodwill in 2010 and 2009. The fair value of those reporting units was estimated using the expected present value of future cash flows expected at that time.

**Required:**

**Part A: Goodwill Disclosures**

1. Does the company provide a schedule showing the changes in the gross amount and impairment losses at the beginning and end of the year?
2. Does the company show any additional goodwill during the period? How did the firm obtain the goodwill?
3. Does the company report the amount of impairment losses recognized during the period?
4. Are there other changes in the carrying amount of goodwill? Are there any unusual or questionable issues relating to goodwill disclosures? What are they?

**Part B: Goodwill Impairments**

1. Does the company provide a description of the facts and circumstances leading to the impairment, such as the reason for the impairment?
2. Can you determine which acquisition is associated with the goodwill impairment?
3. For the amount of the impairment loss, which method is used to determine the fair value of the associated reporting unit: (a) quoted market prices, (b) prices of comparable businesses, and/or (c) present value or other valuation technique.
4. Is the recognized impairment loss an estimate or a finalized amount)?
  - A. If the impairment loss is an estimate, why is the impairment loss not finalized?
  - B. What is the nature and amount of any significant adjustments made to the initial estimate of the impairment loss?

**EXERCISES**

**EXERCISE 5-1 Allocation of Cost LO 1 LO 3**

On January 1, 2013, Pam Company purchased an 85% interest in Shaw Company for \$540,000. On this date, Shaw Company had common stock of \$400,000 and retained earnings of \$140,000.

An examination of Shaw Company's assets and liabilities revealed that their book value was equal to their fair value except for marketable securities and equipment:

|                       | <i>Book Value</i> | <i>Fair Value</i> |
|-----------------------|-------------------|-------------------|
| Marketable securities | \$ 20,000         | \$ 45,000         |
| Equipment (net)       | 120,000           | 140,000           |

**Required:**

- A. Prepare a Computation and Allocation Schedule for the difference between book value of equity acquired and the value implied by the purchase price.
- B. Determine the amounts at which the above assets (plus goodwill, if any) will appear on the consolidated balance sheet on January 1, 2013.

**EXERCISE 5-2 End of the Year of Acquisition Workpaper Entries LO 1 LO 9**

On January 1, 2015, Payne Corporation purchased a 75% interest in Salmon Company for \$585,000. A summary of Salmon Company's balance sheet on that date revealed the following:

|                   | <i>Book Value</i> | <i>Fair Value</i> |
|-------------------|-------------------|-------------------|
| Equipment         | \$525,000         | \$705,000         |
| Other assets      | 150,000           | 150,000           |
|                   | <u>\$675,000</u>  | <u>\$855,000</u>  |
| Liabilities       | \$ 75,000         | \$ 75,000         |
| Common stock      | 225,000           |                   |
| Retained earnings | <u>375,000</u>    |                   |
|                   | <u>\$675,000</u>  |                   |

The equipment had an original life of 15 years and has a remaining useful life of 10 years.

**Required:**

For the December 31, 2015, consolidated financial statements workpaper, prepare the workpaper entry to allocate and depreciate the difference between book value and the value implied by the purchase price assuming:

- A. Equipment is presented net of accumulated depreciation.
- B. Accumulated depreciation is presented on a separate row in the workpaper and in the consolidated statement of financial position.

**EXERCISE 5-3 Allocation of Cost LO 2**

Pace Company purchased 20,000 of the 25,000 shares of Saddler Corporation for \$525,000. On January 3, 2014, the acquisition date, Saddler Corporation's capital stock and retained earnings account balances were \$500,000 and \$100,000, respectively.

The following values were determined for Saddler Corporation on the date of purchase:

|                       | <i>Book Value</i> | <i>Fair Value</i> |
|-----------------------|-------------------|-------------------|
| Inventory             | \$ 50,000         | \$ 70,000         |
| Other current assets  | 200,000           | 200,000           |
| Marketable securities | 100,000           | 125,000           |
| Plant and equipment   | 300,000           | 330,000           |

**Required:**

- A. Prepare the entry on the books of Pace Company to record its investment in Saddler Corporation.
- B. Prepare a Computation and Allocation Schedule for the difference between book value and the value implied by the purchase price in the consolidated statements workpaper.

**EXERCISE 5-4 Allocation of Cost and Workpaper Entries at Date of Acquisition LO 2**

On January 1, 2015, Porter Company purchased an 80% interest in Salem Company for \$260,000. On this date, Salem Company had common stock of \$207,000 and retained earnings of \$130,500.

An examination of Salem Company's balance sheet revealed the following comparisons between book and fair values:

|                      | <i>Book Value</i> | <i>Fair Value</i> |
|----------------------|-------------------|-------------------|
| Inventory            | \$ 30,000         | \$ 35,000         |
| Other current assets | 50,000            | 55,000            |
| Equipment            | 300,000           | 350,000           |
| Land                 | 200,000           | 200,000           |

**Required:**

- A. Determine the amounts that should be allocated to Salem Company's assets on the consolidated financial statements workpaper on January 1, 2015.
- B. Prepare the January 1, 2015, consolidated financial statements workpaper entries to eliminate the investment account and to allocate the difference between book value and the value implied by the purchase price.

**EXERCISE 5-5 T-Account Calculation of Controlling and Noncontrolling Interest in Consolidated Net Income LO4**

On January 1, 2014, P Company purchased an 80% interest in S Company for \$600,000, at which time S Company had retained earnings of \$300,000 and capital stock of \$350,000. Any difference between book value and the value implied by the purchase price was entirely attributable to a patent with a remaining useful life of 10 years.

Assume that P and S Companies reported net incomes from their independent operations of \$200,000 and \$100,000, respectively.

**Required:**

Prepare a t-account calculation of the controlling interest and noncontrolling interest in consolidated net income for the year ended December 31, 2014.

**EXERCISE 5-6 Workpaper Entries LO1**

Park Company acquires an 85% interest in Sunland Company on January 2, 2015. The resulting difference between book value and the value implied by the purchase price in the amount of \$120,000 is entirely attributable to equipment with an original life of 15 years and a remaining useful life, on January 2, 2015, of 10 years.

**Required:**

Prepare the December 31 consolidated financial statements workpaper entries for 2015 and 2016 to allocate and depreciate the difference between book value and the value implied by the purchase price, recording accumulated depreciation as a separate balance.

**EXERCISE 5-7 Workpaper Entries LO1 LO9**

On January 1, 2014, Packard Company purchased an 80% interest in Sage Company for \$600,000. On this date Sage Company had common stock of \$150,000 and retained earnings of \$400,000.

Sage Company's equipment on the date of Packard Company's purchase had a book value of \$400,000 and a fair value of \$600,000. All equipment had an estimated useful life of 10 years on January 2, 2009.

**Required:**

Prepare the December 31 consolidated financial statements workpaper entries for 2014 and 2015 to allocate and depreciate the difference between book value and the value implied by the purchase price, recording accumulated depreciation as a separate balance.

**EXERCISE 5-8 Workpaper Entries and Gain on Sale of Land LO1**

Padilla Company purchased 80% of the common stock of Sanoma Company in the open market on January 1, 2013, paying \$31,000 more than the book value of the interest acquired. The difference between book value and the value implied by the purchase price is attributable to land.

**Required:**

- What workpaper entry is required each year until the land is disposed of?
- Assume that the land is sold on 1/1/16 and that Sanoma Company recognizes a \$50,000 gain on its books. What amount of gain will be reflected in consolidated income on the 2016 consolidated income statement?
- In all years subsequent to the disposal of the land, what workpaper entry will be necessary? Show entry for all three methods (cost, partial equity, and complete equity).

**EXERCISE 5-9 Allocation of Cost and Workpaper Entries LO1 LO3 LO7**

On January 1, 2013, Point Corporation acquired an 80% interest in Sharp Company for \$2,000,000. At that time Sharp Company had capital stock of \$1,500,000 and retained earnings of \$700,000. The book values of Sharp Company's assets and liabilities were equal to their fair values except for land and bonds payable. The land had a fair value of \$100,000 and a book value of \$80,000. The outstanding bonds were issued at par value on January 1, 2008, pay 10% annually, and mature on January 1, 2018. The bond principal is \$500,000 and the current yield rate on similar bonds is 8%.

**Required:**

- Prepare a Computation and Allocation Schedule for the difference between book value and the value implied by the purchase price in the consolidated statements workpaper on the acquisition date.
- Prepare the workpaper entries necessary on December 31, 2013, to allocate and depreciate the difference between book value and the value implied by the purchase price.

**EXERCISE 5-10 Allocation of Cost and Workpaper Entries LO1 LO3 LO7**

On January 2, 2013, Page Corporation acquired a 90% interest in Salcedo Company for \$3,500,000. At that time Salcedo Company had capital stock of \$2,250,000 and retained earnings of \$1,250,000. The book values of Salcedo Company's assets and liabilities were equal to their fair values except for land and bonds payable.

The land had a fair value of \$200,000 and a book value of \$120,000. The outstanding bonds were issued on January 1, 2008, at 9% and mature on January 1, 2018. The bonds' principal is \$500,000 and the current yield rate on similar bonds is 6%.

**Required:**

- A. Assuming interest is paid annually, prepare a Computation and Allocation Schedule for the difference between book value and the value implied by the purchase price in the consolidated statements workpaper on the acquisition date.
- B. Prepare the workpaper entries necessary on December 31, 2013, to allocate and depreciate the difference between book value and the value implied by the purchase price.

**EXERCISE 5-11 Workpaper Entries for Three Years LO 6 LO 3**

On January 1, 2013, Piper Company acquired an 80% interest in Sand Company for \$2,276,000. At that time the capital stock and retained earnings of Sand Company were \$1,800,000 and \$700,000, respectively. Differences between the fair value and the book value of the identifiable assets of Sand Company were as follows:

|                 | <i>Fair Value in Excess of Book Value</i> |
|-----------------|---|
| Inventory       | \$45,000                                  |
| Equipment (net) | 50,000                                    |

The book values of all other assets and liabilities of Sand Company were equal to their fair values on January 1, 2013. The equipment had a remaining useful life of eight years. Inventory is accounted for on a FIFO basis. Sand Company's reported net income and declared dividends for 2013 through 2015 are shown here:

|            | <i>2013</i> | <i>2014</i> | <i>2015</i> |
|------------|-------------|-------------|-------------|
| Net Income | \$100,000   | \$150,000   | \$80,000    |
| Dividends  | 20,000      | 30,000      | 15,000      |

**Required:**

Prepare the eliminating/adjusting entries needed on the consolidated worksheet for the years ended 2013, 2014, and 2015. (It is not necessary to prepare the worksheet.)

1. Assume the use of the cost method.
2. Assume the use of the partial equity method.
3. Assume the use of the complete equity method.

**EXERCISE 5-12 Workpaper Entries and Consolidated Retained Earnings, Cost Method LO 6 LO 2**

A 90% interest in Saxton Corporation was purchased by Palm Incorporated on January 2, 2014. The capital stock balance of Saxton Corporation was \$3,000,000 on this date, and the balance in retained earnings was \$1,000,000. The cost of the investment to Palm Incorporated was \$3,750,000.

The balance sheet information available for Saxton Corporation on the acquisition date revealed these values:

|                  | <i>Book Value</i> | <i>Fair Value</i> |
|------------------|-------------------|-------------------|
| Inventory (FIFO) | \$ 700,000        | \$ 800,000        |
| Equipment (net)  | 2,000,000         | 2,000,000         |
| Land             | 1,600,000         | 2,000,000         |

The equipment was determined to have a 15-year useful life when purchased at the beginning of 2009. Saxton Corporation reported net income in 2014 of \$250,000 and \$300,000 in 2015. No dividends were declared in either of those years.

**Required:**

- A. Prepare the workpaper entries, assuming that the cost method is used to account for the investment, to establish reciprocity, to eliminate the investment account, and to allocate and depreciate the difference between book value and the value implied by the purchase price in the 2015 consolidated statements workpaper.
- B. Calculate the consolidated retained earnings for the year ended December 31, 2015, assuming that the balance in Palm Incorporated's ending retained earnings on that date was \$2,000,000.

**EXERCISE 5-13 Push Down Accounting LO 10**

Pascal Corporation purchased 90% of the stock of Salzer Company for \$2,070,000 on January 1, 2015. On this date, the fair value of the assets and liabilities of Salzer Company was equal to their book value except for the inventory and equipment accounts. The inventory had a fair value of \$725,000 and a book value of \$600,000. The equipment had a book value of \$900,000 and a fair value of \$1,075,000.

The balances in Salzer Company's capital stock and retained earnings accounts on the date of acquisition were \$1,200,000 and \$600,000, respectively.

**Required:**

In general journal form, prepare the entries on Salzer Company's books to record the effect of the pushed down values implied by the purchase of its stock by Pascal Company assuming that values are allocated on the basis of the fair value of Salzer Company as a whole imputed from the transaction.

**EXERCISE 5-14 Workpaper Entries and Consolidated Retained Earnings, Partial Equity LO 6**

A 90% interest in Saxton Corporation was purchased by Palm Incorporated on January 2, 2014. The capital stock balance of Saxton Corporation was \$3,000,000 on this date, and the balance in retained earnings was \$1,000,000. The cost of the investment to Palm Incorporated was \$3,750,000.

The balance sheet information available for Saxton Corporation on the acquisition date revealed these values:

|                  | <i>Book Value</i> | <i>Fair Value</i> |
|------------------|-------------------|-------------------|
| Inventory (FIFO) | \$ 700,000        | \$ 800,000        |
| Equipment (net)  | 2,000,000         | 2,000,000         |
| Land             | 1,600,000         | 2,000,000         |

The equipment was determined to have a 15-year useful life when purchased at the beginning of 2009. Saxton Corporation reported net income in 2014 of \$250,000 and \$300,000 in 2015. No dividends were declared in either of those years.

- Prepare the worksheet entries, assuming that the partial equity method is used to account for the investment, to eliminate the investment account, and to allocate and depreciate the difference between book value and the value implied by the purchase price in the 2015 consolidated statements workpaper.
- Calculate the consolidated retained earnings for the year ended December 31, 2015, assuming that the balance in Palm Incorporated's ending retained earnings on that date was \$2,495,000.

**EXERCISE 5-15 Workpaper Entries and Consolidated Retained Earnings, Complete Equity LO 6**

A 90% interest in Saxton Corporation was purchased by Palm Incorporated on January 2, 2014. The capital stock balance of Saxton Corporation was \$3,000,000 on this date, and the balance in retained earnings was \$1,000,000. The cost of the investment to Palm Incorporated was \$3,750,000.

The balance sheet information available for Saxton Corporation on the acquisition date revealed these values:

|                  | <i>Book Value</i> | <i>Fair Value</i> |
|------------------|-------------------|-------------------|
| Inventory (FIFO) | \$ 700,000        | \$ 800,000        |
| Equipment (net)  | 2,000,000         | 2,000,000         |
| Land             | 1,600,000         | 2,000,000         |

The equipment was determined to have a 15-year useful life when purchased at the beginning of 2009. Saxton Corporation reported net income in 2014 of \$250,000 and \$300,000 in 2015. No dividends were declared in either of those years.

**Required:**

- Prepare the worksheet entries, assuming that the complete equity method is used to account for the investment, to eliminate the investment account, and to allocate and depreciate the difference between book value and the value implied by the purchase price in the 2015 consolidated statements workpaper.
- Calculate the consolidated retained earnings for the year ended December 31, 2015, assuming that the balance in Palm Incorporated's ending retained earnings on that date was \$2,705,000.

**EXERCISE 5-16 Goodwill Impairment LO 3**

On January 1, 2013, Porsche Company acquired 100% of Saab Company's stock for \$450,000 cash. The fair value of Saab's identifiable net assets was \$375,000 on this date. Porsche Company decided to measure goodwill impairment using comparable prices of similar businesses to estimate the fair value of the reporting unit (Saab). The information for these subsequent years is as follows:

| <i>Year</i> | <i>Present Value of Future Cash Flows</i> | <i>Carrying Value of Saab's Identifiable Net Assets*</i> | <i>Fair Value of Saab's Identifiable Net Assets</i> |
|-------------|---|--|---|
| 2014        | \$400,000                                 | \$330,000  | \$340,000   |
| 2015        | \$400,000                                 | \$320,000  | \$345,000   |
| 2016        | \$350,000                                 | \$300,000  | \$325,000   |

\*Identifiable net assets do not include goodwill.

**Required:**

- A. For each year determine the amount of goodwill impairment, if any. Hint: You may wish to refer back to the section entitled Goodwill Impairment Test in Chapter 2.
- B. Prepare the workpaper entries needed *each year* (2014 through 2016) on the consolidating worksheet to record any goodwill impairment assuming:
  1. The cost or partial equity method is used.
  2. The complete equity method is used.

**ASC EXERCISES:** For all ASC exercises indicate as part of your answer: the Codification topic, subtopic, section, and/or paragraph upon which your answer is based (unless otherwise specified). All ASC questions require access to the FASB Codification.

- ASC5-1** **Presentation** You are writing a research paper on the accounting for treasury stock. You wonder if it is possible to treat treasury stock as an asset. If not, you wonder if, over the history of GAAP, it has ever been acceptable for treasury stock to be classified as an asset (you vaguely recall reading something in *FASB Statement No. 135*, paragraph 4).
- ASC5-2** **Presentation** Management changed an accounting method. Several executives would have qualified for additional bonuses totaling \$50,000 in the prior year under the new method. Can the firm restate the previous year's income statement to include this expense?
- ASC5-3** **Objective** What is the objective of the statement of cash flows?
- ASC5-4** **Cross-Reference** *FASB Statement No. 142* changed the guidance for goodwill and other intangibles. List all the topics in the Codification where this information can be found (i.e., ASC XXX). (*Hint:* There are two general topics.)
- ASC5-5** **Measurement** What is a reverse acquisition? How should the consideration transferred in a reverse acquisition be measured?
- ASC5-6** **Disclosure** When does the SEC staff believe that push down accounting should be applied? **LO 10**

**PROBLEMS****PROBLEM 5-1** **Workpaper Entries and Consolidated Net Income for Two Years, Cost Method** **LO 6** **LO 3** **LO 5**

On January 1, 2014, Palmero Company purchased an 80% interest in Santos Company for \$2,800,000, at which time Santos Company had retained earnings of \$1,000,000 and capital stock of \$500,000. On the date of acquisition, the fair value of the assets and liabilities of Santos Company was equal to their book value, except for property and equipment (net), which had a fair value of \$1,500,000 and a book value of \$600,000. The property and equipment had an estimated remaining life of 10 years. Palmero Company reported net income from independent operations of \$400,000 in 2014 and \$425,000 in 2015. Santos Company reported net income of \$300,000 in 2014 and \$400,000 in 2015. Neither company declared dividends in 2014 or 2015. Palmero uses the cost method to account for its investment in Santos.

**Required:**

- A. Prepare in general journal form the entries necessary in the consolidated statements workpapers for the years ended December 31, 2014 and 2015.
- B. Prepare a schedule or t-account showing the calculation of the controlling and noncontrolling interest in consolidated net income for the years ended December 31, 2014 and December 31, 2015.

**PROBLEM 5-2** **Workpaper Entries (including Goodwill Impairment), Consolidated Net Income for Two Years, Partial Equity Method** **LO 6** **LO 3** **LO 4** **LO 7**

On January 1, 2014, Paxton Company purchased a 70% interest in Sagon Company for \$1,300,000, at which time Sagon Company had retained earnings of \$500,000 and capital stock of \$1,000,000. On January 1, 2014, the fair value of the assets and liabilities of Sagon Company was equal to their book value except for bonds payable. Sagon Company had outstanding a \$1,000,000 issue of 6% bonds that were issued at par and that mature on January 1, 2019. Interest on the bonds is payable annually, and the yield rate on similar bonds on January 1, 2014, is 10%. Paxton Company reported net income from independent operations of \$300,000 in 2014 and \$250,000 in 2015. Sagon Company reported net income of \$100,000 in 2014 and \$120,000 in 2015. Neither company paid or declared dividends in 2014 or 2015. Paxton uses the partial equity method to account for its investment in Santos.

Despite two profitable years, changes in the market during 2015 for Sagon's product line have caused Paxton to be concerned about the future profitability of the unit. The following data are collected to test for goodwill impairment at 12/31/15. (No goodwill impairment has been recorded on the parent's books.)

Paxton chose to measure goodwill impairment using the present value of future cash flows to estimate the fair value of the reporting unit (Sagon).

| Year | Present Value of Future Cash Flows | Carrying Value of Sagon's Identifiable Net Assets* | Fair Value of Sagon's Identifiable Net Assets |
|------|------------------------------------|--|---|
| 2015 | \$1,500,000                        | \$1,409,000  | \$1,320,000                                   |

\* Identifiable Net Assets do not include goodwill.

**Required:**

- Prepare in general journal form the entries necessary in the consolidated statements workpapers for the years ended December 31, 2014, and December 31, 2015. Hint: You may wish to refer back to the section entitled Goodwill Impairment Test in Chapter 2.
- Prepare in good form a schedule or t-account showing the calculation of the controlling and noncontrolling interest in consolidated net income for the years ended December 31, 2014, and December 31, 2015.

**PROBLEM 5-3**

**Workpaper Entries and Consolidated Net Income, Complete Equity Method LO 5 LO 6 LO 3**

Perke Corporation purchased 80% of the stock of Superstition Company for \$1,970,000 on January 1, 2015. On this date, the fair value of the assets and liabilities of Superstition Company was equal to their book value except for the inventory and equipment accounts. The inventory had a fair value of \$725,000 and a book value of \$600,000. Sixty percent of Superstition Company's inventory was sold in 2015; the remainder was sold in 2016. The equipment had a book value of \$900,000 and a fair value of \$1,075,000. The remaining useful life of the equipment is seven years.

The balances in Superstition Company's capital stock and retained earnings accounts on the date of acquisition were \$1,200,000 and \$600,000, respectively. Perke uses the complete equity method to account for its investment in Superstition. The following financial data are from Superstition Company's records.

|                    | 2015      | 2016      |
|--------------------|-----------|-----------|
| Net income         | \$750,000 | \$900,000 |
| Dividends declared | 150,000   | 225,000   |

**Required:**

- In general journal form, prepare the entries on Perke Company's books to account for its investment in Superstition Company for 2015 and 2016.
- Prepare the eliminating entries necessary for the consolidated statements workpapers in 2015 and 2016.
- Assuming Perke Corporation's net income for 2015 was \$1,000,000, calculate the controlling interest in consolidated net income for 2016.

**PROBLEM 5-4**

**Eliminating Entries (including Goodwill Impairment) and Worksheets for Various Years LO 1 LO 6**

On January 1, 2013, Porter Company purchased an 80% interest in the capital stock of Salem Company for \$850,000. At that time, Salem Company had capital stock of \$550,000 and retained earnings of \$80,000.

Differences between the fair value and the book value of the identifiable assets of Salem Company were as follows:

|           | Fair Value in Excess of Book Value |
|-----------|------------------------------------|
| Equipment | \$130,000                          |
| Land      | 65,000                             |
| Inventory | 40,000                             |

The book values of all other assets and liabilities of Salem Company were equal to their fair values on January 1, 2013. The equipment had a remaining life of five years on January 1, 2013. The inventory was sold in 2013.

Salem Company's net income and dividends declared in 2013 and 2014 were as follows:

Year 2013 Net Income of \$100,000; Dividends Declared of \$25,000  
 Year 2014 Net Income of \$110,000; Dividends Declared of \$35,000

**Required:**

- Prepare a Computation and Allocation Schedule for the difference between book value of equity acquired and the value implied by the purchase price.
- Present the eliminating/adjusting entries needed on the consolidated worksheet for the year ended December 31, 2013. (It is not necessary to prepare the worksheet.)

1. Assume the use of the cost method.
  2. Assume the use of the partial equity method.
  3. Assume the use of the complete equity method.
- C. Present the eliminating/adjusting entries needed on the consolidated worksheet for the year ended December 31, 2014. (It is not necessary to prepare the worksheet.)
1. Assume the use of the cost method.
  2. Assume the use of the partial equity method.
  3. Assume the use of the complete equity method.

Use the following financial data for 2015 for requirements D through G.

|                              | <i>Porter Company</i> | <i>Salem Company</i> |
|------------------------------|-----------------------|----------------------|
| Sales                        | \$1,100,000           | \$ 450,000           |
| Dividend income              | 48,000                | —                    |
| Total revenue                | <u>1,148,000</u>      | <u>450,000</u>       |
| Cost of goods sold           | 900,000               | 200,000              |
| Depreciation expense         | 40,000                | 30,000               |
| Other expenses               | 60,000                | 50,000               |
| Total cost and expense       | <u>1,000,000</u>      | <u>280,000</u>       |
| Net income                   | <u>\$ 148,000</u>     | <u>\$ 170,000</u>    |
| 1/1 Retained earnings        | \$ 500,000            | \$ 230,000           |
| Net income                   | 148,000               | 170,000              |
| Dividends declared           | (90,000)              | (60,000)             |
| 12/31 Retained earnings      | <u>\$ 558,000</u>     | <u>\$ 340,000</u>    |
| Cash                         | \$ 70,000             | \$ 65,000            |
| Accounts receivable          | 260,000               | 190,000              |
| Inventory                    | 240,000               | 175,000              |
| Investment in Salem Company  | 850,000               |                      |
| Land                         | —0—                   | 320,000              |
| Plant and equipment          | 360,000               | 280,000              |
| Total assets                 | <u>\$1,780,000</u>    | <u>\$1,030,000</u>   |
| Accounts payable             | \$ 132,000            | \$ 110,000           |
| Notes payable                | 90,000                | 30,000               |
| Capital stock                | 1,000,000             | 550,000              |
| Retained earnings            | 558,000               | 340,000              |
| Total liabilities and equity | <u>\$1,780,000</u>    | <u>\$1,030,000</u>   |

**Required:**

- D. Prepare a consolidated financial statements workpaper for the year ended December 31, 2015. Although no goodwill impairment was reflected at the end of 2013 or 2014, the goodwill impairment test conducted at December 31, 2015 revealed implied goodwill from Salem to be only \$150,000. The impairment has not been recorded in the books of the parent. (*Hint:* You can infer the method being used by the parent from the information in its trial balance.)
- E. Prepare a consolidated statement of financial position and a consolidated income statement for the year ended December 31, 2015.
- F. Describe the effect on the consolidated balances if Salem Company uses the LIFO cost flow assumption in pricing its inventory and there has been no decrease in ending inventory quantities since 2013.
- G. Prepare an analytical calculation of consolidated retained earnings for the year ended December 31, 2015.

**PROBLEM 5-5**

**Workpaper Entries and Consolidated Financial Statements LO 1 LO 6 LO 7 LO 9**

On January 1, 2014, Palmer Company acquired a 90% interest in Stevens Company at a cost of \$1,000,000. At the purchase date, Stevens Company's stockholders' equity consisted of the following:

|                   |           |
|-------------------|-----------|
| Common stock      | \$500,000 |
| Retained earnings | 190,000   |

An examination of Stevens Company's assets and liabilities revealed the following at the date of acquisition:

|                                    | <i>Book Value</i> | <i>Fair Value</i> |
|------------------------------------|-------------------|-------------------|
| Cash                               | \$ 90,726         | \$ 90,726         |
| Accounts receivable                | 200,000           | 200,000           |
| Inventories                        | 160,000           | 210,000           |
| Equipment                          | 300,000           | 390,000           |
| Accumulated depreciation—equipment | (100,000)         | (130,000)         |
| Land                               | 190,000           | 290,000           |
| Bonds payable                      | (205,556)         | (150,000)         |
| Other                              | 54,830            | 54,830            |
| Total                              | <u>\$690,000</u>  | <u>\$955,556</u>  |

#### Additional Information—Date of Acquisition

Stevens Company's equipment had an original life of 15 years and a remaining useful life of 10 years. All the inventory was sold in 2014. Stevens Company purchased its bonds payable on the open market on January 10, 2014, for \$150,000 and recognized a gain of \$55,556.

Financial statement data for 2016 are presented here:

|                                    | <i>Palmer<br/>Company</i> | <i>Stevens<br/>Company</i> |
|------------------------------------|---------------------------|----------------------------|
| Sales                              | \$620,000                 | \$340,000                  |
| Cost of sales                      | 430,000                   | 240,000                    |

| Common stock                       | 1,000,000                 | 500,000                    |
| Retained earnings                  | 309,100                   | 220,000                    |
| Total liabilities and equity       | <u>\$2,032,600</u>        | <u>\$855,000</u>           |

#### Required:

- A. What method is Palmer using to account for its investment in Stevens? How can you tell?
- B. Prepare in general journal form the workpaper entry to allocate and depreciate the difference between book value and the value implied by the purchase price in the December 31, 2014, consolidated statements workpaper.
- C. Prepare a consolidated financial statements workpaper for the year ended December 31, 2016.
- D. Prepare in good form a schedule or t-account showing the calculation of the controlling and noncontrolling interest in consolidated net income for the year ended December 31, 2016.

**PROBLEM 5-6** Workpaper Entries for Two Years and Sale of Equipment in Year Two **LO 6 LO 9**

On January 1, 2014, Perini Company purchased an 85% interest in Silvas Company for \$400,000. On this date, Silvas Company had common stock of \$90,000 and retained earnings of \$210,000. An examination of Silvas Company's assets and liabilities revealed that their book value was equal to their fair value except for the equipment.

|                          | <i>Book Value</i> | <i>Fair Value</i> |
|--------------------------|-------------------|-------------------|
| Equipment                | \$360,000         |                   |
| Accumulated depreciation | (120,000)         |                   |
|                          | <u>\$240,000</u>  | <u>\$300,000</u>  |

The equipment had an expected remaining life of six years and no salvage value. Straightline depreciation is used.

During 2014 and 2015, Perini Company reported net income from its own operations of \$80,000 and paid dividends of \$50,000 in each year. Silvas Company had income of \$40,000 each year and paid dividends of \$30,000 on each December 31.

Accumulated depreciation is presented on a separate row in the workpaper and in the consolidated financial statements.

**Required:**

- A.** Prepare eliminating entries for consolidated financial statements workpaper for the year ended December 31, 2014, assuming:
1. The cost method is used to account for the investment.
  2. The partial equity method is used to account for the investment.
- B.** On January 1, 2014, Silvas Company sold all its equipment for \$220,000. Prepare the eliminating entries for the consolidated financial statements workpaper for the year ended December 31, 2014, assuming:
1. The cost method is used to account for the investment.
  2. The partial equity method is used to account for the investment.

**PROBLEM 5-7** Workpaper Entries and Sale of Equipment in Year Three, Complete Equity **LO 6 LO 9**

On January 1, 2014, Pueblo Corporation purchased a 75% interest in Sanchez Company for \$900,000. A summary of Sanchez Company's balance sheet at date of purchase follows:

|                          | <i>Book Value</i> | <i>Fair Value</i> |
|--------------------------|-------------------|-------------------|
| Equipment                | \$720,000         |                   |
| Accumulated depreciation | (240,000)         |                   |
| Equipment (net)          | 480,000           | \$660,000         |
| Other assets             | 450,000           | 450,000           |
|                          | <u>\$930,000</u>  |                   |
| Liabilities              | \$255,000         | \$255,000         |
| Common stock             | 300,000           |                   |
| Retained earnings        | 375,000           |                   |
|                          | <u>\$930,000</u>  |                   |

The equipment had an original life of 15 years and remaining useful life of 10 years.

During 2014 Pueblo Corporation reported income of \$237,000 and paid dividends of \$150,000. Sanchez Company reported net income of \$123,000 and paid dividends of \$120,000. Pueblo uses the complete equity method to account for its investment in Sanchez.

**Required:**

- A.** Prepare the elimination entries for the consolidated financial statements workpaper on December 31, 2014. Accumulated depreciation is presented on a separate row in the workpaper and in the consolidated financial statements.
- B.** Assume that Sanchez Company disposed of all its equipment on January 1, 2016, for \$450,000.
1. What amount of gain (loss) will Sanchez Company report?
  2. What is the consolidated gain (loss)?
  3. Prepare the workpaper entry necessary to allocate the amount of the difference between book value and the value implied by the purchase price that was originally allocated to the equipment that has now been sold to outsiders.
  4. What workpaper entry will be necessary to allocate this difference between book value and the value implied by the purchase price in future years?

**PROBLEM 5-8 Eliminating Entries and Consolidated Net Income LO 1 LO 6 LO 2**

Patten Corporation acquired an 85% interest in Savage Company for \$3,100,000 on January 1, 2014. On this date, the balances in Savage Company's capital stock and retained earnings accounts were \$2,000,000 and \$700,000, respectively.

An examination of Savage Company's books on this date revealed the following:

|                       | <i>Book Value</i> | <i>Fair Value</i> |
|-----------------------|-------------------|-------------------|
| Current assets        | \$ 650,000        | \$ 650,000        |
| Inventory             | 560,000           | 610,000           |
| Marketable securities | 430,000           | 430,000           |
| Plant and equipment   | 1,200,000         | 1,600,000         |
| Land                  | 400,000           | 900,000           |
| Liabilities           | 540,000           | 540,000           |

The remaining useful life of the plant and equipment is 10 years, and all the inventory was sold in 2014. The net income from Patten Corporation's own operations was \$950,000 in 2014 and \$675,000 in 2015. Savage Company's net income for the respective years was \$110,000 and \$180,000. No dividends were declared.

**Required:**

- A. Prepare a Computation and Allocation Schedule for the difference between book value of equity and the value implied by the purchase price.
- B. Prepare the consolidated statements workpaper eliminating entries for 2014 and 2015 in general journal form, under each of the following assumptions:
  1. The cost method is used to account for the investment.
  2. The partial equity method is used to account for the investment.
  3. The complete equity method is used to account for the investment.
- C. Calculate the controlling interest in consolidated net income for 2014 and 2015.

**PROBLEM 5-9 Workpaper Entries and Consolidated Net Income for Year of Acquisition LO 6**

On January 1, 2014, Pump Company acquired all the outstanding common stock of Sound Company for \$556,000 in cash. Financial data relating to Sound Company on January 1, 2014, are presented here:

|                                    | <i>Balance Sheet</i> |                    |
|------------------------------------|----------------------|--------------------|
|                                    | <i>Book Value</i>    | <i>Fair Value</i>  |
| Cash                               | \$ 104,550           | \$ 104,550         |
| Receivables                        | 123,000              | 112,310            |
| Inventories                        | 220,000              | 268,000            |
| Buildings                          | 331,000              | 375,000            |
| Accumulated depreciation—buildings | (264,800)            | (300,000)          |

| Accumulated depreciation—equipment | (108,750)            | (97,500)           |
| Land                               | 150,000              | 420,000            |
| Total assets                       | <u>\$ 700,000</u>    | <u>\$1,012,360</u> |
|                                    | <i>Book Value</i>    | <i>Fair Value</i>  |
| Current liabilities                | \$106,000            | \$ 106,000         |
| Bonds payable, 8% due 1/1/2028     |                      |                    |
| Interest payable on 6/30 and 12/31 | 300,000              |                    |
| Common stock                       | 200,000              |                    |
| Premium on common stock            | 80,000               |                    |
| Retained earnings                  | 14,000               |                    |
| Total liabilities and equities     | <u>\$700,000</u>     |                    |

Sound Company would expect to pay 10% interest to borrow long-term funds on the date of acquisition. During 2014, Sound Company wrote its receivables down by \$10,690 and recorded a corresponding loss. Sound Company accounts for its inventories at lower of FIFO cost or market. Its buildings and equipment had a remaining estimated useful life on January 1, 2014, of 10 years and 2½ years, respectively. Sound Company reported net income of \$80,000 and declared no dividends in 2014.

**Required:**

- A. Prepare in general journal form the December 31, 2014, workpaper entries necessary to eliminate the investment account and to allocate and depreciate the difference between book value and the value implied by the purchase price.
- B. Assume that Pump Company's net income from independent operations in 2014 amounts to \$500,000. Calculate the controlling interest in consolidated net income for 2014.

**PROBLEM 5-10 Workpaper Entries for Year of Acquisition LO 5 LO 6**

Pearson Company purchased a 100% interest in Sanders Company and a 90% interest in Taylor Company on January 2, 2014, for \$800,000 and \$1,300,000, respectively. The account balances and fair values of the acquired companies on the acquisition date were as follows:

|                           | <i>Sanders</i>     |                   | <i>Taylor</i>      |                   |
|---------------------------|--------------------|-------------------|--------------------|-------------------|
|                           | <i>Book Value</i>  | <i>Fair Value</i> | <i>Book Value</i>  | <i>Fair Value</i> |
| Current assets            | \$ 200,000         | \$200,000         | \$ 350,000         | \$350,000         |
| Inventory                 | 400,000            | 400,000           | 500,000            | 575,000           |
| Plant and equipment (net) | 300,000            | 350,000           | 600,000            | 600,000           |
| Land                      | 600,000            | 600,000           | 550,000            | 625,000           |
| Total                     | <u>\$1,500,000</u> |                   | <u>\$2,000,000</u> |                   |
| Current liabilities       | \$ 500,000         | \$500,000         | \$ 300,000         | \$300,000         |
| Bonds payable             | 300,000            | 300,000           | 600,000            | 600,000           |
| Capital stock             | 500,000            |                   | 800,000            |                   |
| Retained earnings         | 200,000            |                   | 300,000            |                   |
| Total                     | <u>\$1,500,000</u> |                   | <u>\$2,000,000</u> |                   |

Sanders Company's equipment has a remaining useful life of 10 years. Two-thirds of Taylor Company's inventory was sold in 2014, and the rest was sold in the following year. In 2014, Sanders Company reported net income of \$500,000 and declared dividends of \$100,000. Taylor Company's net income and declared dividends for 2014 were \$800,000 and \$200,000, respectively.

**Required:**

- A. Prepare in general journal form the entries on the books of Pearson Corporation to account for its investments in 2014.
- B. Prepare the elimination entries necessary in the consolidated statements workpaper for the year ended December 31, 2014.

**PROBLEM 5-11 Eliminating Entries (including Goodwill Impairment) and Worksheets for Various Years, Partial Equity Method LO 6**

(Note that this is the same problem as Problem 5-4, but assuming the use of the partial equity method.)

On January 1, 2013, Porter Company purchased an 80% interest in the capital stock of Salem Company for \$850,000. At that time, Salem Company had capital stock of \$550,000 and retained earnings of \$80,000. Porter Company uses the partial equity method to record its investment in Salem Company. Differences between the fair value and the book value of the identifiable assets of Salem Company were as follows:

|           | <i>Fair Value in Excess of Book Value</i> |
|-----------|---|
| Equipment | \$130,000                                 |
| Land      | 65,000                                    |
| Inventory | 40,000                                    |

The book values of all other assets and liabilities of Salem Company were equal to their fair values on January 1, 2013. The equipment had a remaining life of five years on January 1, 2013. The inventory was sold in 2013.

Salem Company's net income and dividends declared in 2013 and 2014 were as follows:

Year 2013 Net Income of \$100,000; Dividends Declared of \$25,000  
 Year 2014 Net Income of \$110,000; Dividends Declared of \$35,000

**Required:**

- A. Present the eliminating/adjusting entries needed on the consolidated worksheet for the year ended December 31, 2013. (It is not necessary to prepare the worksheet.)
- B. Present the eliminating/adjusting entries needed on the consolidated worksheet for the year ended December 31, 2014. (It is not necessary to prepare the worksheet.)

Use the following financial data for 2015 for requirements C through G.

|                              | <i>Porter Company</i> | <i>Salem Company</i> |
|------------------------------|-----------------------|----------------------|
| Sales                        | \$1,100,000           | \$ 450,000           |
| Equity in subsidiary income  | <u>136,000</u>        | <u>—0—</u>           |
| Total revenue                | <u>1,236,000</u>      | <u>450,000</u>       |
| Cost of goods sold           | 900,000               | 200,000              |
| Depreciation expense         | 40,000                | 30,000               |
| Other expenses               | <u>60,000</u>         | <u>50,000</u>        |
| Total cost and expense       | <u>1,000,000</u>      | <u>280,000</u>       |
| Net income                   | <u>\$ 236,000</u>     | <u>\$ 170,000</u>    |
| 1/1 Retained earnings        | \$ 620,000            | \$ 230,000           |
| Net income                   | 236,000               | 170,000              |
| Dividends declared           | <u>(90,000)</u>       | <u>(60,000)</u>      |
| 12/31 Retained earnings      | <u>\$ 766,000</u>     | <u>\$ 340,000</u>    |
| Cash                         | \$ 70,000             | \$ 65,000            |
| Accounts receivable          | 260,000               | 190,000              |
| Inventory                    | 240,000               | 175,000              |
| Investment in Salem Company  | 1,058,000             |                      |
| Land                         | —0—                   | 320,000              |
| Plant and equipment          | <u>360,000</u>        | <u>280,000</u>       |
| Total assets                 | <u>\$1,988,000</u>    | <u>\$1,030,000</u>   |
| Accounts payable             | \$ 132,000            | \$ 110,000           |
| Notes payable                | 90,000                | 30,000               |
| Capital stock                | 1,000,000             | 550,000              |
| Retained earnings            | <u>766,000</u>        | <u>340,000</u>       |
| Total liabilities and equity | <u>\$1,988,000</u>    | <u>\$1,030,000</u>   |

**Required:**

- C. Although no goodwill impairment was reflected at the end of 2013 or 2014, the goodwill impairment test conducted at December 31, 2015 revealed implied goodwill from Salem to be only \$150,000. The impairment has not been recorded in the books of the parent. Prepare a t-account calculation of the controlling and noncontrolling interests in consolidated income for the year ended December 31, 2015.
- D. Prepare a consolidated financial statements workpaper for the year ended December 31, 2015.
- E. Prepare a consolidated statement of financial position and a consolidated income statement for the year ended December 31, 2015.
- F. Describe the effect on the consolidated balances if Salem Company uses the LIFO cost flow assumption in pricing its inventory and there has been no decrease in ending inventory quantities since 2013.
- G. Prepare an analytical calculation of consolidated retained earnings for the year ended December 31, 2015.

*Note:* If you completed Problem 5-4, a comparison of the consolidated balances in this problem with those you obtained in Problem 5-4 will demonstrate that the method (cost or partial equity) used by the parent company to record its investment in a consolidated subsidiary has no effect on the consolidated balances.

**PROBLEM 5-12 Workpaper Entries and Consolidated Financial Statements, Partial Equity**

**Method LO 1 LO 6 LO 7 LO 9**

(Note that this is the same problem as Problem 5-5, but assuming the use of the partial equity method.)

On January 1, 2014, Palmer Company acquired a 90% interest in Stevens Company at a cost of \$1,000,000. At the purchase date, Stevens Company's stockholders' equity consisted of the following:

|                   |           |
|-------------------|-----------|
| Common stock      | \$500,000 |
| Retained earnings | 190,000   |

An examination of Stevens Company's assets and liabilities revealed the following at the date of acquisition:

|                     | <i>Book Value</i> | <i>Fair Value</i> |
|---------------------|-------------------|-------------------|
| Cash                | \$ 90,726         | \$ 90,726         |
| Accounts receivable | 200,000           | 200,000           |
| Inventories         | 160,000           | 210,000           |
| Equipment           | 300,000           | 390,000           |

|                                    |                  |                  |
|------------------------------------|------------------|------------------|
| Accumulated depreciation—equipment | (100,000)        | (130,000)        |
| Land                               | 190,000          | 290,000          |
| Bonds payable                      | (205,556)        | (150,000)        |
| Other                              | 54,830           | 54,830           |
| Total                              | <u>\$690,000</u> | <u>\$955,556</u> |

#### Additional Information—Date of Acquisition

Stevens Company's equipment had an original life of 15 years and a remaining useful life of 10 years. All the inventory was sold in 2014. Stevens Company purchased its bonds payable on the open market on January 10, 2014, for \$150,000 and recognized a gain of \$55,556. Palmer Company uses the partial equity method to record its investment in Stevens Company. Financial statement data for 2016 are presented here:

|                                    | <i>Palmer<br/>Company</i> | <i>Stevens<br/>Company</i> |
|------------------------------------|---------------------------|----------------------------|
| Sales                              | \$ 620,000                | \$340,000                  |
| Cost of sales                      | 430,000                   | 240,000                    |

| Total liabilities and equity       | <u>\$2,059,600</u>        | <u>\$855,000</u>           |

#### Required:

- Prepare in general journal form the workpaper entry to allocate and depreciate the difference between book value and the value implied by the purchase price in the December 31, 2014, consolidated statements workpaper.
- Prepare a consolidated financial statements workpaper for the year ended December 31, 2016.
- Prepare in good form a schedule or t-account showing the calculation of the controlling interest in consolidated net income for the year ended December 31, 2016.

If you completed Problem 5-5, a comparison of the consolidated balances in this problem with those you obtained in Problem 5-5 will demonstrate that the method (cost or partial equity) used by the parent company to record its investment in a consolidated subsidiary has no effect on the consolidated balances.

**PROBLEM 5-13 Push Down Accounting LO 10**

On January 2, 2014, Press Company purchased on the open market 90% of the outstanding common stock of Sensor Company for \$800,000 cash. Balance sheets for Press Company and Sensor Company on January 1, 2014, just before the stock acquisition by Press Company, were:

|                           | <i>Press Company</i> | <i>Sensor Company</i> |
|---------------------------|----------------------|-----------------------|
| Cash                      | \$1,065,000          | \$ 38,000             |
| Receivables               | 422,500              | 76,000                |
| Inventory                 | 216,500              | 124,000               |
| Building (net)            | 465,000              | 322,000               |
| Equipment (net)           | 229,000              | 185,000               |
| Land                      | 188,000              | 100,000               |
| Patents                   | 167,500              | 88,000                |
| Total assets              | <u>\$2,753,500</u>   | <u>\$933,000</u>      |
| Liabilities               | \$ 667,000           | \$249,000             |
| Common stock              | 700,000              | 300,000               |
| Other contributed capital | 846,000              | 164,000               |
| Retained earnings         | 540,500              | 220,000               |
| Total equities            | <u>\$2,753,500</u>   | <u>\$933,000</u>      |

The full implied value of Sensor Company is to be “pushed down” and recorded in Sensor Company’s books. The excess of the implied fair value over the book value of net assets acquired is allocated as follows: To equipment, 30%; to land, 20%; to patents, 50%.

**Required:**

- A. Prepare the entry on Sensor Company’s books on January 2, 2014, to record the values implied by the 90% stock purchase by Press Company.
- B. Prepare a consolidated balance sheet workpaper on January 1, 2014.

**PROBLEM 5-14 Push Down Accounting LO 10 LO 2**

On January 1, 2012, Push Company purchased an 80% interest in the capital stock of Way-Down Company for \$820,000. At that time, WayDown Company had capital stock of \$500,000 and retained earnings of \$100,000. Differences between the fair value and the book value of identifiable assets of WayDown Company were as follows:

|           | <i>Fair Value in Excess of Book Value</i> |
|-----------|---|
| Equipment | \$125,000                                 |
| Land      | 62,500                                    |
| Inventory | 37,500                                    |

The book values of all other assets and liabilities of WayDown Company were equal to their fair values on January 1, 2012. The equipment had a remaining life of five years on January 1, 2012. The inventory was sold in 2012. WayDown Company revalued its assets on January 2, 2012. New values were allocated on the basis of the fair value on WayDown Company as a whole imputed from the transaction.

Financial data for 2012 are presented here:

|                         | <i>Push Company</i> | <i>WayDown Company</i> |
|-------------------------|---------------------|------------------------|
| Sales                   | \$1,050,000         | \$ 400,000             |
| Dividend income         | 40,000              | —0—                    |
| Total revenue           | <u>1,090,000</u>    | <u>400,000</u>         |
| Cost of goods sold      | 850,000             | 180,000                |
| Depreciation expense    | 35,000              | 50,000                 |
| Other expenses          | 65,000              | 50,000                 |
| Total cost and expense  | <u>950,000</u>      | <u>280,000</u>         |
| Net income              | <u>\$ 140,000</u>   | <u>\$ 120,000</u>      |
| 1/1 Retained earnings   | \$ 480,000          | \$ 102,500             |
| Net income              | 140,000             | 120,000                |
| Dividends declared      | (100,000)           | (50,000)               |
| 12/31 Retained earnings | <u>\$ 520,000</u>   | <u>\$ 172,500</u>      |

|                              |                    |                    |
|------------------------------|--------------------|--------------------|
| Cash                         | \$ 80,000          | \$ 35,000          |
| Accounts receivable          | 250,000            | 170,000            |
| Inventory                    | 230,000            | 150,000            |
| Investment in WayDown        | 820,000            |                    |
| Goodwill                     | —0—                | 200,000            |
| Land                         | —0—                | 362,500            |
| Plant and equipment          | 350,000            | 300,000            |
| Total assets                 | <u>\$1,730,000</u> | <u>\$1,217,500</u> |
| Accounts payable             | \$ 160,000         | \$ 100,000         |
| Notes payable                | 50,000             | 20,000             |
| Capital stock                | 1,000,000          | 500,000            |
| Revaluation capital          |                    | 425,000            |
| Retained earnings            | 520,000            | 172,500            |
| Total liabilities and equity | <u>\$1,730,000</u> | <u>\$1,217,500</u> |

**Required:**

- A. In general journal form, prepare the entry made by WayDown Company on January 2, 2012, to record the effect of the pushed down values implied by the purchase of its stock by Push Company assuming that values were allocated on the basis of the fair value of WayDown Company as a whole imputed from the transaction.
- B. Prepare a consolidated financial statements worksheet for the year ended December 31, 2012.
- C. What effect does the decision to apply the full push down approach have on the following items (compared to the case where push down accounting is not used):
  1. Consolidated net income?
  2. Consolidated retained earnings?
  3. Consolidated net assets?
  4. Noncontrolling interest in consolidated net assets?

**PROBLEM 5-15** **Eliminating Entries and Worksheets for Various Years (including Goodwill Impairment), Complete Equity Method LO 6**

(Note that this is the same problem as Problem 5-4 and Problem 5-11, but assuming the use of the complete equity method.)

On January 1, 2013, Porter Company purchased an 80% interest in the capital stock of Salem Company for \$850,000. At that time, Salem Company had capital stock of \$550,000 and retained earnings of \$80,000. Porter Company uses the complete equity method to record its investment in Salem Company. Differences between the fair value and the book value of the identifiable assets of Salem Company were as follows:

|           | <i>Fair Value in Excess of Book Value</i> |
|-----------|---|
| Equipment | \$130,000                                 |
| Land      | 65,000                                    |
| Inventory | 40,000                                    |

The book values of all other assets and liabilities of Salem Company were equal to their fair values on January 1, 2013. The equipment had a remaining life of five years on January 1, 2013. The inventory was sold in 2013.

Salem Company's net income and dividends declared in 2013 and 2014 were as follows:

Year 2013 Net Income of \$100,000; Dividends Declared of \$25,000

Year 2014 Net Income of \$110,000; Dividends Declared of \$35,000

**Required:**

- A. Present the eliminating/adjusting entries needed on the consolidated worksheet for the year ended December 31, 2013. (It is not necessary to prepare the worksheet.)
- B. Present the eliminating/adjusting entries needed on the consolidated worksheet for the year ended December 31, 2014. (It is not necessary to prepare the worksheet.)

Use the following financial data for 2015 for requirements C through G.

|                              | <i>Porter Company</i> | <i>Salem Company</i> |
|------------------------------|-----------------------|----------------------|
| Sales                        | \$1,100,000           | \$ 450,000           |
| Equity in subsidiary income  | 77,200                | —                    |
| Total revenue                | <u>1,177,200</u>      | <u>450,000</u>       |
| Cost of goods sold           | 900,000               | 200,000              |
| Depreciation expense         | 40,000                | 30,000               |
| Other expenses               | 60,000                | 50,000               |
| Total cost and expense       | <u>1,000,000</u>      | <u>280,000</u>       |
| Net income                   | <u>\$ 177,200</u>     | <u>\$ 170,000</u>    |
| 1/1 Retained earnings        | \$ 546,400            | \$ 230,000           |
| Net income                   | 177,200               | 170,000              |
| Dividends declared           | (90,000)              | (60,000)             |
| 12/31 Retained earnings      | <u>\$ 633,600</u>     | <u>\$ 340,000</u>    |
| Cash                         | \$ 70,000             | \$ 65,000            |
| Accounts receivable          | 260,000               | 190,000              |
| Inventory                    | 240,000               | 175,000              |
| Investment in Salem Company  | 925,600               |                      |
| Land                         | —0—                   | 320,000              |
| Plant and equipment          | 360,000               | 280,000              |
| Total assets                 | <u>\$1,855,600</u>    | <u>\$1,030,000</u>   |
| Accounts payable             | \$ 132,000            | \$ 110,000           |
| Notes payable                | 90,000                | 30,000               |
| Capital stock                | 1,000,000             | 550,000              |
| Retained earnings            | 633,600               | 340,000              |
| Total liabilities and equity | <u>\$1,855,600</u>    | <u>\$1,030,000</u>   |

**Required:**

- C. Although no goodwill impairment was reflected at the end of 2013 or 2014, the goodwill impairment test conducted at December 31, 2015 revealed implied goodwill from Salem to be only \$150,000. The impairment was reflected in the books of the parent. Prepare a t-account calculation of the controlling and noncontrolling interests in consolidated income for the year ended December 31, 2015.
- D. Prepare a consolidated financial statements workpaper for the year ended December 31, 2015.
- E. Prepare a consolidated statement of financial position and a consolidated income statement for the year ended December 31, 2015.
- F. Describe the effect on the consolidated balances if Salem Company uses the LIFO cost flow assumption in pricing its inventory and there has been no decrease in ending inventory quantities since 2013.
- G. Prepare an analytical calculation of consolidated retained earnings for the year ended December 31, 2015.

*Note:* If you completed Problem 5-4 and Problem 5-11, a comparison of the consolidated balances in this problem with those you obtained in Problem 5-4 and Problem 5-11 will demonstrate that the method (cost or partial equity) used by the parent company to record its investment in a consolidated subsidiary has no effect on the consolidated balances.

**PROBLEM 5-16 Workpaper Entries and Consolidated Financial Statements, Complete Equity Method LO 1 LO 6 LO 7 LO 9**

(Note that this is the same problem as Problem 5-5 or Problem 5-12, but assuming the use of the complete equity method.)

On January 1, 2014, Palmer Company acquired a 90% interest in Stevens Company at a cost of \$1,000,000. At the purchase date, Stevens Company's stockholders' equity consisted of the following:

|                   |           |
|-------------------|-----------|
| Common stock      | \$500,000 |
| Retained earnings | 190,000   |

An examination of Stevens Company's assets and liabilities revealed the following at the date of acquisition:

|                                    | <i>Book Value</i> | <i>Fair Value</i> |
|------------------------------------|-------------------|-------------------|
| Cash                               | \$ 90,726         | \$ 90,726         |
| Accounts receivable                | 200,000           | 200,000           |
| Inventories                        | 160,000           | 210,000           |
| Equipment                          | 300,000           | 390,000           |
| Accumulated depreciation—equipment | (100,000)         | (130,000)         |
| Land                               | 190,000           | 290,000           |
| Bonds payable                      | (205,556)         | (150,000)         |
| Other                              | 54,830            | 54,830            |
| Total                              | <u>\$690,000</u>  | <u>\$955,556</u>  |

#### Additional Information—Date of Acquisition

Stevens Company's equipment had an original life of 15 years and a remaining useful life of 10 years. All the inventory was sold in 2014. Stevens Company purchased its bonds payable on the open market on January 10, 2014, for \$150,000 and recognized a gain of \$55,556. Palmer Company uses the complete equity method to record its investment in Stevens Company. Financial statement data for 2016 are presented on the next page.

|                                    | <i>Palmer Company</i> | <i>Stevens Company</i> |

#### Required:

- A. Prepare in general journal form the workpaper entry to allocate and depreciate the difference between book value and the value implied by the purchase price in the December 31, 2014, consolidated statements workpaper.
- B. Prepare a consolidated financial statements workpaper for the year ended December 31, 2016.
- C. Prepare in good form a schedule or t-account showing the calculation of the controlling interest in consolidated net income for the year ended December 31, 2016.

If you completed Problem 5-5 and Problem 5-12, a comparison of the consolidated balances in this problem with those you obtained in Problem 5-5 and Problem 5-12 will demonstrate that the method (cost, partial equity, or complete equity) used by the parent company to record its investment in a consolidated subsidiary has no effect on the consolidated balances.

### PROBLEM 5-17 Impact on Future Profits and In-process R&D LO 1

The Mcquire Company is considering acquiring 100% of the Sosa Company. The management of Mcquire fears that the acquisition price may be too high. Condensed financial statements for Sosa Company for the current year are as follows:

| <i>Income Statement</i> | <i>2015</i> |               |
|-------------------------|-------------|---------------|
| Revenues                |             | \$100,000     |
| Cost of Goods Sold      |             | <u>40,000</u> |
| Gross Margin            |             | 60,000        |
| Operating Expenses      |             | <u>35,000</u> |
| Pretax Income           |             | 25,000        |
| Income Tax Expense      |             | <u>10,000</u> |
| Net Income              |             | <u>15,000</u> |

| <i>Balance Sheet</i>         | <i>Year Ended 12/31/14</i> | <i>Year Ended 12/31/15</i> |
|------------------------------|----------------------------|----------------------------|
| Cash                         | \$ 4,000                   | \$ 4,000                   |
| Receivables                  | 10,000                     | 14,000                     |
| Inventory                    | 31,000                     | 27,000                     |
| Fixed Assets (net)           | 50,000                     | 55,000                     |
| Total Assets                 | <u>\$95,000</u>            | <u>\$100,000</u>           |
| Current Liabilities          | \$15,000                   | \$ 17,000                  |
| Long-term Liabilities        | 25,000                     | 18,000                     |
| Common Stock                 | 20,000                     | 20,000                     |
| Retained Earnings            | 35,000                     | 45,000                     |
| Total Liabilities and Equity | <u>\$95,000</u>            | <u>\$100,000</u>           |

You believe that Sosa might be currently acquired at a price resulting in a price to earnings (P/E) ratio of 8 to 12 times. Also, the fair market value of Sosa's net assets is approximately \$105,000, and the difference between book value and the value implied by the purchase price is due solely to depreciable assets with a remaining useful life of 10 years. Sosa Company is heavily involved in research and development of new baseball bats that enable the batter to hit the ball further. You estimate that \$30,000 of the acquisition price might be classified as in-process R&D. Sosa's net income is expected to grow an average of 10% per year for the next 10 years and remain constant thereafter.

#### Required:

- A. If the acquisition occurs on January 1, 2016, determine the amount of income from Sosa Company that would be included in consolidated income assuming the following P/E ratios are used to determine the acquisition price, based on earnings for the year 2015. Suppose that the FASB revoked its requirement that in-process R&D be capitalized and amortized, as the result of extensive lobbying. Instead, in-process R&D will be expensed in the year of acquisition.
  1. P/E ratio = 10
  2. P/E ratio = 12
- B. Now assume that FASB does require (as is currently the case at this writing) that in process R&D be capitalized (assume an amortization period of 20 years). How would your answer to part A change?

### PROBLEM 5-18 Deferred Tax Effects LO 6 LO 7

On January 1, 2015, Pruitt Company issued 25,500 shares of its common stock (\$2 par) in exchange for 85% of the outstanding common stock of Shah Company. Pruitt's common stock had a fair value of \$28 per share at that time. Pruitt Company uses the cost method to account for its investment in Shah Company and files a consolidated income tax return. A schedule of the Shah Company assets acquired and liabilities assumed at book values (which are equal to their tax bases) and fair values follows.

| <i>Item</i>               | <i>Book Value/Tax Basis</i> | <i>Fair Value</i>  | <i>Excess</i>    |
|---------------------------|-----------------------------|--------------------|------------------|
| Receivables (net)         | \$125,000                   | \$ 125,000         | \$ —0—           |
| Inventory                 | 167,000                     | 195,000            | 28,000           |
| Land                      | 86,500                      | 120,000            | 33,500           |
| Plant assets (net)        | 467,000                     | 567,000            | 100,000          |
| Patents                   | 95,000                      | 200,000            | 105,000          |
| Total                     | <u>\$940,500</u>            | <u>\$1,207,000</u> | <u>\$266,500</u> |
| Current liabilities       | \$ 89,500                   | \$ 89,500          | \$ —0—           |
| Bonds payable             | 300,000                     | 360,000            | 60,000           |
| Common stock              | 120,000                     |                    |                  |
| Other contributed capital | 164,000                     |                    |                  |
| Retained earnings         | 267,000                     |                    |                  |
| Total                     | <u>\$940,000</u>            |                    |                  |

**Additional Information:**

- Pruitt's income tax rate is 35%.
- Shah's beginning inventory was all sold during 2015.
- Useful lives for depreciation and amortization purposes are:

|              |          |
|--------------|----------|
| Plant assets | 10 years |
| Patents      | 8 years  |
| Bond premium | 10 years |
- Pruitt uses the straight-line method for all depreciation and amortization purposes.

**Required:**

- Prepare the stock acquisition entry on Pruitt Company's books.
- Assuming Shah Company earned \$216,000 and declared a \$90,000 dividend during 2015, prepare the eliminating entries for a consolidated statements workpaper on December 31, 2015.
- Assuming Shah Company earned \$240,000 and declared a \$100,000 dividend during 2016, prepare the eliminating entries for a consolidated statements workpaper on December 31, 2016.

**PROBLEM 5-19 Interim Acquisition, Contingent Consideration, Cost Method LO 5 LO 6**

(This is a continuation of Problem 4-20.)

Pcost Company purchased 85% of the common stock of Scost Company on April 1, Year 1 for total consideration of \$545,000 cash plus \$50,000 of contingent consideration as measured according to GAAP at fair value. Both companies have a December 31 year-end. December 31, Year 1, trial balances for Pcost and Scost were:

|                                    | <i>At December 31, Year 1</i> |                    |
|------------------------------------|-------------------------------|--------------------|
|                                    | <i>Pcost</i>                  | <i>Scost</i>       |
| Cash                               | \$ 30,000                     | \$ 25,000          |
| Accounts Receivables               | 173,000                       | 135,000            |
| Inventory                          | 232,000                       | 130,000            |
| Treasury Stock at Cost, 500 Shares |                               | 48,000             |
| Investment in Scost Company        | 595,000                       |                    |
| Property and Equipment (net)       | 936,000                       | 519,000            |
| Cost of Goods Sold                 | 1,540,000                     | 754,000            |
| Selling, General, & Administration | 320,000                       | 260,000            |
| Other Expenses                     | 96,000                        | 90,000             |
| Dividends Declared                 | —0—                           | 50,000             |
| Total                              | <u>\$3,936,000</u>            | <u>\$2,011,000</u> |
| Accounts Payable                   | \$ 193,500                    | \$ 130,000         |
| Contingent Consideration           | 61,000                        |                    |
| Dividends Payable                  | —0—                           | 50,000             |
| Common Stock, \$5 par Value        | 270,000                       | 40,000             |
| Other Contributed Capital          | 900,000                       | 250,000            |
| Retained Earnings, 1/1             | 355,000                       | 241,000            |
| Sales                              | 2,100,000                     | 1,300,000          |
| Dividend Income                    | 42,500                        | —0—                |
| Total                              | <u>\$3,936,000</u>            | <u>\$2,011,000</u> |

Scost Company declared a \$50,000 cash dividend on December 20, Year 1, payable on January 10, Year 2, to stockholders of record on December 31, Year 1. Pcost Company recognized the dividend on its declaration date. Pcost includes dividend income receivable in the accounts receivable account.

On the acquisition date, the book values and fair values of Scost's assets and liabilities were equal with the following exceptions.

|                        | <i>Book Value</i> | <i>Fair Value</i> |
|------------------------|-------------------|-------------------|
| Inventory              | 116,000           | 146,000           |
| Property and Equipment | 465,000           | 507,000           |

Any difference between book value and fair value for property and equipment is depreciated over seven years. Depreciation expense is reported on the income statement in Selling, General, and Administration expense. The entire amount of inventory acquired was sold in Year 1.

No payments were made for the earn-out at the end of year 1, and the adjustment to contingent consideration included only interest adjustments (no change in fair value was expected since the actual and target levels for revenue were equal at the end of year 1).

Both companies report depreciation expense as a component of Selling, General, and Administration expense on the income statement. For the year ending December 31, Year 1, Pcost and Scost reported depreciation expense of \$96,000 and \$72,000, respectively. Both companies use straight-line and use the full-year option in computing depreciation expense (i.e., they take a full year's depreciation on any asset acquired during the year). The following balance sheet is available for both companies at the beginning of the year of acquisition and the acquisition date.

| <i>Balance Sheet</i>         | <i>Pcost</i>       | <i>Scost</i>      | <i>Pcost</i>       | <i>Scost</i>      |
|------------------------------|--------------------|-------------------|--------------------|-------------------|
|                              | <i>1/1/Year 1</i>  | <i>1/1/Year 1</i> | <i>4/1/Year 1</i>  | <i>4/1/Year 1</i> |
| Cash                         | \$100,000          | \$15,000          | 28,000             | 11,000            |
| Accounts Receivables         | 170,000            | 115,000           | 124,000            | 121,000           |

| Retained Earnings            | 355,000            | 241,000           | 391,000            | 315,000           |
| Treasury Stock               |                    | (48,000)          | —                  | (48,000)          |
| Total                        | <u>\$1,340,000</u> | <u>\$702,000</u>  | <u>\$1,826,000</u> | <u>\$713,000</u>  |

**Required:**

1. Prepare a consolidated workpaper at the end of year 1.
2. Prepare a consolidated statement of cash flows for year 1 (see Chapter 4 for a review of the consolidated statement of cash flows).
3. Prepare the journal entry on the books of Pcost to account for the change in the contingent consideration liability for year 1.

**PROBLEM 5-20 Interim acquisition, contingent consideration, complete equity method LO 5 LO 6**

(This is a continuation of Problem 4-21)

Pequity Company purchased 85% of the common stock of Sequity Company on April 1, Year 1 for total consideration of \$545,000 cash plus \$50,000 of contingent consideration as measured according to GAAP at

fair value. Both companies have a December 31 year-end. December 31, Year 1, trial balances for Pequity and Sequity were:

|                                    | <i>At December 31, Year 1</i> |                    |
|------------------------------------|-------------------------------|--------------------|
|                                    | <i>Pequity</i>                | <i>Sequity</i>     |
| Cash                               | \$ 30,000                     | \$ 25,000          |
| Accounts Receivables               | 173,000                       | 135,000            |
| Inventory                          | 232,000                       | 130,000            |
| Treasury Stock at Cost, 500 shares |                               | 48,000             |
| Investment in Sequity Company      | 626,875                       |                    |
| Property and Equipment (net)       | 936,000                       | 519,000            |
| Cost of Goods Sold                 | 1,540,000                     | 754,000            |

| Total                              | <u>\$3,953,875</u>            | <u>\$2,011,000</u> |
| Accounts Payable                   | \$ 193,500                    | \$ 130,000         |
| Contingent Consideration           | 61,000                        |                    |
| Dividends Payable                  | —0—                           | 50,000             |
| Common Stock, \$5 par Value        | 270,000                       | 40,000             |
| Other Contributed Capital          | 900,000                       | 250,000            |
| Retained Earnings, 1/1             | 355,000                       | 241,000            |
| Sales                              | 2,100,000                     | 1,300,000          |
| Equity Income                      | 74,375                        | —0—                |
| Total                              | <u>\$3,953,875</u>            | <u>\$2,011,000</u> |

Sequity Company declared a \$50,000 cash dividend on December 20, Year 1, payable on January 10, Year 2, to stockholders of record on December 31, Year 1. Pequity Company recognized the dividend on its declaration date. Pequity includes dividend income receivable in the accounts receivable account.

On the acquisition date, the book values and fair values of Sequity's assets and liabilities were equal with the following exceptions.

|                        | <i>Book Value</i> | <i>Fair Value</i> |
|------------------------|-------------------|-------------------|
| Inventory              | 116,000           | 146,000           |
| Property and Equipment | 465,000           | 507,000           |

Any difference between book value and fair value for property and equipment is depreciated over seven years. Depreciation expense is reported on the income statement in selling, general, and administration expense. The entire amount of inventory acquired was sold in Year 1.

No payments were made for the earn-out at the end of year 1, and the adjustment to contingent consideration included only interest adjustments (no change in fair value was expected since the actual and target levels for revenue were equal at the end of year 1).

Both companies report depreciation expense as a component of Selling, General, and Administration expense on the income statement. For the year ending December 31, Year 1, Pequity and Sequity reported depreciation expense of \$96,000 and \$72,000, respectively. Both companies use straight-line and use the full-year option in computing depreciation expense (i.e., they take a full year's depreciation on any asset acquired during the year). The following balance sheet is available for both companies at the beginning of the year of acquisition and the acquisition date.

| <i>Balance Sheet</i>         | <i>Pequity</i>     | <i>Sequity</i>    | <i>Pequity</i>     | <i>Sequity</i>    |
|------------------------------|--------------------|-------------------|--------------------|-------------------|
|                              | <i>1/1/Year 1</i>  | <i>1/1/Year 1</i> | <i>4/1/Year 1</i>  | <i>4/1/Year 1</i> |
| Cash                         | \$100,000          | \$15,000          | 28,000             | 11,000            |
| Accounts Receivables         | 170,000            | 115,000           | 124,000            | 121,000           |
| Inventory                    | 220,000            | 122,000           | 229,000            | 116,000           |
| Investment in Scost Company  | 0                  | 0                 | 595,000            |                   |
| Property and Equipment       | 850,000            | 450,000           | 850,000            | 465,000           |
| Total                        | <u>\$1,340,000</u> | <u>\$702,000</u>  | <u>1,826,000</u>   | <u>\$713,000</u>  |
| Accounts and Notes Payable   | \$65,000           | \$169,000         | 215,000            | 156,000           |

| Dividends Payable            | —                  | 50,000            | —                  |                   |
| Capital Stock, \$5 par value | 220,000            | 40,000            | 270,000            | 40,000            |
| Other Contributed Capital    | 700,000            | 250,000           | 900,000            | 250,000           |
| Retained Earnings            | 355,000            | 241,000           | 391,000            | 315,000           |
| Treasury Stock               |                    | (48,000)          | —                  | (48,000)          |
| Total                        | <u>\$1,340,000</u> | <u>\$702,000</u>  | <u>\$1,826,000</u> | <u>\$713,000</u>  |

**Required:**

1. Prepare a consolidated workpaper at the end of year 1.
2. Prepare a consolidated statement of cash flows for year 1 (see Chapter 4 for a review of the consolidated statement of cash flows).
3. Prepare the journal entry on the books of Pequity to account for the change in the contingent consideration liability for year 1.

## Chapter 5 – Review Questions

The review questions accompanying this course are designed to assist you in achieving the course learning objectives. The review section is not graded; do not submit it in place of your qualified assessment. While completing the review questions, it may be helpful to study any unfamiliar terms in the glossary in addition to course content. After completing the review questions, proceed to the review question answers and rationales.

28. A bargain purchase is when:
- Fair value is less than implied value.
  - Fair value is below book value.
  - Book value is greater than implied value.
  - The implied value is below the aggregate fair value of identifiable assets less liabilities.
29. Historically, in a bargain purchase:
- All assets and liabilities of the subsidiary were recorded at fair value as the first step.
  - An extraordinary gain was recognized for the difference between fair value of net assets and the purchase price.
  - Long-lived assets (other than some specifically required to be accounted for differently) were recorded at fair value less an adjustment for the bargain.
  - Only current assets and marketable securities were recorded at fair value.
30. If the price paid by the acquiring company for a subsidiary is between the fair value of the net assets and the book value of the net assets:
- The acquiring company will recognize goodwill.
  - The acquiring company will write down the assets on a pro rata basis.
  - The acquiring company will recognize a gain for the excess of fair value over implied value.
  - The acquiring company will recognize a noncontrolling interest.
31. Which of the following statements is accurate regarding the parent company's required entries for the subsidiary under the cost method?
- After the acquisition, the only entry the parent company will record on its books is for any dividend income paid by the subsidiary.
  - After the acquisition, the parent company will record dividends and its share of subsidiary income on its books.
  - After the acquisition, the parent company will not record any entries related to the investment in subsidiary unless there is a permanent impairment.
  - After the acquisition, the parent company will reduce the value of the investment in subsidiary for any dividends paid.

32. Which of the following entries would only be required in consolidation in the years after the acquisition if the subsidiary had been accounted for under the cost method?
- Debit the equity accounts of the subsidiary and credit the investment in subsidiary.
  - Debit investment in subsidiary and credit beginning retained earnings of the parent company.
  - Debit asset accounts and credit difference between implied value and book value for the amount that fair value of individual assets exceeds their book values.
  - Debit goodwill and credit difference between implied value and book value.
33. Which of the following statements is accurate regarding the correct accounting for a goodwill impairment 2 years after acquisition by the parent of an 80% ownership in the subsidiary?
- The amount of impairment will permanently reduce goodwill on the parent company's balance sheet.
  - The amount of impairment will be recognized as a loss and there will be a valuation account set up for goodwill.
  - The amount of the impairment will be recognized as a loss in the consolidated income statement and such loss will be fully reflected in the controlling interest in consolidated income.
  - The amount of the impairment will be recognized as a loss in the consolidated income statement and such loss will be allocated between the controlling and noncontrolling interests.

34. Which of the following is the correct course of action if goodwill is determined to be impaired?
- Reduce the difference between implied value and book value account.
  - Recognize an extraordinary loss in the current period.
  - Set up an allowance account for goodwill to adjust for current and future increases and decreases in value.
  - Recognize impairment loss on the income statement.
35. Which of the following is accurate regarding the calculation of consolidated retained earnings when using the partial equity method?
- It is the parent's ending retained earnings plus their share of the subsidiary's current year income/loss.
  - It is the beginning retained earnings of the parent plus the cumulative effect of the subsidiary's earnings/loss since the acquisition.
  - It is the parent's retained earnings plus or minus the cumulative effect of adjustments to date related to depreciation of the difference between implied and book value.
  - It is the parent's beginning retained earnings plus the current year consolidated earnings less the noncontrolling interest.
36. When a company uses the complete equity method, which of the following accounts must be eliminated in consolidation?
- Equity in subsidiary income.
  - Dividend income.
  - Goodwill.
  - Minority interest in income.
37. Which of the following statements is accurate regarding calculating the fair value of liabilities?
- Fair value does not take into consideration nonperformance risk.
  - The valuation technique used to value the debt should be the approach that is the best match to the nature of the debt and the circumstances so it will necessarily vary across the various liabilities.
  - Recording additional liabilities at acquisition can be a way to manipulate future earnings by running the related expenses through the liability accounts rather than recording the expenses.
  - FASB greatly favors use of the income approach over the market approach for valuing liabilities.

38. Push down accounting:
- a. Is required in the banking industry.
  - b. Is required when 100% of the stock is acquired.
  - c. Is not allowed in any industry but some companies maintain a separate set of “push down” books for internal purposes.
  - d. Was used heavily in the early 2000s, but because of abuses after the financial crisis has been disallowed.

## **Chapter 6 – Elimination of Unrealized Profit on Intercompany Sales of Inventory**

### **Learning Objectives**

After completing this section of the course, you will be able to:

- Identify the reporting objectives for intercompany sales of inventory.
- Calculate the amount of intercompany profit to be eliminated from the consolidated financial statements.
- Cite the authoritative position for eliminating 100% of intercompany profit not realized in transactions with outsiders and apply it in client situations.
- Recognize differences between upstream and downstream sales of inventory.
- Compute the noncontrolling interest in consolidated net income for upstream and downstream sales when not all inventory has been sold to outsiders.
- Recognize differences between the consolidation requirements for cost, partial equity, and complete equity situations.
- Identify the appropriate treatment of intercompany profit earned prior to the parent-subsidiary affiliation.
- Identify potential tax issues related to intercompany activity.

## ELIMINATION OF UNREALIZED PROFIT ON INTERCOMPANY SALES OF INVENTORY

### CHAPTER CONTENTS

- 6.1 EFFECTS OF INTERCOMPANY SALES OF MERCHANDISE ON THE DETERMINATION OF CONSOLIDATED BALANCES
- 6.2 COST METHOD: CONSOLIDATED STATEMENTS WORKPAPER—UPSTREAM SALES
- 6.3 COST METHOD—ANALYSIS OF CONSOLIDATED NET INCOME AND CONSOLIDATED RETAINED EARNINGS
- 6.4 CONSOLIDATED STATEMENTS WORKPAPER—PARTIAL EQUITY METHOD
- 6.5 PARTIAL EQUITY METHOD—ANALYSIS OF CONSOLIDATED NET INCOME AND CONSOLIDATED RETAINED EARNINGS
- 6.6 CONSOLIDATED STATEMENTS WORKPAPER—COMPLETE EQUITY METHOD
- 6.7 COMPLETE EQUITY METHOD—ANALYSIS OF CONSOLIDATED NET INCOME AND CONSOLIDATED RETAINED EARNINGS
- 6.8 SUMMARY OF WORKPAPER ENTRIES RELATING TO INTERCOMPANY SALES OF INVENTORY
- 6.9 INTERCOMPANY PROFIT PRIOR TO PARENT-SUBSIDIARY AFFILIATION

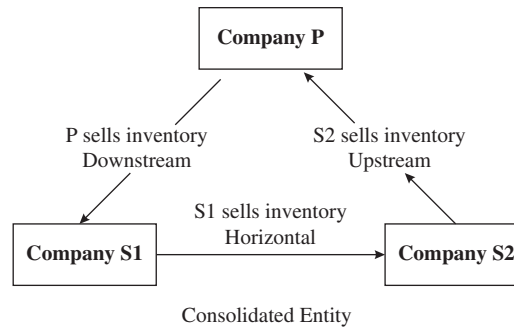

IN  
THE  
NEWS

“What separates a good year in mergers-and-acquisitions from a bad one? By the Pavlovian measure of Wall Street, it is simple: The more deals, the better the year. But 2007 revealed the fallacy of this approach. Buyers gorged on cheap credit, overpaying along the way. Some raced to rip up transactions signed months earlier. More deals, more problems.”<sup>1</sup>

<sup>1</sup> *Wall Street Journal*, “What to Look for as Deal Makers Revise Strategies,” by Dennis Berman, p. C1, January 15, 2008.

**LO 4** Upstream and downstream sales.

Affiliated companies may make intercompany sales of inventory or other assets. The term “affiliated group” is used to refer to a parent and all subsidiaries for which consolidated financial statements are prepared; alternatively, this group may be referred to as the economic entity or as the consolidated entity.<sup>2</sup> Sales from a parent company to one or more of its subsidiaries are referred to as **downstream sales**. Sales from subsidiaries to the parent company are referred to as **upstream sales**. Sales from one subsidiary to another subsidiary are referred to as **horizontal sales**.

**IN THE NEWS**

AOL Time Warner reported that intercompany advertising revenue

increased to \$97 million in the third quarter of 2001 (which represented 5% of the advertising revenue). The networks segment reported that advertising and commerce revenue fell by 6%. Later, a spokesperson for the company stated that these numbers included intercompany sales (a number that would be eliminated for consolidated statements).<sup>3</sup>

Ordinarily, the selling affiliate will record a profit or loss on such sales. From the point of view of the consolidated entity, however, such profit or loss should not be reported until the inventory or other assets acquired by the purchasing affiliate have been used during the course of operations or sold to parties outside the affiliated group (third parties). Profit (loss) that has not been realized from the point of view of the consolidated entity through subsequent sales to third parties is defined as **unrealized intercompany profit (loss)** and must be eliminated in the preparation of consolidated financial statements. The elimination of unrealized profit resulting from intercompany sales of inventory is examined in this chapter. The elimination of unrealized profit resulting from intercompany sales of property and equipment will be examined in the next chapter.

## 6.1 EFFECTS OF INTERCOMPANY SALES OF MERCHANDISE ON THE DETERMINATION OF CONSOLIDATED BALANCES

**LO 1** Financial reporting objectives for intercompany sales.

The workpaper procedures illustrated in this chapter are designed to accomplish the following financial reporting objectives in the consolidated financial statements:

- Consolidated sales include only **sales to parties outside the affiliated group**.
- Consolidated cost of sales includes only **the cost to the affiliated group**, of goods that have been sold to parties outside the affiliated group.
- Consolidated inventory on the balance sheet is recorded at a value equal its **cost to the affiliated group**.

Stated another way, the objective of eliminating the effects of intercompany sales of merchandise is to present consolidated balances for sales, cost of sales, and inventory as if the intercompany sale had **never** occurred. As a result, the recognition of income or loss on the intercompany transaction, including its allocation between the noncontrolling and controlling interests, is deferred until the profit or loss is confirmed by sale of the merchandise to nonaffiliates.

<sup>2</sup> Note that this definition of an affiliated group is broader than the definition imposed by the Tax Code (Section 1504(a)). A parent must own at least 80% of the voting power of all stock classes and 80% of the fair value of its subsidiaries' outstanding stock to qualify as an affiliated group for tax purposes.

<sup>3</sup> *The Street.com*, “Why You Can’t Avoid Those AOL Ads,” by George Mannes, 11/15/2001.

Thoughtful consideration of these financial reporting objectives will indicate that they are logical and noncontroversial. However, the workpaper procedures for accomplishing these objectives are not self-evident. Thus the workpaper procedures for accomplishing these objectives are the central topic of this chapter. These procedures include workpaper entries to adjust the recorded amounts of sales, cost of sales (or components thereof), and ending inventory to amounts based on the objectives stated above. In addition, the procedures are designed to equate beginning consolidated retained earnings and noncontrolling interest (NCI) in equity with the amounts reported as ending consolidated retained earnings and ending NCI, respectively, in the previous reporting period for firms using the cost or partial equity methods. These procedures also serve to allocate consolidated income properly between the noncontrolling and controlling interests.

In order to concentrate on intercompany profit eliminations and adjustments, reporting complications relating to accounting for the difference between implied and book values are avoided in the initial illustrations by assuming that all acquisitions are made at the book value of the acquired interest in net assets and that the book value of the subsidiary company's net assets equals their fair value on the date the parent company acquires interest. (This assumption is later relaxed.) It is also assumed that the affiliates file consolidated income tax returns. If the affiliates file separate tax returns, deferred tax issues arise. These are addressed in Appendix 6A, Deferred Tax and Intercompany Sales of Inventory available online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).

### Determination of Consolidated Sales, Cost of Sales, and Inventory Balances Assuming Downstream Sales

The basic workpaper eliminating entries required because of intercompany sales of merchandise are illustrated using the following simplifying assumptions:

1. P Company sells all goods it buys or manufactures to its wholly owned subsidiary, S Company, at 125% of cost.
2. During the first year of this arrangement, goods that cost P Company \$200,000 are sold to S Company for \$250,000 (*downstream sale*).
3. During the same year, S Company sold all the goods purchased by it from P Company to third parties for \$270,000.

Sales, cost of sales, and inventory balances reported by the affiliated companies are presented in Illustration 6-1. Recall that the cost of sales is computed as:

$$\begin{array}{r}
 \text{Beginning inventory} \\
 + \text{Net purchases}^4 \\
 \hline
 \text{Total available for sale} \\
 - \text{Ending inventory} \\
 \hline
 \text{Cost of sales}
 \end{array}$$

Depending upon the accounting system used, a given company may have a single account in its general ledger entitled “cost of sales” or “cost of goods sold” and a single line on its workpaper or, alternatively, separate accounts for the various components. In this chapter, we assume that the trial balance lists each component separately, and we present the workpaper entries accordingly. Using this approach, the cost of sales line on the income statement is replaced with lines for Beginning Inventory—Income Statement; Purchases; Ending Inventory—Income Statement; and Cost of Sales. Note that under this assumption, Ending Inventory—Income Statement requires an entry distinct from that to the balance sheet account Inventory. The account “Ending Inventory—Income Statement” has a normal credit balance because it is subtracted in computing Cost of Sales. We indicate in

<sup>4</sup> For a manufacturing concern, “purchases” is replaced by the total cost of goods manufactured, which includes labor and overhead in addition to the raw materials used. Nonetheless, when a company purchases manufactured items from an affiliate, the purchasing affiliate would record those items as “purchases” at the amount charged by the selling affiliate.

| <i>Balance Sheet</i>    |                  |                  |                     |             |                              |          |
| Inventory               | —0—              | —0—              |                     |             | —0—                          |          |

(1) To eliminate intercompany sales.

parentheses those entries that might be replaced by the use of the single account “cost of sales.”

The workpaper entry in the year of the sale to eliminate intercompany sales of merchandise takes the following form:

**LO 6** Consolidated workpapers for downstream sales.

|                                  |         |         |
|----------------------------------|---------|---------|
| (1) Sales                        | 250,000 |         |
| Purchases (Cost of Sales)        |         | 250,000 |
| To eliminate intercompany sales. |         |         |

No unrealized intercompany profit exists, since all goods sold by P Company to S Company have been resold to third parties. After the elimination of intercompany sales, consolidated sales of \$270,000 equals the amount of sales by the affiliated group (S Company) to third parties, and consolidated cost of sales of \$200,000 equals the cost to the affiliated group (P Company) of purchasing/manufacturing the goods sold.

Failure to eliminate intercompany sales would result in an overstatement of sales and of cost of sales in the consolidated financial statements. If the intercompany sales were not eliminated, the gross profit would be calculated as shown in Illustration 6-2. Compare this to the gross profit computed in Illustration 6-1, with the proper eliminating entry. If the intercompany sales were not eliminated, the consolidated gross profit would be correct but the gross profit percentage would not. Whereas the gross profit percentage should be 25.9% (\$70,000/\$270,000), failure to eliminate the intercompany sales would show the gross percentage as only 13.5% (\$70,000/\$520,000). Since both sales and cost of sales would be overstated by the same amounts, consolidated net income is not affected by the failure to eliminate intercompany sales. However, a number of financial ratios based on sales revenues would be distorted if the elimination were not made.

**RELATED CONCEPTS**

The *historical cost* principle suggests that inventory and other assets should not be reported above their cost to the consolidated entity (\$80,000).

Assume now that S Company sells 60% of the goods purchased from P Company to third parties prior to the end of the current year. Sales, cost of sales, and inventory balances reported by each of the affiliated companies are presented in Illustration 6-3. Entry (1) to eliminate sales and purchases is the same as explained before. However, intercompany profit in the amount of \$20,000 [ $\$50,000 \times 40\%$ ] resides in the ending inventory balance of S Company. This profit has not yet been realized by the consolidated entity through sales to outsiders (third parties). When, at the end of the accounting period, some of the merchandise remains in the inventory of the purchasing affiliate, the intercompany profit

| Ending Inventory        | 0                    | 100,000              | (2) 20,000          |             | 80,000                           |
| Cost of Sales           | 200,000              | 150,000              |                     |             | 120,000                          |
| Gross Profit            | 50,000               | 12,000               |                     |             | 42,000                           |
| <i>Balance Sheet</i>    |                      |                      |                     |             |                                  |
| Inventory (40% remains) | —0—                  | 100,000              |                     | (2) 20,000  | 80,000                           |

\* These entries are the same for firms using the cost, partial equity, and complete equity methods.

(1) To eliminate intercompany sales.

(2) To eliminate unrealized intercompany profit in ending inventory.

recognized thereon must be excluded from consolidated net income and from the inventory balance in the consolidated balance sheet. The workpaper entry to accomplish this elimination and to reduce Inventory on both the Income Statement and the Balance Sheet is as follows:

|     |   |        |        |
|-----|---|--------|--------|
| (2) | Ending Inventory—Income Statement (Cost of Sales)                                       | 20,000 |        |
|     | Inventory—Balance Sheet   |        | 20,000 |
|     | To defer the unrealized gross profit in ending inventory until it is sold to outsiders. |        |        |

The form of the entry eliminating intercompany sales, entry (1), implicitly assumes that there is no unrealized intercompany profit. Accordingly, either entry (1) must be adjusted, or entry (2) must be made to remove the unrealized intercompany profit from the ending inventory and to reduce the excessive credit to cost of sales.

The first and second eliminating entries could be combined and one entry prepared as follows, if a single account is used for “cost of sales”:

|                         |         |         |
|-------------------------|---------|---------|
| Sales                   | 250,000 |         |
| Cost of Sales           |         | 230,000 |
| Inventory—Balance Sheet |         | 20,000  |

As a practical matter, two entries are conventionally prepared as shown in Illustration 6-3. In either case, after adjustment, consolidated sales of \$162,000 equals the amount of sales of the affiliated group to third parties. Consolidated cost of sales of \$120,000 equals the cost to the affiliated group of the goods sold ( $60\% \times \$200,000$ ), and the consolidated inventory balance of \$80,000 equals the cost to the affiliated group of the goods held by S Company at the end of the year ( $40\% \times \$200,000$ ).

The above entries for intercompany sales and unrealized profit in ending inventory are the same regardless of whether the parent uses the cost, partial equity, or complete equity method. However, as shown next, the entries for intercompany profit in beginning inventory differ slightly.

## Year Two Eliminating Entries—Downstream Sales

Assume now that in the next period P Company sells merchandise to S Company in the amount of \$500,000 (cost \$400,000) and that S Company sells all its beginning inventory (\$100,000 cost to S; \$80,000 cost to consolidated entity) and one-half of its current purchases from P Company (\$250,000 cost to S; \$200,000 cost to consolidated entity) to third parties for \$378,000. Sales, cost of sales, and inventory balances reported by the affiliated

| <b>Retained Earnings</b>    |              |              |              |             |                          |
| Beginning Retained Earnings |              |              |              |             |                          |
| P Company                   | XXXX (a)     |              | (3) 20,000   |             | XXXX                     |
| <b>Balance Sheet</b>        |              |              |              |             |                          |
| Inventory                   | —0—          | 250,000      |              | (2) 50,000  | 200,000                  |

(a) Includes \$20,000 of gross profit on intercompany sales from the previous year (not yet sold to third parties).

(1) To eliminate intercompany sales.

(2) To eliminate unrealized intercompany profit in ending inventory.

(3) To recognize intercompany profit in beginning inventory realized during the period.

companies are presented in Illustration 6-4. This illustration assumes that either the cost or the partial equity method is used.

Unrealized intercompany profit in the amount of \$50,000 [ $\$250,000 - \$200,000$ ] or [ $\$250,000 - (\$250,000/1.25)$ ] resides in the ending inventory of S Company. Workpaper eliminating entries (1) and (2) are similar to those discussed in the preceding example. Assuming a first-in, first-out (FIFO) inventory cost flow, intercompany profit in inventories excluded from consolidated net income in one period will be realized by sales to third parties in the next period. The form of the workpaper entry to recognize profit in the buying affiliate's beginning inventory that is realized during the current period depends on the method of accounting for the investment on the books of the parent.

If the parent uses the *cost* or *partial equity* method of recording its investment in the subsidiary, the entry takes the following form (as shown in Illustration 6-4):

COST

**Cost or Partial Equity Method**

|     |  |        |        |
|-----|--|--------|--------|
| (3) | Beginning Retained Earnings—P Company <sup>5</sup>                               | 20,000 |        |
|     | Beginning Inventory—Income Statement (Cost of Sales)                             |        | 20,000 |
|     | To realize the gross profit in beginning inventory deferred in the prior period. |        |        |

PARTIAL

The credit to beginning inventory (*Cost of Sales*) in entry (3) is necessary in order to recognize in consolidated income the amount of profit in the beginning inventory that has been confirmed by sales to third parties during the current period. S Company charged cost of sales for its cost of \$100,000, whereas the cost to the affiliated group of the beginning inventory of S Company is only \$80,000. Accordingly, cost of sales must be decreased by \$20,000, which increases consolidated net income by \$20,000. The adjustment to Beginning Inventory this period is in the same amount as that to Ending Inventory last period.

For firms using the cost or partial equity method to account for its investment in the subsidiary, the rationale for the debit of \$20,000 to beginning retained earnings of P Company is as follows. In the previous year, P Company recorded \$50,000 in profit on intercompany sales and transferred it to its Retained Earnings account as part of the normal

<sup>5</sup> If the parent firm uses the complete equity method, this debit is replaced by a debit to the Investment in Subsidiary account (see below).

(1) To eliminate intercompany sales.

(2) To eliminate unrealized intercompany profit in ending inventory.

(3) To recognize intercompany profit in beginning inventory realized during the period.

accounting process. Since, at the beginning of the year, 40% of that amount has not been realized by sales to third parties, it must be eliminated from the beginning retained earnings of P Company to correctly reflect the beginning consolidated retained earnings.

The debit to beginning retained earnings may also be viewed in the following manner. In determining consolidated net income in the prior year, \$20,000 was deducted from the reported income and thus from the retained earnings of the affiliated group by a workpaper entry (which, like all workpaper entries, was not posted to the ledger accounts). In order for beginning retained earnings to match the prior year's ending retained earnings (to the consolidated entity), this \$20,000 adjustment must be made to beginning retained earnings.

For firms using the *complete equity* method, the debit to beginning retained earnings is not needed, assuming the parent correctly adjusted for all intercompany profits/losses in its "revenue from subsidiary" account in the preceding year. Under the complete equity method, consolidated retained earnings is identical to the parent's reported retained earnings and thus no adjustment is needed. The debit to retained earnings is replaced by a debit to Investment in Subsidiary, which serves simply to facilitate the elimination of this account on the workpaper (as shown in Illustration 6-5):

COMPLETE

**Complete Equity Method**

|--|----------|----------|
| (3) Investment in Subsidiary   | \$20,000 |          |
| Beginning Inventory—Income Statement (Cost of Sales)                             |          | \$20,000 |
| To realize the gross profit in beginning inventory deferred in the prior period. |          |          |

Consolidated sales of \$378,000 are equal to the amount of sales of the affiliated group to third parties. Consolidated cost of sales of \$280,000 equals the cost to the affiliated group of the goods sold and is calculated as follows:

|  |                  |
|--|------------------|
| Cost of goods transferred to                                   |                  |
| S Company in prior year and sold this year (40% × \$200,000)   | \$80,000         |
| Cost of goods transferred to                                   |                  |
| S Company in current year and sold this year (50% × \$400,000) | 200,000          |
| Cost of sales to third parties during current year             | <u>\$280,000</u> |

Consolidated inventory of \$200,000 equals the cost to the affiliated group (P Company) of the goods on hand at the end of the year (50% × \$400,000).

Over two consecutive periods, assuming a FIFO flow of inventory costs and no new deferrals, differences between the summed net income recorded on the books of the individual affiliates and consolidated net income offset each other, as do the effects of the differences on beginning retained earnings.

If an inventory cost flow assumption other than FIFO is used, unrealized intercompany profit in beginning inventory balances may continue to be included in the ending inventory. In that case, to the extent that unrealized intercompany profit from the beginning of the year remains unrealized, the effects on consolidated net income from the credit to Beginning Inventory—Income Statement (Cost of Sales) in entry (3) and the debit to Ending Inventory—Income Statement (Cost of Sales) in entry (2) offset each other. Thus, as a matter of workpaper procedure, there is no need to be concerned in formulating entry (3) as to whether FIFO or LIFO is used, as long as any unrealized gross profit in ending inventory is appropriately deferred.

## Determination of Amount of Intercompany Profit

IN  
THE  
NEWS

Bunge Ltd., a leading agribusiness and food company, overstated its

2007 sales and cost of goods sold by \$7 billion. The correction was the result of a review of its accounting processes, financial statements, and certain transactions related to its agribusiness. It said certain intercompany sales were classified as third-party transactions in both net sales and cost of goods sold and were not eliminated in the consolidation process.<sup>6</sup>

In the preceding examples, the amount of intercompany profit subject to elimination was calculated on the basis of the selling affiliate's **gross profit rate** stated as a percentage of cost. Recall that gross profit may be stated either as a percentage of sales or as a percentage of cost. When it is stated as a percentage of cost, it is often referred to as "markup." To calculate the amount of intercompany gross profit to be eliminated from ending inventory, be careful to distinguish between percentages stated in terms of sales versus cost of sales. For example, if ending inventory (obtained from an affiliate) of \$12,000 reflects a markup of 20% of cost of sales, the gross profit to be eliminated would be calculated as:

|                               |               |
|-------------------------------|---------------|
| Sales                         | \$12,000      |
| Cost of Sales (\$12,000/120%) | <u>10,000</u> |
| Gross Profit (20% × \$10,000) | \$ 2,000      |

In contrast, if ending inventory of \$12,000 reflects a gross profit of 20% of sales, the gross profit to be eliminated would be \$2,400, or 20% of \$12,000.

## Inventory Pricing Adjustments

When inventory adjustments (write-downs) have been made on the books of one of the affiliated firms due to market fluctuations, the workpaper entries are modified accordingly. To illustrate, assume the following:

1. P Company sells S Company goods costing \$200,000 for \$250,000 (*downstream sale*);
2. At the end of the year, all these goods remain in the ending inventory of S Company and are written down from \$250,000 to \$215,000 on that company's books;
3. The write-down on the books of S Company results from the application of the lower-of-cost-or-market rule in pricing its ending inventory; and
4. The related loss is included in the cost of sales of S Company, or may be disclosed separately if considered material.

What amount of intercompany profit is subject to elimination in the preparation of consolidated financial statements? Since the gross profit of \$50,000 recognized by P Company is offset by the reduction of gross profit of \$35,000 recognized by S Company, only the remaining \$15,000 is still subject to elimination in the preparation of consolidated financial statements. The deduction of the amount of the current year's write-down of intercompany inventory from the amount of intercompany profit otherwise subject to elimination also results in the presentation of intercompany inventory at cost to the affiliated group (\$215,000 – \$15,000 = \$200,000). In summary, the amount of intercompany profit subject to elimination should be reduced to the extent that the related goods have been written down by the purchasing affiliate.

**LO 2** Determining the amount of intercompany profit.

<sup>6</sup> *Forbes*, "Bunge Says It Overstated 2007 Sales, Cost of Goods Sold by Around \$7 Billion," by M. Cotton, 3/3/08.

## Determination of Proportion of Intercompany Profit to Be Eliminated

**Lo 3** Eliminating 100% of intercompany profit.

It is clear that unrealized intercompany profit should not be included in consolidated net income or assets. However, two alternative views of the amount of intercompany profit that should be considered as “unrealized” exist. The elimination methods associated with these two points of view are generally referred to as **100% (total) elimination** and **partial elimination**. Both current and past GAAP **require** 100% elimination of intercompany profit **in the preparation of consolidated financial statements**. Because past and current GAAP agree in this regard, and because IFRS are silent in this regard we do not elaborate on the alternative of partial elimination. Under 100% elimination, the entire amount of unconfirmed intercompany profit is eliminated from consolidated net income and the related asset balance. This approach is particularly logical under the current view of consolidated financial statements, based on the “entity” rather than “parent” concept, and may be summarized as follows:

The amount of intercompany profit or loss to be eliminated . . . is not affected by the existence of a minority [noncontrolling] interest. The complete elimination of the intercompany profit or loss is consistent with the underlying assumption that consolidated statements represent the financial position and operating results of a single business enterprise. [FASB ASC paragraph 810-10-45-18]

## Determination of the Noncontrolling Interest in Consolidated Income—Upstream or Horizontal Sales

**Lo 5** Noncontrolling interest (NCI) for upstream sales.

**Subsidiary as Intercompany Seller** In the preceding examples, the selling affiliate was the parent company (downstream sale). Accordingly, even though 100% of the unrealized intercompany profit was eliminated, no modification in the calculation of the noncontrolling interest in consolidated net income or consolidated net assets was necessary. Had the selling affiliate been a less than wholly owned subsidiary (upstream sale), however, the controlling and the noncontrolling interests would have needed to be adjusted to reflect their interest in the amount of unrealized intercompany profit eliminated.

Intercompany sales of inventory necessitate adjustments to the calculation of the distribution of income to the controlling and noncontrolling interests. Whether the

### ILLUSTRATION 6-6

#### Calculation of Noncontrolling Interest in Consolidated Income—Upstream Sales

##### General Format:

| Noncontrolling Interest in Consolidated Income with Upstream Sales              |        |  |                |
|---|--------|--|----------------|
| Amortization of the difference between implied and book value                   | \$XXXX | Net income reported by subsidiary  | \$XXXXX        |
| Unrealized intercompany profit recorded by the subsidiary in the current period | XXXX   | Intercompany profit recognized by the subsidiary in the prior period(s) that is realized by sales to third parties during the current period | XXXX           |
|   |        | Subsidiary income included in consolidated income  | \$ XXXX        |
|   |        | Noncontrolling ownership percentage interest   | _____ %        |
|   |        | Noncontrolling interest in consolidated income   | <u>\$ XXXX</u> |

##### Succinct Format:

| Noncontrolling Interest in Consolidated Income with Upstream Sales |        |   |                |
|--|--------|---|----------------|
| Amortization of the difference between implied and book value      | \$ XXX | Net income reported by subsidiary                 | \$XXXXX        |
| Unrealized profit in ending inventory                              | XXXX   | Realized profit from beginning inventory          | XXXX           |
|  |        | Subsidiary income included in consolidated income | \$ XXXX        |
|  |        | NCI %   | _____ %        |
|  |        | NCI in consolidated income                        | <u>\$ XXXX</u> |

adjustments directly affect the noncontrolling interest (or only the controlling interest) depends on *who is the intercompany seller (selling affiliate)*. If the intercompany seller is the subsidiary, it is the subsidiary's income that needs adjustment, therefore directly affecting the noncontrolling interest, as shown in Illustration 6-6.

In essence, the amount of the noncontrolling interest in consolidated net income that is deducted to arrive at the controlling interest is based on the amount of subsidiary income (loss) that has been realized in transactions with third parties. This deduction is, as usual, made on the consolidated statements workpaper (final column) to be presented later in this chapter.

The general and succinct formats for the calculation of the noncontrolling interest in consolidated net income in the case of an *upstream sale* are presented in Illustration 6-6.

The reader is reminded, however, that this modification of the calculation of the noncontrolling interest is applicable only when the subsidiary is the *selling affiliate* (upstream or horizontal sales). Where the parent company is the selling affiliate (*downstream sale*), the amount of subsidiary income included in consolidated net income is not affected by the elimination of unrealized intercompany profit and no adjustment is necessary in the calculation of the noncontrolling interest in consolidated net income. (See Illustration 6-11 for the effects of both upstream and downstream sales on income distribution.)

### TEST YOUR KNOWLEDGE 6.1

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

#### Multiple Choice

- Pristine Corporation owns 80% of Serendipity Inc.'s common stock. During 2011, Pristine sold Serendipity \$250,000 of inventory on the same terms as sales made to third parties. Serendipity sold all the inventory purchased from Pristine in 2011. The following data pertain to sales by each company for the year:

|                    | <i>Pristine</i> | <i>Serendipity</i> |
|--------------------|-----------------|--------------------|
| Sales              | \$1,000,000     | \$700,000          |
| Cost of goods sold | 400,000         | 350,000            |

How much should be reported as cost of goods sold in the consolidated income statement for 2011?

- a. \$400,000   b. \$500,000   c. \$680,000   d. \$750,000
- Polychromasia Company sold inventory costing \$30,000 to its subsidiary, Simply Colorful, for double its cost in 2012. Polychromasia owns 80% of Simply Colorful.

Simply resold \$50,000 of this inventory for \$60,000 to outsiders in 2012. How much unrealized profit exists at the end of the year?

- a. \$10,000   b. \$8,000   c. \$5,000   d. \$20,000

- Skipper Company owns all the outstanding common stock of Anchorage Inc. During 2013, Skipper sells merchandise to Anchorage that is in turn sold to outsiders. None of the intercompany merchandise remains in Anchorage's year-end inventory, but some of the intercompany purchases from Skipper have not yet been paid. Identify the accounts that will reflect incorrect balances in the consolidated financial statements if no adjustments are made:
  - Accounts Receivable and Accounts Payable
  - Sales, Cost of Goods Sold, Inventory, Accounts Receivable
  - Sales, Cost of Goods Sold, Accounts Receivable, and Accounts Payable
  - Accounts Payable, Inventory, and Net Income

## 6.2 COST METHOD: CONSOLIDATED STATEMENTS WORKPAPER—UPSTREAM SALES

IN  
THE  
NEWS

Dell Inc. warned investors on March 8, 2006, that it would not achieve its sales and earnings goals for the fiscal period ending May 5. Eleven days later, Dell announced that it intended to start using AMD chips in some high-end servers. Analysts speculated that the move was in response to competitors.<sup>7</sup>

<sup>7</sup> *WSJ*, "Dell to Use AMD Chips in Some Servers," by Don Clark and Christopher Lawton, 5/19/06, p. A3.

COST

**LO 6** Consolidated workpapers for upstream Sales-Cost Method.

To illustrate consolidation procedures when the parent company records its investment using the cost method, assume the following:

1. P Company acquired an 80% interest in S Company on January 1, 2014, for \$1,360,000, at which time S Company had capital stock of \$1,000,000 and retained earnings of \$700,000.
2. In 2014, S Company reported net income of \$125,000 and declared dividends of \$20,000.
3. In 2015, S Company reported net income of \$140,000 and declared dividends of \$60,000.
4. P Company uses the cost method to account for its investment in S Company.
5. The purchase price equals 80% of both the book values and fair values of S Company's net assets on the date of acquisition. Thus, the implied value equals the total book value equals fair value.
6. S Company sells merchandise to P Company as follows (upstream sales):

| Year | Total Sales of S Company to P Company | Intercompany Merchandise in 12/31 Inventory of P Company | Unrealized Intercompany Profit (25% of Selling Price) |
|------|---------------------------------------|--|---|
| 2014 | \$ 700,000                            | \$400,000  | \$100,000   |
| 2015 | 1,000,000                             | 500,000  | 125,000   |

COST

Consolidated statements workpapers for the years ended December 31, 2014, and December 31, 2015, are presented in Illustrations 6-7 and 6-8, respectively. Entries *on the books* of P Company as well as *workpaper entries* necessary in the consolidated statements workpapers for the years ended December 31, 2014, and December 31, 2015, are summarized in general journal form below. The workpaper entries and the determination of the noncontrolling interest are explained in more detail as needed.

**Entries on Books of P Company—Cost Method 2014—Year of Acquisition**

|  |           |           |
|--|-----------|-----------|
| (1) Investment in S Company                                    | 1,360,000 |           |
| Cash   |           | 1,360,000 |
| To record purchase of S Company stock.                         |           |           |
| (2) Cash   | 16,000    |           |
| Dividend Income  |           | 16,000    |
| To record receipt of dividends from S Company (.8 × \$20,000). |           |           |

**Consolidated Statements Workpaper Entries—December 31, 2014 (Year of Acquisition)**

|  |           |           |
|--|-----------|-----------|
| (1) Sales  | 700,000   |           |
| Purchases  |           | 700,000   |
| To eliminate intercompany sales.   |           |           |
| (2) 12/31 Inventory—Income Statement (Cost of Sales)                     | 100,000   |           |
| Inventory—Balance Sheet  |           | 100,000   |
| To defer (eliminate) unrealized intercompany profit in ending inventory. |           |           |
| (3) Dividend Income  | 16,000    |           |
| Dividends Declared   |           | 16,000    |
| To eliminate intercompany dividends.                                     |           |           |
| (4) Beginning Retained Earnings—S Company                                | 700,000   |           |
| Capital Stock—S Company  | 1,000,000 |           |
| Investment in S Company  |           | 1,360,000 |
| NCI in Equity  |           | 340,000   |
| To eliminate investment account and create NCI account.                  |           |           |

| Retained Earnings from above                | 2,100,000        | 885,000                              | 2,058,000        | 1,232,000        | 11,000                  | 2,148,000             |                |
| 1/1 Noncontrolling Interest in Net Assets   |                  |                                      | (4)              | 20,000           | (6)                     | 361,000**             | 341,000        |
| 12/31 Noncontrolling Interest in Net Assets |                  |                                      |                  |                  |                         | <u>352,000</u>        | <u>352,000</u> |
| Total Liabilities and Equity                | <u>7,320,000</u> | <u>2,690,000</u>                     | <u>3,162,000</u> | <u>3,162,000</u> |                         | <u>8,525,000</u>      |                |

\* .2(\$140,000 - \$125,000 + \$100,000) = \$23,000.

\*\* \$340,000 + .2(\$805,000 - \$700,000) = \$361,000

(1) To convert to equity/establish reciprocity as of 1/1/15 [.8 × (\$805,000 - \$700,000)].

(2) To eliminate intercompany sales.

(3) To eliminate unrealized intercompany profit in ending inventory.

(4) To recognize profit realized during year and to reduce the controlling and noncontrolling interests for their shares of unrealized intercompany profit at beginning of year.

(5) To eliminate intercompany dividends.

(6) To eliminate investment account and create noncontrolling interest account.

Since the selling affiliate is a partially owned subsidiary, unrealized intercompany profit is subtracted from reported subsidiary income when calculating the noncontrolling interest in consolidated net income as follows:

$$.20 \times (\$125,000 - \$100,000) = \$5,000$$

If the sale of merchandise had been *downstream* rather than *upstream*, the amount of subsidiary income included in consolidated income would not be affected by the elimination of unrealized intercompany profit and no adjustment would be necessary in the calculation of the noncontrolling interest in consolidated income.

COST

The unrealized profit in the current year's beginning inventory is the same as the unrealized profit in the prior year's ending inventory. Since the sale is *upstream*, the unrealized profit at the end of the prior year was apportioned between the controlling and noncontrolling interests by reducing the noncontrolling interest in consolidated income in the consolidated statements workpaper in the previous year. Thus, the retained earnings effects in entry (4) are split between P Company's (80%) beginning retained earnings accounts and the NCI (20%).

As a matter of workpaper procedure, adjustments to the controlling interest (consolidated retained earnings) are made by debiting (decreasing) or crediting (increasing) the *beginning* retained earnings row of the parent company. Adjustments to the noncontrolling interest are made by debiting (decreasing) or crediting (increasing) the *beginning* NCI in Net Assets (or Equity).

**ILLUSTRATION 6-9****Calculation of Realized Assets of Company S  
December 31, 2015**

|                              | 12/31/15           | <i>Unrealized Intercompany<br/>Profits in Ending Inventory</i> | <i>Realized<br/>12/31/15</i> |
|------------------------------|--------------------|--|------------------------------|
| Total Assets—S Company       | \$2,690,000        | 125,000  | \$2,565,000                  |
| Total Liabilities—S Company  | 805,000            |  | 805,000                      |
| Capital Stock—S Company      | 1,000,000          |  | 1,000,000                    |
| Retained Earnings            | 885,000            | 125,000  | 760,000                      |
| Total Liabilities and Equity | <u>\$2,690,000</u> |  | <u>\$2,565,000</u>           |

The net effect of the adjustments to the noncontrolling interest in the income statement and retained earnings statement sections of the consolidated statements workpaper that are necessary in the case of *upstream sales* is to adjust the amount of the noncontrolling interest in consolidated net assets. The amount of the noncontrolling interest reported in the consolidated balance sheet is based on the net assets of the subsidiary that have been realized in transactions with third parties. Workpaper entry (6) creates the beginning balance in the noncontrolling interest account reflective of the sum of the 20% interest at acquisition plus the noncontrolling share of changes in Retained Earnings of S since acquisition to the beginning of the current year. This entry could just as easily be numbered as entry (1) or (2), as there is no particular sequence for workpaper entries. Workpaper entry (4) debits the noncontrolling interest, thus adjusting the balance as needed for prior year unrealized profit in inventory (that is to be realized through the current share of consolidated income).

In Illustration 6-8, for example, the noncontrolling interest in consolidated net assets on December 31, 2015, may be calculated as follows. First, as shown in Illustration 6-9, the reported assets are adjusted for the unrealized intercompany profit at the end of the year on upstream sales. Then the noncontrolling interest in realized net assets can be computed either of two ways as shown in Illustration 6-10.

**ILLUSTRATION 6-10****Calculation of the Noncontrolling Interest in Consolidated Net Assets  
December 31, 2015***Method One:*

|  |                   |
|--|-------------------|
| Total Realized Assets—S Company (see Illustration 6-9) | \$2,565,000       |
| Less: Total Liabilities—S Company                      | <u>(805,000)</u>  |
| Realized Net Assets—S Company                          | 1,760,000         |
| Noncontrolling percentage                              | <u>20%</u>        |
| Noncontrolling interest in consolidated net assets     | <u>\$ 352,000</u> |

*Method Two:*

|   |                   |
|---|-------------------|
| Capital Stock—S Company                                     | \$1,000,000       |
| Realized Retained Earnings—S Company (see Illustration 6-9) | <u>760,000</u>    |
| Realized Net Assets—S Company                               | \$1,760,000       |
| Noncontrolling percentage                                   | <u>20%</u>        |
| Noncontrolling interest in consolidated net assets          | <u>\$ 352,000</u> |

## 6.3 COST METHOD—ANALYSIS OF CONSOLIDATED NET INCOME AND CONSOLIDATED RETAINED EARNINGS

In Chapter 5, the calculations of consolidated net income and consolidated retained earnings were refined to accommodate the effect of the amortization, depreciation, and impairment of differences between implied and book values. These analyses must now be further refined to accommodate the effect of unrealized intercompany profit.

The noncontrolling interest in consolidated net income is calculated after subtracting end-of-year unrealized intercompany profit and adding intercompany profit realized during the current year to the net income reported by the subsidiary, as presented in Illustration 6-11. If the sale of merchandise had been downstream rather than upstream, the amount of subsidiary income included in consolidated net income would not be affected by the workpaper entries related to unrealized intercompany profit, and no adjustment would be necessary in the calculation of the noncontrolling interest in consolidated income.

## Consolidated Net Income

*Consolidated net income is the parent company's income from its independent operations that has been realized in transactions with third parties plus (minus) subsidiary income (loss) that has been realized in transactions with third parties plus or minus adjustments for the period relating to the depreciation, amortization, and impairment of differences between implied and book values.*

Using the data from Illustration 6-8, the calculation of the controlling and noncontrolling interests in consolidated net income for the year ended December 31, 2015, is presented in t-account form in Illustration 6-11.

## Consolidated Retained Earnings

*Consolidated retained earnings is the parent company's cost basis retained earnings that has been realized in transactions with third parties plus (minus) the parent company's share of the increase (decrease) in subsidiary retained earnings that has been realized in transactions with third parties from the date of acquisition to the current date plus or minus the cumulative effect of adjustments to date relating to the amortization, depreciation, and impairment of differences between implied and book values.*

On the basis of Illustration 6-8, a t-account calculation of consolidated retained earnings on December 31, 2015, is shown in Illustration 6-12. Notice that the retained earnings calculation reflects cumulative rather than only current-year data, in contrast to the distribution of current income (Illustration 6-11). There is no need, however, to include the realized profit in beginning inventory from January 1, 2015, or the unrealized profit in ending inventory at December 31, 2014, in the retained earnings calculation as they would cancel out.

### ILLUSTRATION 6-11

#### Calculation of the Controlling and Noncontrolling Interest in Consolidated Income— Cost Method for the Year Ended December 31, 2015

| Noncontrolling Interest in Consolidated Income                        |           |  |           |
|---|-----------|--|-----------|
| Unrealized profit on upstream sales in ending inventory               | \$125,000 | Net income reported by S Company   | \$140,000 |
| Amortization of the difference between implied and book value         | 0         | Realized profit (upstream sales) from beginning inventory                                | 100,000   |
|   |           | Subsidiary income included in consolidated income  | \$115,000 |
|   |           | Noncontrolling ownership percentage interest   | 20%       |
|   |           | Noncontrolling interest in consolidated income   | \$ 23,000 |
| Controlling Interest in Consolidated Income                           |           |  | 80%       |
|   |           | Net income internally generated by P Company (\$454,000 less \$48,000 dividend income)   | \$406,000 |
| Unrealized profit on downstream sales to S Company (ending inventory) | \$0       | Realized profit (downstream sales) from begin. inventory                                 | 0         |
|   |           | P Company's percentage of S Company's income realized from third parties, .80(\$115,000) | 92,000    |
|   |           | Controlling Interest in Consolidated Income  | \$498,000 |

**ILLUSTRATION 6-12****Calculation of Consolidated Retained Earnings  
for the Year Ended December 31, 2015**

| Consolidated Retained Earnings   |         |   |                        |
|--|---------|---|------------------------|
| P Company's share of unrealized profit on upstream sales from S Company (in P's ending inventory), .8(\$125,000) | 100,000 | P Company's Retained Earnings on 12/31/15   | \$2,100,000            |
|  |         | Increase in S Company's Retained Earnings since acquisition (\$885,000 – \$700,000)               | 185,000                |
| Unrealized profit on downstream sales to S Company (in S's ending Inventory)                                     | 0       | <i>Less:</i> Cumulative amount of depreciation of the differences between implied and book values | 0                      |
|  |         | Adjusted increase   | 185,000                |
|  |         | P Company's share thereof   | 0.80                   |
|  |         | Consolidated Retained Earnings  | 148,000<br>\$2,148,000 |

**Comprehensive Example: Upstream and Downstream Sales—Cost Method**

COST

To illustrate all aspects of the t-account calculations of consolidated net income and consolidated retained earnings, assume that:

1. Pepper Company acquired 80% of the voting stock of Salt Company on January 1, 2014, when Salt Company's retained earnings amounted to \$150,000.
2. The difference between implied and book value on the date of acquisition was allocated as follows:

|                          |          |
|--------------------------|----------|
| Land                     | \$50,000 |
| Equipment (10-year life) | 20,000   |
| Goodwill                 | 40,000   |

3. Salt Company reported retained earnings of \$260,000 on January 1, 2017, and \$320,000 on December 31, 2017.
4. Salt Company reported net income of \$90,000 and declared dividends of \$30,000 in 2017.
5. Pepper Company reported net income in 2017 in the amount of \$724,000 and retained earnings on December 31, 2017, of \$3,500,000.
6. There were no intercompany sales prior to 2016, and unrealized profits on January 1 and on December 31, 2017, resulting from intercompany sales, are as summarized below:

| Resulting From                          | <i>Unrealized Intercompany Profit on</i> |          |
|---|--|----------|
|   | 1/1/17                                   | 12/31/17 |
| Sales by Salt Company to Pepper Company | \$10,000                                 | \$ 5,000 |
| Sales by Pepper Company to Salt Company | 15,000                                   | 20,000   |

T-account calculations of the controlling and noncontrolling interests in consolidated net income for the year ended December 31, 2017, and consolidated retained earnings on December 31, 2017, are presented in Illustrations 6-13 and 6-14 respectively.

**6.4 CONSOLIDATED STATEMENTS WORKPAPER—  
PARTIAL EQUITY METHOD**

**Lo 6** Consolidated workpapers—partial equity method.

The balances reported by the parent company in income, retained earnings, and the investment account differ depending on the method used by the parent company to record its investment. As demonstrated in Chapters 4 and 5, however, the method used by the parent company to record its investment has no effect on the consolidated balances. To illustrate

**ILLUSTRATION 6-13****Calculation of the Controlling and Noncontrolling Interest in Consolidated Income for the Year Ended December 31, 2017**

| Noncontrolling Interest in Combined Income                                      |        |   |                  |
|---|--------|---|------------------|
| Unrealized profit on <i>upstream</i> sales in ending inventory                  | 5,000  | Net income reported by Salt Company   | \$ 90,000        |
| Depreciation (\$20,000/10)  | 2,000  | Realized profit ( <i>upstream</i> sales) from beginning inventory                               | 10,000           |
|   |        | Subsidiary income included in consolidated income   | \$ 93,000        |
|   |        | Noncontrolling ownership percentage interest  | 20%              |
|   |        | Noncontrolling interest in consolidated income  | <u>\$ 18,600</u> |
| Controlling Interest in Income  |        |   |                  |
| Unrealized profit on <i>downstream</i> sales to Salt Company (ending inventory) | 20,000 | Net income internally generated by Pepper Company (\$724,000 less \$24,000 dividends from Salt) | \$ 700,000       |
|   |        | Realized profit ( <i>downstream</i> sales) from begin. inventory                                | 15,000           |
|   |        | Pepper Company's percentage of Salt Company's income realized from third parties, .80(\$93,000) | \$ 74,400        |
|   |        | Controlling Interest in Consolidated Income   | \$769,400        |

**ILLUSTRATION 6-14****Calculation of Consolidated Retained Earnings—Cost Method for the Year Ended December 31, 2017**

| Consolidated Retained Earnings  |        |  |                    |
|---|--------|--|--------------------|
| Pepper Company's share of unrealized profit on <i>upstream</i> sales from S Company (in Pepper's ending inventory), .8(\$5,000) | 4,000  | Pepper Company's Retained Earnings on 12/31/17   | \$3,500,000        |
| Unrealized profit on <i>downstream</i> sales to Salt Company (in Salt's ending inventory)                                       | 20,000 | Increase in Salt Company's Retained Earnings since acquisition (\$320,000 2 \$150,000)     | 170,000            |
|   |        | Less: Cumulative amount of depreciation of the differences between implied and book values | <u>(10,000)</u>    |
|   |        | Adjusted increase  | 160,000            |
|   |        | Pepper Company's share thereof   | <u>80%</u> 128,000 |
|   |        | Consolidated Retained Earnings   | \$3,604,000        |

consolidation procedures when the parent company records its investment using the partial equity method, assume the following:

PARTIAL

1. P Company acquired an 80% interest in S Company on January 1, 2014, for \$1,360,000, at which time S Company had capital stock of \$1,000,000 and retained earnings of \$700,000.
2. In 2014, S Company reported net income of \$125,000 and declared dividends of \$20,000.
3. In 2015, S Company reported net income of \$140,000 and declared dividends of \$60,000.
4. P Company uses the partial equity method to account for its investment in S Company.
5. The purchase price equals 80% of both the book values and fair values of S Company's net assets on the date of acquisition. Thus, implied value equals total book value equals fair value of S company net assets.
6. S Company sells merchandise to P Company as follows (upstream sales):

|      | <i>Total Sales<br/>of S Company<br/>to P Company</i> | <i>Intercompany<br/>Merchandise<br/>in 12/31 Inventory<br/>of P Company</i> | <i>Unrealized<br/>Intercompany<br/>Profit (25%<br/>of Selling Price)</i> |
|------|--|---|--|
| 2014 | \$ 700,000   | \$400,000   | \$100,000  |
| 2015 | 1,000,000  | 500,000   | 125,000  |

## Entries on Books of P Company—Partial Equity Method

Entries recorded on the books of P Company under the partial equity method are as follows:

### 2014—Year of Acquisition—Partial Equity

|     |  |           |           |
|-----|--|-----------|-----------|
| (1) | Investment in S Company                                  | 1,360,000 |           |
|     | Cash   |           | 1,360,000 |
|     | To record purchase of 80% interest in S Company.         |           |           |
| (2) | Cash   | 16,000    |           |
|     | Investment in S Company                                  |           | 16,000    |
|     | To record dividends received (.80 × \$20,000).           |           |           |
| (3) | Investment in S Company                                  | 100,000   |           |
|     | Equity in Subsidiary Income                              |           | 100,000   |
|     | To record equity in subsidiary income (.80 × \$125,000). |           |           |

### 2015—Year Subsequent to Acquisition—Partial Equity

|     |  |         |         |
|-----|--|---------|---------|
| (4) | Cash   | 48,000  |         |
|     | Investment in S Company                                  |         | 48,000  |
|     | To record dividends received (.80 × \$60,000).           |         |         |
| (5) | Investment in S Company                                  | 112,000 |         |
|     | Equity in Subsidiary Income                              |         | 112,000 |
|     | To record equity in subsidiary income (.80 × \$140,000). |         |         |

After these entries are posted, the investment account will appear as follows:

| Investment in S Company |                  |               |        |
|-------------------------|------------------|---------------|--------|
| (1) Cost                | 1,360,000        | (2) Dividends | 16,000 |
| (3) Subsidiary Income   | 100,000          |               |        |
| <b>12/31/14 Balance</b> | <b>1,444,000</b> |               |        |
| (5) Subsidiary Income   | 112,000          | (4) Dividends | 48,000 |
| <b>12/31/15 Balance</b> | <b>1,508,000</b> |               |        |

**Workpaper Entries—2015—Partial Equity** Consolidated workpapers under the partial equity method for the years ended December 31, 2014 and 2015, are presented in Illustrations 6-15 and 6-16. Workpaper entries in Illustration 6-16 (the year subsequent to acquisition) are presented in general journal form as follows:

PARTIAL

|     |  |           |           |
|-----|--|-----------|-----------|
| (1) | Equity in Subsidiary Income  | 112,000   |           |
|     | Dividends Declared   |           | 48,000    |
|     | Investment in S Company  |           | 64,000    |
|     | To reverse the effect of parent company entries during the year for subsidiary dividends and income.   |           |           |
| (2) | Sales  | 1,000,000 |           |
|     | Purchases (Cost of Sales)  |           | 1,000,000 |
|     | To eliminate intercompany sales.   |           |           |
| (3) | 12/31 Inventory—Income Statement (Cost of Sales)   | 125,000   |           |
|     | Inventory—Balance Sheet  |           | 125,000   |
|     | To eliminate unrealized intercompany profit in ending inventory.   |           |           |
| (4) | Beginning Retained Earnings—P Company  | 80,000    |           |
|     | (.80 × \$100,000)  |           |           |
|     | NCI in Equity  | 20,000    |           |
|     | (.20 × \$100,000)  |           |           |
|     | 1/1 Inventory—Income Statement (Cost of Sales)   |           | 100,000   |
|     | To recognize intercompany profit in beginning inventory realized during the year and to reduce controlling and noncontrolling interest for their share of unrealized intercompany profit at beginning of year. |           |           |

Entries (2), (3), and (4) are the same as the corresponding entries in Illustration 6-8 (investment recorded using cost method).

| 1/1 Noncontrolling Interest in Net Assets   |                  |                  | (4) 20,000          | (5) 361,000      | 341,000                        |                              |
| 12/31 Noncontrolling Interest in Net Assets |                  |                  |                     |                  | 352,000                        | 352,000                      |
| Total Liabilities and Equity                | <u>7,468,000</u> | <u>2,690,000</u> | <u>3,142,000</u>    | <u>3,142,000</u> |                                | <u>8,525,000</u>             |

\*.20(\$140,000 - \$125,000 + \$100,000) = \$23,000.

\*\*\$340,000 + .2(\$805,000 - \$700,000) = \$361,000.

(1) To reverse the effect of parent company entries during the year for subsidiary dividends and income.

(2) To eliminate intercompany sales.

(3) To eliminate unrealized intercompany profit in ending inventory.

(4) To recognize profit realized during year and to reduce the controlling and noncontrolling interests for their shares of unrealized intercompany profit at beginning of year.

(5) To eliminate investment account and create noncontrolling interest account.

|     |  |           |           |
|-----|--|-----------|-----------|
| (5) | Beginning Retained Earnings—S Company                  | 805,000   |           |
|     | Capital Stock—S Company                                | 1,000,000 |           |
|     | Investment in S Company (\$1,508,000 – \$64,000)       |           | 1,444,000 |
|     | NCI in Equity (\$340,000 + .20(\$805,000 – \$700,000)) |           | 361,000   |
|     | To eliminate investment account.                       |           |           |

This entry is the same as entry (6) in Illustration 6-8 (investment recorded using cost method). Workpaper entry (5) creates the balance in the noncontrolling interest account reflective of the sum of the 20% interest at acquisition plus the noncontrolling share of changes in Retained Earnings of S since acquisition. This entry could just as easily be numbered as entry (1) or (2), as there is no particular sequence for workpaper entries. Workpaper entry (4) debits the noncontrolling interest, thus adjusting the balance as needed for prior year unrealized profit in inventory.

Observe that the consolidated balances in Illustration 6-16 are the same as those in Illustration 6-8 (cost method workpaper). However, when the parent company records its investment using the partial equity method, entry (1) in Illustration 6-16 replaces the cost method entries to establish reciprocity and to eliminate dividend income [entries (1) and (5) in Illustration 6-8]. Most importantly, a comparison of entries (2), (3), and (4) in Illustration 6-16 with entries (2), (3), and (4) in Illustration 6-8 demonstrates that the workpaper entries to eliminate intercompany sales and unrealized intercompany profit are the same regardless of whether the investment is recorded using the cost method or the partial equity method.

## 6.5 PARTIAL EQUITY METHOD—ANALYSIS OF CONSOLIDATED NET INCOME AND CONSOLIDATED RETAINED EARNINGS

The t-account calculation of the controlling and noncontrolling interests in consolidated net income is independent of the method used by the parent company to record its investment. As stated earlier, *consolidated net income is the parent company's income from its independent operations that has been realized in transactions with third parties plus (minus) reported subsidiary income (loss) that has been realized in transactions with third parties plus or minus adjustments for the period relating to the depreciation, amortization, and impairment differences between implied and book values.*

On the basis of Illustration 6-16, the t-account calculation of consolidated net income for the year ended December 31, 2015, is demonstrated in Illustration 6-17.

### ILLUSTRATION 6-17

#### Calculation of the Controlling and Noncontrolling Interest in Consolidated Income— Partial Equity Method for the Year Ended December 31, 2015

| Noncontrolling Interest in Consolidated Income                               |         |  |           |
|--|---------|--|-----------|
| Unrealized profit on <i>upstream</i> sales in ending inventory               | 125,000 | Net income reported by S Company   | \$140,000 |
| Depreciation of differences between implied and book values                  | 0       | Realized profit ( <i>upstream</i> sales) from beginning inventory                        | 100,000   |
|  |         | Subsidiary income included in consolidated income  | \$115,000 |
|  |         | Noncontrolling ownership percentage interest   | 20%       |
|  |         | Noncontrolling interest in consolidated income   | \$ 23,000 |
| Controlling Interest in Income   |         |  |           |
| Unrealized profit on <i>downstream</i> sales to S Company (ending inventory) | 0       | Net income internally generated by P Company (\$518,000 less \$112,000 equity income)    | \$406,000 |
|  |         | Realized profit ( <i>downstream</i> sales) from begin. inventory                         | 0         |
|  |         | P Company's percentage of S Company's income realized from third parties, .80(\$115,000) | 92,000    |
|  |         | Controlling Interest in Consolidated Income  | \$498,000 |

## ILLUSTRATION 6-18

**Calculation of Consolidated Retained Earnings—  
Partial Equity Method  
for the Year Ended December 31, 2015**

| Consolidated Retained Earnings  |         |   |
|---|---------|---|
| P Company's share of unrealized profit on <i>upstream</i> sales from S Company (in P's ending inventory), .8(\$125,000) | 100,000 |   |
| Unrealized profit on <i>downstream</i> sales to S Company (in S's ending inventory)                                     | 0       |   |
|   |         | P Company's Retained Earnings on 12/31/15 |
|   |         | \$2,248,000                               |
|   |         | Consolidated Retained Earnings            |
|   |         | \$2,148,000                               |

When the parent company uses the partial equity method to record its investment, the parent company's share of subsidiary income since acquisition is already included in the parent company's reported retained earnings. Consequently, ***consolidated retained earnings is calculated as the parent company's recorded partial equity basis retained earnings that has been realized in transactions with third parties plus or minus the cumulative effect of the adjustments to date relating to the depreciation, amortization, and impairment of differences between implied and book values.***

On the basis of Illustration 6-16, the t-account calculation of consolidated retained earnings on December 31, 2015, is shown in Illustration 6-18. There is no need to include adjustments for 12/31/14 ending inventory or 1/1/15 beginning inventory as they cancel out.

**TEST YOUR KNOWLEDGE**
**6.2**

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

**Multiple Choice**

- Peller owns 80% of Sando Company common stock. During the fourth quarter of 2012, Sando sold inventory to Peller for \$200,000. At the end of December 2012, half this inventory remained in Peller's ending inventory. For the year 2012, Peller's gross profit percentage was 30% while Sando's was 40%. How much unrealized profit should be eliminated from ending inventory on December 31, 2012?
  - \$80,000
  - \$40,000
  - \$32,000
  - \$30,000
- Pony owns 80% of Shetland. During 2013, Shetland sold \$100,000 of merchandise at a 25% gross profit to its parent. One-tenth of the goods remain unsold by Pony at the end of 2013. How much gross profit will the noncontrolling interest receive as a result of these sales?
  - \$22,500
  - \$4,500
  - \$5,000
  - \$25,000

## 6.6 CONSOLIDATED STATEMENTS WORKPAPER—COMPLETE EQUITY METHOD

**LO 6** Consolidated workpapers—complete equity method.

COMPLETE

The balances reported by the parent company in income, in retained earnings, and in the investment account differ depending on the method used by the parent company to record its investment. As illustrated in Chapters 4 and 5, however, the method used by the parent company to record its investment has no effect on the consolidated balances. To illustrate consolidation procedures when the parent company records its investment using the complete equity method, assume the following:

- P Company acquired an 80% interest in S Company on January 1, 2014, for \$1,360,000, at which time S Company had capital stock of \$1,000,000 and retained earnings of \$700,000.
- In 2014, S Company reported net income of \$125,000 and declared dividends of \$20,000.
- In 2015, S Company reported net income of \$140,000 and declared dividends of \$60,000.

4. P Company uses the complete equity method to account for its investment in S Company.
5. The purchase price equals 80% of both the book values and fair values of S Company's net assets on the date of acquisition. Thus, implied value of S equals the book value and the fair value of S net assets.
6. S Company sells merchandise to P Company as follows (upstream sales):

|      | <i>Total Sales<br/>of S Company<br/>to P Company</i> | <i>Intercompany<br/>Merchandise<br/>in 12/31 Inventory<br/>of P Company</i> | <i>Unrealized<br/>Intercompany<br/>Profit (25%<br/>of Selling Price)</i> |
|------|--|---|--|
| 2014 | \$ 700,000   | \$400,000   | \$100,000  |
| 2015 | 1,000,000  | 500,000   | 125,000  |

### Entries on Books of P Company—Complete Equity Method

Entries recorded on the books of P Company under the complete equity method are as follows:

| <b>2014—Year of Acquisition—Complete Equity Method</b> |  |           |           |
|--|--|-----------|-----------|
| (1)  | Investment in S Company  | 1,360,000 |           |
|  | Cash   |           | 1,360,000 |
|  | To record purchase of 80% interest in S Company.   |           |           |
| (2)  | Cash   | 16,000    |           |
|  | Investment in S Company  |           | 16,000    |
|  | To record dividends received (.80 × \$20,000).   |           |           |
| (3)  | Investment in S Company  | 100,000   |           |
|  | Equity in Subsidiary Income  |           | 100,000   |
|  | To record equity in subsidiary income (.80 × \$125,000).   |           |           |
| (4)  | Equity in Subsidiary Income  | 80,000    |           |
|  | Investment in S Company  |           | 80,000    |
|  | To adjust equity in subsidiary income for P Company's share of unrealized intercompany profit (.80 × \$100,000) in ending inventory. |           |           |

Entries (3) and (4) can be collapsed into one entry.

| <b>2015—Year Subsequent to Acquisition—Complete Equity Method</b> |  |         |         |
|---|--|---------|---------|
| (5)   | Cash   | 48,000  |         |
|   | Investment in S Company  |         | 48,000  |
|   | To record dividends received (.80 × \$60,000).   |         |         |
| (6)   | Investment in S Company  | 112,000 |         |
|   | Equity in Subsidiary Income  |         | 112,000 |
|   | To record equity in subsidiary income (.80 × \$140,000).   |         |         |
| (7)   | Investment in S Company  | 80,000  |         |
|   | Equity in Subsidiary Income  |         | 80,000  |
|   | To adjust equity in subsidiary income for realized intercompany profit in beginning inventory (.80 × \$100,000). |         |         |
| (8)   | Equity in Subsidiary Income  | 100,000 |         |
|   | Investment in S Company  |         | 100,000 |
|   | To adjust equity in subsidiary income for unrealized intercompany profit in ending inventory (.80 × \$125,000).  |         |         |

After these entries are posted, the investment account will appear as follows:

| <b>Investment in S Company</b>          |                  |                                      |                     |
|---|------------------|--------------------------------------|---------------------|
| (1) Cost                                | 1,360,000        | (2) Dividends                        | 16,000              |
| (3) Subsidiary Income                   | 100,000          | (4) Profit in Ending Inventory (80%) | 80,000              |
| <b>12/31/14 Balance</b>                 | <b>1,364,000</b> | (5) Dividends                        | 48,000              |
| (6) Subsidiary Income                   | 112,000          | (8) Profit in Ending Inventory (80%) | (125,000) = 100,000 |
| (7) Profit in Beginning Inventory (80%) | 80,000           |                                      |                     |
| <b>12/31/15 Balance</b>                 | <b>1,408,000</b> |                                      |                     |

**Workpaper Entries—2015—Complete Equity Method** Consolidated workpapers under the complete equity method for the years ended December 31, 2014 and 2015, are presented in Illustrations 6-19 and 6-20. Workpaper entries in Illustration 6-20 (the year subsequent to acquisition) are presented in general journal form as follows:

|     |  |           |           |
|-----|--|-----------|-----------|
| (1) | Equity in Subsidiary Income<br>(\$112,000 + \$80,000 – \$100,000)  | 92,000    |           |
|     | Dividends Declared   |           | 48,000    |
|     | Investment in S Company  |           | 44,000    |
|     | To reverse the effect of parent company entries during the year for subsidiary dividends and income (adjusted for parent's share of gross profit realized/unrealized as needed).   |           |           |
| (2) | Sales  | 1,000,000 |           |
|     | Purchases (Cost of Sales)  |           | 1,000,000 |
|     | To eliminate intercompany sales.   |           |           |
| (3) | 12/31 Inventory—Income Statement (Cost of Sales)   | 125,000   |           |
|     | Inventory—Balance Sheet  |           | 125,000   |
|     | To eliminate unrealized intercompany profit in ending inventory.   |           |           |
| (4) | Investment in S Company (.80 × \$100,000)  | 80,000    |           |
|     | NCI in Equity (.20 × \$100,000)  | 20,000    |           |
|     | 1/1 Inventory—Income Statement (Cost of Sales)   |           | 100,000   |
|     | To recognize intercompany profit in beginning inventory realized during the year in the proper accounts for presentation on the consolidated financial statements; that is, even though the parent has adjusted its equity in subsidiary income, the effect must be shown in the cost of sales account (as the equity in subsidiary income is eliminated). |           |           |

Entries (2), (3), and (4) are the same as the corresponding entries in Illustration 6-8 (investment recorded using cost method) with one exception, shown in bold in entry (4). The exception is that the debit to Investment in S Company in entry (4) above replaces the debit to Beginning Retained Earnings—P Company under the cost or partial equity methods. The difference is that under the complete equity method, P Company had appropriately adjusted the investment account for its share of unrealized gross profit in inventory at the end of 2014. But now the entire investment account must be eliminated.

COMPLETE

|     |   |           |           |
|-----|---|-----------|-----------|
| (5) | Beginning Retained Earnings—S Company                 | 805,000   |           |
|     | Capital Stock—S Company                               | 1,000,000 |           |
|     | Investment in S Company                               |           | 1,444,000 |
|     | NCI in Equity (\$340,000 + .2(\$805,000 – \$700,000)) |           | 361,000   |
|     | To eliminate the investment account.                  |           |           |

This entry is the same as entry (5) in Illustration 6-16 (partial equity method) or entry (6) in Illustration 6-8 (cost method). Workpaper entry (5) creates the balance in the noncontrolling interest account reflective of the sum of the 20% interest at acquisition plus the noncontrolling share of changes in Retained Earnings of S since acquisition. This entry could just as easily be numbered as entry (1) or (2), as there is no particular sequence for workpaper entries. Workpaper entry (4) debits the noncontrolling interest, thus adjusting the balance as needed for prior year unrealized profit in inventory.

Observe that the consolidated balances in Illustration 6-20 are also the same as those in Illustration 6-8 (cost method workpaper) or in Illustration 6-16 (partial equity workpaper). However, when the parent company records its investment using the complete equity method, entry (1) in Illustration 6-20 replaces the cost method entries to establish reciprocity and to eliminate dividend income [entries (1) and (5) in Illustration 6-8]. Most importantly, a comparison of entries (2), (3), and (4) in Illustration 6-20 with entries (2), (3), and (4) in Illustration 6-8 or in Illustration 6-16 demonstrates that the workpaper entries to eliminate intercompany sales and unrealized intercompany profit differ in only one respect. That is, the parent company's retained earnings account needs no adjustment under the complete equity method. Any adjusting/eliminating entries made to that account under the other two methods are replaced by an entry to the Investment account under the complete equity method.

\* .20(\$125,000 - \$100,000) = \$5,000.

(1) To reverse the effect of parent company entries during the year for subsidiary dividends and income.

(2) To eliminate intercompany sales.

(3) To eliminate unrealized intercompany profit in ending inventory.

(4) To recognize profit realized during year and to reduce the controlling and noncontrolling interests for their shares of unrealized intercompany profit at beginning of year.

(5) To eliminate investment account and create noncontrolling interest account.

\*  $20(\$140,000 - \$125,000 + \$100,000) = \$23,000$ .

\*\*  $\$340,000 + .2(\$805,000 - \$700,000) = \$361,000$ .

(1) To reverse the effect of parent company entries during the year for subsidiary dividends and income.

(2) To eliminate intercompany sales.

(3) To eliminate unrealized intercompany profit in ending inventory.

(4) To recognize profit realized during year and to reduce the controlling and noncontrolling interests for their shares of unrealized intercompany profit at beginning of year.

(5) To eliminate investment account and create noncontrolling interest account.

## 6.7 COMPLETE EQUITY METHOD—ANALYSIS OF CONSOLIDATED NET INCOME AND CONSOLIDATED RETAINED EARNINGS

*Consolidated net income* is the sum of the following components: *the parent company's net income from its independent operations that has been realized in transactions with third parties plus (minus) reported subsidiary income (loss) that has been realized in transactions with third parties plus or minus adjustments for the period relating to the depreciation, amortization, and impairment of differences between implied and book values.* See Illustration 6-17.

Under the complete equity method, no formal calculation of the controlling interest in consolidated net income is needed. The parent company has already made adjustments for realized/unrealized gross profit depending upon whether or not such profit has been confirmed through transactions with outsiders. Thus, the controlling interest in *consolidated net income equals the parent company's recorded income.*

When the parent company uses the complete equity method to record its investment, the parent company's share of subsidiary income (including any needed adjustments for intercompany profits) since acquisition is already included in the parent company's reported retained earnings. Consequently, *consolidated retained earnings is equal to the parent company's recorded complete equity basis retained earnings.*

## 6.8 SUMMARY OF WORKPAPER ENTRIES RELATING TO INTERCOMPANY SALES OF INVENTORY

Consolidated statement workpaper eliminating entries for intercompany sales of inventory are summarized in Illustration 6-21. The entries are the same whether the parent company uses the cost method or the partial equity method to record its investment. However, the form of the workpaper entry for unrealized profit in beginning inventories differs between upstream and downstream sales and between the complete equity method and the other two.

## 6.9 INTERCOMPANY PROFIT PRIOR TO PARENT-SUBSIDIARY AFFILIATION

**Lo 7** Intercompany profit prior to affiliation.

Generally accepted accounting standards are silent as to the appropriate treatment of unrealized profit on assets that result from sales between companies prior to affiliation (preaffiliation profit). The question is whether preaffiliation profit should be eliminated in

consolidation. In our opinion, workpaper entries eliminating preaffiliation profit are inappropriate.

If the selling company is the new subsidiary, the profit recognized by it prior to its acquisition is implicitly considered in determining the book value of the interest acquired by the parent company. Accordingly, such profit is automatically eliminated from consolidated retained earnings in the investment elimination entry. A second elimination would therefore result in a double reduction of the amount of preaffiliation profit from consolidated retained earnings on the date of acquisition. When the assets are sold to third parties in subsequent years, consolidated net income would be increased by a corresponding amount, thus restoring the amount of the second reduction to consolidated retained earnings. The net result is to make an unwarranted reduction of consolidated retained earnings on the date of acquisition in order to report preacquisition profit in consolidated net income in years subsequent to affiliation that has already been reported by the subsidiary prior to affiliation. In our opinion such effects lack both conceptual and practical merit.

If the selling company is the parent, the preaffiliation profit will ultimately be included in consolidated retained earnings in any case. However, a reduction of such profit from consolidated retained earnings on the date of affiliation simply results in the inclusion of the profit in the consolidated net income of subsequent years. Again, the effect of the elimination would be to report the profit twice, once before affiliation and once after affiliation. Support for the elimination of preaffiliation profit is based primarily on the application of conservatism to the valuation of consolidated assets on the date of acquisition.

## SUMMARY

- 1 *Describe the financial reporting objectives for intercompany sales of inventory.* Intercompany sales of inventory are eliminated, and adjustments made, to report sales revenue, cost of sales, and inventory balances as if the intercompany sale had not occurred. Thus, consolidated sales reflects only sales with “outsiders,” consolidated cost of sales reflects the cost to the consolidated entity, and consolidated inventory is reported at its cost to the consolidated entity (affiliated group).
- 2 *Determine the amount of intercompany profit, if any, to be eliminated from the consolidated statements.* Intercompany sales (and selling prices) do affect the allocation of profits to the controlling and noncontrolling interests, once the profit is realized through sales to outsiders. Thus, intercompany profit needs to be eliminated *only if* assets are still on the books of the consolidated entity (one of the members of the affiliated group). In such cases, the amount of profit to be eliminated may be calculated using the selling affiliate’s gross profit rate, which may be stated as a percentage of either sales or costs. (The amount of profit to be eliminated is the same, regardless of how the percentage is stated.)
- 3 *Understand the concept of eliminating 100% of intercompany profit not realized in transactions with outsiders, and know the authoritative position.* Proponents of 100% elimination regard *all* the intercompany profit associated with assets remaining in the affiliated group to be unrealized. Proponents of partial elimination regard *only* the parent company’s share of the profit recognized by the selling affiliate to be unrealized. Both current and past GAAP require 100% elimination of intercompany profit in the preparation of consolidated financial statements.
- 4 *Distinguish between upstream and downstream sales of inventory.* Sales from a parent company to one or more of its subsidiaries are referred to as **downstream sales**. Sales from subsidiaries to the parent company are referred to as **upstream sales**.
- 5 *Compute the noncontrolling interest in consolidated net income for upstream and downstream sales, when not all the inventory has been sold to outsiders.* For downstream sales, no modification to the calculation of the noncontrolling interest in consolidated income is needed. For upstream or horizontal sales, however, the noncontrolling interest in income must be adjusted. The reported income of the subsidiary (the selling affiliate) is *reduced* by the amount of gross profit remaining in ending inventory of the purchasing affiliate before multiplying by the noncontrolling percentage interest; *it is increased for gross profit realized from beginning inventory*.
- 6 *Prepare consolidated workpapers for firms with upstream and downstream sales using the cost, partial equity, and complete equity methods.* In the consolidated workpapers, eliminating and adjusting entries serve to eliminate intercompany sales and adjust both beginning and ending inventories for the effects of any gross profit included from intercompany sales. The noncontrolling interest in consolidated income reflects the adjustment described in the preceding learning objective for upstream (or horizontal) sales. The final column of the workpapers is identical, regardless of whether the parent uses the cost, partial equity, or complete equity method for consolidated investments.
- 7 *Discuss the treatment of intercompany profit earned prior to the parent-subsidiary affiliation.* Generally accepted accounting standards are silent as to the appropriate treatment of unrealized profit on assets that result from sales between companies prior to affiliation (preaffiliation profit). The question is whether preaffiliation profit should be eliminated in consolidation. In our opinion, workpaper entries eliminating preaffiliation profit are inappropriate.

Appendix 6A, “Deferred Taxes and Intercompany Sales of Inventory,” is available online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).

### QUESTIONS

(The letter A indicated for a question, exercise, or problem refers to the appendix.)

- LO 2** 1. Does the elimination of the effects of intercompany sales of merchandise always affect the amount of reported consolidated net income? Explain.
- LO 2** 2. Why is the gross profit on intercompany sales, rather than profit after deducting selling and administrative expenses, ordinarily eliminated from consolidated inventory balances?
- LO 2** 3. P Company sells inventory costing \$100,000 to its subsidiary, S Company, for \$150,000. At the end of the current year, one-half of the goods remains in S Company’s inventory. Applying the lower of cost or market rule, S Company writes down this inventory to \$60,000. What amount of intercompany profit should be eliminated on the consolidated statements workpaper?
- LO 5** 4. Are the adjustments to the noncontrolling interest for the effects of intercompany profit eliminations illustrated in this text necessary for fair presentation in accordance with generally accepted accounting principles? Explain.
- LO 5** 5. Why are adjustments made to the calculation of the noncontrolling interest for the effects of intercompany profit in upstream but not in downstream sales?
- LO 5** 6. What procedure is used in the consolidated statements workpaper to adjust the noncontrolling interest in consolidated net assets at the beginning of the year for the effects of intercompany profits?
- LO 5** 7. What is the essential procedural difference between workpaper eliminating entries for unrealized intercompany profit made when the selling affiliate is a less than wholly owned subsidiary and those made when the selling affiliate is the parent company or a wholly owned subsidiary?
8. Define the controlling interest in consolidated net income using the t-account or analytical approach. **LO 1**
9. Why is it important to distinguish between upstream and downstream sales in the analysis of intercompany profit eliminations? **LO 4**
10. In what period and in what manner should profits relating to the intercompany sale of merchandise be recognized in the consolidated financial statements? **LO 1**

#### Business Ethics

One issue concerning Enron’s collapse centered on the amount of non-audit fees paid by Enron to its external auditor, Arthur Andersen. For each of the following items, discuss the potential ethical issues between the firm and its auditor. For each item, list at least one reason why the statement might be viewed as a threat to the auditor’s independence, and at least one reason why it might not be viewed as such a threat.

1. The firm’s auditor is heavily involved in non-audit services.
2. The audit partner’s compensation depends on both audit and non-audit fees from the same client.
3. In 1995, Congress passed the Private Securities Litigation Reform Act. This act reduced plaintiffs’ ability to sue auditors.

### ANALYZING FINANCIAL STATEMENTS

#### AFS6-1 Medianet Intercompany Eliminations **LO 2** **LO 3**

On December 16, 2010, Medianet Group’s CFO and Company’s Board of Directors concluded that the previously issued financial statements contained in the Company’s Quarterly Reports on Form 10-Q for each of the three quarters during the year ended September 30, 2010, should not be relied upon because of the following errors that require a restatement of such financial statements:

*Intercompany eliminations.* Certain intercompany eliminations were not made during each of the quarters during the year ended September 30, 2010, and for the fiscal year ended September 30, 2009. In this connection, Medianet determined that during the periods referred to above, insufficient personnel resources were available to perform review and monitoring controls within the accounting function.

*Enrollment fees.* The Company determined that revenue from the sale of its eBiz kits was erroneously recorded for each of the quarters during the year ended September 30, 2010, and for the fiscal year ended September 30, 2009. The Company’s nonrefundable eBiz kits fee revenue was previously recognized when collected. Based on a review of Staff Accounting Bulletin (“SAB”) 104, the Company revised its revenue recognition of nonrefundable eBiz kits to recognize them on a straight-line basis over the term of the renewal period (12 months).

**Balance Sheet (12/30/2009)**  
**(as reported)**

| <i>Assets</i>                      |                  | <i>Liabilities</i>            |                    |
|------------------------------------|------------------|-------------------------------|--------------------|
| <i>Current Assets:</i>             |                  | <i>Current Liabilities:</i>   |                    |
| Cash and cash equivalents          | 2,499,237        | Accounts payable              | 121,461            |

| Net Income (loss)                   | <u>(2,931,874)</u> |

**Required:**

- A. Intercompany sales of inventory of \$862,677 were not eliminated from the consolidated income statement. What impact did this have on net income and on revenues? Why are intercompany sales eliminated during consolidation?
- B. The error for the enrollment fees meant that unearned revenues were understated by \$2,934,794. What impact did this error have on revenue? Does this error have an impact on cash flows? What impact did this error have on the Company's working capital, current ratio, and total liabilities-to-equity ratio?

**AFS6-2 Green Mountain Coffee Roasters LO 2**

Assessing whether an accounting error is material is addressed in FASB ASC paragraph 250–10–S55-1 (also paragraph 250-10-S99-1) and in FASB Concepts Statement No. 2. In concept 2, FASB states:

The omission or misstatement of an item in a financial report is material if, in the light of surrounding circumstances, the magnitude of the item is such that it is probable that the judgment of a reasonable person relying upon the report would have been changed or influenced by the inclusion or correction of the item.

In the Codification, FASB states that materiality cannot be reduced to a numerical formula. The SEC argues that evaluation of materiality requires a registrant and its auditor to consider all relevant circumstances and believes that qualitative factors may cause misstatements of relatively small amounts to be material. The SEC lists several considerations that may cause a small misstatement to be material. Some of these include whether the misstatement hides a failure to meet analysts' consensus expectations or whether the misstatement changes a loss into income. Furthermore, the SEC states that in determining whether multiple misstatements cause the financial statements to be materially misstated, registrants and its auditors should consider each misstatement separately and in the aggregate.

Green Mountain Coffee Roasters announced in an 8-K that the SEC was conducting an informal investigation of its financial statements. Initially, Green Mountain determined that the errors (primarily from failure to eliminate intercompany inventory correctly) were immaterial, but later decided to restate prior statements. The first error resulted in an overstatement of ending inventory in the first three quarters of 2010 or \$5.792 million. A second error resulted in over-eliminating intercompany sales of \$15.200 million.

Also, included in the second-quarter earnings ending on March 28, 2010, were acquisition-related expenses of \$5 million, or \$3,070 after tax. Earnings for the second quarter as reported were \$24.702 million and the number of shares used for diluted earnings per share were 45.943 million. Diluted EPS is \$0.54 per share. Second-quarter earnings, after the restatement, were \$24.108 million.

**Required:**

- A. Prepare journal entries to correct the two errors.
- B. Generally, analysts forecast earnings excluding certain expenses. In the second quarter, the analysts' forecast of earnings, excluding the acquisition-related expenses, was \$0.60 per share. Did Green Mountain beat the analysts' expectations of earnings before and after the restatement?

## EXERCISES

### EXERCISE 6-1 Downstream Sales LO2

P Company owns 80% of the outstanding stock of S Company. During 2014, S Company reported net income of \$525,000 and declared no dividends. At the end of the year, S Company's inventory included \$487,500 in unrealized profit on purchases from P Company. Intercompany sales for 2014 totaled \$2,700,000.

**Required:**

Prepare in general journal form all consolidated financial statement workpaper entries necessary at the end of the year to eliminate the effects of the 2014 intercompany sales.

### EXERCISE 6-2 Noncontrolling Interest, Downstream Sales LO5

Refer to Exercise 6-1. Calculate the amount of the noncontrolling interest to be deducted from consolidated income in arriving at 2014 controlling interest in consolidated net income.

### EXERCISE 6-3 Noncontrolling Interest, Upstream Sales LO5

Peabody Company owns 90% of the outstanding capital stock of Sloane Company. During 2014 and 2015 Sloane Company sold merchandise to Peabody Company at a markup of 25% of selling price. The selling price of the merchandise sold during the two years was \$20,800 and \$25,000, respectively. At the end of each year, Peabody Company had in its inventory one-fourth of the goods purchased that year from Sloane Company. Sloane Company reported net income of \$30,000 in 2014 and \$35,000 in 2015.

**Required:**

Determine the amount of the noncontrolling interest in consolidated income to be reported for 2014 and 2015.

### EXERCISE 6-4 Controlling Interest, Downstream Sales LO2

On January 1, 2014, Pearce Company purchased an 80% interest in the capital stock of Searl Company for \$2,460,000. At that time, Searl Company had capital stock of \$1,500,000 and retained earnings of \$300,000. The difference between book of value Searl equity and the value implied by the purchase price was attributed to specific assets of Searl Company as follows:

|             |   |
|-------------|---|
| 375,000     | to equipment of Searl Company with a five-year remaining life.                              |
| 187,500     | to land held by Searl Company.  |
| 112,500     | to inventory of Searl Company. Searl uses the FIFO assumption in pricing its inventory, and |
| 600,000     | that could not be assigned to specific assets or liabilities of Searl Company.              |
| \$1,275,000 | Total   |

At year-end 2014 and 2015, Searl had in its inventory merchandise that it had purchased from Pearce at a 25% markup on cost during each year in the following amounts:

|      |           |
|------|-----------|
| 2014 | \$ 90,000 |
| 2015 | \$105,000 |

During 2014, Pearce reported net income from independent operations (including sales to affiliates) of \$1,500,000, while Searle reported net income of \$600,000. In 2015, Pearce's net income from independent operations (including sales to affiliates) was \$1,800,000 and Searl's was \$750,000.

**Required:**

Calculate the controlling interest in consolidated net income for 2014 and 2015.

**EXERCISE 6-5 Controlling Interest, Upstream Sales LO2**

Refer to Exercise 6-4. Using the same figures, assume that the merchandise mentioned was included in Pearce's inventory, having been purchased from Searl.

**Required:**

Calculate the controlling interest in consolidated net income for 2014 and 2015.

**EXERCISE 6-6 Controlling Interest, Upstream Sales LO2**

Payne Company owns all the outstanding common stock of Sierra Company and 80% of the outstanding common stock of Santa Fe Company. The amount of intercompany profit included in the inventories of Payne Company on December 31, 2014, and December 31, 2015, is indicated here:

|                     | <i>Intercompany Profit on<br/>Goods Purchased From</i> |                             |              |
|---------------------|--|-----------------------------|--------------|
|                     | <i>Sierra<br/>Company</i>                              | <i>Santa Fe<br/>Company</i> | <i>Total</i> |
| Inventory, 12/31/14 | \$3,800  | \$4,600                     | \$8,400      |
| Inventory, 12/31/15 | 4,800  | 2,300                       | 7,100        |

The three companies reported net income from their independent operations (including sales to affiliates) for the year ended December 31, 2015, as follows:

|                  |           |
|------------------|-----------|
| Payne Company    | \$280,000 |
| Sierra Company   | 172,000   |
| Santa Fe Company | 120,000   |

**Required:**

Calculate the controlling interest in consolidated net income for the year ended December 31, 2015.

**EXERCISE 6-7 Workpaper Entries, Downstream Sales LO2**

Perkins Company owns 85% of Sheraton Company. Perkins Company sells merchandise to Sheraton Company at 20% above cost. During 2014 and 2015, such sales amounted to \$450,000 and \$486,000, respectively. At the end of each year, Sheraton Company had in its inventory one-third of the amount of goods purchased from Perkins during that year.

**Required:**

Prepare the workpaper entries necessary to eliminate the effects of the intercompany sales for 2014 and 2015.

**EXERCISE 6-8 Workpaper Entries, Upstream Sales LO2**

Refer to Exercise 6-7. Using the same figures, assume that the sales were upstream instead of downstream.

**Required:**

Prepare the workpaper entries necessary to eliminate the effects of the intercompany sales for 2014 and 2015.

**EXERCISE 6-9 Upstream and Downstream Sales LO2**

Peat Company owns a 90% interest in Seaton Company. The consolidated income statement drafted by the controller of Peat Company appeared as follows:

| <b>Peat Company and Subsidiary<br/>Consolidated Income Statement<br/>for Year Ended December 31, 2015</b> |                  |                     |
|---|------------------|---------------------|
| Sales   |                  | \$14,000,000        |
| Cost of Sales   | \$9,200,000      |                     |
| Operating Expense   | <u>1,800,000</u> | <u>11,000,000</u>   |
| Consolidated Income   |                  | 3,000,000           |
| Less Noncontrolling Interest in Consolidated Income   |                  | <u>200,000</u>      |
| Controlling Interest in Consolidated Net Income   |                  | <u>\$ 2,800,000</u> |

During your audit you discover that intercompany sales transactions were not reflected in the controller's draft of the consolidated income statement. Information relating to intercompany sales and unrealized intercompany profit is as follows:

|                           | <i>Cost</i> | <i>Selling<br/>Price</i> | <i>Unsold at<br/>Year-End</i> |
|---------------------------|-------------|--------------------------|-------------------------------|
| 2014 Sales—Seaton to Peat | \$1,500,000 | \$1,800,000              | 1/3                           |
| 2015 Sales—Peat to Seaton | 900,000     | 1,400,000                | 2/5                           |

**Required:**

Prepare a corrected consolidated income statement for Peat Company and Seaton Company for the year ended December 31, 2015.

**ASC EXERCISES:** For all ASC exercises indicate as part of your answer: the Codification topic, subtopic, section, and/or paragraph upon which your answer is based (unless otherwise specified). All ASC questions require access to the FASB Codification.

- ASC6-1** **Presentation** If a firm uses the LIFO method to account for inventories, is the firm required to disclose the excess of replacement or current cost over the stated LIFO value?
- ASC6-2** **Presentation** Suppose that a firm would like to adopt the LIFO method to account for its inventories, but it is not practical to determine the amounts assigned to major classes of inventories. Can the firm use the LIFO method? If so, what option is available?
- ASC6-3** **Glossary** Define an extraordinary item.
- ASC6-4** **SEC** A company that manufactures and sells a product excludes depreciation expense from the computation of cost of goods sold. The company computes the gross margin by subtracting this cost-of-goods-sold number from sales. Is this a violation of current GAAP?
- ASC6-5** **SEC** There are 21 required line items to be reported on the income statement as determined by the SEC. Is a firm required to report its *gross margin* on the income statement?

**PROBLEMS**

**PROBLEM 6-1** **Upstream Sales** **LO 2** **LO 5**

Peel Company owns 90% of the common stock of Seacore Company. Seacore Company sells merchandise to Peel Company at 20% above cost. During 2014 and 2015, such sales amounted to \$436,000 and \$532,000, respectively. At the end of each year, Peel Company had in its inventory one-fourth of the goods purchased from Seacore Company during that year.

Peel Company reported \$300,000 in net income from its independent operations in 2014 and 2015. Seacore Company reported net income of \$130,000 in each year and did not declare any dividends in any year. There were no intercompany sales prior to 2014.

**Required:**

- Prepare in general journal form all entries necessary on the consolidated financial statements worksheet to eliminate the effects of the intercompany sales for each of the years 2014 and 2015.
- Calculate the amount of noncontrolling interest to be deducted from consolidated income in the consolidated income statement for 2015.
- Calculate controlling interest in consolidated income for 2015.

**PROBLEM 6-2** **Upstream Sales** **LO 2** **LO 5**

Shell Company, an 85% owned subsidiary of Plaster Company, sells merchandise to Plaster Company at a markup of 20% of selling price. During 2014 and 2015, intercompany sales amounted to \$442,500 and \$386,250, respectively. At the end of 2014, Plaster had one-half of the goods that it purchased that year from Shell in its ending inventory. Plaster's 2015 ending inventory contained one-fifth of that year's purchases from Shell. There were no intercompany sales prior to 2014.

Plaster had net income in 2014 of \$750,000 from its own operations and in 2015 its independent income was \$780,000. Shell reported net income of \$322,500 and \$335,400 for 2014 and 2015, respectively.

**Required:**

- A. Prepare in general journal form all entries necessary on the consolidated financial statement workpapers to eliminate the effects of the intercompany sales for each of the years 2014 and 2015.
- B. Calculate the amount of noncontrolling interest to be deducted from consolidated income in the consolidated income statement for 2015.
- C. Calculate controlling interest in consolidated income for 2015.

**PROBLEM 6-3****Downstream Sales LO2 LO5**

Peer Company owns 80% of the common stock of Seacrest Company. Peer Company sells merchandise to Seacrest Company at 25% above its cost. During 2014 and 2015 such sales amounted to \$265,000 and \$475,000, respectively. The 2014 and 2015 ending inventories of Seacrest Company included goods purchased from Peer Company for \$125,000 and \$170,000, respectively.

Peer Company reported net income from its independent operations (including intercompany profit on inventory sales to affiliates) of \$450,000 in 2014 and \$480,000 in 2015. Seacrest reported net income of \$225,000 in 2014 and \$275,000 in 2015 and did not declare dividends in either year. There were no intercompany sales prior to 2014.

**Required:**

- A. Prepare in general journal form all entries necessary in the consolidated financial statements workpapers to eliminate the effects of the intercompany sales for each of the years 2014 and 2015.
- B. Calculate the amount of noncontrolling interest to be deducted from consolidated income in the consolidated income statements for 2014 and 2015.
- C. Calculate controlling interest in consolidated income for 2015.

**PROBLEM 6-4****Upstream and Downstream Sales LO2 LO5**

Pace Company owns 85% of the outstanding common stock of Sand Company and all the outstanding common stock of Star Company. During 2015, the affiliates engaged in intercompany sales as follows:

| <i>Sales of Merchandise</i> |                  |
|-----------------------------|------------------|
| Pace to Sand                | \$ 40,000        |
| Sand to Pace                | 60,000           |
| Sand to Star                | 75,000           |
| Star to Pace                | 50,000           |
|                             | <u>\$225,000</u> |

The following amounts of intercompany profits were included in the December 31, 2014, and December 31, 2015, inventories of the individual companies:

| <i>Selling Company</i> | <i>Intercompany Profit in<br/>December 31, 2014, Inventory of</i> |                |                |                 |
|------------------------|---|----------------|----------------|-----------------|
|                        | <i>Pace</i>   | <i>Sand</i>    | <i>Star</i>    | <i>Total</i>    |
| Pace Company           |   | \$7,000        |                | \$ 7,000        |
| Sand Company           | \$ 5,000  |                | \$3,000        | 8,000           |
| Star Company           | 8,000   |                |                | 8,000           |
| Total                  | <u>\$13,000</u>   | <u>\$7,000</u> | <u>\$3,000</u> | <u>\$23,000</u> |

| <i>Selling Company</i> | <i>Intercompany Profit in<br/>December 31, 2015, Inventory of</i> |                |                |                 |
|------------------------|---|----------------|----------------|-----------------|
|                        | <i>Pace</i>   | <i>Sand</i>    | <i>Star</i>    | <i>Total</i>    |
| Pace Company           |   | \$2,000        |                | \$ 2,000        |
| Sand Company           | \$ 6,000  |                | \$9,000        | 15,000          |
| Star Company           | 4,000   |                |                | 4,000           |
| Total                  | <u>\$10,000</u>   | <u>\$2,000</u> | <u>\$9,000</u> | <u>\$21,000</u> |

Income from each company's independent operations (including sales to affiliates) for the year ended December 31, 2015, is presented here:

|              |           |
|--------------|-----------|
| Pace Company | \$200,000 |
| Sand Company | 150,000   |
| Star Company | 125,000   |

**Required:**

- A. Prepare in general journal form the workpaper entries necessary to eliminate intercompany sales and intercompany profit in the December 31, 2015, consolidated financial statements workpaper.
- B. Calculate the balance to be reported in the consolidated income statement for the following line items:  
 Consolidated income  
 Noncontrolling interest in consolidated income  
 Controlling interest in consolidated income

**PROBLEM 6-5 Intercompany Downstream Sales, Cost Method LO 6**

Pruitt Corporation owns 90% of the common stock of Sedbrook Company. The stock was purchased for \$625,500 on January 1, 2012, when Sedbrook Company's retained earnings were \$95,000. Preclosing trial balances for the two companies at December 31, 2016, are presented here:

|                            | <i>Pruitt<br/>Corporation</i> | <i>Sedbrook<br/>Company</i> |
|----------------------------|-------------------------------|-----------------------------|

The January 1, 2016, inventory of Paque Corporation includes \$45,000 of profit recorded by Segal Company on 2015 sales. During 2016, Segal Company made intercompany sales of \$300,000 with a markup of 20% of selling price. The ending inventory of Paque Corporation includes goods purchased in 2016 from Segal Company for \$75,000.

**Required:**

- A. Prepare the consolidated statements workpaper for the year ended December 31, 2016.
- B. Prepare a t-account calculation of controlling interest in consolidated net income for the year ended December 31, 2016.

**PROBLEM 6-8**

**Upstream Eliminating Entries and Consolidated Net Income, Comprehensive Problem LO 6**

On January 2, 2014, Patten Company purchased a 90% interest in Sterling Company for \$1,400,000. At that time Sterling Company had capital stock outstanding of \$800,000 and retained earnings of \$425,000. The difference between book value of equity acquired and the value implied by the purchase price was allocated to the following assets:

|                           |           |
|---------------------------|-----------|
| Inventory                 | \$ 41,667 |
| Plant and Equipment (net) | 200,000   |
| Goodwill                  | 88,889    |

The inventory was sold in 2014. The plant and equipment had a remaining useful life of 10 years on January 2, 2014.

During 2014 Sterling sold merchandise with a cost of \$950,000 to Patten at a 20% markup above cost. At December 31, 2014, Patten still had merchandise in its inventory that it purchased from Sterling for \$576,000.

In 2014, Sterling Company reported net income of \$410,000 and declared no dividends.

COMPREHENSIVE

**Required:**

- A. Prepare in general journal form all entries necessary on the consolidated financial statements workpaper to eliminate the effects of the intercompany sales, to eliminate the investment account, and allocate the difference between book value of equity acquired and the value implied by the purchase price.
- B. Assume that Patten Company reports net income of \$2,000,000 from its independent operations. Calculate controlling interest in consolidated net income.
- C. Calculate noncontrolling interest in consolidated income.

**PROBLEM 6-9**

COMPREHENSIVE

**Upstream and Downstream Workpaper, Comprehensive Problem, Cost Method LO 6**

On January 1, 2012, Perry Company purchased 80% of Selby Company for \$990,000. At that time Selby had capital stock outstanding of \$350,000 and retained earnings of \$375,000.

The fair value of Selby Company's assets and liabilities is equal to their book value except for the following:

|                                    | <i>Fair Value</i> | <i>Book Value</i> |
|------------------------------------|-------------------|-------------------|
| Inventory                          | \$210,000         | \$160,000         |
| Plant and Equipment (10-year life) | 780,000           | 630,000           |

One-half of the inventory was sold in 2012, the remainder was sold in 2013.

At the end of 2012, Perry Company had in its ending inventory \$60,000 of merchandise it had purchased from Selby Company during the year. Selby Company sold the merchandise at 25% above cost. During 2013, Perry Company sold merchandise to Selby Company for \$310,000 at a markup of 20% of the selling price. At December 31, 2013, Selby still had merchandise that it purchased from Perry Company for \$82,000 in its inventory.

Financial data for 2013 are presented here:

|                              | <i>Perry Company</i> | <i>Selby Company</i> |

- A. Prepare the consolidated statements workpaper for the year ended December 31, 2013.
- B. Calculate consolidated retained earnings on December 31, 2013, using the analytical or t-account approach.

**PROBLEM 6-10 Controlling and Noncontrolling Interest LO2 LO5**

Penn Company owns a 90% interest in Salvador Company and an 80% interest in Sencal Company. Profit remaining in ending inventories from intercompany sales for 2014 and 2015 is indicated below.

| Selling Company | Intercompany Profit in Ending Inventory of |         |          |          |
|-----------------|--|---------|----------|----------|
|                 | 2014                                       |         | 2015     |          |
|                 | Salvador                                   | Sencal  | Salvador | Sencal   |
| Penn            | \$8,000                                    | \$4,000 | \$5,000  | \$ 9,000 |
| Salvador        |  | 6,000   |          | 10,000   |
| Sencal          | 5,000                                      |         | 2,000    |          |

Salvador Company reported net income of \$50,000 in 2014 and \$45,000 in 2015, whereas Sencal Company's net income was \$60,000 and \$75,000 in 2014 and 2015, respectively.

Penn Company's net income from its own operations (including sales to affiliates) for 2014 and 2014 was \$600,000 and \$400,000, respectively.

**Required:**

- Determine noncontrolling interest in consolidated income for 2014 and 2015.
- Calculate the controlling interest in consolidated income for 2014 and 2015.

**PROBLEM 6-11 Downstream Workpaper—Partial Equity Method LO6**

Pruitt Corporation owns 90% of the common stock of Sedbrook Company. The stock was purchased for \$540,000 on January 1, 2012, when Sedbrook Company's retained earnings were \$100,000. Preclosing trial balances for the two companies at December 31, 2016, are presented here:

|                             | Pruitt Corporation | Sedbrook Company   |

|                             | <u>\$2,654,250</u> | <u>\$1,220,000</u> |
| Ending Inventory            | <u>\$ 200,000</u>  | <u>\$ 120,000</u>  |

The January 1, 2016, inventory of Sedbrook Company includes \$30,000 of profit recorded by Pruitt Corporation on 2015 sales. During 2016, Pruitt Corporation made intercompany sales of \$200,000 with a markup of 25% on cost. The ending inventory of Sedbrook Company includes goods purchased in 2016 from Pruitt for \$50,000. Pruitt Corporation uses the partial equity method to record its investment in Sedbrook Company.

**Required:**

- Prepare the consolidated statements workpaper for the year ended December 31, 2016.
- Calculate consolidated retained earnings on December 31, 2016, using the analytical or t-account approach.

**PROBLEM 6-12 Downstream Trial Balance Workpaper LO6**

Using the information in Problem 6-11, prepare a consolidated statements workpaper using the trial balance format.

**PROBLEM 6-13 Upstream Workpaper—Partial Equity Method LO 6**

(Note: This is the same problem as Problem 6-7, but assuming the use of the partial equity method.)

Paque Corporation owns 90% of the common stock of Segal Company. The stock was purchased for \$810,000 on January 1, 2012, when Segal Company's retained earnings were \$150,000.

Financial data for 2016 are presented here:

|                              | <i>Paque Corporation</i> | <i>Segal Company</i> |
|------------------------------|--------------------------|----------------------|
| Sales                        | \$1,650,000              | \$ 795,000           |

The January 1, 2016, inventory of Paque Corporation includes \$45,000 of profit recorded by Segal Company on 2015 sales. During 2016, Segal Company made intercompany sales of \$300,000 with a markup of 20% of selling price. The ending inventory of Paque Corporation includes goods purchased in 2016 from Segal Company for \$75,000. Paque Corporation uses the partial equity method to record its investment in Segal Company.

**Required:**

- Prepare the consolidated statements workpaper for the year ended December 31, 2016.
- Calculate consolidated retained earnings on December 31, 2016, using the analytical or t-account approach.
- If you completed Problem 6-7, compare the consolidated balances obtained in requirement A with those obtained in Problem 6-7.

**PROBLEM 6-14 Upstream and Downstream Workpaper—Partial Equity Method LO 6**

On January 1, 2013, Perry Company purchased 80% of Selby Company for \$960,000. At that time Selby had capital stock outstanding of \$400,000 and retained earnings of \$400,000.

The fair value of Selby Company's assets and liabilities is equal to their book value except for the following:

|                                    | <i>Fair Value</i> | <i>Book Value</i> |
|------------------------------------|-------------------|-------------------|
| Inventory                          | \$230,000         | \$155,000         |
| Plant and Equipment (10-year life) | 800,000           | 600,000           |

One-half of the inventory was sold in 2013; the remainder was sold in 2014.

At the end of 2013, Perry Company had in its ending inventory \$54,000 of merchandise it had purchased from Selby Company during the year. Selby Company sold the merchandise at 20% above cost. During 2014, Perry Company sold merchandise to Selby Company for \$300,000 at a markup of 20% of the selling price. At December 31, 2014, Selby still had merchandise that it purchased from Perry Company for \$78,000 in its inventory.

Financial data for 2014 are presented here:

|                              | <i>Perry Company</i> | <i>Selby Company</i> |
|------------------------------|----------------------|----------------------|
| Sales                        | \$1,385,000          | \$ 720,000           |
| Equity in Subsidiary Income  | 208,000              |                      |

| Total Liabilities and Equity | <u>\$3,235,000</u>   | <u>\$1,145,000</u>   |

**Required:**

- A. Prepare the consolidated statements workpaper for the year ended December 31, 2014.
- B. Calculate consolidated retained earnings on December 31, 2014, using the analytical or t-account approach.

**PROBLEM 6-15 Upstream and Downstream Sales, Journal Entries, and Controlling and Noncontrolling Interests LO2 LO5**

On January 1, 2012, Paul Company purchased 80% of the voting stock of Simon Company for \$1,360,000 when Simon Company had retained earnings and capital stock in the amounts of \$450,000 and \$1,000,000, respectively. The difference between implied and book value is allocated to a franchise and is amortized over 25 years. Simon Company's retained earnings amount to \$780,000 on January 1, 2015, and \$960,000 on December 31, 2015. In 2015, Simon Company reported net income of \$270,000 and declared dividends of \$90,000. Paul Company reported net income from independent operations in 2015 in the amount of \$700,000 and retained earnings on December 31, 2015, of \$1,500,000. During 2015, intercompany sales of merchandise from Paul to Simon amounted to \$70,000 and from Simon to Paul were \$50,000. Unrealized profits on January 1 and on December 31, 2015, resulting from intercompany sales are as summarized here:

| <i>Resulting From</i>                  | <i>Unrealized Intercompany Profit on</i> |                 |
|--|--|-----------------|
|  | <i>1/1/15</i>                            | <i>12/31/15</i> |
| Sales by Simon Company to Paul Company | \$20,000                                 | \$10,000        |
| Sales by Paul Company to Simon Company | 30,000                                   | 5,000           |

There were no intercompany sales prior to 2014.

**Required:**

- A. Prepare in general journal form the entries necessary in the December 31, 2015, consolidated statements workpaper to eliminate the effects of the intercompany sales.

- B. Calculate controlling interest in consolidated net income for the year ended December 31, 2015.  
 C. Calculate consolidated retained earnings on December 31, 2015.  
 D. Calculate noncontrolling interest in consolidated income for the year ended December 31, 2015.

**PROBLEM 6-16 Complete Equity with Downstream Sales LO6**

(Note: This is the same problem as Problem 6-11, but assuming the use of the complete equity method.)

Pruitt Corporation owns 90% of the common stock of Sedbrook Company. The stock was purchased for \$540,000 on January 1, 2012, when Sedbrook Company's retained earnings were \$100,000. Preclosing trial balances for the two companies at December 31, 2016, are presented here:

|                             | <i>Pruitt<br/>Corporation</i> | <i>Sedbrook<br/>Company</i> |
|-----------------------------|-------------------------------|-----------------------------|
| Cash                        | \$ 83,000                     | \$ 80,000                   |
| Accounts Receivable (net)   | 213,000                       | 112,500                     |
| Inventory 1/1               | 150,000                       | 110,000                     |
| Investment in Sedbrook Co.  | 568,250                       |                             |

| Common Stock                | 800,000                       | 500,000                     |
| Retained Earnings, 1/1      | 532,000                       | 120,000                     |
| Sales                       | 1,100,000                     | 530,000                     |
| Equity in Subsidiary Income | 67,250                        |                             |
|                             | <u>\$2,644,250</u>            | <u>\$1,220,000</u>          |
| Ending Inventory            | <u>\$ 200,000</u>             | <u>\$ 120,000</u>           |

The January 1, 2016, inventory of Sedbrook Company includes \$30,000 of profit recorded by Pruitt Corporation on 2015 sales. During 2016, Pruitt Corporation made intercompany sales of \$200,000 with a markup of 25% on cost. The ending inventory of Sedbrook Company includes goods purchased in 2016 from Pruitt for \$50,000. Pruitt Corporation uses the complete equity method to record its investment in Sedbrook Company.

**Required:**

- A. Prepare the consolidated statements workpaper for the year ended December 31, 2016.  
 B. Calculate consolidated retained earnings on December 31, 2016, using the analytical or t-account approach.  
 C. If you completed Problem 6-11, compare the consolidated balances obtained in requirement A with those obtained in that problem.

**PROBLEM 6-17 Complete Equity with Upstream Sales LO6**

(Note: This is the same problem as Problem 6-7 and Problem 6-13, but assuming the use of the complete equity method.)

Paque Corporation owns 90% of the common stock of Segal Company. The stock was purchased for \$810,000 on January 1, 2012, when Segal Company's retained earnings were \$150,000.

Financial data for 2016 are presented here:

|                             | <i>Paque<br/>Corporation</i> | <i>Segal<br/>Company</i> |
|-----------------------------|------------------------------|--------------------------|
| Sales                       | \$1,650,000                  | \$ 795,000               |
| Equity in Subsidiary Income | 91,125                       |                          |
| Total Revenue               | <u>1,741,125</u>             | <u>795,000</u>           |

The January 1, 2016, inventory of Paque Corporation includes \$45,000 of profit recorded by Segal Company on 2015 sales. During 2016, Segal Company made intercompany sales of \$300,000 with a markup of 20% of selling price. The ending inventory of Paque Corporation includes goods purchased in 2016 from Segal Company for \$75,000. Paque Corporation uses the complete equity method to record its investment in Segal Company.

**Required:**

- Prepare the consolidated statements worksheet for the year ended December 31, 2016.
- Calculate consolidated retained earnings on December 31, 2016, using the analytical or t-account approach.
- If you completed Problem 6-7 or Problem 6-13, compare the consolidated balances obtained in requirement A with those obtained in those problems.

**PROBLEM 6-18 Comprehensive Complete Equity Problem, Cost Greater Than Fair Value with Intercompany Sales of Inventory LO 6**

(Note: This is the same problem as Problem 6-14, but assuming the use of the complete equity method.)

On January 1, 2013, Perry Company purchased 80% of Selby Company for \$960,000. At that time Selby had capital stock outstanding of \$400,000 and retained earnings of \$400,000.

The fair value of Selby Company's assets and liabilities is equal to their book value except for the following:

|                                    | <i>Fair Value</i> | <i>Book Value</i> |
|------------------------------------|-------------------|-------------------|
| Inventory                          | \$230,000         | \$155,000         |
| Plant and Equipment (10-year life) | 800,000           | 600,000           |

One-half of the inventory was sold in 2013; the remainder was sold in 2014.

At the end of 2013, Perry Company had in its ending inventory \$54,000 of merchandise it had purchased from Selby Company during the year. Selby Company sold the merchandise at 20% above cost. During 2014, Perry Company sold merchandise to Selby Company for \$300,000 at a markup of 20% of the selling price. At December 31, 2014, Selby still had merchandise that it purchased from Perry Company for \$78,000 in its inventory.

Financial data for 2014 are presented here:

|                             | <i>Perry<br/>Company</i> | <i>Selby<br/>Company</i> |
|-----------------------------|--------------------------|--------------------------|
| Sales                       | \$1,385,000              | \$ 720,000               |

| Total Liabilities and Equity | <u>\$3,127,400</u>       | <u>\$1,145,000</u>       |

**Required:**

- A. Prepare the consolidated statements worksheet for the year ended December 31, 2014.
- B. Calculate consolidated retained earnings on December 31, 2014, using the analytical or t-account approach.
- C. If you completed Problem 6-14, compare the consolidated balances obtained in requirement A with those obtained in those problems.

**PROBLEM 6-19A** Deferred Taxes and Intercompany Sales of Inventory (See Appendix 6A online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter))

Pearson Company owns 80% of the common stock of Sedbrook Company. Pearson Company sells merchandise to Sedbrook Company at 25% above its cost. During 2014 and 2015, such sales amounted to \$265,000 and \$475,000, respectively. The 2014 and 2015 ending inventories of Sedbrook Company included goods purchased from Pearson Company for \$150,000 and \$195,000, respectively.

Pearson Company reported net income from its independent operations (including sales to affiliates) of \$450,000 in 2014 and \$480,000 in 2015. Sedbrook reported net income of \$225,000 in 2014 and \$275,000 in 2015 and did not declare dividends in either year. There were no intercompany sales prior to 2014. The affiliated companies file separate income tax returns and have marginal income tax rates of 30%. Ignore the income tax consequences of undistributed subsidiary income.

**Required:**

- A. Prepare in general journal form all entries necessary in the consolidated financial statements workpapers to eliminate the effects of the intercompany sales for each of the years 2014 and 2015.
- B. Calculate the amount of noncontrolling interest to be reported in the consolidated income statements for 2014 and 2015.
- C. Calculate the controlling interest in consolidated net income for 2015.

**PROBLEM 6-20A** Deferred Taxes, Intercompany Sales of Inventory, Cost Method (See Appendix 6A online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter))

Peek Corporation owns 70% of the common stock of Seacrest Company. The stock was purchased for \$420,000 on January 1, 2010, when Seacrest Company's retained earnings were \$100,000. Preclosing trial balances for the two companies at December 31, 2014, are presented here:

|                                | <i>Peck Corporation</i> | <i>Seacrest Company</i> |
|--------------------------------|-------------------------|-------------------------|
| Cash                           | \$ 35,000               | \$ 100,000              |
| Accounts Receivable (net)      | 211,000                 | 107,750                 |

| Other Expenses                 | 180,000                 | 114,000                 |
| Income Tax Expense             | 27,000                  | 28,250                  |
| Total                          | <u>\$2,473,000</u>      | <u>\$1,220,000</u>      |
| Accounts Payable               | \$ 70,000               | \$ 30,000               |
| Other Liabilities              | 55,000                  | 35,000                  |
| Deferred Tax Liability         | 20,000                  | 5,000                   |
| Common Stock                   | 680,000                 | 500,000                 |
| Retained Earnings              | 541,000                 | 120,000                 |
| Sales                          | 1,100,000               | 530,000                 |
| Dividend Income                | 7,000                   |                         |
| Total                          | <u>\$2,473,000</u>      | <u>\$1,220,000</u>      |
| Inventory—12/31                | <u>\$ 140,000</u>       | <u>\$ 115,000</u>       |

The January 1, 2014, inventory of Peck Corporation includes \$10,000 of profit recorded by Seacrest Company on 2013 sales. During 2014, Seacrest Company made intercompany sales of \$100,000 with a markup of 25% on cost. The ending inventory of Peck Corporation includes goods purchased in 2014 from Seacrest Company for \$40,000.

The affiliates file separate tax returns, and the prior, current, and expected future marginal income tax rates for both companies are 40%. Dividends received from Seacrest Company are subject to an 80% dividends received exclusion.

**Required:**

- A. Prepare a consolidated statements workpaper for the year ended December 31, 2014.
- B. Calculate the controlling interest in consolidated net income for the year ended December 31, 2014, and consolidated retained earnings on December 31, 2014, using the analytical or t-account approach.

**PROBLEM 6-21A** Deferred Taxes, Intercompany Sales of Inventory, Partial Equity Method (See Appendix 6A online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter))

Petra Corporation owns 70% of the common stock of Swain Company. The stock was purchased for \$420,000 on January 1, 2010, when Swain Company's retained earnings were \$100,000. Preclosing trial balances for the two companies at December 31, 2014, are presented here:

|                             | <i>Petra Corporation</i> | <i>Swain Company</i> |

## APPENDIX 6A – DEFERRED TAXES AND INTERCOMPANY SALES OF INVENTORY (ONLINE)

---

### DEFERRED TAX CONSEQUENCES ARISING BECAUSE OF UNREALIZED INTERCOMPANY PROFIT

If the affiliated companies file consolidated income tax returns, profits from intercompany transactions are included in taxable income in the same years that they are included in the consolidated income statement. In that case, the amount at which the asset is reported in the consolidated financial statements and its tax basis are the same, and it is not necessary to consider deferred tax consequences.

However, when the affiliates file separate income tax returns, the tax basis for an asset sold between affiliates is based on the price paid by the purchasing affiliate. Thus, the tax basis of the asset will differ from the amount reported for that asset in the consolidated financial statements. Assuming that the selling affiliate recognized a profit on the intercompany sale, the amount of this difference is equal to the *unrealized* profit associated with that asset on the balance sheet date. This difference is a temporary difference that will result in deductible amounts on the tax return of the *purchasing affiliate* in a future year(s) when the profit is considered realized in the consolidated financial statements through the sale or depreciation of the asset.

However, under FASB ASC topic 740 [Income Taxes] the measurement of the tax benefit for temporary differences related to unrealized profit on intercompany sales is not subject to the basic principles that apply to other temporary differences that will result in deductible amounts in future years. Rather, the provisions of FASB ASC paragraph 810-10-45-8 relating to income taxes paid on intercompany profit are applied.

This standard requires deferral of income taxes *paid by the seller* on intercompany profits on assets remaining within the consolidated group. In effect, the taxes paid by the selling affiliate on these profits are treated as prepaid taxes in the consolidated financial statements, and the tax expense is reported in the consolidated financial statements in the same period that the profit is reported as realized. By adopting these provisions, deferred tax effects are based on the income taxes paid by the selling affiliate rather than on the future tax benefit to the purchasing affiliate. The amounts calculated under these two approaches would be different, for example, if the affiliates had different marginal tax rates or were in different tax jurisdictions, or when expected future tax rates differ from the tax rate used to determine the tax paid or accrued by the selling affiliate.

The balances reported by the parent company in income, retained earnings, and the investment account differ depending on the method used by the parent company to record its investment. As illustrated in previous chapters, however, the method used by the parent company to record its investment has no effect on the consolidated balances. Workpaper entries to record deferred tax consequences of unrealized intercompany profit and undistributed subsidiary income are also the same when the parent company records its investment using the partial equity method or the cost method to record its investment. Hence, these methods are illustrated jointly in the following section. The complete equity method differs slightly, however, as illustrated in the final section of this appendix.

## INTERCOMPANY SALES OF INVENTORY—COST AND PARTIAL EQUITY METHOD

To illustrate the treatment in the consolidated financial statements of deferred income taxes relating to intercompany sales of inventory assume that:

1. S Company is a 70% owned subsidiary of P Company.
2. The companies file separate income tax returns and the marginal income tax rates for both companies are 40%.
3. On December 31, 2013, there is \$500,000 of unrealized intercompany profit in the ending inventory of the purchasing affiliate.
4. S Company reports net income of \$900,000 in 2013 and \$600,000 in 2014.

Workpaper eliminating entries relating to the unrealized profit included in inventory of the purchasing affiliate differ depending on whether the selling affiliate is the parent company (downstream sale) or the subsidiary (upstream or horizontal sale). Entries in the December 31, 2013, and December 31, 2014, consolidated statements workpapers under each of these conditions are illustrated below:

PARTIAL

COST

### Consolidated Statements Workpaper Entries—Cost and Partial Equity Methods—December 31, 2013

| Downstream Sales  |         | Upstream Sales                         |         |
|---|---------|--|---------|
| 12/31 Inventory—<br>(Income Statement)  | 500,000 | 12/31 Inventory—<br>(Income Statement) | 500,000 |
| Inventory   | 500,000 | Inventory                              | 500,000 |
| To eliminate unrealized profit in ending inventory.   |         |  |         |
| Deferred Tax Asset  | 200,000 | Deferred Tax Asset                     | 200,000 |
| Tax Expense   | 200,000 | Tax Expense                            | 200,000 |
| To defer income tax paid or accrued by the selling affiliate on unrealized intercompany profit<br>(.4 × \$500,000 = \$200,000). |         |  |         |

Although the workpaper entries are the same, the computation of noncontrolling interest in consolidated net income is affected by upstream sales. The *after-tax* unrealized intercompany profit of \$300,000 [(\$500,000 – \$200,000) or (.60 × \$500,000)] must be subtracted from reported subsidiary income in computing subsidiary income included in consolidated net income. For example, if the sale is upstream and S Company reports net income of \$900,000 in 2013, the noncontrolling interest in consolidated net income is \$180,000 [.30 × (\$900,000 – (.60 × \$500,000))]. Alternatively, the following schedule illustrates the previous points.

#### Upstream Sales

|   | S Company (000s)               |                                   |
|---|--------------------------------|-----------------------------------|
|   | With<br>Intercompany<br>Profit | Without<br>Intercompany<br>Profit |
| Income from Independent Operations                    | \$1,000                        | \$1,000                           |
| Unrealized Profit in Ending Inventory                 | 500                            |                                   |
| Pretax Income   | \$1,500                        | \$1,000                           |
| Tax Expense (40%)                                     | 600                            | 400                               |
| Net Income  | 900                            | 600                               |
| Less: After-tax unrealized profit in inventory        |                                |                                   |
| Unrealized profit                                     | 500                            |                                   |
| Tax on unrealized profit (40%)                        | (200)                          | (300)                             |
| Subsidiary Income in Consolidated Net Income          | \$600                          | \$600                             |
| Noncontrolling Interest percentage                    | 30%                            | 30%                               |
| Noncontrolling Interest in Consolidated Net<br>Income | \$180                          | \$180                             |

PARTIAL

If the sale is downstream, the amount of subsidiary income included in consolidated net income is not affected by the elimination of unrealized intercompany profit and no adjustment is necessary in the calculation of the noncontrolling interest in consolidated net income.

Assume that in the next year, the inventory is sold.

COST

### Consolidated Statements Workpaper Entries—Cost and Partial Equity Methods—December 31, 2014

| <i>Downstream Sales</i>   |         | <i>Upstream Sales</i>                                   |         |
|---|---------|---|---------|
| 1/1 Retained Earnings—<br>P Company   | 500,000 | 1/1 Retained Earnings—<br>P Company<br>(.7 × \$500,000) | 350,000 |
|   |         | 1/1 NCI—<br>(.3 × \$500,000)                            | 150,000 |
| 1/1 Inventory<br>(Income Statement)   | 500,000 | 1/1 Inventory<br>(Income Statement)                     | 500,000 |
| To recognize intercompany profit realized during the year and to reduce the controlling and the noncontrolling interests for their share of unrealized intercompany profit at the beginning of the year.  |         |   |         |
| Tax Expense   | 200,000 | Tax Expense   | 200,000 |
| 1/1 Retained Earnings—<br>+P Company  | 200,000 | 1/1 Retained Earnings—<br>P Company<br>(.7 × \$200,000) | 140,000 |
|   |         | 1/1 NCI—<br>(.3 × \$200,000)                            | 60,000  |
| To recognize income tax expense on intercompany profit considered realized during the year and to adjust the controlling and noncontrolling interests for the tax consequence of unrealized intercompany profit eliminated in the previous entry. |         |   |         |

Note that since the inventory is now sold to outsiders, there are no longer any deferred tax items recorded on the consolidated balance sheet.

In the case of upstream sales, the net after-tax adjustment to the noncontrolling interest at the *beginning of the year* is \$90,000 (\$150,000 – \$60,000), which is the same amount by which the noncontrolling interest in consolidated net income was reduced for after-tax unrealized intercompany profit at the end of the prior year. [.3 × (\$500,000 – \$200,000) = \$90,000].

If the sale is upstream, the noncontrolling interest in consolidated net income for 2014 is calculated after adding the after-tax amount of intercompany profit that is included in consolidated net income in the current year (.60 × \$500,000 = \$300,000). For example, if the sale is upstream and S Company reports net income of \$600,000 in 2014, the noncontrolling interest in consolidated net income is \$270,000 [.30 × (\$600,000 + \$300,000)]. If the sale is downstream, no adjustment is necessary in the calculation of the noncontrolling interest in consolidated net income. These concepts are illustrated fully in the next section.

PARTIAL

COST

## UNDISTRIBUTED SUBSIDIARY INCOME—IMPACT OF UNREALIZED INTERCOMPANY PROFIT ON THE CALCULATION OF DEFERRED TAXES

### Cost and Partial Equity Methods

The workpaper entries needed to report the tax consequences of past and current undistributed earnings of a subsidiary were described in Appendix B in Chapter 4. Workpaper entries are necessary under the cost method when there is undistributed subsidiary income and the affiliates file separate income tax returns. Now that we have discussed the effects of unrealized intercompany profits, it is important to note that the calculation of the tax consequences of undistributed income is based on the undistributed income of the subsidiary that has been *included in consolidated net income*. Thus, before calculating the

deferred tax consequences relating to undistributed subsidiary income, the amount of undistributed income of the subsidiary must be adjusted for the *after-tax amount of* unrealized intercompany profit *recorded by the subsidiary* that has been recognized in the determination of consolidated net income.

To illustrate, assume that:

PARTIAL

1. P Company acquired 75% of the voting stock of S Company when S Company's retained earnings amounted to \$150,000.
2. S Company reported retained earnings of \$260,000 on January 1, 2014, and \$320,000 on December 31, 2014.
3. S Company reported net income of \$90,000 and declared dividends of \$30,000 in 2014.
4. P Company reported net income from independent operations in 2014 in the amount of \$700,000 and retained earnings on December 31, 2014, of \$3,500,000.
5. The affiliates file separate income tax returns.
6. Undistributed income is expected to be received in the form of future dividends.
7. The dividends received deduction is 80%, and past, current, and future expected marginal income tax rates are 40%.
8. There were no intercompany sales prior to 2013, and unrealized profits on January 1 and on December 31, 2014, resulting from intercompany sales are as summarized below:

COST

| Resulting From                  | Unrealized Intercompany Profit on |          |
|---------------------------------|-----------------------------------|----------|
|                                 | 1/1/14                            | 12/31/14 |
| Sales by S Company to P Company | \$10,000                          | \$ 5,000 |
| Sales by P Company to S Company | 15,000                            | 20,000   |

The calculation of the amounts of the undistributed income of S Company that is included in consolidated net income is presented in Illustration 6-22. Illustration 6-23 shows the calculation of the noncontrolling and controlling interests in consolidated net income for 2014.

## Complete Equity Method—Intercompany Sales of Inventory

COMPLETE

When the parent uses the complete equity method to account for the investment, the parent accounts for deferred taxes related to undistributed *adjusted* subsidiary income on its own books. This occurs because there is a difference between taxable income (dividends received from the subsidiary) and equity income (reported on the income statement) on the books of the parent, necessitating parent company entries for deferred taxes.

To illustrate the treatment in the consolidated financial statements of deferred income taxes relating to intercompany sales of inventory, assume that:

1. S Company is a 70% owned subsidiary of P Company.
2. The companies file separate income tax returns and the marginal income tax rates for both companies are 40%.
3. On December 31, 2013, there is \$500,000 of unrealized intercompany profit in the ending inventory of the purchasing affiliate.
4. S Company reports net income of \$900,000 in 2013 and \$600,000 in 2014.

On the books of the parent, the following entries are made to account for the effects of intercompany sales of inventory.

**ILLUSTRATION 6-22****Undistributed Income of S Company  
That Has Been Included in Consolidated Income**

| <i>S Company</i>  | <i>From<br/>Acquisition<br/>to 1/1/2014</i> | <i>For<br/>Calendar<br/>Year 2014</i> | <i>From<br/>Acquisition to<br/>12/31/2014</i> |
|---|---|---------------------------------------|---|
| Retained earnings 1/1/2014  | \$260,000                                   |                                       |   |

| Deferred taxes on undistributed income of S Company (\$93,000 - \$30,000)(.75)(.20)(.40)        | 3,780  | After-tax realized profit (downstream sales) from begin. Inventory (.6 × \$15,000)       | 9,000           |
|   |        | P Company's percentage of S Company's income realized from third parties, .75 (\$93,000) | 69,750          |
|   |        | Controlling Interest in Income   | \$762,970       |

75%

|   |         |         |
|---|---------|---------|
| Equity in Subsidiary Income   | 500,000 |         |
| Investment in S Company   |         | 500,000 |
| To adjust equity in subsidiary income for unrealized intercompany profit in ending inventory. |         |         |

|                    |         |         |
|--------------------|---------|---------|
| Deferred Tax Asset | 200,000 |         |
| Tax Expense        |         | 200,000 |

Workpaper eliminating entries relating to the unrealized profit included in inventory of the purchasing affiliate differ in subsequent years, depending on whether the selling affiliate is the parent company (downstream sale) or the subsidiary (upstream or horizontal sale).

Entries in the December 31, 2013, and December 31, 2014, consolidated statements workpapers under each of these conditions are illustrated below:

| <b>Consolidated Statements Workpaper Entries—Complete Equity</b> |         |   |         |
|--|---------|---|---------|
| <b>Method December 31, 2013</b>                                  |         |   |         |
| <i>Downstream Sales</i>  |         | <i>Upstream Sales</i>                   |         |
| Ending Inventory—<br>(Income Statement)                          | 500,000 | Ending Inventory—<br>(Income Statement) | 500,000 |
| Inventory (Balance Sheet)  | 500,000 | Inventory (Balance Sheet)               | 500,000 |
| To eliminate unrealized profit in ending inventory.              |         |   |         |

In the year 2014, the inventory is sold. The entry on the books of the parent to reflect the reversal of the deferred tax asset is as follows:

|                    |         |         |
|--------------------|---------|---------|
| Tax Expense        | 200,000 |         |
| Deferred Tax Asset |         | 200,000 |

Then the following entry is made on the workpaper:

| <b>Consolidated Statements Workpaper Entries—Complete Equity</b>   |         |                                     |         |
|--|---------|-------------------------------------|---------|
| <b>Method December 31, 2014</b>  |         |                                     |         |
| <i>Downstream Sales</i>  |         | <i>Upstream Sales</i>               |         |
| Investment in S  | 500,000 | Investment in S<br>(.7 × \$500,000) | 350,000 |
|  |         | NCI—<br>(.3 × \$500,000)            | 150,000 |
| 1/1 Inventory<br>(Income Statement)  | 500,000 | 1/1 Inventory<br>(Income Statement) | 500,000 |
| To recognize intercompany profit realized during the year and to reduce the controlling and the noncontrolling interests for their share of unrealized intercompany profit at the beginning of the year. |         |                                     |         |

COMPLETE

Note that since the inventory is now sold to outsiders, there are no longer any deferred tax items recorded on the consolidated balance sheet.

In the case of upstream sales, the net after-tax adjustment to the noncontrolling interest at the *beginning of the year* is \$90,000 (\$150,000 – \$60,000), the same amount by which the noncontrolling interest in consolidated net income was reduced for after-tax unrealized intercompany profit at the end of the prior year (2013) [ $.3 \times (\$500,000 - \$200,000) = \$90,000$ ].

If the sale is upstream, the noncontrolling interest in consolidated income is calculated after adding the after-tax amount of intercompany profit that is included in consolidated net income in the current year ( $.60 \times \$500,000 = \$300,000$ ). For example, if the sale is upstream and S Company reports net income of \$600,000 in 2014, the noncontrolling interest in consolidated net income is \$270,000 [ $.30 \times (\$600,000 + \$300,000)$ ]. If the sale is downstream, no adjustment is necessary in the calculation of the noncontrolling interest in consolidated net income.

## Chapter 6 – Review Questions

The review questions accompanying this course are designed to assist you in achieving the course learning objectives. The review section is not graded; do not submit it in place of your qualified assessment. While completing the review questions, it may be helpful to study any unfamiliar terms in the glossary in addition to course content. After completing the review questions, proceed to the review question answers and rationales.

39. Which of the following is accurate regarding the financial reporting objectives of intercompany sales?
- Transactions recorded on subsidiary and parent books should reflect the cost without the profit component.
  - The selling company must recognize profit from intercompany sales but the acquiring company must reduce the cost down to the affiliates original cost in order to properly reflect cost of goods sold.
  - The selling company must not recognize profit on intercompany sales on their own company books.
  - Consolidated cost of sales includes only the cost to the affiliated group for goods that have been sold to parties outside the affiliated group.
40. Which of the following statements is accurate regarding the impact of a failure to eliminate intercompany sales for the consolidated entity (assuming that all goods bought through intercompany activity are sold to third parties by year-end)?
- Failing to eliminate an intercompany sale will result in an incorrect consolidated gross profit.
  - The gross profit percentage will be wrong.
  - Consolidate net income will be incorrect.
  - Cost of goods sold will be understated.
41. Which of the following is accurate regarding the differences between the three methods as it relates to intercompany sales?
- Under the partial method, parent company retained earnings does not need to be adjusted in year 2 for any activity from year 1.
  - Under the cost method, the year 1 entries will not have any impact on year 2.
  - Under the complete method, the retained earnings account on the separate company books of the parent is the same as consolidated retained earnings.
  - Under both the partial method and the complete method, beginning retained earnings of the parent company equals ending consolidated retained earnings.

42. In which of the following situations would the noncontrolling interest in consolidated net income need to be adjusted for intercompany sales?
- Downstream sales.
  - Subsidiary sales to another affiliate (not the parent).
  - Parent sells to the subsidiary.
  - Subsidiary purchases from the parent.
43. In comparing the cost method and the partial equity method, which of the following entries will be different depending on which method you use?
- The entry to eliminate intercompany sales.
  - The entry to eliminate intercompany profit.
  - The entry to establish reciprocity.
  - The entry to recognize intercompany profit in beginning inventory realized during the year.
44. All of the following statements regarding the complete equity method are accurate with the **EXCEPTION** of:
- Under the complete equity method, no formal calculation of the controlling interest in consolidated net income is needed.
  - Under the complete equity method, consolidated retained earnings is equal to the parent company's recorded complete equity basis retained earnings.
  - Under the complete equity method, consolidated net income equals the parent company's recorded income.
  - Under the complete equity method, intercompany profits will have to be adjusted out of the parent company's retained earnings.
45. Which of the following is accurate regarding the elimination of intercompany profits realized prior to the affiliation?
- It is required under GAAP to eliminate such intercompany profit if the selling company is the new subsidiary.
  - It is required under GAAP to eliminate such intercompany profit if the purchasing company is the new subsidiary.
  - GAAP is silent as to the appropriate treatment of intercompany profits prior to acquisition.
  - GAAP requires that profits be eliminated only when the selling company is the subsidiary.

## **Chapter 7 – Elimination of Unrealized Gains or Losses on Intercompany Sales of Property and Equipment**

### **Learning Objectives**

After completing this section of the course, you will be able to:

- Identify the reporting objectives in accounting for intercompany sales of depreciable and non-depreciable assets, noting the accounting treatment of gains or losses on these assets.
- Recognize differences between upstream and downstream sales and calculate their impacts on consolidation for both depreciable and non-depreciable asset sales under the cost, partial equity, and complete equity methods.
- Choose the requirements for recording or eliminating intercompany interest, rent, and service fees.
- Identify income tax impacts of intercompany transactions and determine the appropriate accounting treatment for them.

## ELIMINATION OF UNREALIZED GAINS OR LOSSES ON INTERCOMPANY SALES OF PROPERTY AND EQUIPMENT

### CHAPTER CONTENTS

- 7.1 INTERCOMPANY SALES OF LAND (NONDEPRECIABLE PROPERTY)
- 7.2 INTERCOMPANY SALES OF DEPRECIABLE PROPERTY (MACHINERY, EQUIPMENT, AND BUILDINGS)
- 7.3 CONSOLIDATED STATEMENTS WORKPAPER—COST AND PARTIAL EQUITY METHODS
- 7.4 CALCULATION OF CONSOLIDATED NET INCOME AND CONSOLIDATED RETAINED EARNINGS
- 7.5 CONSOLIDATED STATEMENTS WORKPAPER—COMPLETE EQUITY METHOD
- 7.6 CALCULATION AND ALLOCATION OF CONSOLIDATED NET INCOME; CONSOLIDATED RETAINED EARNINGS: COMPLETE EQUITY METHOD
- 7.7 SUMMARY OF WORKPAPER ENTRIES RELATING TO INTERCOMPANY SALES OF EQUIPMENT
- 7.8 INTERCOMPANY INTEREST, RENTS, AND SERVICE FEES

#### IN THE NEWS

The Irish arm of Symantec, the Internet security company, returned to profit in 2010 after a pretax loss of 6.6 million euro in 2009. It recorded profits of 73 million euro in spite of a decline in revenue. The U.S.-owned company's revenues last year declined by 125 million euro. The chief factor behind the increase in pretax profits was a foreign currency gain of 50 million euro on intercompany transactions in 2010.<sup>1</sup>

<sup>1</sup> Irishtimes.com, "Symantec's Irish Division Reports 73 Million Euro Pretax Profit," by G. Deegan, 10/1/11.

Affiliated companies often recognize gains or losses on intercompany sales of property or equipment. They also may recognize revenue or expense in connection with intercompany loans, intercompany service fees, or intercompany operating leases. As with intercompany sales of inventory discussed in Chapter 6, workpaper entries are also necessary in these situations in order to present related balances in the consolidated financial statements as if the intercompany transactions had never occurred.

In this chapter, the effects on the preparation of consolidated financial statements of intercompany transactions involving property and equipment, loans, services, and operating leases are described and illustrated.

Certain complications (specifically, those related to accounting for the difference between the value implied by the acquisition cost and book value) are avoided in all illustrations by assuming: (1) all acquisitions are made at the book value of the acquired interest in net assets, and (2) the book value of the subsidiary net assets equals their fair value on the date the parent company's interest is acquired. It is further assumed that the affiliates file consolidated income tax returns.

## 7.1 INTERCOMPANY SALES OF LAND (NONDEPRECIABLE PROPERTY)

### RELATED CONCEPTS

To recognize gains or losses on PPE sales before the assets are sold to outside parties would violate the *revenue recognition principle* from the perspective of the consolidated economic entity.

When there have been intercompany sales of *nondepreciable* property, workpaper entries are necessary to accomplish the following financial reporting objectives in the consolidated financial statements:

- To include gains or losses on the sale of nondepreciable property in consolidated net income only at the time such property is *sold to parties outside the affiliated group* and in an amount equal to the difference between the cost of the property to the affiliated group and the proceeds received from outsiders.
- To present nondepreciable property in the consolidated balance sheet at *its cost to the affiliated group*.

Workpaper procedures to accomplish these objectives are presented here. In addition, for firms using the cost or partial equity methods to account for the investments in subsidiaries, the workpaper entries serve to equate beginning consolidated retained earnings with the amount of consolidated retained earnings reported at the end of the prior reporting period. For all firms, the entries (in the case of upstream sales) also serve to equate beginning NCI (in equity) with ending NCI (in equity) at the end of the prior period.

Assume that S Company (an 80% owned subsidiary) sells land to P Company for \$500,000 that cost S Company \$300,000 (an upstream sale of land). Entries made on the books of each affiliate to record this intercompany sale are presented below.

| <i>Entry on Books of S Company</i> |         | <i>Entry on Books of P Company</i>                                       |         |
|------------------------------------|---------|--|---------|
| Cash                               | 500,000 | Land   | 500,000 |
| Land                               | 300,000 | Cash   | 500,000 |
| Gain on Sale of Land               | 200,000 | <i>Additional Entry for Complete Equity Method Only: P Company Books</i> |         |
|                                    |         | Equity in Subsidiary   | 160,000 |
|                                    |         | Income   |         |
|                                    |         | Investment in S Company  | 160,000 |

If P Company uses the complete equity method to account for its investment in S Company, the additional entry shown above is needed on the books of P Company to reduce its income from subsidiary by its share (80%) of the intercompany gain. Under this method, the amount of income reported on the books of the parent is its share of the subsidiary's reported income that has been realized in transactions with third parties.

In the year of the intercompany sale, a workpaper entry is necessary to eliminate the \$200,000 gain reported by S Company and to reduce the land balance from the \$500,000

**LO 1** Financial reporting objectives—nondepreciable property.

recorded on the books of P Company to its \$300,000 cost to the affiliated group. Both objectives are accomplished in one workpaper entry as follows:

| Workpaper Entry in Year of Intercompany Sale |         |         |
|--|---------|---------|
| Gain on Sale of Land                         | 200,000 |         |
| Land   |         | 200,000 |

If S Company reported \$900,000 in income, the noncontrolling interest in consolidated net income is \$140,000 [ $.20 \times (\$900,000 - \$200,000) = \$140,000$ ]. The noncontrolling interest in consolidated income is based on the amount of income of S Company that was realized in transactions with third parties (\$900,000 in reported income less \$200,000 unrealized gain on sale of land). Stated another way, the noncontrolling interest in consolidated income is based on the amount of income from the subsidiary included in consolidated net income (after all workpaper adjustments). Since \$200,000 of subsidiary income is excluded from consolidated net income, the noncontrolling interest in consolidated income is reduced by \$40,000 ( $.2 \times \$200,000$ ).

In subsequent years, so long as P Company owns the land, it will be reported in the *statements of P Company* at the intercompany selling price of \$500,000. However, in the *consolidated balance sheet*, the land should continue to be reported at its cost to the affiliated group of \$300,000. Since in the year of the sale consolidated income was reduced by \$200,000, the controlling interest in net income and consolidated retained earnings were reduced by \$160,000 ( $.8 \times \$200,000$ ) in that year. The workpaper entry necessary in all subsequent years, until the land is disposed of by P Company, is as follows:

| Workpaper Entry in Subsequent Years   |         |         |                         |         |
|---------------------------------------|---------|---------|-------------------------|---------|
| Cost or Partial Equity                |         |         | Complete Equity         |         |
| Beginning Retained Earnings—P Company | 160,000 |         | Investment in S Company | 160,000 |
| Beginning NCI                         | 40,000  |         | Beginning NCI           | 40,000  |
| Land                                  |         | 200,000 | Land                    | 200,000 |

Because the subsidiary is the intercompany seller, the \$200,000 of unrealized profit is allocated between the controlling interest ( $\$160,000 = .8 \times \$200,000$ ) and the noncontrolling interest ( $\$40,000 = .2 \times \$200,000$ ) based on their percentage interests in the selling affiliate. As in Chapter 6, the workpaper procedure to adjust the controlling interest (consolidated retained earnings) is to debit the beginning retained earnings of the parent company (or investment account, if P Company uses the complete equity method). The workpaper procedure to adjust the noncontrolling interest is to debit the beginning NCI in equity. *If the intercompany seller had been the parent (downstream sale), the entire \$200,000 would go to the controlling interest, resulting in a \$200,000 debit to the beginning retained earnings of the parent company under the cost or partial equity method.*

If and when the land is sold by P Company to a nonaffiliate, P company will use the \$500,000 carrying value of the land on its books to calculate any gain or loss. For example, if P Company sells the land it purchased for \$500,000 from S Company to an outside party for \$550,000, P company will record a gain on the sale of \$50,000 ( $\$550,000 - \$500,000$ ). However, the cost of the land to the affiliated group is \$300,000, and the gain to the affiliated group confirmed by its sale for \$550,000 to a nonaffiliate is \$250,000 ( $\$550,000 - \$300,000$ ). The workpaper entry to adjust the \$50,000 gain reported by P Company to the \$250,000 gain realized on the sale by the affiliated group is as follows:

| Cost or Partial Equity                |         |         | Complete Equity         |         |
|---------------------------------------|---------|---------|-------------------------|---------|
| Beginning Retained Earnings—P Company | 160,000 |         | Investment in S Company | 160,000 |
| Beginning NCI                         | 40,000  |         | Beginning NCI           | 40,000  |
| Gain on Sale of Land                  |         | 200,000 | Gain on Sale of Land    | 200,000 |

The debits are the same as if the sale to outsiders had not occurred. In the year of the sale of the land to outsiders, it is still necessary to adjust *beginning* consolidated retained

earnings (or the investment account, under the complete equity method) and beginning NCI. This entry under the cost and partial equity methods serves to equate *beginning* consolidated retained earnings in the year of sale with the consolidated retained earnings reported at the end of the prior year. Under the complete equity method, as previously stated, the retained earnings of the parent company always equals the correct consolidated retained earnings; thus no adjustment is needed. Instead a debit to the investment account facilitates the elimination of the investment account.<sup>2</sup>

In the year of the sale of the land to outsiders, consolidated net income is increased by \$200,000, and consolidated net income, consolidated retained earnings, and noncontrolling interest in consolidated income are increased accordingly.

To the consolidated entity, the sales price (to third parties) of \$550,000 exceeds the cost (to the consolidated entity) of \$300,000, resulting in a gain of \$250,000 to be included in consolidated income in the year of the sale to a third party.

At the end of the year of the sale to outsiders, the amount of *cumulative* profit on the sale of the land recorded on the books of the affiliates and the amount of profit on the sale of the land recognized in the consolidated financial statements are equal, as shown below.

*Cumulative Profit Recorded on the Individual Books of Affiliates*

|                                   |                  |                            |
|-----------------------------------|------------------|----------------------------|
| S Company on sale to P Company    | \$200,000        | (year sold to affiliate)   |
| P Company on sale to nonaffiliate | <u>50,000</u>    | (year sold to third party) |
| Total                             | <u>\$250,000</u> |                            |

*Profit Reported in Consolidated Income Statement in Year of Sale*

|                                     |                  |                            |
|-------------------------------------|------------------|----------------------------|
| Reported by P Company               | \$ 50,000        | (year sold to third party) |
| Workpaper adjustment                | <u>200,000</u>   | (year sold to third party) |
| Reported in consolidated net income | <u>\$250,000</u> |                            |

Retained earnings is thus correct in future years without adjustment, and no further workpaper entries relating to the intercompany sale of land are necessary in subsequent periods.

## 7.2 INTERCOMPANY SALES OF DEPRECIABLE PROPERTY (MACHINERY, EQUIPMENT, AND BUILDINGS)

### Realization through Usage

**LO 4** Intercompany gain realized through usage.

A firm may sell property or equipment to an affiliate for a price that differs from its book value. In the year of the sale, the amount of intercompany gain (loss) recorded by the selling affiliate must be eliminated in consolidation. After the sale, the purchasing affiliate will calculate depreciation on the basis of its cost, which is the intercompany selling price. The depreciation recorded by the purchasing affiliate will, therefore, be excessive (deficient) from a consolidated point of view and will also require adjustment.

From the view of the consolidated entity, the intercompany gain (loss) is considered to be realized from the use of the property or equipment in the generation of revenue. Because such use is measured by depreciation, the recognition of the realization of intercompany profit (loss) is accomplished through depreciation adjustments.

**LO 3** Recognition of gains (losses) through depreciation adjustments.

To contrast the intercompany sale of a depreciable asset to the intercompany sale of land, consider the following. Parental Guidance Company sells property with a book value of \$2,000 to its fully owned subsidiary, Subservient Recipient Company, for \$5,000.

<sup>2</sup> The investment account is reduced on the parent's books at the same time that the unrealized income is deducted from the parent's income under the complete equity method. Thus, the usual workpaper entry to eliminate the investment account against the underlying subsidiary equity accounts eliminates an amount greater than the actual beginning investment account balance. That entry, combined with the entry above, however, will eliminate the investment to exactly zero.

Assume first that the property is nondepreciable land. When will the \$3,000 gain be recognized in the consolidated financial statements?

The answer is: not until it is sold to outsiders. If the property is sold immediately by Subservient Recipient Company for \$5,000, the \$3,000 gain will be recognized immediately by the consolidated entity. If, on the other hand, it isn't sold until year 4, the gain will not be realized to the consolidated entity until year 4. Now suppose instead that the property (with a book value of \$2,000) is depreciable equipment, with a remaining life of three years. Again it is sold to Subservient Recipient Company for \$5,000. When will the \$3,000 gain be recognized in the consolidated financial statements?

The answer might at first seem to be: not until it is sold to outsiders. But consider the combined effect on consolidated income of the intercompany sale and the depreciation adjustments needed on the consolidated workpaper. On the books of Subservient Recipient Company, depreciation expense is based on a purchase price of \$5,000 (straight-line depreciation over three years). But to the consolidated entity, depreciation expense should be based on the book value of \$2,000 (also over three years). The difference is \$1,000 per year (equal to the \$3,000 gain on the intercompany sale spread over three years). Thus, as the depreciation expense is adjusted downward, consolidated income is increased to realize a portion of the gain each year. The depreciation adjustment in such a case is often referred to as gain or revenue *realization through usage*.

When there have been intercompany sales of depreciable property, workpaper entries are necessary to accomplish the following financial reporting objectives in the consolidated financial statements:

**LO 2** Financial reporting objectives—depreciable property.

- To report as gains or losses in the consolidated income statement only those that result from the sale of depreciable property *to parties outside the affiliated group*.
- To present property in the consolidated balance sheet at *its cost to the affiliated group*.
- To present accumulated depreciation in the consolidated balance sheet based on the *cost to the affiliated group* of the related assets.
- To present depreciation expense in the consolidated income statement based on the *cost to the affiliated group* of the related assets.

Workpaper procedures to accomplish these objectives are presented next. For firms using the cost or partial equity method, an additional objective is to equate beginning consolidated retained earnings with the amount of consolidated retained earnings reported at the end of the prior reporting. For firms using the complete equity method, this final objective is not necessary because the parent's retained earnings already reflects all adjustments accurately. For upstream sales, the entries also serve to equate current period beginning NCI and prior period ending NCI.

## Illustration of Basic Workpaper Elimination Entries—Downstream Sales

The basic workpaper eliminating entries required because of intercompany sales of depreciable property are illustrated using the following simplifying assumptions. We first illustrate a downstream sale of depreciable property; the parent is the intercompany seller. Upstream sales are illustrated later in the chapter.

1. On January 1, 2014, P Company sells to S Company, a 90% owned subsidiary, equipment with a book value of \$750,000 (original cost \$1,350,000 and accumulated depreciation of \$600,000) for \$900,000.
2. On the date of the sale, the equipment has an estimated remaining useful life of three years, has no residual value, and is depreciated using the straight-line method.
3. No other equipment is owned by S Company or P Company.

The entries on the books of P Company and S Company to record the intercompany sale are summarized in general journal form shown on the next page.

| P Company Books           |         |           |
|---------------------------|---------|-----------|
| Cash                      | 900,000 |           |
| Accumulated Depreciation  | 600,000 |           |
| Equipment                 |         | 1,350,000 |
| Gain on Sale of Equipment |         | 150,000   |

| S Company Books          |         |         |
|--------------------------|---------|---------|
| Equipment                | 900,000 |         |
| Cash                     |         | 900,000 |
| Depreciation Expense     | 300,000 |         |
| Accumulated Depreciation |         | 300,000 |

### Workpaper Entries—Year of the Intercompany Sale

Balances on December 31, 2014, of the accounts of the affiliated companies affected by these transactions are presented in Illustration 7-1. Workpaper entries in the year of the sale are presented below in general journal form.

|   |         |         |
|---|---------|---------|
| (1) Equipment (\$1,350,000 – \$900,000)   | 450,000 |         |
| Gain on Sale of Equipment   | 150,000 |         |
| Accumulated Depreciation  |         | 600,000 |
| To eliminate the intercompany gain and restore equipment to its original cost to the consolidated entity (along with its accumulated depreciation at the point of the intercompany sale). |         |         |

P Company recorded a gain of \$150,000 on the intercompany sale and S Company recorded the equipment at \$900,000. From the point of view of the consolidated entity, however, no gain should be reported on the intercompany sale, and equipment should be reported at cost to the affiliated group. The effect of this entry is to decrease consolidated net income by \$150,000. It also restores equipment and accumulated depreciation to their amounts prior to the intercompany sale. Without this entry, equipment would be reported in the consolidated balance sheet at its intercompany selling price of \$900,000 instead of its historical cost of \$1,350,000. Further, without the entry, accumulated depreciation on the equipment would commence from the point of the intercompany sale instead of from the original acquisition by the consolidated entity.

|  |        |        |
|--|--------|--------|
| (2) Accumulated Depreciation   | 50,000 |        |
| Depreciation Expense   |        | 50,000 |
| To adjust depreciation expense to the correct amount to the consolidated entity, thus realizing a portion of the gain through usage. |        |        |

The purchasing affiliate (S Company) will record depreciation in the amount of \$300,000 (\$900,000/3 years) each year. From the point of view of the consolidated entity,

#### ILLUSTRATION 7-1

##### Partial Consolidated Statements Workpaper, Elimination of Intercompany Sale of Equipment, Year of Intercompany Sale, December 31, 2014

| Income Statement          | P Company | S Company | Eliminations |             | Consolidated Balances |
|---------------------------|-----------|-----------|--------------|-------------|-----------------------|
|                           |           |           | Dr.          | Cr.         |                       |
| Gain on Sale of Equipment | (150,000) |           | (1) 150,000  |             |                       |
| Depreciation Expense      |           | 300,000   |              | (2) 50,000  | 250,000               |
| <b>Balance Sheet</b>      |           |           |              |             |                       |
| Equipment                 |           | 900,000   | (1) 450,000  |             | 1,350,000             |
| Accumulated Depreciation  |           | (300,000) | (2) 50,000   | (1) 600,000 | (850,000)             |

(1) To eliminate the intercompany gain and restore equipment to its original cost to the consolidated entity.

(2) To adjust depreciation expense to the correct amount to the consolidated entity.

only \$250,000 (\$750,000/3 years) in depreciation on the equipment should be recognized. The effect of entry (2) is to increase consolidated net income by \$50,000 and thus treat an equivalent amount of intercompany profit as realized through the use of the equipment.

The net effect of entries (1) and (2) is to reduce consolidated income by \$100,000 (the original \$150,000 of intercompany gain recorded by P Company for the sale less the \$50,000 of intercompany gain that is considered realized during the year through the utilization of the equipment by S Company).

### Workpaper Entries—Years Subsequent to the Year of the Intercompany Sale

Balances of the affected accounts of the affiliated companies on December 31, 2015, are presented in Illustration 7-2. In years subsequent to the year of the intercompany sale, the basic workpaper elimination entries related to the intercompany sale are presented below. As indicated, some entries differ slightly depending on whether the firm accounts for its investment using the cost, partial equity, or complete equity method. In the context of this chapter, the cost and partial equity entries are the same, while the complete equity entries differ with one respect; that is, entries to Beginning Retained Earnings—P Company are replaced by entries to Investment in S Company under the complete equity method.

#### 2015 Workpaper Entries

| Cost or Partial Equity   |         | Complete Equity          |         |
|--|---------|--------------------------|---------|
| (1) Equipment  | 450,000 | Equipment                | 450,000 |
| Beginning Retained Earnings—P Company  | 150,000 | Investment in S          | 150,000 |
| Accumulated Depreciation   | 600,000 | Accumulated Depreciation | 600,000 |
| To eliminate the prior period intercompany gain and restore equipment to its original cost to the consolidated entity (along with its accumulated depreciation at the point of the intercompany sale). |         |                          |         |

In entry (1), the first entry from the prior year (2014) is repeated, with the debit to gain now replaced by a debit to the beginning retained earnings of the parent under the cost or partial equity methods. The debit to the equipment account and the credit to the accumulated depreciation account are for the same amount each year. This entry is necessary again (with any income statement accounts, e.g., gain, replaced by beginning retained earnings in subsequent years) because workpaper entries are not posted. If P Company uses the complete equity method, the debit to Beginning Retained Earnings—P Company is not needed, as the prior year income was adjusted for all unrealized amounts. The debit in this workpaper entry is replaced by a debit to the investment account to facilitate its elimination. Later in this chapter, both methods are illustrated in their entirety.

#### ILLUSTRATION 7-2

#### Partial Consolidated Statements Workpaper, Elimination of Unrealized Profit on Intercompany Sale of Equipment, Year Subsequent to Intercompany Sale, December 31, 2015

|  | P Company | S Company | Eliminations |             | Consolidated Balances |
|--|-----------|-----------|--------------|-------------|-----------------------|
|  |           |           | Dr.          | Cr.         |                       |
| <b>Income Statement</b>                        |           |           |              |             |                       |
| Depreciation Expense                           |           | 300,000   |              | (2) 50,000  | 250,000               |
| <b>Retained Earnings Statement</b>             |           |           |              |             |                       |
| 1/1 Retained Earnings—P Company (Consolidated) | 2,000,000 |           | (1) 150,000  | (2) 50,000  | 1,900,000             |
| <b>Balance Sheet</b>                           |           |           |              |             |                       |
| Equipment                                      |           | 900,000   | (1) 450,000  |             | 1,350,000             |
| Accumulated Depreciation                       |           | (600,000) | (2) 100,000  | (1) 600,000 | (1,100,000)           |

(1) To eliminate the intercompany gain and restore equipment to its original cost to the consolidated entity.  
 (2) To adjust depreciation expense to the correct amount to the consolidated entity.

| 2015 Workpaper Entries  |         |                                     |         |
|---|---------|-------------------------------------|---------|
| Cost or Partial Equity  |         | Complete Equity                     |         |
| (2) Accumulated Depreciation  | 100,000 | Accumulated Depreciation            | 100,000 |
| Depreciation Expense (current year)   | 50,000  | Depreciation Expense (current year) | 50,000  |
| Beginning Retained Earnings—P Company (prior year)                                    | 50,000  | Investment in S                     | 50,000  |
| To adjust depreciation for the current and prior year on equipment sold to affiliate. |         |                                     |         |

The explanation for entry (2) is the same as the preceding year with two modifications. Accumulated depreciation is adjusted for two years now, and the income statement account “depreciation expense” from the first year is now replaced by a credit to beginning retained earnings of P Company (or by a credit to Investment, for firms using the complete equity method).

As a result of these entries, consolidated depreciation expense (\$250,000), consolidated equipment (\$1,350,000), and consolidated accumulated depreciation (\$1,100,000) are all based on the cost of the equipment to the affiliated companies. The net effect of these workpaper entries is to increase consolidated income by \$50,000, which is the amount of gain recorded on the intercompany sale that is considered realized from a consolidated point of view through the utilization of the equipment during the current year.

The entries in the December 31, 2016, consolidated statements workpaper to eliminate the effects of the intercompany sale are as follows:

| 2016 Workpaper Entries   |         |                                     |         |
|--|---------|-------------------------------------|---------|
| Cost or Partial Equity   |         | Complete Equity                     |         |
| (1) Equipment  | 450,000 | Equipment                           | 450,000 |
| Beginning Retained Earnings—P Company  | 150,000 | Investment in S                     | 150,000 |
| Accumulated Depreciation   | 600,000 | Accumulated Depreciation            | 600,000 |
| To reduce consolidated retained earnings for gain on intercompany sale and to restore equipment to its original cost to the consolidated entity (along with its accumulated depreciation at the point of the intercompany sale). |         |                                     |         |
| (2) Accumulated Depreciation (\$50,000 × 3 year)   | 150,000 | Accumulated Depreciation            | 150,000 |
| Depreciation Expense (current year)  | 50,000  | Depreciation Expense (current year) | 50,000  |
| Beginning Retained Earnings—P Company (prior years)  | 100,000 | Investment in S (prior years)       | 100,000 |
| To reverse amount of excess depreciation recorded during current year and to recognize amounts of intercompany gain realized in current and prior periods through usage (two prior years of depreciation expense since sale).    |         |                                     |         |

Over the life of the equipment, the amount of gain recognized in the consolidated income statement will be the same as the amount of gain recorded by the selling affiliate, and no further adjustments will be necessary in the consolidated statements workpaper. The recognition of the gain on the sale of the equipment on the books of the selling affiliate and in the consolidated income statement may be compared as follows:

|                                    | <i>On Books of<br/>Selling Affiliate</i> | <i>In Consolidated<br/>Income Statement</i> |
|------------------------------------|--|---|
| Gain on Sale of Equipment—2012     | \$150,000                                |   |
| Reduction of Depreciation Expense: |  |   |
| 2014                               |  | \$ 50,000                                   |
| 2015                               |  | 50,000                                      |
| 2016                               |  | 50,000                                      |
|                                    | <u>\$150,000</u>                         | <u>\$150,000</u>                            |

## Determination of Noncontrolling Interest

**LO 6** Subsidiary vs. parent as the seller.

**Subsidiary as Intercompany Seller (Upstream Sale)** In the preceding example, the selling affiliate was the parent company (downstream sale). Accordingly, even though 100% of the unrealized intercompany gain was eliminated, no modification in the calculation of the noncontrolling interest in consolidated income or consolidated net assets was necessary. Had the selling affiliate been a less than wholly owned subsidiary (upstream sale), however, workpaper modifications in the determination of the noncontrolling interest would have been necessary if the controlling and noncontrolling interests were to be adjusted in proportion to their interest in the amount of unrealized intercompany profit eliminated.

**LO 7** Computing the noncontrolling interest.

Intercompany sales of property, plant, and equipment, as in the case of intercompany inventory sales, necessitate adjustments to the calculation of the distribution of income to the controlling and noncontrolling interests. Whether the adjustments directly affect the noncontrolling interest (or only the controlling interest) depends on *who is the intercompany seller*. If the intercompany seller is the subsidiary, it is the subsidiary's income that needs adjustment, hence directly affecting the noncontrolling interest, as shown in Illustration 7-3.

Procedurally, the steps needed differ slightly between the year of the intercompany sale and subsequent years. To calculate the noncontrolling interest in consolidated income, begin as always with the subsidiary's reported income. As always, subtract any excess depreciation, amortization, or impairment charges related to differences between implied and book values. In the year of the intercompany upstream sale (subsidiary is the intercompany seller), adjust the subsidiary's reported income by subtracting the unrealized gain

### ILLUSTRATION 7-3

#### Calculation of the Noncontrolling Interest in Consolidated Income, Upstream Sales of Equipment

| Noncontrolling Interest in Consolidated Income—Year of Sale—2014            |         |   |           |
|---|---------|---|-----------|
| Unrealized gain on upstream sales of equipment                              | 150,000 | Net income reported by S Company                      | \$300,000 |
| Amortization and depreciation of difference between implied and book value  | 0       | Depreciation adjustment (gain realized through usage) | 50,000    |
|   |         | Subsidiary Income included in Consolidated Income     | \$200,000 |
|   |         | Noncontrolling Ownership percentage interest          | 10%       |
|   |         | Noncontrolling Interest in Consolidated Income        | \$ 20,000 |
| Noncontrolling Interest in Consolidated Income—Year Subsequent to Sale—2015 |         |   |           |
| Amortization and depreciation of difference between implied and book value  | 0       | Net income reported by S Company                      | \$175,000 |
|   |         | Depreciation adjustment (gain realized through usage) | 50,000    |
|   |         | Subsidiary Income included in Consolidated Income     | \$225,000 |
|   |         | Noncontrolling Ownership percentage interest          | 10%       |
|   |         | Noncontrolling Interest in Consolidated Income        | \$ 22,500 |
| Noncontrolling Interest in Consolidated Income—Year Subsequent to Sale—2016 |         |   |           |
| Amortization and depreciation of difference between implied and book value  | 0       | Net income reported by S Company                      | \$200,000 |
|   |         | Depreciation adjustment (gain realized through usage) | 50,000    |
|   |         | Subsidiary Income included in Consolidated Income     | \$250,000 |
|   |         | Noncontrolling Ownership percentage interest          | 10%       |
|   |         | Noncontrolling Interest in Consolidated Income        | \$ 25,000 |

on the intercompany sale (or adding an unrealized loss, as appropriate). Next, subtract (add) the portion of the intercompany gain (loss) that is considered *realized through usage* (i.e., the depreciation adjustment for the year of the sale). This is shown in Illustration 7-3 for the year 2014 in t-account form.

For example, assume that S Company is 90% owned, was the selling affiliate in the previous illustration, and reports \$300,000 in income (including the \$150,000 intercompany gain) in the year 2014, \$175,000 of income in 2015, and \$200,000 in 2016. The calculation of the noncontrolling interest in consolidated income in each of the respective years is presented in Illustration 7-3.

The calculations are the same in subsequent years except that the intercompany gain (or loss) does not need to be subtracted (or added) since it is not included in the subsidiary's reported income in those years. Realization through usage, however, occurs as long as the property is being used by the intercompany buyer (the parent, in the case of an upstream sale). Note, however, that the *adjustment for realization through usage* appears on the t-account to compute the *noncontrolling interest* in the case of upstream sales.

The adjustments shown in Illustration 7-3 are needed only if we assume the subsidiary is the intercompany seller. With this assumption, adjustments are also needed to the workpaper eliminating/adjusting entries presented in the previous section of this chapter. Specifically, the workpaper entries to Beginning Retained Earnings—P Company in the preceding example for firms using the cost or partial equity method are replaced by entries to *both* Beginning Retained Earnings—P Company (controlling interest percentage) and Beginning NCI in equity (noncontrolling interest percentage). No other changes are needed. If P Company uses the complete equity method, any debits or credits to Beginning Retained Earnings—P Company are not needed, as prior years' income is adjusted on the books of the parent for unrealized gains and for any amount realized through usage. Thus any debits or credits to beginning retained earnings of the parent in workpaper entries are replaced by debits or credits to the investment account, once more facilitating its elimination.

If S Company were the selling affiliate, entry (1) in Illustration 7-2 for 2015 would be modified as follows in order to adjust the controlling and the noncontrolling interests in net assets at the beginning of the year:

#### Upstream Sale

| Cost or Partial Equity  |         | Complete Equity                 |         |
|---|---------|---------------------------------|---------|
| (1) Equipment   | 450,000 | Equipment                       | 450,000 |
| Beginning Retained Earnings—P Company   | 135,000 | Investment in S Company         | 135,000 |
| Beginning NCI (.10 × \$150,000)   | 15,000  | Beginning NCI (.10 × \$150,000) | 15,000  |
| Accumulated Depreciation  | 600,000 | Accumulated Depreciation        | 600,000 |
| To reduce the controlling and noncontrolling interests for their respective shares of the unrealized intercompany gain at the date of the intercompany sale, and restore equipment and accumulated depreciation to original amounts to the consolidated entity. |         |                                 |         |

#### IN THE NEWS

For the fiscal year 2005, Fleetwood Enterprises, Inc. eliminated \$128 million

of intercompany sales from consolidated revenues. Moreover, it was difficult to compare the performance of the Housing Group because the company made \$27 million of sales to its own retail stores in the fourth quarter last year in which a majority of these stores were closed.<sup>3</sup>

As explained in the discussion of unrealized intercompany profit in inventory, as a matter of workpaper procedure, the noncontrolling interest in net assets (or equity) is adjusted for intercompany gains (losses) by debiting (decrease in noncontrolling interest) or crediting (increase in noncontrolling interest) the beginning NCI balance.

To reduce repetition and conserve space, we do not present the three methods (cost, partial equity, and complete equity) in standalone sections in Chapters 7 through 10 to the same extent as in earlier chapters. In Chapters 7 and 10, the cost and partial equity methods are quite similar (under the assumptions in our presentation), while the complete equity method is different. In Chapters 8 and 9, in contrast, the partial and complete equity methods are similar, while the cost method is different. Thus, in the following section, we combine the presentation of the cost and partial equity methods. Worksheets are presented separately.

<sup>3</sup> PRNewswire—FirstCall via COMTEX News Network, Riverside, California, 5/4/06.

## 7.3 CONSOLIDATED STATEMENTS WORKPAPER—COST AND PARTIAL EQUITY METHODS

### Subsidiary Is Intercompany Seller (Upstream Sale)

COST

PARTIAL

Assume that P Company acquires an 85% interest in S Company for \$1,190,000 in 2012, when the retained earnings and capital stock of S Company amount to \$400,000 and \$1,000,000, respectively. The retained earnings of S Company on January 1, 2014, are \$666,000. On January 1, 2014, S Company sells P Company equipment with a book value of \$500,000 (original cost of \$800,000 and accumulated depreciation of \$300,000) for \$600,000. On January 1, 2014, the equipment has an estimated remaining useful life of five years and is depreciated using the straight-line method. S Company will record a gain of \$100,000 on the sale of the equipment, and each year P Company will record depreciation that is \$20,000  $[(\$600,000 - \$500,000)/5 \text{ years}]$  greater than depreciation based on the cost of the equipment to the consolidated group. Consolidated statements workpapers for the years ended December 31, 2014, and December 31, 2015, are presented in Illustrations 7-4A and 7-5A, respectively, assuming the use of the *cost* method by P Company to account for its investment in S Company. Consolidated statements workpapers for the years ended December 31, 2014, and December 31, 2015, are presented in Illustrations 7-4B and 7-5B, respectively, assuming the use of the *partial equity* method by P Company to account for its investment in S Company.

**LO 6** Workpaper entries—upstream sales.

The balances reported by the parent company in income, in retained earnings, and in the investment account differ depending on the method used by the parent company to record its investment. As illustrated in prior chapters, however, the method used by the parent company to record its investment has no effect on the *consolidated* balances.

Also as illustrated in earlier chapters, when the parent company records its investment using the partial equity method, a workpaper entry to reverse the effect of parent company entries during the year for subsidiary dividends and income replaces the cost method entries to establish reciprocity (convert to equity) and to eliminate dividend income. However, as demonstrated in Chapters 5 and 6, the workpaper entries to allocate the difference between implied and book value, to record additional amortization, depreciation, and/or impairment on differences between market and book values, to eliminate intercompany sales, and to eliminate unrealized intercompany profit are the same regardless of whether the investment is recorded using the cost method or the partial equity method. The workpapers entries to eliminate the effects of intercompany sales of equipment are also the same when the parent uses the partial equity or the cost method. Therefore, to conserve space and avoid excessive repetition, we discuss the workpaper entries for the cost and partial equity methods together in the following section. When the investment is recorded using the complete equity method, however, the workpaper entries differ slightly, as illustrated in the next section.

### Consolidated Statements Workpaper Entries—December 31, 2014 (Year of Intercompany Sale)

COST

PARTIAL

Workpaper entries in Illustrations 7-4A and 7-4B are presented in general journal form as follows:

|  |         |         |
|--|---------|---------|
| (1) Investment in S Company  | 226,100 |         |
| Beginning Retained Earnings—P Company  |         | 226,100 |
| To convert to equity/establish reciprocity $[\.85 \times (\$666,000 - \$400,000) = \$226,100]$ . |         |         |

Entry (1) above is needed only for firms using the cost method to account for their investments in the subsidiary. This distinction is particularly easy to remember if the entry is thought of as the entry to convert to equity. If the parent is already using the equity method, there is no need to convert to equity. Thus, in Illustration 7-4B, entry (1) above is replaced with an entry eliminating the equity in subsidiary income of \$122,400  $(85\% \times \$144,000)$

against the investment account. Unless noted, the following workpaper entries are the same whether the parent uses the cost method or the partial equity method.

|     |  |           |           |
|-----|--|-----------|-----------|
| (2) | Gain on Sale of Equipment  | 100,000   |           |
|     | Property and Equipment (\$800,000 – 600,000)   | 200,000   |           |
|     | Accumulated Depreciation   |           | 300,000   |
|     | To eliminate the unrealized gain recorded on intercompany sale of equipment (\$100,000) and restore equipment to its original cost (and accumulated depreciation to its balance at the date of the intercompany sale). |           |           |
| (3) | Accumulated Depreciation   | 20,000    |           |
|     | Depreciation Expense   |           | 20,000    |
|     | To adjust depreciation on equipment sold to affiliate, thus realizing a portion of the gain through usage (\$100,000/5 years = \$20,000).  |           |           |
| (4) | Beginning Retained Earnings—S Company  | 666,000   |           |
|     | Capital Stock—S Company  | 1,000,000 |           |
|     | Investment in S Company (\$1,190,000 + \$226,100)  |           | 1,416,100 |
|     | NCI in Equity [\$210,000 + .15 (\$666,000 – \$400,000)]  |           | 249,000   |
|     | To eliminate investment account against underlying equity accounts of S Company, and recognize NCI.  |           |           |

Since the selling affiliate is a partially owned subsidiary (upstream sale), the calculation of the noncontrolling interest in consolidated net income is modified by subtracting the amount of the gain recognized by the subsidiary and adding the amount of the gain considered to be realized (through depreciation) to the reported net income of the subsidiary [ $.15 \times (\$144,000 - \$100,000 + \$20,000) = \$9,600$ ].

#### Noncontrolling Interest in Consolidated Net Income

|   |         |   |                 |
|---|---------|---|-----------------|
| Unrealized gain on intercompany (upstream) sale | 100,000 | Internally generated income of S Company              | \$144,000       |
|   |         | Gain realized through usage (depreciation adjustment) | <u>20,000</u>   |
|   |         | Adjusted income of subsidiary                         | \$ 64,000       |
|   |         | Noncontrolling percentage                             | × 15%           |
|   |         | Noncontrolling interest in income                     | <u>\$ 9,600</u> |

Note that the \$9,600 appears in Illustration 7-4A as the noncontrolling interest in income.

If the sale of the equipment had been *downstream* rather than *upstream*, the amount of subsidiary income included in consolidated net income would not be affected by the workpaper entries related to unrealized intercompany gain and no adjustment would be necessary in the calculation of the noncontrolling interest in consolidated net income. Instead the *controlling* interest would be affected as indicated in bold type in the following t-account:

#### Controlling Interest in Consolidated Net Income

| 12/31 Noncontrolling Interest               |                    |                                      |                  |                  |                         | <u>259,500</u>        |
| Total Liabilities and Equity                | <u>5,470,000</u>   | <u>2,510,000</u>                     | <u>2,212,100</u> | <u>2,212,100</u> |                         | <u>6,710,000</u>      |

\*  $.15 \times (\$144,000 - \$100,000 + \$20,000) = \$9,600$ .

\*\*  $\$210,000 + .15 \times (\$666,000 - \$400,000) = \$249,900$ .

(1) To convert to equity/establish reciprocity [ $.85 \times (\$666,000 - \$400,000) = \$226,100$ ].

(2) To eliminate the unrealized gain recorded on intercompany sale of equipment (\$100,000) and restore equipment to its original cost (and accumulated depreciation to its balance at the date of the intercompany sale).

(3) To adjust depreciation on equipment sold to affiliate, thus realizing a portion of the gain through usage ( $\$100,000/5 \text{ years} = \$20,000$ ).

(4) To eliminate investment account against underlying equity accounts of S Company and create noncontrolling interest account.

\*  $.15 \times (\$144,000 - \$100,000 + \$20,000) = \$9,600$ .\*\* The investment account equals  $\$1,190,000 + 85\%$  of the increase in S Company's Retained Earnings from the date of acquisition to the beginning of the year  $(\$666,000 - 400,000)$  plus the current period's equity in subsidiary income  $(\$122,400)$ .\*\*\*  $\$210,000 + .15 \times (\$666,000 - \$400,000) = \$249,900$ .

(1) To eliminate equity in subsidiary income and intercompany dividends, if any.

(2) To eliminate the unrealized gain recorded on intercompany sale of equipment and restore equipment to its original cost (and accumulated depreciation to its balance at the date of the intercompany sale).

(3) To adjust depreciation on equipment sold to affiliate, thus realizing a portion of gain through usage  $(\$100,000/5 \text{ years} = \$20,000)$ .

(4) To eliminate investment account against the underlying equity accounts of S Company and create noncontrolling interest account.

## Consolidated Statements Workpaper Entries—December 31, 2015 (Year Subsequent to Intercompany Sale)

Workpaper entries in Illustrations 7-5A and 7-5B are presented in general journal form for the year subsequent to the intercompany sale as follows:

|  |         |         |
|--|---------|---------|
| (1) Investment in S Company  | 348,500 |         |
| Beginning Retained Earnings—P Company  |         | 348,500 |
| To convert to equity/establish reciprocity [ $.85 \times (\$810,000 - \$400,000)$ ]. |         |         |

As in the previous year, entry (1) above is needed only for firms using the cost method to account for their investments in the subsidiary. If the parent is already using the equity method, there is no need to convert to equity. In Illustration 7-5B, entry (1) is replaced by an entry once again eliminating equity in subsidiary income against the investment account.

|   |         |         |
|---|---------|---------|
| (2) Beginning Retained Earnings—P Company   |         |         |
| (100,000 $\times$ .85)  | 85,000  |         |
| Beginning NCI   |         |         |
| (100,000 $\times$ .15)  | 15,000  |         |
| Property and Equipment (800,000 – 600,000)  | 200,000 |         |
| Accumulated Depreciation  |         | 300,000 |
| To reduce the controlling and noncontrolling interests for their shares of unrealized intercompany gain (\$100,000), and to restore equipment and accumulated depreciation to their original balances at the date of the intercompany sale. |         |         |

COST

PARTIAL

|   |        |        |
|---|--------|--------|
| (3) Accumulated Depreciation  | 40,000 |        |
| Depreciation Expense (current year)   |        | 20,000 |
| Beginning Retained Earnings—P Company   |        |        |
| (20,000 $\times$ .85)   |        | 17,000 |
| Beginning NCI   |        |        |
| (20,000 $\times$ .15)   |        | 3,000  |
| To reverse amount of excess depreciation recorded during current year and prior year and to recognize intercompany gain realized through usage. |        |        |

|  |           |           |
|--|-----------|-----------|
| (4) Beginning Retained Earnings—S Company  | 810,000   |           |
| Capital Stock—S Company  | 1,000,000 |           |
| Investment in S Company  |           |           |
| (\$1,190,000 + \$348,500)  |           | 1,538,500 |
| NCI (210,000 + .15 (810,000 – 400,000))  |           | 271,500   |
| To eliminate investment account against the underlying equity accounts of S Company. |           |           |

The noncontrolling interest recognized in entry (4) above is calculated as the sum of the NCI at acquisition plus 15% of the increase in subsidiary retained earnings from acquisition to the beginning of the current year. The noncontrolling interest in consolidated income is calculated after adding the portion of the gain considered realized during the year to the net income reported by the subsidiary [ $.15 \times (\$162,000 + \$20,000) = \$27,300$ ].

### Noncontrolling Interest in Income (year subsequent to sale)

|   |                  |
|---|------------------|
| Internally generated income of S Company              | \$162,000        |
| Gain realized through usage (depreciation adjustment) | 20,000           |
|   | <u>182,000</u>   |
| Adjusted income of subsidiary                         | \$182,000        |
| Noncontrolling percentage                             | $\times 15\%$    |
| Noncontrolling interest in income                     | <u>\$ 27,300</u> |

\*  $.15 \times (\$162,000 + \$20,000) = \$27,300$ .

\*\*  $\$210,000 + .15 \times (\$810,000 - \$400,000) = \$271,500$ .

(1) To eliminate equity in subsidiary income and intercompany dividends, if any.

(2) To reduce controlling and noncontrolling interests for their shares of unrealized intercompany gain and to restore equipment and accumulated depreciation to their original balances.

(3) To reverse amount of excess depreciation recorded during current and prior year and to recognize intercompany gain realized through usage.

(4) To eliminate investment account and create noncontrolling interest account.

**ILLUSTRATION 7-6****Calculation of the Noncontrolling Interest in Consolidated Net Assets**

|   |           |                |
|---|-----------|----------------|
| Capital Stock—S Company   |           | \$1,000,000    |
| Realized Retained Earnings—S Company                                      |           |                |
| Reported Retained Earnings  | \$972,000 |                |
| Unrealized Intercompany Profit on 12/31/15<br>(\$100,000 – \$20,000 ÷ 2)  | (60,000)  | <u>912,000</u> |
| Realized Net Assets—S Company   |           | \$1,912,000    |
| Noncontrolling Ownership Percentage                                       |           | <u>15%</u>     |
| Noncontrolling Interest in Consolidated Net<br>Assets (.15 × \$1,912,000) |           | \$ 286,800     |

The net effect of the adjustments to the noncontrolling interest in the income statement and retained earnings sections of the consolidated statements workpaper for upstream sales also serves to adjust the noncontrolling interest in consolidated net assets. The amount of the noncontrolling interest reported in the consolidated balance sheet is based on the net assets of the subsidiary that have been realized in transactions with third parties. For example, the amount of the noncontrolling interest in consolidated net assets shown in Illustrations 7-5A and 7-5B is calculated in Illustration 7-6.

**Disposal of Property and Equipment by Purchasing Affiliate****LO 9** Disposal of Property and Equipment by purchaser.

Assume that on January 1, 2016, P Company sells the equipment it purchased from S Company to a party outside the affiliated group for \$400,000. The recorded and consolidated book values of the equipment on January 1, 2016, are calculated in Illustration 7-7. P Company will record a \$40,000 gain on the sale of the equipment to the party outside the affiliated group, calculated as:

COST

PARTIAL

|                                      |                |
|--------------------------------------|----------------|
| Selling price                        | \$400,000      |
| Book value (on P Company's books)    | <u>360,000</u> |
| Gain on sale (recorded by P Company) | 40,000         |

The following entry is made on the books of P Company to record the sale:

**P Company Books (Cost or Partial Equity Method)**

|                           |         |               |
|---------------------------|---------|---------------|
| Cash                      | 400,000 |               |
| Accumulated Depreciation  | 240,000 |               |
| Property and Equipment    |         | 600,000       |
| Gain on Sale of Equipment |         | <u>40,000</u> |

**ILLUSTRATION 7-7****Calculation of Book Value of Equipment on January 1, 2016**

| <i>On Books of P Company</i>  |                  |
|---|------------------|
| Cost (to P Company)   | \$600,000        |
| Accumulated Depreciation [(\$600,000/5) × 2]                                  | <u>240,000</u>   |
| Recorded Book Value—January 1, 2016   | <u>\$360,000</u> |
| <i>Consolidated</i>   |                  |
| Cost (original cost to S Company)   | \$800,000        |
| Accumulated Depreciation [\$300,000 +<br>(((\$800,000 ÷ 2 \$300,000)/5) × 2)] | <u>500,000</u>   |
| Consolidated Book Value—January 1, 2016                                       | <u>\$300,000</u> |

**ILLUSTRATION 7-8****Reconciliation of Income Recorded on Books with Income Reported on Consolidated Financial Statements**

|  |                  |
|--|------------------|
| Amount of profit recorded by affiliates                        |                  |
| 2014—Gain on sale from S Company to P Company                  | \$100,000        |
| 2016—Gain on sale by P Company to nonaffiliate                 | 40,000           |
| Additional depreciation expense recorded by affiliates:        |                  |
| 2014   | (20,000)         |
| 2015   | (20,000)         |
| Net amount of profit recorded by affiliates                    | <u>\$100,000</u> |
| Amount of profit realized in the consolidated income statement |                  |
| Selling price to the consolidated entity                       | \$400,000        |
| Book value to the consolidated entity                          | 300,000          |
| Net amount of profit to the consolidated entity                | <u>\$100,000</u> |

However, the consolidated book value of the equipment on the date of the sale by P Company is only \$300,000, and from the point of view of the consolidated entity a \$100,000 gain on the sale (selling price of \$400,000 minus book value to consolidated entity of \$300,000) should be recognized. The entry on the December 31, 2016, consolidated statements workpaper necessary to achieve this result follows:

|   |        |        |
|---|--------|--------|
| Beginning Retained Earnings—P Company   |        |        |
| (.85 × \$60,000)  | 51,000 |        |
| Beginning NCI (.15 × \$60,000)  | 9,000  |        |
| Gain on Sale of Equipment   |        | 60,000 |
| To adjust reported gain on the sale of equipment by P Company to third party from \$40,000 recorded by P Company to \$100,000 to be reported on the consolidated statement. |        |        |

The above entry also serves to adjust the controlling and noncontrolling interests for their share of unrealized intercompany gain at beginning of year (\$100,000 original gain minus \$40,000 realized through usage [\$20,000 in 2014 and \$20,000 in 2015] = \$60,000).

Note that the entry does not include any adjustment to equipment or accumulated depreciation after the disposal, as these accounts are accurately reflected at zero. Also, it is not necessary to calculate the \$60,000 adjustment to the controlling and noncontrolling interests directly in the above entry as it will always equal the gain adjustment. From a consolidated point of view, the amount of gain recorded by the selling affiliate will always be understated (or the amount of loss recorded will always be overstated) by an amount that is equal to the unrealized intercompany gain associated with the equipment on the date of its premature disposal.

After December 31, 2016, no more book or workpaper entries relating to this equipment will be required, because by that date the amount of gain recorded by the affiliates is equal to the amount of gain considered realized in the consolidated financial statements. The equality of the recorded and consolidated amounts is confirmed in Illustration 7-8.

## 7.4 CALCULATION OF CONSOLIDATED NET INCOME AND CONSOLIDATED RETAINED EARNINGS

In Chapter 6, the t-account calculation of the controlling and noncontrolling interests in consolidated net income was refined to accommodate the effect of unrealized intercompany profit in inventory. We now refine it further to include unrealized gain or loss on intercompany sales of equipment.

## Consolidated Net Income

**LO 8** Consolidated net income—  
computation and allocation.

After modification for the effects of unrealized intercompany profit, consolidated net income was calculated in Chapter 6 as the parent company's income from its independent operations that has been realized in transactions with third parties plus (minus) subsidiary income (loss) that has been realized in transactions with third parties plus or minus adjustments for the period relating to the depreciation, amortization, or impairment of differences between implied and book values.

On the basis of Illustration 7-4A, the t-account calculations of the noncontrolling and controlling interests in consolidated net income for the year ended December 31, 2014, are demonstrated in Illustration 7-9. The amount of controlling interest in consolidated net income calculated in Illustration 7-9 is the same as that shown in the consolidated statements workpaper in Illustration 7-4A.

On the basis of Illustration 7-5A, the t-account allocation of consolidated net income for the year ended December 31, 2015, is presented in Illustration 7-10. The sum of the controlling and noncontrolling interests in consolidated net income calculated in Illustration 7-10 is, of course, the same as that shown as consolidated net income in the consolidated statements workpaper in Illustration 7-5A.

## Consolidated Retained Earnings

Consolidated retained earnings were calculated in Chapter 6 as the parent company's cost method retained earnings that have been realized in transactions with third parties plus (minus) the parent company's share of the increase (decrease) in subsidiary retained earnings that has been realized in transactions with third parties from the date of acquisition to the current date plus or minus the cumulative effect of adjustments to date relating to the depreciation, amortization, and impairment of differences between implied and book values.

### ILLUSTRATION 7-9

#### Calculation of Controlling and Noncontrolling Interests in Net Income for Year Ended December 31, 2014 Year of Intercompany Sale of Equipment

| Noncontrolling Interest in Consolidated Income—Year 2014                |         |   |                 |
|---|---------|---|-----------------|
|   |         | Internally generated income of S Company  | \$144,000       |
| Unrealized profit on upstream sales in ending inventory                 | 0       | Gain realized through usage (depreciation adjustment)                                   | 20,000          |
| Unrealized gain on 2014 intercompany sale of equipment (upstream sales) | 100,000 | Realized profit (upstream sales) from beginning inventory                               | 0               |
| Amortization of excess depreciation                                     | 0       |   |                 |
|   |         | Subsidiary Income included in Consolidated Income                                       | \$ 64,000       |
|   |         | Noncontrolling Ownership percentage interest  | 15%             |
|   |         | Noncontrolling Interest in Consolidated Income  | <u>\$ 9,600</u> |
| Controlling Interest in Consolidated Income—Year 2014                   |         |   |                 |
| Unrealized gain on intercompany sale (downstream sales)                 | 0       | Net income internally generated by P Company  | \$300,000       |
|   |         | Gain realized through usage (depreciation adjustment)                                   | 0               |
| Unrealized profit on downstream sales to S Company (ending inventory)   | 0       | Realized profit (downstream sales) from beginning inventory                             | 0               |
|   |         | P Company's percentage of S Company's income realized from third parties, .85(\$64,000) | 54,400          |
|   |         | Controlling Interest in Consolidated Income   | \$354,400       |

|                                       |        | P Company's share thereof   | 0.85           |
|                                       |        |   | <u>486,200</u> |
|                                       |        | Consolidated Retained Earnings  | \$2,643,200    |

On the basis of Illustration 7-5A, the t-account calculation of consolidated retained earnings on December 31, 2015, is demonstrated in Illustration 7-11.

As mentioned earlier, the workpaper entries to eliminate the effects of intercompany sales of equipment are the same when the parent uses the partial equity or the cost method, but differ slightly when the investment is recorded using the complete equity method. Therefore, we illustrate the complete equity method next.

## TEST YOUR KNOWLEDGE

7.1

NOTE: Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

## Multiple Choice

- Parting Ways owns all of the common stock of Smarts Inc. On January 1, 2011, Parting sold to Smarts for a \$5,000 gain a fixed asset that Smarts will use over the next five years. How should this gain be reflected in the consolidated financial statements?
  - Not be recorded
  - Be recognized over five years
  - Be recognized in its entirety in the year of sale
  - Be recognized only when the fixed asset is resold to outsiders after Smarts has finished using it
- Punn Corporation owns all the common stock of Prey Inc. On January 2, 2012, Punn sells a machine with a book value of \$30,000 to Prey for \$40,000. Prey uses straight-line depreciation and intends to use the machine for five years. The adjustments (net) needed to compute the consolidated net income (before tax) for the years 2012 and 2013 are:
  - \$(10,000), 2012; \$0, 2013
  - \$(10,000), 2012; \$2,000, 2013
  - \$(8,000), 2012; \$0, 2013
  - \$(8,000), 2012; \$2,000, 2013
- Price Corp. owns 80% of the common stock of Stairways to Heaven. Stairways sold an asset with a carrying value of \$10,000 to its parent for \$15,000 on January 1, 2011. Price intended to use the asset for five years but actually sold it on December 31, 2012, to a third party for \$17,000. If no adjustments were made for this intercompany transaction in the consolidating process, identify the amounts (and direction) of balance sheet misstatements at the end of 2012.
  - No misstatements occur.
  - The noncontrolling interest is overstated by \$600.
  - The noncontrolling interest is overstated by \$2,000.
  - Retained earnings and controlling interest are both overstated by \$2,400.

## 7.5 CONSOLIDATED STATEMENTS WORKPAPER—COMPLETE EQUITY METHOD

## Subsidiary Is Intercompany Seller (Upstream Sale)

LO 6 Upstream sales—complete equity method.

Assume that P Company acquires an 85% interest in S Company for \$1,190,000 in 2012, when the retained earnings and capital stock of S Company amount to \$400,000 and \$1,000,000, respectively. The retained earnings of S Company on January 1, 2014, are \$666,000. On January 1, 2014, S Company sells P Company equipment with a book value of \$500,000 (original cost of \$800,000 and accumulated depreciation of \$300,000) for \$600,000. On January 1, 2014, the equipment has an estimated remaining useful life of five years and is depreciated using the straight-line method. S Company will record a gain of \$100,000 on the sale of the equipment, and each year P Company will record depreciation that is \$20,000 [ $(\$600,000 - \$500,000)/5$  years] greater than depreciation based on the cost of the equipment to the consolidated group.

Under the complete equity method, P Company makes additional entries to adjust its equity in subsidiary income for amounts unrealized (and subsequently realized) in intercompany transactions. In this example, in 2014, P Company would make the following entries:

COMPLETE

**P Company Books (Complete Equity)**

|   |         |         |
|---|---------|---------|
| Investment in S Company   | 122,400 |         |
| Equity in Subsidiary Income   |         | 122,400 |
| To record the parent's 85% share of subsidiary reported net income in 2014.   |         |         |
| Equity in Subsidiary Income   | 85,000  |         |
| Investment in S Company   |         | 85,000  |
| To adjust subsidiary income downward for the unrealized gain on the intercompany sale of equipment ( $100,000 \times 85\%$ ). |         |         |

|  |        |        |
|--|--------|--------|
| Investment in S Company  | 17,000 |        |
| Equity in Subsidiary Income  |        | 17,000 |
| To adjust subsidiary income upward for the portion of the gain realized through usage ( $20,000 \times 85\%$ , or $85,000/5$ years). |        |        |

Consolidated statements workpapers for the years ended December 31, 2014, and December 31, 2015, are presented in Illustrations 7-12 and 7-13, respectively.

### Consolidated Statements Workpaper Entries—December 31, 2014

Workpaper entries in Illustration 7-12 are presented in general journal form as follows:

|  |           |           |
|--|-----------|-----------|
| (1) Equity in Subsidiary Income ( $\$122,400 - \$85,000 + \$17,000$ )  | 54,400    |           |
| Dividends Declared—S Company   |           | 0         |
| Investment in S Company  |           | 54,400    |
| To eliminate equity in subsidiary income and intercompany dividends, if any.   |           |           |
| (2) Gain on Sale of Equipment  | 100,000   |           |
| Property and Equipment   | 200,000   |           |
| Accumulated Depreciation   |           | 300,000   |
| To eliminate the unrealized gain recorded on intercompany sale of equipment and restore equipment to its original cost (and accumulated depreciation to its balance at the date of the intercompany sale). |           |           |
| (3) Accumulated Depreciation   | 20,000    |           |
| Depreciation Expense   |           | 20,000    |
| To adjust depreciation on equipment sold to affiliate, thus realizing a portion of gain through usage ( $\$100,000/5$ years = $\$20,000$ ).  |           |           |
| (4) Beginning Retained Earnings—S Company  | 666,000   |           |
| Capital Stock—S Company  | 1,000,000 |           |
| Investment in S Company ( $\$1,190,000 + \$226,100$ )  |           | 1,416,100 |
| NCI in Equity ( $\$210,000 + .15 (\$666,000 - \$400,000)$ )  |           | 249,900   |
| To eliminate investment account against underlying equity accounts of S Company, and recognize NCI.  |           |           |

Since the selling affiliate is a partially owned subsidiary (upstream sale), the calculation of the noncontrolling interest in consolidated net income is modified by subtracting the amount of the gain recognized by the subsidiary and adding the amount of the gain considered to be realized (through depreciation) to the reported net income of the subsidiary [ $.15 \times (\$144,000 - \$100,000 + \$20,000) = \$9,600$ ].

#### Noncontrolling Interest in Income

|                                      |           |   |                 |
|--------------------------------------|-----------|---|-----------------|
|                                      |           | Internally generated income of S Company              | \$144,000       |
| Unrealized gain on intercompany sale | \$100,000 | Gain realized through usage (depreciation adjustment) | 20,000          |
|                                      |           | Adjusted income of subsidiary                         | \$ 64,000       |
|                                      |           | Noncontrolling percentage                             | $\times 15\%$   |
|                                      |           | Noncontrolling interest in income                     | <u>\$ 9,600</u> |

If the sale of the equipment had been downstream rather than upstream, the amount of subsidiary income included in consolidated income would not be affected by the workpaper entries related to unrealized intercompany gain and no adjustment would be necessary in calculating the *noncontrolling interest* in consolidated income.

\*  $.15 \times (\$144,000 - \$100,000 + \$20,000) = \$9,600$ .

\*\* The investment account equals  $\$1,190,000 + 85\%$  of the increase in S Company's Retained Earnings from the date of acquisition to the beginning of the year  $(\$666,000 - 400,000)$  plus the current period's equity in subsidiary income  $(\$54,400)$ .

(1) To eliminate equity in subsidiary income and intercompany dividends, if any.

(2) To eliminate the unrealized gain recorded on intercompany sale of equipment and restore equipment to its original cost (and accumulated depreciation to its balance at the date of the intercompany sale).

(3) To adjust depreciation on equipment sold to affiliate, thus realizing a portion of the gain through usage  $(\$100,000/5 \text{ years} = \$20,000)$ .

(4) To eliminate investment account against the underlying equity accounts of S Company and create noncontrolling interest account.

\*  $.15 \times (\$162,000 + \$20,000) = \$27,300$ .

\*\*  $\$210,000 + .15 \times (\$810,000 - \$400,000) = \$271,500$ .

(1) To eliminate equity in subsidiary income and intercompany dividends, if any.

(2) To reduce controlling and noncontrolling interests for their shares of unrealized intercompany gain and to restore equipment and accumulated depreciation to their original balances.

(3) To reverse amount of excess depreciation recorded during current and prior year and to recognize intercompany gain realized through usage.

(4) To eliminate investment account and create noncontrolling interest account.

## Consolidated Statements Workpaper Entries—December 31, 2015

In the year 2015, P Company would again make an entry to adjust its equity in subsidiary income for the portion of the gain on the intercompany sale that is realized through usage. This entry may be recorded separately from the one to record P's share of subsidiary *reported* income, as shown below, or the two could be collapsed into one entry for \$154,700 (\$137,700 + \$17,000).

### P Company Books (Complete Equity Method)

|  |         |         |
|--|---------|---------|
| Investment in S Company  | 137,700 |         |
| Equity in Subsidiary Income  |         | 137,700 |
| To record the parent's 85% share of subsidiary reported net income in 2015.  |         |         |
| Investment in S Company  | 17,000  |         |
| Equity in Subsidiary Income  |         | 17,000  |
| To adjust subsidiary income upward for the portion of the gain realized through usage (20,000 × 85%, or 85,000/5 years). |         |         |

Workpaper entries in Illustration 7-13 are presented in general journal form as follows:

|  |         |         |
|--|---------|---------|
| (1) Equity in Subsidiary Income  | 154,700 |         |
| Dividends Declared—S Company   |         | 0       |
| Investment in S Company  |         | 154,700 |
| To eliminate equity in subsidiary income and intercompany dividends, if any. |         |         |

|  |         |         |
|--|---------|---------|
| (2) Investment in S Company (100,000 × .85)  | 85,000  |         |
| Beginning NCI  |         |         |
| (100,000 × .15)  | 15,000  |         |
| Property and Equipment   | 200,000 |         |
| Accumulated Depreciation   |         | 300,000 |
| To reduce the noncontrolling interest for its share of unrealized intercompany gain, to restore equipment and accumulated depreciation to their original balances at the date of the intercompany sale, and to facilitate the elimination of the investment account. |         |         |

COMPLETE

Consider the debit to the investment account in entry (2), recalling that the investment account is reduced on the parent's books when the unrealized income is deducted from the parent's equity in subsidiary income under the complete equity method. Thus, the usual workpaper entry to eliminate the investment account against the underlying subsidiary equity accounts [entry (4) below] eliminates an amount greater than the actual beginning investment account balance. That entry, combined with entries (2) and (3), however, will eliminate the investment to exactly zero.

|   |        |        |
|---|--------|--------|
| (3) Accumulated Depreciation  | 40,000 |        |
| Depreciation Expense  |        | 20,000 |
| Investment in S Company (20,000 × .85)  |        | 17,000 |
| Beginning Retained Earnings—S Company   |        |        |
| (20,000 × .15)  |        | 3,000  |
| To adjust depreciation recorded in current year and prior year, thus recognizing intercompany gain realized through usage (prior year adjustment for controlling interest to Investment account). |        |        |

|  |           |           |
|--|-----------|-----------|
| (4) Beginning Retained Earnings—S Company  | 810,000   |           |
| Capital Stock—S Company  | 1,000,000 |           |
| Investment in S Company  |           | 1,538,500 |
| NCI (210,000 + .15 (810,000 – 400,000))  |           | 271,500   |
| To eliminate investment account against underlying equity accounts of S Company and recognize NCI. |           |           |

The noncontrolling interest in consolidated net income is calculated after adding the portion of the gain considered realized during the year to the net income reported by the subsidiary [.15 × (\$162,000 + \$20,000) = \$27,300].

### Noncontrolling Interest in Income

|  |   |           |
|--|---|-----------|
|  | Internally generated income of S Company              | \$162,000 |
|  | Gain realized through usage (depreciation adjustment) | 20,000    |
|  | Adjusted income of subsidiary                         | \$182,000 |
|  | Noncontrolling percentage                             | × 15%     |
|  | Noncontrolling interest in income                     | \$ 27,300 |

## Disposal of Property and Equipment by Purchasing Affiliate

**LO 9** Disposal of property by purchaser—complete equity.

Assume that on January 1, 2016, P Company sells the equipment it purchased from S Company to a party outside the affiliated group for \$400,000. The recorded and consolidated book values of the equipment on January 1, 2016, are calculated in Illustration 7-14. P Company will record a \$40,000 gain on the sale of the equipment to the party outside the affiliated group, calculated as:

|                                      |           |
|--------------------------------------|-----------|
| Selling price                        | \$400,000 |
| Book value (on P Company's books)    | 360,000   |
| Gain on sale (recorded by P Company) | 40,000    |

The following entry is made on the books of P Company to record the sale:

COMPLETE

#### P Company Books—Complete Equity Method

|                           |         |
|---------------------------|---------|
| Cash                      | 400,000 |
| Accumulated Depreciation  | 240,000 |
| Property and Equipment    | 600,000 |
| Gain on Sale of Equipment | 40,000  |

In addition, P Company would make an entry to adjust its equity in subsidiary income for the amount of the intercompany gain realized in the current period (85% of: the original \$100,000 gain minus the depreciation adjustments of \$40,000 for 2014–2015; or \$51,000). This entry is made for 85% of the realized gain as the original intercompany transaction was an upstream sale, and thus the controlling interest in the realized gain is 85% of \$60,000, or \$51,000.

|                             |        |
|-----------------------------|--------|
| Investment in S Company     | 51,000 |
| Equity in Subsidiary Income | 51,000 |

However, the consolidated book value of the equipment on the date of the sale by P Company is only \$300,000, and from the point of view of the consolidated entity a \$100,000 gain on the sale (selling price of \$400,000 minus book value to consolidated entity of \$300,000) should be recognized. The entry on the December 31, 2016, consolidated statements workpaper necessary to achieve this result follows:

|   |        |
|---|--------|
| Investment in S Company (.85 × \$60,000)  | 51,000 |
| Beginning NCI (.15 × \$60,000)  | 9,000  |
| Gain on Sale of Equipment   | 60,000 |
| To adjust reported gain on the sale of equipment by P Company to third party from \$40,000 gain recorded by P Company to \$100,000 gain to the consolidated equity. |        |

### ILLUSTRATION 7-14

#### Calculation of Book Value of Equipment on January 1, 2016

| <i>On Books of P Company</i>   |           |
|--|-----------|
| Cost (to P Company)  | \$600,000 |
| Accumulated Depreciation [((\$600,000/5) × 2)]                         | 240,000   |
| Recorded Book Value—January 1, 2016                                    | \$360,000 |
| <i>Consolidated</i>  |           |
| Cost (original cost to S Company)                                      | \$800,000 |
| Accumulated Depreciation [\$300,000 + ((\$800,000 – \$300,000)/5) × 2] | 500,000   |
| Consolidated Book Value—January 1, 2016                                | \$300,000 |

The above entry also serves to adjust the noncontrolling interest for its share of unrealized intercompany gain at the beginning of year (\$100,000 original gain minus \$40,000 realized through usage [\$20,000 in 2014 and \$20,000 in 2015] = \$60,000  $\times$  15%), and to facilitate the elimination of the investment account (by debiting it for the controlling share \$60,000  $\times$  85%).

COMPLETE

Note that the entry does not include any adjustment to equipment or accumulated depreciation after the disposal, as these accounts are accurately reflected at zero. Also, it is not necessary to calculate the \$60,000 adjustment to the controlling and noncontrolling interests directly in the above entry as it will always equal the gain adjustment. From a consolidated point of view, the amount of gain recorded by the selling affiliate will always be understated (or the amount of loss recorded will always be overstated) by an amount that is equal to the unrealized intercompany profit associated with the equipment on the date of its premature disposal.

After December 31, 2016, no more book or workpaper entries relating to this equipment will be required. Under the complete equity method, entries are needed up through December 31, 2016, even though profit is accurately reflected in the books of P Company. Because the adjustments are reflected in P's books in the account Equity in Subsidiary Income and that account is eliminated in the consolidating process, it is still necessary to adjust the underlying accounts (gain, depreciation expense, etc.) until the asset is sold to outsiders and appropriately removed from the books entirely.

---

## 7.6 CALCULATION AND ALLOCATION OF CONSOLIDATED NET INCOME; CONSOLIDATED RETAINED EARNINGS: COMPLETE EQUITY METHOD

**Lo 8** Consolidated net income—complete equity method.

For firms using the complete equity method, the controlling interest in consolidated net income will always equal the net income reported by the parent. Thus it is not necessary to reconcile the two. It is, nonetheless, useful to know how to check the amount of the controlling and noncontrolling interests in consolidated income using the t-account approach presented in Illustrations 7-9 and 7-10. Similarly, consolidated retained earnings will equal the retained earnings reported by the parent at any point, assuming the parent has correctly adjusted for any and all unrealized (and subsequently realized) intercompany profit. This amount may be verified using the t-account approach presented in Illustration 7-11.

---

## 7.7 SUMMARY OF WORKPAPER ENTRIES RELATING TO INTERCOMPANY SALES OF EQUIPMENT

Consolidated statements workpaper eliminating entries for intercompany sales of equipment are summarized in Illustration 7-15. The entries are the same whether the parent company uses the cost method or the partial equity method to record its investment. However, the form of the workpaper entry to adjust for unrealized intercompany profit at the beginning of the year differs as between upstream and downstream sales and between the complete equity method and the other two.

---

## 7.8 INTERCOMPANY INTEREST, RENTS, AND SERVICE FEES

**Lo 10** Intercompany interest, rents, service fees.

Income and expenses relating to interest, fees, and rents should be reported in the consolidated income statement only when they arise from transactions with parties outside the affiliated group. In addition, as discussed in Chapter 3, only receivables and payables that are receivable from or payable to parties outside the affiliated group should be reported in the consolidated balance sheet.

**ILLUSTRATION 7-15**

## Intercompany Interest

When interest is charged on intercompany loans, the intercompany interest income on the lending affiliate's books is equal to the intercompany interest expense on the borrowing affiliate's books. The workpaper entry to eliminate intercompany interest is:

|                  |     |     |
|------------------|-----|-----|
| Interest Income  | XXX |     |
| Interest Expense |     | XXX |

Since equal amounts of revenue and expense are removed from combined income, the net amount of consolidated net income is not affected by this entry. When intercompany loans or interest remain unpaid on the balance sheet date, additional entries are necessary to eliminate related intercompany payables and receivables as follows:

|                     |     |     |
|---------------------|-----|-----|
| Notes Payable       | XXX |     |
| Notes Receivable    |     | XXX |
| Interest Payable    | XXX |     |
| Interest Receivable |     | XXX |

## Intercompany Rents

When there is an intercompany operating lease, intercompany rent income on the books of the lessor will equal intercompany rent expense on the books of the lessee. The workpaper entry to eliminate intercompany rent is:

|              |     |     |
|--------------|-----|-----|
| Rent Income  | XXX |     |
| Rent Expense |     | XXX |

Since equal amounts of revenue and expense are removed from consolidated income, the net amount of consolidated net income is not affected by this entry.

## Intercompany Service Fees

When one affiliate charges fees to another, the form of the eliminating entry is determined by how the transaction is recorded by the affiliates. If the affiliate that provides the service treats the fee as revenue and the affiliate that receives the service treats the fee as an expense, the necessary workpaper entry is simply a debit to service fee revenue and a credit to service fee expense. On the other hand, the affiliate that receives the service may treat the amount it is charged for the service as a capital addition. For example, fees for architectural services to an affiliate may be treated by the purchasing affiliate as part of the cost of a building. In this case, architectural fees should be debited for the amount recorded as revenue on the intercompany transaction, appropriate expense accounts (as recorded on the selling affiliate's books) should be credited for the cost to the selling affiliate of providing the services, and the building should be credited for the difference between the revenue recorded and the cost of providing the service. Additional workpaper entries will also be necessary in subsequent years to report balances for the building, accumulated depreciation, and depreciation expense at amounts based on the cost of the building to the affiliated group.

For example, assume that P Company bills its subsidiary, S Company, \$400,000 for architectural services. The cost to P Company of providing the services is \$250,000. S Company charges the services to the cost of a building that it opens at the beginning of the next year with an estimated useful life of 15 years. Workpaper entries to eliminate the effects of the intercompany service fee are as follows:

| In the Year the Services Are Rendered |         |                    |         |
|---------------------------------------|---------|--------------------|---------|
| Cost and Partial Equity               |         | Complete Equity    |         |
| Architectural Fees                    | 400,000 | Architectural Fees | 400,000 |
| Salary Expense                        | 200,000 | Salary Expense     | 200,000 |
| Travel Expense                        | 15,000  | Travel Expense     | 15,000  |
| Other Expense                         | 35,000  | Other Expense      | 35,000  |
| Building                              | 150,000 | Building           | 150,000 |

**In the Year the Building Is Opened**

| Cost and Partial Equity                        |         |         | Complete Equity                  |         |         |
|--|---------|---------|----------------------------------|---------|---------|
| Beginning Retained Earnings—P Company Building | 150,000 | 150,000 | Investment in S Company Building | 150,000 | 150,000 |
| Accumulated Depreciation                       | 10,000  |         | Accumulated Depreciation         | 10,000  |         |
| Depreciation Expense                           |         | 10,000  | Depreciation Expense             |         | 10,000  |

**In the Fifth Year After the Building Is Opened**

| Cost and Partial Equity               |         |         | Complete Equity                   |         |         |
|---------------------------------------|---------|---------|-----------------------------------|---------|---------|
| Beginning Retained Earnings—P Company | 110,000 |         | Investment in S Company           | 110,000 |         |
| Accumulated Depreciation Building     | 40,000  | 150,000 | Accumulated Depreciation Building | 40,000  | 150,000 |
| Accumulated Depreciation              | 10,000  |         | Accumulated Depreciation          | 10,000  |         |
| Depreciation Expense                  |         | 10,000  | Depreciation Expense              |         | 10,000  |

Thus eliminating entries relating to intercompany transactions depend on how these transactions are recorded on the books of the affiliates. In all cases, however, the financial reporting objectives identified in previous sections of this chapter and in Chapter 6 apply. In the preceding example, the reporting objectives were:

- To include in revenue only the amounts that result from *transactions with parties outside the affiliated group*.
- To present property in the consolidated balance sheet at *its cost to the affiliated group*.
- To present accumulated depreciation in the consolidated balance sheet based on the *cost to the affiliated group* of the related assets.
- To present depreciation expense in the consolidated income statement based on the *cost to the affiliated group* of the related assets.

In order to apply the objectives identified in this chapter and in Chapter 6 to a situation that is not illustrated in this text, the student may wish to work out the workpaper entries necessary in a situation like the following. S Company is in the business of selling equipment that it manufactures. S Company treats equipment manufactured as finished goods inventory. S Company sells some equipment that it manufactured to its parent company at a profit. The equipment is capitalized and depreciated on the books of the parent company.

**SUMMARY**

- 1 *Understand the financial reporting objectives in accounting for intercompany sales of nondepreciable assets on the consolidated financial statements.* The consolidated financial statements should include gains or losses only when the property is sold to outsiders (parties outside the affiliated group) for the difference between the cost to the consolidated entity and the proceeds from outsiders. Until it is sold to outsiders, the property should be presented in the consolidated balance sheet at its cost to the affiliated group.
- 2 *State the additional financial reporting objectives in accounting for intercompany sales of depreciable assets on the consolidated financial statements.* Accumulated depreciation should be presented in the consolidated balance sheet based on the cost of the asset to the affiliated group, and depreciation expense should be presented in the consolidated income statement also based on the cost to the affiliated group.
- 3 *Explain when gains or losses on intercompany sales of depreciable assets should be recognized on a consolidated basis.* Gains or losses on intercompany sales of depreciable assets are recognized either when the asset is sold to outsiders, or gradually over time as it is depreciated.
- 4 *Explain the term “realized through usage.”* After an intercompany sale, the purchasing affiliate will calculate depreciation on the basis of its cost, which is the intercompany selling price. The depreciation recorded by the purchasing affiliate will, therefore, be excessive (deficient) from a consolidated point of view and will also require adjustment. From the view of the consolidated entity, the intercompany gain (loss) is considered to be realized from the use of the property or equipment in the generation of revenue.
- 5 *Describe the differences between upstream and downstream sales in determining consolidated net income and the controlling and noncontrolling interests in consolidated income.* There is no difference between upstream and downstream sales in determining consolidated income. However, the controlling and noncontrolling interests are affected differently. For downstream sales, the elimination of intercompany gains as well as the subsequent depreciation adjustments affect only the

controlling interest. For upstream sales, the adjustments are made to the subsidiary income, and thus affect both the noncontrolling and controlling interests in the proportion of subsidiary ownership.

- 6 *Compare the eliminating entries when the selling affiliate is a subsidiary (less than wholly owned) versus when the selling affiliate is the parent company.* Because of the differences explained in the preceding item (#5), the eliminating entries are similarly affected. Specifically, the entries in subsequent years for downstream sales that reflect prior years' income or expense adjustments [entries to Retained Earnings—Parent (under the cost or partial equity method) or Investment in Subsidiary (under the complete equity method)] are replaced by eliminating entries for upstream sales to both Retained Earnings—Parent and to NCI in Equity under the cost or partial equity method or to both Investment in Subsidiary and NCI under the complete equity method.
- 7 *Compute the noncontrolling interest in consolidated net income when the selling affiliate is a subsidiary.* The noncontrolling interest in consolidated income is computed as the noncontrolling interest percentage of the internally generated income of the subsidiary minus the unrealized gain on upstream sales (year of sale only) plus the amount of the gain realized through usage (depreciation adjustment).
- 8 *Compute consolidated net income considering the effects of intercompany sales of depreciable assets.* Consolidated net income is computed as the internally generated income of the

parent minus the unrealized gain on downstream sales (year of sale only) plus the amount of the gain realized through usage (depreciation adjustment) plus the subsidiary income adjusted for upstream sales minus any other adjustments needed (such as excess depreciation, described in earlier chapters).

- 9 *Describe the eliminating entry needed to adjust the consolidated financial statements when the purchasing affiliate sells a depreciable asset that was acquired from another affiliate.* The entry does not include any adjustment to equipment or accumulated depreciation after the disposal, as these accounts are accurately reflected at zero. The entry merely adjusts the gain or loss reported by the purchasing affiliate from the amount it recorded to the correct amount from the perspective of the consolidated entity (based on original cost and depreciation), and adjusts the controlling and noncontrolling interests for the unrealized intercompany profit associated with the equipment on the date of its premature disposal (which equals the over- or understatement of the gain or loss).
- 10 *Explain the basic principles used to record or eliminate intercompany interest, rent, and service fees.* Income and expenses relating to interest, fees, and rents should be reported in the consolidated income statement only when they arise from transactions with parties outside the affiliated group. In addition, only receivables and payables that are receivable from or payable to parties outside the affiliated group should be reported in the consolidated balance sheet.

Appendix 7A, “Deferred Taxes Consequences Related to Intercompany Sales of Equipment,” is available online at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).

### QUESTIONS

(The letter A or B indicated for a question, exercise, or problem refers to a related appendix.)

- LO 1 LO 3 1. From a consolidated point of view, when should profit be recognized on intercompany sales of depreciable assets? Nondepreciable assets?
- LO 3 2. In what circumstances might a consolidated gain be recognized on the sale of assets to a nonaffiliate when the selling affiliate recognizes a loss?
- LO 6 3. What is the essential procedural difference between workpaper eliminating entries for unrealized intercompany profit when the selling affiliate is a less than wholly owned subsidiary and such entries when the selling affiliate is the parent company or a wholly owned subsidiary?
- LO 8 4. Define the controlling interest in consolidated net income using the t-account approach.
- LO 5 5. Why is it important to distinguish between upstream and downstream sales in the analysis of intercompany profit eliminations?
6. In what period and in what manner should profits relating to the intercompany sale of depreciable property and equipment be recognized in the consolidated financial statements? LO 3
7. Define consolidated retained earnings using the analytical approach. LO 8

### Business Ethics

Some people believe that the use of executive stock options is directly related to the increased number of earnings restatements. For each of the following items, discuss the potential ethical issues that might be related to earnings management within the firm.

1. Should stock options be expensed on the Income Statement?
2. Should the CEO or CFO be a past employee of the firm's audit firm?
3. Should the firm's audit committee be composed entirely of outside members and be solely responsible for hiring the firm's auditors?<sup>4</sup>

## ANALYZING FINANCIAL STATEMENTS

### AFS7-1 Green Mountain Coffee Roasters Acquisition of Timothy's Coffee of the World

Green Mountain Coffee Roasters reported net income for the year ended September 26, 2009 of \$54.439 million. There were 120,370,659 common shares outstanding. On November 13, 2009, Green Mountain acquired all the outstanding shares of Timothy's Coffee of the World for \$155.74 million cash. The purchase price was allocated as follows (\$ in thousands):

|                          |          |               |
|--------------------------|----------|---------------|
| Purchase price           |          | \$155,740     |
| Allocated to:            |          |               |
| Accounts receivable      | 8,732    |               |
| Inventory                | 6,911    |               |
| Other current assets     | 83       |               |
| Fixed assets             | 7,827    |               |
| Identifiable intangibles | 98,300   |               |
| Accounts payable         | (6,852)  |               |
| Accrued expenses         | (1,284)  |               |
| Deferred taxes           | (27,274) |               |
| Total                    |          | <u>86,443</u> |
| Excess                   |          | 69,297        |

The identifiable intangible assets included \$83.2 million for customer relationships with an estimated life of 16 years, \$8.9 million for Timothy's trade name with an estimated life of 11 years, and \$6.2 million for supply agreements with an estimated life of 11 years. The valuation of fixed assets to fair value was not significant.

#### Required:

- Prepare the consolidation worksheet entry(ies) to eliminate the investment account.
- If Timothy's Coffee generated \$15 million of income (not considering the acquisition) in 2010, will the acquisition of Timothy's Coffee be accretive or dilutive to the earnings per share of Green Mountain?

## EXERCISES

### EXERCISE 7-1 Controlling Interest in Income LO8

On January 1, 2014, Sherwood Company, an 80% owned subsidiary of Paradise Company, sold to Paradise Company equipment with a book value of \$600,000 for \$840,000. The equipment had an estimated remaining useful life of eight years on the date of the intercompany sale.

Paradise Company reported net income from its independent operations of \$550,000, and Sherwood Company reported net income of \$300,000 in the years of 2014 and 2015.

#### Required:

Calculate the controlling interest in combined net income for the years ended December 31, 2014, and December 31, 2015.

### EXERCISE 7-2 Controlling Interest in Income LO8

On January 1, 2014, Polar Company, which owns an 80% interest in Superior Company, sold Superior Company equipment with a book value of \$400,000 for \$560,000. The equipment had an estimated remaining useful life of eight years on the date of the intercompany sale.

Polar Company reported net income from its independent operations (including sales to affiliates) of \$400,000, and Superior Company reported net income of \$200,000 from its independent operations in 2014 and 2015.

#### Required:

Calculate the controlling interest in consolidated net income for the years ended December 31, 2014, and December 31, 2015.

<sup>4</sup> *The CPA Journal*, "Proposals to Improve the Image of the Public Accounting Profession," by Franklin Strier, 3/06, p. 67.

**EXERCISE 7-3 Workpaper Entries—Intercompany Sale of Equipment LO 6 LO 8**

Pearson Company owns 90% of the outstanding common stock of Spring Company. On January 1, 2014, Spring Company sold equipment to Pearson Company for \$200,000. Spring Company had purchased the equipment for \$300,000 on January 1, 2009, and had depreciated it using a 10% straight-line rate. The management of Pearson Company estimated that the equipment had a remaining useful life of five years on January 1, 2014. In 2015, Pearson Company reported \$150,000 and Spring Company reported \$100,000 in net income from their independent operations (including sales to affiliates).

**Required:**

- A. Prepare in general journal form the workpaper entries relating to the intercompany sale of equipment that are necessary in the December 31, 2014, and December 31, 2015, consolidated financial statements workpapers.
- B. Calculate controlling interest in consolidated income for 2015.

**EXERCISE 7-4 Entries—Intercompany Sale of Land LO 6**

Procter Company owns 90% of the outstanding stock of Silex Company. On January 1, 2014, Silex Company sold land to Procter Company for \$350,000. Silex had originally purchased the land on June 30, 2010, for \$200,000.

Procter Company plans to construct a building on the land bought from Silex in which it will house new production machinery. The estimated useful life of the building and the new machinery is 15 years.

**Required:**

- A. Prepare the entries on the books of Procter related to the intercompany sale of land for the years ended December 31, 2014, and December 31, 2015.
- B. Prepare in general journal form the workpaper entries necessary because of the intercompany sale of land in:
  - (1) The consolidated financial statements workpaper for the year ended December 31, 2014.
  - (2) The consolidated financial statements workpaper for the year ended December 31, 2015.

**EXERCISE 7-5 Upstream and Downstream Sale LO 6**

Patterson Company owns 80% of the outstanding common stock of Stevens Company. On June 30, 2013, land costing \$500,000 is sold by one affiliate to the other for \$800,000.

**Required:**

Prepare in general journal form the workpaper entries necessary because of the intercompany sale of land in the consolidated financial statements workpaper for the year ended December 31, 2014, assuming that:

- A. Patterson Company purchased the land from Stevens Company.
- B. Stevens Company purchased the land from Patterson Company.

**EXERCISE 7-6 Calculating Gain on Sale LO 9**

P Company owns 90% of the outstanding common stock of S Company. On January 1, 2015, S Company sold land to P Company for \$600,000. S Company originally purchased the land for \$400,000.

On January 1, 2016, P Company sold the land purchased from S Company to a company outside the affiliated group for \$700,000.

**Required:**

- A. Calculate the amount of gain on the sale of the land that is recognized on the books of P Company in 2016.
- B. Calculate the amount of gain on the sale of the land that should be recognized in the consolidated financial statements in 2016.
- C. Prepare in general journal form the workpaper entries necessary because of the intercompany sale of land in the consolidated financial statements workpaper for the year ended December 31, 2016.

**EXERCISE 7-7 Entries—Intercompany Sale of Inventory and Equipment LO 7 LO 9**

On January 1, 2013, Price Company acquired an 80% interest in the common stock of Smith Company on the open market for \$750,000, the book value at that date.

On January 1, 2014, Price Company purchased new equipment for \$14,500 from Smith Company. The equipment cost \$9,000 and had an estimated life of five years as of January 1, 2014.

During 2015, Price Company had merchandise sales to Smith Company of \$100,000; the merchandise was priced at 25% above Price Company's cost. Smith Company still owes Price Company \$17,500 on open account and has 20% of this merchandise in inventory at December 31, 2015. At the beginning of 2015, Smith Company had in inventory \$25,000 of merchandise purchased in the previous period from Price Company.

**Required:**

- A. Prepare all workpaper entries necessary to eliminate the effects of the intercompany sales on the consolidated financial statements for the year ended December 31, 2015.
- B. Assume that Smith Company reports net income of \$40,000 for the year ended December 31, 2015. Calculate the amount of noncontrolling interest to be deducted from consolidated income in the consolidated income statement for the year ended December 31, 2015.

**EXERCISE 7-8 Controlling Interest in Income LO 8**

On January 1, 2015, P Company acquired a 90% interest in S Company. During 2016, S Company sold merchandise to P Company at 25% above cost in the amount (selling price) of \$225,000. At the end of the year, P Company had in its inventory one-third of the amount of goods purchased from S Company.

On January 1, 2016, P Company sold equipment that had a book value of \$80,000 to S Company for \$120,000. The equipment had an estimated remaining life of four years.

S Company reported net income of \$120,000, and P Company reported net income of \$300,000 from their independent operations (including sales to affiliates) for the year ended December 31, 2016.

**Required:**

Calculate controlling interest in consolidated net income for the year ended December 31, 2016.

**EXERCISE 7-9 Workpaper Entries—Sales of Services LO 10**

P Company owns 80% of the outstanding stock of S Company. The 2015 sales of S Company included revenue of \$390,000 consisting of consulting services billed to P Company at cost plus 30%. P Company was billed the full \$390,000; of this amount, \$260,000 was charged to selling expenses and \$130,000 was charged to administrative expense.

**Required:**

Prepare in general journal form the workpaper entry necessary to eliminate the effects of intercompany sales of services in the consolidated financial statements workpaper for the year ended December 31, 2015.

**EXERCISE 7-10 Workpaper Entries—Intercompany Fees LO 10**

During 2013, Pier One Company billed its 80% owned subsidiary, Scale Company, \$700,000 for architectural services. The cost to Pier One Company of providing the services was \$400,000 for salaries and \$150,000 for other operating expenses. Scale Company charged the architecture fees to the cost of a building that it opened on January 1, 2014. The building had an estimated useful life of 30 years.

**Required:**

Prepare in general journal form the workpaper entries relating to the intercompany fees that are necessary in the consolidated statements workpapers for the years ended December 31, 2013, 2014, and 2015.

**EXERCISE 7-11 Workpaper Entries—Upstream and Downstream Sales LO 6 LO 8**

Pinta Company, a forklift manufacturer, owns 80% of the voting stock of Standard Company. On January 1, 2014, Pinta Company sold forklifts to Standard Company for \$400,000. The forklifts, which represented inventory to Pinta Company, had a cost to Pinta Company of \$310,000. The management of Standard Company estimated that the forklifts had a useful life of nine years from the date of purchase. Standard Company uses the straight-line method to depreciate its capital assets.

In 2014, Pinta Company reported \$700,000 in net income from its independent operations (including sales to affiliates), and Standard Company reported \$250,000 in net income from its operations.

**Required:**

- A. Prepare in general journal form the workpaper entries necessary because of the intercompany sales in:
  - (1) The consolidated financial statements workpaper for the year ended December 31, 2014.
  - (2) The consolidated financial statements workpaper for the year ended December 31, 2015.
- B. Calculate controlling interest in consolidated net income for the year ended December 31, 2014.

**EXERCISE 7-12 Workpaper Entries—Sale of Equipment LO 6**

Pomeroy Corporation owns an 80% interest in Sherer Company and a 90% interest in Tampa Company. On January 2, 2014, Tampa Company sold equipment with a book value of \$600,000 to Sherer Company for \$780,000. This equipment has a remaining useful life of three years. Sherer Company reported \$100,000 and Tampa Company reported \$150,000 in net income (including sales to affiliates) in 2014.

**Required:**

Prepare the 2014 and 2015 consolidated statements workpaper entries to eliminate the effects of this sale of equipment.

**ASC Exercises:** For all ASC exercises indicate as part of your answer: the Codification topic, subtopic, section, and paragraph upon which your answer is based (unless otherwise specified). All ASC questions require access to the FASB Codification.

- ASC7-1** **Presentation** A subsidiary sold an old, abandoned plant to its parent and incurred a loss of \$10 million. Can this loss be reported on the subsidiary-only income statement as an extraordinary item?
- ASC7-2** **Disclosure** Is a change in the method of accounting for depreciation considered a change in estimate or a change in accounting principle? What is the justification? Has it always been treated this way under U.S. GAAP? Explain.
- ASC7-3** **Glossary** Define a *related party* and provide an example.
- ASC7-4** **Cross-Reference** FASB's Emerging Issues Task Force (EITF) issued *EITF 00-21* to provide guidance on revenue arrangements with multiple deliverables. List the topic and subtopic where this information can be found in the Codification (i.e., ASC XXX-XX).

## PROBLEMS

**PROBLEM 7-1** **Workpaper Journal Entries and Income Statement Balances** **LO6 LO7 LO8**  
Powell Company owns 80% of the outstanding common stock of Sullivan Company. On June 30, 2014, Sullivan Company sold equipment to Powell Company for \$500,000. The equipment cost Sullivan Company \$780,000 and had accumulated depreciation of \$400,000 on the date of the sale. The management of Powell Company estimated that the equipment had a remaining useful life of four years from June 30, 2014. In 2015, Powell Company reported \$300,000 and Sullivan Company reported \$200,000 in net income from their independent operations (including sales to affiliates but excluding dividend or equity income from subsidiary).

**Required:**

- A. Prepare in general journal form the workpaper entries necessary because of the intercompany sale of equipment in:
- (1) The consolidated financial statements workpaper for the year ended December 31, 2014.
  - (2) The consolidated financial statements workpaper for the year ended December 31, 2015.
- B. Calculate the balances to be reported in the consolidated income statement for the year ended December 31, 2015, for the following items:
- (1) Consolidated income.
  - (2) Noncontrolling interest in consolidated income.
  - (3) Controlling interest in consolidated income.

**PROBLEM 7-2** **Workpaper Journal Entries** **LO6 LO8**  
Pico Company, a truck manufacturer, owns 90% of the voting stock of Seward Company. On January 1, 2014, Pico Company sold trucks to Seward Company for \$350,000. The trucks, which represented inventory to Pico Company, had a cost to Pico Company of \$260,000. The management of Seward Company estimated that the trucks had a useful life of six years from the date of purchase. Seward Company uses the straight-line method to depreciate its capital assets.

In 2014, Pico Company reported \$600,000 in net income from its independent operations (including sales to affiliates but excluding dividend or equity income from subsidiary), and Seward Company reported \$200,000 in net income from its operations.

**Required:**

- A. Prepare in general journal form the workpaper entries necessary because of the intercompany sales in:
- (1) The consolidated financial statements workpaper for the year ended December 31, 2014.
  - (2) The consolidated financial statements workpaper for the year ended December 31, 2015.
- B. Calculate controlling interest in consolidated net income for the year ended December 31, 2014.

**PROBLEM 7-3** **P Company Entries and Determining Gain or Loss on Sale** **LO6 LO9**  
On January 1, 2015, P Company purchased equipment from its 80% owned subsidiary for \$600,000. The carrying value of the equipment on the books of S Company was \$450,000. The equipment had a remaining useful life of six years on January 1, 2015. On January 1, 2016, P Company sold the equipment to an outside party for \$550,000.

**Required:**

- A. Prepare in general journal form the entries necessary in 2015 and 2016 on the books of P Company to account for the purchase and sale of the equipment.
- B. Determine the consolidated gain or loss on the sale of the equipment and prepare in general journal form the entry necessary on the December 31, 2016, consolidated statements workpaper to properly reflect this gain or loss.

**PROBLEM 7-4 Workpaper—Cost Method LO 6 LO 9**

Prout Company owns 80% of the common stock of Sexton Company. The stock was purchased for \$1,600,000 on January 1, 2012, when Sexton Company's retained earnings were \$800,000. On January 1, 2014, Prout Company sold fixed assets to Sexton Company for \$360,000. These assets were originally purchased by Prout Company for \$400,000 on January 1, 2004, at which time their estimated depreciable life was 25 years. The straight-line method of depreciation is used.

On December 31, 2015, the trial balances of the two companies were as shown here:

|   | <i>Prout Company</i> | <i>Sexton Company</i> |
|---|----------------------|-----------------------|
| Current Assets                          | \$ 568,000           | \$ 271,000            |
| Fixed Assets                            | 1,972,000            | 830,000               |
| Other Assets                            | 1,000,800            | 1,600,000             |
| Investment in Sexton Company            | 1,600,000            |                       |
| Dividends Declared                      | 120,000              | 100,000               |
| Cost of Goods Sold                      | 942,000              | 795,000               |
| Other Expenses (including depreciation) | 145,000              | 90,000                |
| Income Tax Expense                      | 187,200              | 90,000                |
| Total                                   | <u>\$6,535,000</u>   | <u>\$3,776,000</u>    |
| Liabilities                             | \$ 305,000           | \$ 136,000            |
| Accumulated Depreciation                | 375,000              | 290,000               |
| Sales                                   | 1,475,000            | 1,110,000             |
| Dividend Income                         | 80,000               |                       |
| Common Stock                            | 3,000,000            | 1,200,000             |
| Retained Earnings 1/1                   | 1,300,000            | 1,040,000             |
| Total                                   | <u>\$6,535,000</u>   | <u>\$3,776,000</u>    |

**Required:**

- A. Prepare a consolidated statements workpaper for the year ended December 31, 2015.
- B. Assuming that on January 1, 2016, Sexton Company sells the fixed assets purchased from Prout Company to a party outside the affiliated group for \$300,000:
- (1) Prepare the entry that would have been entered on the books of Sexton Company to record the sale.
  - (2) Prepare entries for the December 31, 2016, consolidated statements workpaper necessitated by the sale of the assets.
  - (3) Prepare any workpaper entries that will be needed in the December 31, 2017, consolidated statements workpaper in regard to these fixed assets.

**PROBLEM 7-5 Trial Balance Workpaper—Cost Method LO 6 LO 9**

Using the information presented in Problem 7-4, prepare a consolidated financial statements workpaper for the year ended December 31, 2015, using the trial balance format.

**PROBLEM 7-6 Workpaper—Cost Method LO 6 LO 8**

Pitts Company owns 80% of the common stock of Shannon Company. The stock was purchased for \$960,000 on January 1, 2012, when Shannon Company's retained earnings were \$675,000. On January 1, 2014, Shannon Company sold fixed assets to Pitts Company for \$960,000; Shannon Company had purchased these assets for \$1,350,000 on January 1, 2004, at which time their estimated useful life was 25 years. The estimated remaining useful life to Pitts Company on 1/1/14 is 10 years. Both companies employ the straight-line method of depreciation.

The financial data for 2015 are presented here:

|                                       | <i>Pitts Company</i> | <i>Shannon Company</i> |
|---------------------------------------|----------------------|------------------------|
| Sales                                 | \$1,950,000          | \$1,350,000            |
| Dividend Income                       | 60,000               |                        |
| Total Revenue                         | <u>2,010,000</u>     | <u>1,350,000</u>       |
| Cost of Goods Sold                    | 1,350,000            | 900,000                |
| Other Expenses                        | 225,000              | 150,000                |
| Total Cost and Expense                | <u>1,575,000</u>     | <u>1,050,000</u>       |
| Net Income                            | <u>\$ 435,000</u>    | <u>\$ 300,000</u>      |
| 1/1 Retained Earnings                 | \$1,215,000          | \$1,038,000            |
| Net Income                            | 435,000              | 300,000                |
| Dividends Declared                    | (150,000)            | (75,000)               |
| 12/31 Retained Earnings               | <u>\$1,500,000</u>   | <u>\$1,263,000</u>     |
| Inventory                             | \$ 498,000           | \$ 225,000             |
| Investment in Shannon Company         | 960,000              |                        |
| Fixed Assets                          | 2,168,100            | 2,625,000              |
| Accumulated Depreciation—Fixed Assets | (900,000)            | (612,000)              |
| Total Assets                          | <u>\$2,726,100</u>   | <u>\$2,238,000</u>     |
| Liabilities                           | \$ 465,600           | \$ 450,000             |
| Common Stock                          | 760,500              | 525,000                |
| Retained Earnings                     | <u>1,500,000</u>     | <u>1,263,000</u>       |
| Total Liabilities and Equity          | <u>\$2,726,100</u>   | <u>\$2,238,000</u>     |

**Required:**

- A. Prepare a consolidated statements workpaper for the year ended December 31, 2015.
- B. Calculate consolidated retained earnings on December 31, 2015, using an analytical or t-account approach.

**PROBLEM 7-7**

**Workpaper, Cost Method, Comprehensive Problem LO 6 LO 8**

Parsons Company acquired 90% of the outstanding common stock of Shea Company on June 30, 2014, for \$426,000. On that date, Shea Company had retained earnings in the amount of \$60,000, and the fair value of its recorded assets and liabilities was equal to their book value. The excess of implied over the fair value of the recorded net assets was attributed to an unrecorded manufacturing formula held by Shea Company, which had an expected remaining useful life of five years from June 30, 2014.

Financial data for 2016 are presented here:

|                         | <i>Parsons Company</i> | <i>Shea Company</i> |
|-------------------------|------------------------|---------------------|
| Sales                   | \$2,555,500            | \$1,120,000         |
| Dividend Income         | 54,000                 |                     |
| Total Revenue           | <u>2,609,500</u>       | <u>1,120,000</u>    |
| Cost of Goods Sold      | 1,730,000              | 690,500             |
| Expenses                | 654,500                | 251,000             |
| Total Cost and Expense  | <u>2,384,500</u>       | <u>941,500</u>      |
| Net Income              | <u>\$ 225,000</u>      | <u>\$ 178,500</u>   |
| 1/1 Retained Earnings   | \$ 595,000             | \$ 139,500          |
| Net Income              | 225,000                | 178,500             |
| Dividends Declared      | (100,000)              | (60,000)            |

On December 31, 2014, Parsons Company sold equipment (with an original cost of \$100,000 and accumulated depreciation of \$50,000) to Shea Company for \$97,500. This equipment has since been depreciated at an annual rate of 20% of the purchase price. During 2015 Shea Company sold land to Parsons Company at a profit of \$15,000.

The inventory of Parsons Company on December 31, 2015, included goods purchased from Shea Company on which Shea Company recognized a profit of \$7,500. During 2016, Shea Company sold goods to Parsons Company for \$375,000, of which \$60,000 was unpaid on December 31, 2016. The December 31, 2016, inventory of Parsons Company included goods acquired from Shea Company on which Shea Company recognized a profit of \$10,500.

**Required:**

- A. Prepare a consolidated financial statements workpaper for the year ended December 31, 2016.
- B. Prepare a schedule to calculate consolidated retained earnings on December 31, 2016, using an analytical or t-account approach. (*Hint:* Due to rounding, you may be out of balance by \$1. To avoid this, you should carry decimals until the final calculation.)

**PROBLEM 7-8**    **Workpaper—Cost Method, Comprehensive Problem LO 6**

On January 1, 2013, Phelps Company purchased an 85% interest in Sloane Company for \$955,000 when the retained earnings of Sloane Company were \$150,000. The difference between implied and book value was assigned as follows:

|                           |          |
|---------------------------|----------|
| Inventory                 | \$48,000 |
| Land                      | 36,000   |
| Discount on Bonds Payable | 48,000   |
| Goodwill                  | 91,529   |

One-half of the inventory was sold in 2013 and the remaining inventory was sold in 2014. The bonds mature in eight years.

On December 31, 2013, Phelps Company's inventory contained \$10,000 in unrealized intercompany profit. During 2014 Phelps Company sold merchandise with a cost of \$200,000 to Sloane Company at a 30% markup on cost. Only \$65,000 (selling price) of this merchandise remains in Sloane Company's 2014 ending inventory. As of December 31, 2014, Sloane Company owes Phelps Company \$40,000 for merchandise purchased during 2014.

Equipment with a book value of \$500,000 was sold by Sloane Company on January 2, 2014, to Phelps Company for \$640,000. This equipment had an estimated useful life when purchased by Sloane Company on July 1, 2011, of 10 years.

**Required:**

Prepare a consolidated financial statements workpaper for the year ended December 31, 2014.

**PROBLEM 7-9**

**Workpaper with Intercompany Sales of Inventory and Land, Cost Method LO 6**

Pierce Company acquired a 90% interest in Sanders Company on January 1, 2014, for \$1,480,000. At this time, Sanders Company's common stock and retained earnings balances were \$1,000,000 and \$500,000, respectively. An examination of the books of Sanders on the date of purchase revealed the following:

|                           | <i>Book Value</i> | <i>Fair Value</i> |
|---------------------------|-------------------|-------------------|
| Current Assets            | \$300,000         | \$300,000         |
| Marketable Securities     | 200,000           | 200,000           |
| Inventory                 | 175,000           | 225,000           |
| Plant and Equipment (net) | 650,000           | 800,000           |
| Land                      | 500,000           | 600,000           |

Sanders Company's equipment has a remaining life of 10 years. Eighty percent of the inventory was sold in 2014, the remainder in 2015.

During 2014, Pierce Company sold merchandise costing \$400,000 to Sanders at a 25% markup on cost, and Sanders sold merchandise to Pierce Company for \$100,000 (this price included \$25,000 in profit). In 2015, Pierce Company sold merchandise to Sanders Company for \$350,000, while Sanders Company sold merchandise to Pierce Company for \$80,000. The 2014 markup percentages were also used on the 2015 sales.

The selling price of intercompany merchandise remaining in ending inventories for both years is summarized here:

| <i>Merchandise from Intercompany Sales<br/>in Ending Inventory of</i> | <i>2014</i> | <i>2015</i> |
|---|-------------|-------------|
| Pierce Company  | \$40,000    | \$20,000    |
| Sanders Company   | 50,000      | 30,000      |

In 2015, Sanders Company also sold a piece of land that had a book value of \$250,000 to Pierce Company for \$300,000. On December 31, 2015, Pierce Company holds a \$60,000 receivable on the merchandise it sold to Sanders Company.

Adjusted trial balances for the year ended December 31, 2015 are shown here:

|                               | <i>Pierce</i>      | <i>Sanders</i>     |
|-------------------------------|--------------------|--------------------|

**Required:**

- A. Prepare a consolidated statements workpaper for the year ended December 31, 2015.
- B. Calculate consolidated retained earnings on December 31, 2015, using an analytical or t-account approach.

**PROBLEM 7-13 Workpaper—Partial Equity Method, Comprehensive Problem LO6 LO8**

COMPREHENSIVE

Padilla Company acquired 90% of the outstanding common stock of Sanchez Company on June 30, 2014, for \$426,000. On that date, Sanchez Company had retained earnings in the amount of \$60,000, and the fair value of its recorded assets and liabilities was equal to their book value. The excess of implied over fair value of the recorded net assets was attributed to an unrecorded manufacturing formula held by Sanchez Company, which had an expected remaining useful life of five years from June 30, 2014.

Financial data for 2016 are presented here:

|                               | <i>Padilla Company</i> | <i>Sanchez Company</i> |
|-------------------------------|------------------------|------------------------|
| Sales                         | \$2,555,500            | \$1,120,000            |
| Equity in Subsidiary Income   | 160,650                |                        |

| Total Liabilities and Equity  | <u>\$2,236,200</u>     | <u>\$ 659,000</u>      |

On December 31, 2014, Padilla Company sold equipment (with an original cost of \$100,000 and accumulated depreciation of \$50,000) to Sanchez Company for \$97,500. This equipment had been depreciated at an annual rate of 20% of the purchase price. During 2015, Sanchez Company sold land to Padilla Company at a profit of \$15,000.

The inventory of Padilla Company on December 31, 2015, included goods purchased from Sanchez Company on which Sanchez Company recognized a profit of \$7,500. During 2016, Sanchez Company sold goods to Padilla Company for \$375,000, of which \$60,000 was unpaid on December 31, 2016. The December 31, 2016, inventory of Padilla Company included goods acquired from Sanchez Company on which Sanchez Company recognized a profit of \$10,500.

**Required:**

- A. Prepare a consolidated financial statements workpaper for the year ended December 31, 2016.
- B. Prepare a schedule to calculate consolidated retained earnings on December 31, 2016, using an analytical or t-account approach.

**PROBLEM 7-14** **Entries and Computation of Income and Retained Earnings** **LO 6** **LO 7** **LO 8**

Platt Company acquired an 80% interest in Sloane Company when the retained earnings of Sloane Company were \$300,000. On January 1, 2014, Sloane Company recorded a \$250,000 gain on the sale to Platt Company of equipment with a remaining life of five years. On January 1, 2015, Platt Company recorded a \$180,000 gain on the sale to Sloane Company of equipment with a remaining life of six years. Sloane Company reported net income of \$180,000 and declared dividends of 60,000 in 2015. It reported retained earnings of \$520,000 on January 1, 2015, and \$640,000 on December 31, 2015. Platt Company reported net income from independent operations of \$400,000 in 2015 and retained earnings of \$1,800,000 on December 31, 2015.

**Required:**

- A. Prepare in general journal form the entries necessary in the December 31, 2015, consolidated statements workpaper to eliminate the effects of the intercompany sales.

- B. Calculate controlling interest in consolidated net income for the year ended December 31, 2015.
- C. Calculate consolidated retained earnings on December 31, 2015.
- D. Calculate noncontrolling interest in consolidated income for the year ended December 31, 2015.

**PROBLEM 7-15** Workpaper—Complete Equity Method **LO 6** **LO 9**

(Note: This is the same Problem as Problems 7-4 and 7-10, but assuming the use of the complete equity method.)

Prout Company owns 80% of the common stock of Sexton Company. The stock was purchased for \$1,600,000 on January 1, 2012, when Sexton Company's retained earnings were \$800,000. On January 1, 2014, Prout Company sold fixed assets to Sexton Company for \$360,000. These assets were originally purchased by Prout Company for \$400,000 on January 1, 2004, at which time their estimated depreciable life was 25 years. The straight-line method of depreciation is used.

On December 31, 2015, the trial balances of the two companies were as shown here:

|   | <i>Prout Company</i> | <i>Sexton Company</i> |
|---|----------------------|-----------------------|
| Current Assets                          | \$ 568,000           | \$ 271,000            |
| Fixed Assets                            | 1,972,000            | 830,000               |
| Other Assets                            | 1,000,800            | 1,600,000             |
| Investment in Sexton Company            | 1,716,000            |                       |
| Dividends Declared                      | 120,000              | 100,000               |
| Cost of Goods Sold                      | 942,000              | 795,000               |
| Other Expenses (including depreciation) | 145,000              | 90,000                |
| Income Tax Expense                      | 187,200              | 90,000                |
| Total                                   | <u>\$6,651,000</u>   | <u>\$3,776,000</u>    |
| Liabilities                             | \$ 305,000           | \$ 136,000            |
| Accumulated Depreciation                | 375,000              | 290,000               |
| Sales                                   | 1,475,000            | 1,110,000             |
| Equity in Subsidiary Income             | 116,000              |                       |
| Common Stock                            | 3,000,000            | 1,200,000             |
| Retained Earnings 1/1                   | 1,380,000            | 1,040,000             |
| Total                                   | <u>\$6,651,000</u>   | <u>\$3,776,000</u>    |

**Required:**

- A. Prepare a consolidated statements workpaper for the year ended December 31, 2015.
- B. Assuming that on January 1, 2016, Sexton Company sells the fixed assets purchased from Prout Company to a party outside the affiliated group for \$300,000:
  - (1) Prepare the entry that would have been entered on the books of Sexton Company to record the sale.
  - (2) Prepare entries for the December 31, 2016, consolidated statements workpaper necessitated by the sale of the assets.
  - (3) Prepare any workpaper entries that will be needed in the December 31, 2017, consolidated statements workpaper in regard to these fixed assets.
- C. If you completed Problem 7-4, compare the consolidated balance obtained in requirement A to those obtained in Problem 7-4.

**PROBLEM 7-16** Workpaper—Complete Equity Method **LO 6** **LO 8**

(This is the same problem as Problem 7-12, but assuming the complete equity method.)

Prather Company owns 80% of the common stock of Stone Company. The stock was purchased for \$960,000 on January 1, 2012, when Stone Company's retained earnings were \$675,000. On January 1, 2014, Stone Company sold fixed assets to Prather Company for \$960,000; Stone Company had purchased these assets for \$1,350,000 on January 1, 2004, at which time their estimated useful life was 25 years. The estimated remaining useful life to Prather Company on 1/1/14 is 10 years. Both companies employ the straight-line method of depreciation.

The financial data for 2015 are presented here:

|                                       | <i>Prather Company</i> | <i>Stone Company</i> |
|---------------------------------------|------------------------|----------------------|
| Sales                                 | \$1,950,000            | \$1,350,000          |
| Equity in Subsidiary Income           | 252,000                |                      |
| Total Revenue                         | <u>2,202,000</u>       | <u>1,350,000</u>     |

| Retained Earnings             | 818,250                | 258,000                |
| Total Liabilities and Equity  | <u>\$2,156,250</u>     | <u>\$ 659,000</u>      |

On December 31, 2014, Padilla Company sold equipment (with an original cost of \$100,000 and accumulated depreciation of \$50,000) to Sanchez Company for \$97,500. This equipment has since been depreciated at an annual rate of 20% of the purchase price. During 2015, Sanchez Company sold land to Padilla Company at a profit of \$15,000.

The inventory of Padilla Company on December 31, 2015, included goods purchased from Sanchez Company on which Sanchez Company recognized a profit of \$7,500. During 2016, Sanchez Company sold goods to Padilla Company for \$375,000, of which \$60,000 was unpaid on December 31, 2016. The December 31, 2016, inventory of Padilla Company included goods acquired from Sanchez Company on which Sanchez Company recognized a profit of \$10,500.

**Required:**

- A. Prepare a consolidated financial statements workpaper for the year ended December 31, 2016.
- B. Prepare a schedule to calculate consolidated retained earnings on December 31, 2016, using a t-account or analytical approach.

# Chapter 7

## APPENDIX A – DEFERRED TAX CONSEQUENCES RELATED TO INTERCOMPANY SALES OF EQUIPMENT (ONLINE)

---

To keep the focus of this appendix on deferred tax consequences rather than alternative methods of accounting for investments, we present the discussion only once. The balances reported by the parent company in income, retained earnings, and the investment account differ depending on the method used by the parent company to record its investment. As illustrated in previous chapters, however, the method used by the parent company to record its investment has no effect on the consolidated balances.

As has also been illustrated in previous chapters, when the parent company records its investment using the equity method, a workpaper entry to reverse the effect of parent company entries during the year for subsidiary dividends and income replaces the cost method entries to establish reciprocity and to eliminate dividend income. However, workpaper entries to allocate the difference between implied and book values, to amortize, depreciate, or record impairment of differences between implied and book values of depreciable or amortizable assets, to eliminate intercompany sales, and to eliminate unrealized intercompany profit are the same regardless of whether the investment is recorded using the cost method or the partial equity method. Workpaper entries to record deferred tax consequences of unrealized intercompany profit and undistributed subsidiary income are also the same when the parent company records its investment using the partial equity method or the cost method. The principal difference between the workpaper entries for these methods and for the complete equity method is that entries to Retained Earnings—P Company are generally replaced by entries to the Investment in S Company, as indicated by an asterisk in the following analysis.

To illustrate the treatment in the consolidated financial statements of deferred income taxes relating to intercompany sales of equipment, assume that P Company owns a 70% interest in S Company and that on January 1, 2013, S Company sells P Company equipment with a book value of \$500,000 (original cost of \$800,000 and accumulated depreciation of \$300,000) for \$600,000. On January 1, 2013, the equipment has a remaining useful life of five years and is depreciated using the straight-line method. The marginal income tax rates for both companies are 40% and separate income tax returns are filed.

S Company will record a gain of \$100,000 on the sale of the equipment and each year P Company will record depreciation that is \$20,000 greater than depreciation based on the cost of the equipment to the selling affiliate. Workpaper eliminating entries in the December 31, 2013, and December 31, 2014, consolidated statements workpapers relating to the unrealized profit on the intercompany sale of the equipment are illustrated below:

### Consolidated Statements Workpaper Entries—December 31, 2013

|     |  |         |         |
|-----|--|---------|---------|
| (1) | Gain on Sale of Equipment  | 100,000 |         |
|     | Property and Equipment   |         | 100,000 |
|     | To eliminate unrealized profit recorded on intercompany sale of equipment.     |         |         |
| (2) | Accumulated Depreciation   | 20,000  |         |
|     | Depreciation Expense   |         | 20,000  |
|     | To reverse the amount of excess depreciation recorded during the current year. |         |         |

|     |   |         |         |
|-----|---|---------|---------|
| (3) | Deferred Tax Asset  | 32,000  |         |
|     | Income Tax Expense  |         | 32,000  |
|     | To defer the net amount of income tax paid or accrued by the affiliates on the amount of unrealized intercompany profit in equipment at the end of the year [ $.4 \times (\$100,000 - \$20,000)$ ]. |         |         |
| (4) | Property and Equipment  | 300,000 |         |
|     | Accumulated Depreciation  |         | 300,000 |
|     | To restate property and equipment at original cost to the selling affiliate.  |         |         |

Since the selling affiliate is a partially owned subsidiary (upstream sale), the calculation of the noncontrolling interest in consolidated income requires that the *after-tax* amount of gain recorded by the subsidiary ( $.60 \times \$100,000 = \$60,000$ ) be subtracted from the reported net income of the subsidiary and that the *after-tax* amount of the gain realized through depreciation ( $.6 \times \$20,000 = \$12,000$ ) be added to the reported net income of the subsidiary *before* multiplying by the noncontrolling interest percentage. Assuming that S Company reported net income of \$144,000 in 2013, the noncontrolling interest in consolidated income is \$28,800 [ $.30 \times (\$144,000 - \$60,000 + \$12,000)$ ].

If the sale of equipment is downstream, no adjustments to the reported net income of the subsidiary are necessary in the calculation of the noncontrolling interest in consolidated income.

#### Consolidated Statements Workpaper Entries—December 31, 2014

|     |  |         |         |
|-----|--|---------|---------|
| (1) | 1/1 Retained Earnings—P Company*   |         |         |
|     | [ $.70 \times (\$100,000 - \$20,000)$ ]  | 56,000  |         |
|     | 1/1 NCI  |         |         |
|     | [ $.30 \times (\$100,000 - \$20,000)$ ]  | 24,000  |         |
|     | Accumulated Depreciation   | 20,000  |         |
|     | Equipment  |         | 100,000 |
|     | To reduce the controlling and the noncontrolling interests for their respective shares of unrealized intercompany profit at the beginning of the year, to reduce accumulated depreciation by the amount of excess depreciation accumulated to the beginning of the year, and to reduce the carrying value of equipment to its book value on the date of the intercompany sale.   |         |         |
| (2) | Accumulated Depreciation   | 20,000  |         |
|     | Depreciation Expense   |         | 20,000  |
|     | To reverse the amount of excess depreciation recorded (during the current year).   |         |         |
| (3) | Deferred Tax Asset   | 24,000  |         |
|     | Income Tax Expense   | 8,000   |         |
|     | 1/1 Retained Earnings—P Company*   |         | 22,400  |
|     | 1/1 NCI  |         | 9,600   |
|     | To recognize deferred taxes for taxes paid in prior years on the amount of intercompany profit still considered unrealized at the <i>end of the year</i> [ $.40 \times (\$100,000 - \$20,000 - \$20,000) = \$24,000$ ], to recognize income tax expense on intercompany profit considered to be realized during the current year ( $.40 \times \$20,000 = \$8,000$ ), to adjust consolidated retained earnings for the controlling interest's share of the tax consequence of unrealized profit at the beginning of the year ( $.70 \times \$32,000 = \$22,400$ ), and to adjust the noncontrolling interest for its share of the tax consequence of unrealized profit at the beginning of the year ( $.30 \times \$32,000 = \$9,600$ ). |         |         |
|     | * Entry to R/E—P Company is replaced by an entry to Investment in S Company under the complete equity method.  |         |         |
| (4) | Property and Equipment   | 300,000 |         |
|     | Accumulated Depreciation   |         | 300,000 |
|     | To restate property and equipment to original cost to the selling affiliate.   |         |         |

The noncontrolling interest in consolidated income is calculated after adding the *after-tax* profit considered realized during the year ( $.6 \times \$20,000 = \$12,000$ ) to the reported net income of the subsidiary. If S Company reported net income of \$162,000 in 2014, the noncontrolling interest in consolidated income is \$52,200 [ $.30 \times (\$162,000 + \$12,000)$ ].

## IMPACT OF UNREALIZED INTERCOMPANY PROFIT ON THE CALCULATION OF DEFERRED TAX CONSEQUENCES RELATED TO UNDISTRIBUTED SUBSIDIARY INCOME

Earlier we emphasized that the calculation of the tax consequences of undistributed income is based on the undistributed income of the subsidiary that has been *included in consolidated income*. Thus, before calculating the deferred tax consequences relating to undistributed subsidiary income, the amount of undistributed income must be adjusted for the *after-tax* amount of unrealized intercompany profit *recorded by the subsidiary* that has been recognized in the determination of consolidated income.

To illustrate, assume that:

1. P Company acquired 70% of the voting stock of S Company when S Company's retained earnings amounted to \$150,000.
2. On January 1, 2013, S Company recorded a \$100,000 gain on the sale to P Company of equipment with a remaining life of five years.
3. On January 1, 2014, P Company recorded a \$60,000 gain on the sale to S Company of equipment with a remaining life of six years.
4. S Company reported retained earnings of \$260,000 on January 1, 2014, and \$320,000 on December 31, 2014.
5. S Company reported net income of \$90,000 and declared dividends of \$30,000 in 2014.
6. P Company reported net income from independent operations in 2014 in the amount of \$700,000 and retained earnings on December 31, 2014, of \$3,500,000.
7. The affiliates file separate income tax returns.
8. Undistributed income is expected to be received in the form of future dividends.
9. The dividends received deduction is 80%, and the past, current, and expected future marginal income tax rates are 40%.

The calculation of the amounts of the undistributed income of S Company that have been included in consolidated income is presented in Illustration 7-16.

### ILLUSTRATION 7-16

#### Undistributed Income of S Company That Has Been Included in Consolidated Income

| <i>S Company</i>  | <i>From<br/>Acquisition<br/>to 1/1/14</i> | <i>For<br/>Calendar<br/>Year 2014</i> | <i>From<br/>Acquisition<br/>to 12/31/14</i> |
|---|---|---------------------------------------|---|
| Retained earnings 1/1/14  | \$ 260,000                                |                                       |   |
| Retained earnings 12/31/14  |   |                                       | \$ 320,000                                  |
| Retained earnings date of acquisition   | (150,000)                                 |                                       | (150,000)                                   |
| Increase in retained earnings   | 110,000                                   |                                       | 170,000                                     |
| Net income 2014   |   | \$ 90,000                             |   |
| Dividends 2014  |   | (30,000)                              |   |
| After-tax unrealized profit on 1/1/14<br>[.6 × (\$100,000 – \$20,000)]              | (48,000)                                  |                                       |   |
| After-tax profit realized in 2014<br>(.6 × \$20,000)                                |   | 12,000                                |   |
| After-tax unrealized profit on 12/31/14<br>[.6 × (\$100,000 – \$20,000 – \$20,000)] |   |                                       | (36,000)                                    |
| Undistributed income that has been<br>included in consolidated income               | \$ 62,000                                 | \$ 72,000                             | \$ 134,000                                  |

The following entry is needed in the December 31, 2014, consolidated statements workpaper to report the income tax consequences of past and current undistributed subsidiary income:

|   |       |       |
|---|-------|-------|
| 1/1 Retained Earnings—P Company (1)*      | 3,472 |       |
| Income Tax Expense (balancing amount) (2) | 4,032 |       |
| Deferred Income Tax Liability (3)         |       | 7,504 |

(1)  $\$62,000 \times 70\% \times 20\% \times 40\% = \$3,472$

(2)  $\$7,504 - \$3,472 = \$4,032$

(3)  $\$134,000 \times 70\% \times 20\% \times 40\% = \$7,504$

\* Entry to Retained Earnings—P Company is replaced by an entry in the same amount to the Investment in S Company account under the complete equity method.

Note that the calculation of the deferred income tax liability on undistributed subsidiary income is not affected by unrealized intercompany profit recorded by the parent company on sales to the subsidiary (downstream sales). The calculation is also not affected by the allocation, depreciation, or amortization of any differences between market and book values.

## CALCULATIONS (AND ALLOCATION) OF CONSOLIDATED NET INCOME AND CONSOLIDATED RETAINED EARNINGS

When the affiliated companies file separate income tax returns, the calculations of consolidated net income and consolidated retained earnings must be modified to incorporate income tax consequences. When calculating the amounts of net income or retained earnings that have been realized in transactions with third parties, adjustments must now be made for the *after-tax amounts* of unrealized intercompany profit. In addition, consolidated net income is reduced by the income tax consequence of undistributed income for the current year and consolidated retained earnings is reduced by the income tax consequence of undistributed income from the date of acquisition to the date of the calculation.

The calculation of consolidated net income in Illustration 7-17 and the calculation of consolidated retained earnings in Illustration 7-18 are based on the same assumptions as those used in the preparation of Illustration 7-16.

### ILLUSTRATION 7-17

#### Calculation of Controlling and Noncontrolling Interests in Income for Year Ended December 31, 2014 Deferred Tax Considerations

| Noncontrolling Interest in Consolidated Net Income—Year 2014                                      |        |  |            |
|---|--------|--|------------|
| Unrealized profit on upstream sales in ending inventory (after-tax)                               | 0      | Internally generated income of S Company   | \$ 90,000  |
| Unrealized gain on 2014 intercompany sale of equipment—upstream sales (after-tax)                 | 0      | After-tax gain realized through usage (depreciation adjustment) .60(\$20,000)            | 12,000     |
| Amortization of excess depreciation   | 0      | Realized profit (upstream sales) from beginning inventory (after-tax)                    | 0          |
|   |        | Subsidiary Income included in Consolidated Income  | \$ 102,000 |
|   |        | Noncontrolling Ownership percentage interest   | 30%        |
|   |        | Noncontrolling Interest in Consolidated Income   | \$ 30,600  |
| Controlling Interest in Income—Year 2014  |        |  |            |
| After-tax unrealized gain on 2014 intercompany sales of equipment (downstream sales) .6(\$60,000) | 36,000 | Net income internally generated by P Company   | \$ 700,000 |
| Unrealized profit on downstream sales to S Company (ending inventory) (after-tax)                 | 0      | After-tax gain realized through usage (depreciation adjustment) .6(\$10,000)             | 6,000      |
|   |        | Realized profit (downstream sales) from beginning inventory (after-tax)                  | 0          |
|   |        | P Company's percentage of S Company's income realized from third parties, .70(\$102,000) | 71,400     |
| Deferred taxes on S Company's undistributed income for 2014 [(\$102,000 - 30,600) (.7)(.2)(.4)]   | 4,032  |  |            |
|   |        | Controlling interest in consolidated income  | \$ 737,368 |

**ILLUSTRATION 7-18****Calculation of Consolidated Retained Earnings  
December 31, 2014**

|  |            |                     |
|--|------------|---------------------|
| P Company's retained earnings on 12/31/14  |            | \$ 3,500,000        |
| Less the after-tax amount of P Company's retained earnings that have not been realized in transactions with third parties [ $.6 \times (\$60,000 - \$10,000)$ ]                                      |            | <u>(30,000)</u>     |
| P Company's retained earnings that have been realized in transactions with third parties   |            | 3,470,000           |
| Increase in retained earnings of S Company from date of acquisition to 12/31/14 ( $\$320,000 - \$150,000$ )  | \$ 170,000 |                     |
| Less cumulative amortization of differences between implied and book values  |            | <u>—0—</u>          |
| Less after-tax unrealized profit, included in S Company's retained earnings on 12/31/14 [ $.6 \times (\$100,000 - \$20,000 - \$20,000)$ ]  |            | <u>(36,000)</u>     |
| Increase in reported retained earnings of S Company since acquisition that has been realized in transactions with third parties  | \$ 134,000 |                     |
| P Company's share thereof ( $.70 \times \$134,000$ )   |            | 93,800              |
| Less income tax consequence of undistributed income of S Company that has been included in consolidated income from date of acquisition to 12/31/14 ( $\$134,000 \times .70 \times .20 \times .40$ ) |            | <u>(7,504)</u>      |
| Consolidated retained earnings 12/31/14  |            | <u>\$ 3,556,296</u> |

**PROBLEM 7-18A Deferred Tax Consequences of Intercompany Inventory and Equipment**

Peer Company acquired an 80% interest in Sells Company on January 1, 2014, for \$1,600,000. On this date, the common stock and retained earnings balances were \$1,500,000 and \$500,000, respectively. During the year, Peer Company sold merchandise to Sells Company for \$200,000. Only one-fourth of this merchandise was in Sells Company's 2014 ending inventory, and \$10,000 of this amount is unrealized profit.

On January 2, 2014, Sells Company sold equipment with a book value of \$300,000 to Peer Company for \$400,000. The equipment has a remaining useful life of four years. Sells Company's net income for 2014 was \$300,000, while Peer Company's was \$800,000. Neither company declared dividends in 2014. The affiliated companies file separate income tax returns, the dividends received exclusion is 80%, and the prior, current, and expected future marginal income tax rates for both companies are 40%.

**Required:**

- A. Prepare in general journal form all consolidated statements workpaper entries necessary for 2014.
- B. Calculate the controlling interest in consolidated net income for the year ended December 31, 2014.
- C. Calculate the noncontrolling interest in consolidated income for the year ended December 31, 2014.

## Chapter 7 – Review Questions

The review questions accompanying this course are designed to assist you in achieving the course learning objectives. The review section is not graded; do not submit it in place of your qualified assessment. While completing the review questions, it may be helpful to study any unfamiliar terms in the glossary in addition to course content. After completing the review questions, proceed to the review question answers and rationales.

46. In looking at the objectives for consolidated reporting related to exchanges of non-depreciable assets between affiliated parties, which the following is **NOT** a financial reporting objective?
- To show the economic impact of a transaction on each separate company.
  - To include gains or losses on non-depreciable property only when the property has been sold to a third party.
  - To uphold the revenue recognition principle for the consolidated entity and not the individual entities.
  - To present non-depreciable property in the consolidated balance sheet at its cost to the consolidated entity.
47. P Company owns all of the common stock of S Company. On January 1, P sold to S for a \$5,000 gain a fixed assets that S will use over the next five years. How should this gain be reflected in the consolidated financial statements?
- Not be recorded.
  - Be recognized over 5 years.
  - Be recognized in its entirety in the year of sale.
  - Be recognized in its entirety only when it is sold to outsiders.
48. P Corporation owns all of the common stock of S Company. On January 2, P sells a machine with a book value of \$30,000 to S for \$40,000. S uses straight-line depreciation and intends to use the machine for five years. The adjustments (net) needed to compute the consolidated net income (before tax) for the first 2 years are:
- Year 1: (\$10,000); year 2: \$0.
  - Year 1: (\$10,000); year 2: \$2,000.
  - Year 1: (\$8,000); year 2: \$0.
  - Year 1: (\$8,000); year 2: \$2,000.

49. P Corp owns 80% of the common stock of S Corp. S sold an asset with a carrying value of \$10,000 to its parent for \$15,000 on January 1, year 1. P intended to use the asset for five years but actually sold it on December 31, year 2 to a third party for \$17,000. If no adjustments were made for this intercompany transaction in the consolidating process, identify the amount (and direction) of balance sheet misstatements at the end of year 2.
- No misstatements occurred.
  - The noncontrolling interest is overstated by \$600.
  - The noncontrolling interest is overstated by \$2,000.
  - Retained earnings and controlling interest are both overstated by \$2,400.
50. Which of the following is accurate regarding the differences between the cost, partial equity, and complete equity methods assuming an upstream sale of depreciable property?
- The entries used to eliminate the effects of intercompany sales of equipment will be the same whether the parents uses the partial equity method or the complete equity method.
  - The entries used to eliminate the effects of intercompany sales of equipment will be different when the parents uses the cost method or the partial equity method.
  - The balances of the parent company for income, retained earnings, and in the investment in subsidiary account differ depending on the method used by the parent company to record its investment.
  - The reciprocity entry will need to be made regardless of the method used by the parent to account for the investment in subsidiary.
51. When depreciable assets are sold to an affiliate:
- Whether the purchaser is upstream, downstream, or horizontal is the critical consideration in determining the impact to noncontrolling interest.
  - The length of the remaining useful life of the equipment is the critical consideration in determining the impact on consolidated income.
  - Whether the equipment is sold at a gain or loss is the critical consideration in determining the impact on consolidated income.
  - Whether the seller is upstream, downstream, or horizontal is the critical consideration in determining the impact to noncontrolling interest.

52. All of the following are accurate regarding intercompany transactions with the **EXCEPTION** of:
- a. Interest on intercompany loans offsets the interest income on the loan so the two income statement accounts are simply eliminated in consolidation.
  - b. When one affiliate charges rent to another within the group, the income statement accounts are simply eliminated in consolidation.
  - c. When intercompany services are provided, it will always result in revenue and expense being recorded which are simply eliminated in consolidation.
  - d. If intercompany notes have not been repaid at the balance sheet date, the notes and the related interest payable/receivable must be eliminated in consolidation.

## Chapter 8 – Changes in Ownership Interest

### Learning Objectives

After completing this section of the course, you will be able to:

- Identify the types of transactions that change the parent company's ownership interest in a subsidiary.
- Identify the impact and required responses when a parent acquires subsidiary shares through multiple open market purchases using cost, partial equity method and complete equity method.
- Identify the reporting for differences between selling price and book value when shares are sold subsequent to acquisition.
- Recall how to prepare the required accounting entries on the books of the parent and in consolidation for purchases and sales of subsidiary stock by the parent.
- Compute the controlling and noncontrolling interest in income after the parent sells some shares of the subsidiary company.
- Recognize the impact of subsidiary issuance of new shares to the parent and account for purchase prices of more or less than book value.
- Recognize the impact on the investment in subsidiary account when the subsidiary issues new shares and they are purchased under various parent and minority interest situations.

# CHANGES IN OWNERSHIP INTEREST

## CHAPTER CONTENTS

- 8.1 CHANGES IN OWNERSHIP
- 8.2 PARENT ACQUIRES SUBSIDIARY STOCK THROUGH SEVERAL OPEN-MARKET PURCHASES—COST METHOD
- 8.3 PARENT SELLS SUBSIDIARY STOCK INVESTMENT ON THE OPEN MARKET—COST METHOD
- 8.4 EQUITY METHOD—PURCHASES AND SALES OF SUBSIDIARY STOCK BY THE PARENT
- 8.5 PARENT SELLS SUBSIDIARY STOCK INVESTMENT ON THE OPEN MARKET—COST METHOD
- 8.6 SUBSIDIARY ISSUES STOCK

## 8.1 CHANGES IN OWNERSHIP

Two assumptions regarding the equity interest acquired have been followed in previous chapters dealing with consolidated financial statements. Although not expressly stated, those assumptions were:

**LO 1** Changes in ownership.

1. The interest in the subsidiary was obtained through a single open-market transaction.
2. The percentage of ownership remained constant.

These assumptions are not always valid. For example, control of a purchased subsidiary might not be obtained until two or more stock purchases have been made. Similarly, the percentage of ownership may change for several reasons, such as (1) additional shares of the subsidiary may be purchased on the open market; (2) some of the shares held by the parent company may be sold; (3) the subsidiary may engage in capital transactions with the parent company and/or outside parties that change the parent company's percentage of ownership. In this chapter, we focus on changes in the ownership interest with only two principal companies involved, one parent and one subsidiary.

A summary of transactions and the accounting treatment for each follows:

| <i>Topic</i>  | <i>Current GAAP<br/>(ASC Topics 805 and 810)</i>  |
|---|---|
| <i>Parent Transactions with Third Parties</i>                                   |   |
| <b>Parent acquires in stages</b>  |   |
| Control not achieved upon the first purchase.                                   | Revalue initial investment to fair value when control is achieved. Adjustment to Income Statement.  |
| Control achieved in the first purchase.   | In the second purchase, adjustment to contributed capital of controlling interest.  |
| <b>Parent sells shares to third parties</b>                                     |   |
| Completely.   | Gain/loss on difference between selling price and book value (no change from prior GAAP).   |
| Loss of control, but maintains some ownership.                                  | The entire interest must be adjusted to fair value, and a gain or loss recorded on all shares owned prior to sale.                                  |
| Sold some shares, but maintains control.  | Adjustment to contributed capital of controlling interest, no gain or loss in Income Statement.   |
| <i>Subsidiary Transactions with and without the Parent</i>                      |   |
| <b>Issues additional shares</b>   |   |
| Parent's ownership decreases (no participation by the controlling interest).    | Adjustment to contributed capital of controlling interest.  |
| Parent's ownership increases (no participation by the noncontrolling interest). | Assuming the Parent already has control, no new adjustments are made for changes in fair value. Otherwise, see above ("Parent acquires in stages"). |

Justification for the current accounting treatments is based on the concept of economic substance over form. That is, a parent company can effectively increase its ownership interest in a subsidiary by either (1) buying additional subsidiary shares directly from third parties or (2) having a subsidiary purchase its (subsidiary's) shares from third parties. Similarly, the parent can effectively decrease its ownership interest by either (1) selling some of its subsidiary shares directly to third parties or (2) having a subsidiary sell additional shares (including treasury shares) to third parties. Since the economic substance is essentially the same from the parent company's point of view, the transactions should be accounted for in a consistent manner. Accounting for these changes in the parent company's percentage of ownership is discussed and illustrated in this chapter.

Recall that the current rules focus on the entity rather than on the parent's perspective. Thus, this is a significant change from previous standards. Under past GAAP, acquisitions of additional shares in an investee were handled in a step-by-step manner, with Computation and Allocation Schedules prepared for each portion purchased. Sales of shares were handled in much the same manner as any sale of an asset: the difference between the selling price and the basis of the shares sold is shown as a gain or loss in income. Shares retained are not adjusted. In contrast, current GAAP requires the following for acquisitions that take place in stages and for partial sales:

- a. Measure and recognize the acquiree's identifiable assets and liabilities at 100% of their fair values on the date the acquirer obtains *control*, and
- b. Recognize all the acquiree's goodwill (not just the parent's share), measured as the difference between the fair value of the acquiree on the acquisition date and the fair value of the identifiable net assets.

#### RELATED CONCEPTS

The date when control is achieved is treated as the acquisition date because it reflects the point at which the two firms become one economic entity.

- c. Any previously held noncontrolling equity interests should be remeasured to fair value, with the resulting adjustment recognized in income.
- d. After control is achieved, subsequent adjustments due to increased ownership are shown as Additional Contributed Capital, not as income.
- e. If a parent loses control, the retained investment should be remeasured to fair value and the adjustments recognized in net income.

## 8.2 PARENT ACQUIRES SUBSIDIARY STOCK THROUGH SEVERAL OPEN-MARKET PURCHASES—COST METHOD

**LO 2** Multiple open market purchases.

COST

Sometimes the controlling interest in a subsidiary is acquired through the initial stock purchase; at other times control is not achieved until two or more stock purchases have been made. When control is achieved on the first purchase, the date of acquisition is the purchase date. However, when more than one purchase is made before control is obtained, the acquisition date is the date when control is achieved. Determination of the date of acquisition is important because previously purchased shares must be revalued and the gain or loss included in income. Under prior GAAP, the previously held interests were not revalued at the date of subsequent purchases. Under current GAAP, subsidiary retained earnings accumulated before control is achieved constitutes a portion of the equity acquired by the parent company, whereas the parent’s share of subsidiary retained earnings accumulated after acquisition is properly included in consolidated retained earnings.

Under FASB ASC paragraph 805–10–25–9, the previously held noncontrolling equity interest should be remeasured to fair value *when control is achieved*, and the resulting adjustment should be recognized in net income. Similarly, if a parent loses control but retains a noncontrolling interest, the portion retained should be remeasured to fair value on the date control is surrendered and the adjustment reflected in the income statement.

The fair values of the acquirer’s interest in the acquiree and the noncontrolling interest on a per-share basis might differ. The main difference is likely to be the inclusion of a control premium in the per-share fair value of the acquirer’s interest in the acquiree or, conversely, the inclusion of a discount for lack of control (also referred to as a minority interest discount) in the per-share fair value of the noncontrolling interest. In this textbook, for practical considerations, we assume that the per-share fair value for pricing the controlling and noncontrolling shares are the same.

To illustrate the consolidation of an investment acquired in stages, assume that S Company had 10,000 shares of \$10 par value common stock outstanding and retained earnings as follows:

|                                      | <i>S Company<br/>Retained Earnings</i> |
|--------------------------------------|--|
| January 1, 2013 (1st stock purchase) | \$ 40,000                              |
| January 1, 2015 (control achieved)   | 120,000                                |
| January 1, 2016                      | 185,000                                |
| December 31, 2016                    | 265,000                                |

P Company purchased S Company common stock on the open market for cash as follows:

| <i>Date</i>     | <i>Shares Acquired</i>       | <i>Cost</i> | <i>Cost/share</i> |
|-----------------|------------------------------|-------------|-------------------|
| January 1, 2013 | 1,500 (15% of 10,000 shares) | \$ 24,000   | \$16/share        |
| January 1, 2015 | 7,500 (75% of 10,000 shares) | 187,500     | \$25/share        |
| Total           | 9,000 (90% of 10,000 shares) | \$211,500   |                   |

Thus on P’s books, the following entries are made:

|                         |  |         |         |
|-------------------------|--|---------|---------|
| January 1, 2013         |  |         |         |
| Investment in S Company |  | 24,000  |         |
| Cash                    |  |         | 24,000  |
| January 1, 2015         |  |         |         |
| Investment in S Company |  | 187,500 |         |
| Cash                    |  |         | 187,500 |

Some additional simplifying assumptions are made to concentrate attention on the new issues introduced and because the complexities avoided by the assumptions have been discussed in detail in previous chapters. The assumptions are:

1. Any difference between implied and book values of the purchases relates solely to goodwill and is, therefore, not subject to amortization or depreciation but is reviewed periodically for impairment.
2. S Company distributes no dividends during the periods under consideration.

The initial purchase of the 15% interest in S Company is recorded at its cost of \$24,000 and reported as an investment on P Company's balance sheets on December 31, 2013 and 2014. No income on the investment is recognized for either 2013 or 2014 because no dividends were distributed by S Company. The second purchase on January 1, 2015, is also recorded in the investment account at its cost of \$187,500. Again, no income is recognized on the investment during 2015 because S Company declared no dividends.

Since P Company now has controlling ownership of S Company, the investment must be consolidated. In the preparation of a consolidated workpaper on December 31, 2015, it is necessary to determine the amount of S Company equity to eliminate, as well as the difference between implied and book value. Note that P Company owns 90% of S Company after the second purchase, which constitutes control.

The payment by P Company of \$187,500 for 75% of S implies a total value at this date, which is the acquisition date, of \$250,000, \$187,500 divided by 75%. P now owns a total of 90% of S Company, or a total value of \$225,000, while the noncontrolling share is 10%, or \$25,000. The Computation and Allocation Schedule implied by this second purchase is as follows:

#### Computation and Allocation of Difference Schedule

|   | <i>Parent<br/>Share</i> | <i>Noncontrolling<br/>Share</i> | <i>Entire<br/>Value</i> |
|---|-------------------------|---------------------------------|-------------------------|
| Value implied by purchase price           | <b>\$225,000</b>        | <b>25,000</b>                   | 250,000                 |
| Less: Book value of equity acquired       | <u>198,000</u>          | <u>22,000</u>                   | <b>220,000</b>          |
| Difference between implied and book value | 27,000                  | 3,000                           | <b>30,000</b>           |
| Record goodwill                           | <u>(27,000)</u>         | <u>(3,000)</u>                  | <b>(30,000)</b>         |
| Balance                                   | <u><u>0</u></u>         | <u><u>0</u></u>                 | <u><u>0</u></u>         |

## Cost Method

Because P Company has owned a percentage of S Company (15%) since January 1, 2013, an entry is needed on P's books to revalue the 1,500 shares purchased in 2013 to their fair value as of the date of control (January 1, 2015). Initially, these 1,500 shares were purchased for \$16 per share, but now the shares are worth \$25 per share (or a \$9 per share increase). Thus the investment in S must be increased by \$13,500 (or \$9 × 1,500 shares) for consolidation. Before this entry can be made, the carrying value of the initial investment (1,500 shares) must be determined. Recall that S Company retained earnings increased from \$40,000 on January 1, 2013, to \$120,000 on January 1, 2015. During that time, P Company owned 15% of S Company; thus, since the consolidation is being retroactively applied to cover this time period, this is equivalent to the entry for reciprocity in previous chapters. Therefore, the carrying value of the initial investment for consolidated purposes is computed as:

|   |                      |
|---|----------------------|
| Initial purchase price (1,500 shares at \$16/share)   | \$24,000             |
| Change in retained earnings of S since acquisition × 15%:<br>[.15 × (\$120,000 – \$40,000)] | <u>12,000</u>        |
| Carrying value (implied) of initial investment  | <u><u>36,000</u></u> |

Thus the gain on revaluation of the initial shares is computed as:

|  |                     |
|--|---------------------|
| Implied value (\$25/share × 1,500)       | \$37,500            |
| Implied carrying value of initial shares | <u>36,000</u>       |
| Revaluation gain                         | <u><u>1,500</u></u> |

Thus the following entry is made on P company books.

|   |         |         |
|---|---------|---------|
| Investment in S Company   | \$1,500 |         |
| Gain on revaluation   |         | \$1,500 |
| To adjust from the implied carrying value of \$36,000 to fair value of \$37,500 (or \$25/share × 1,500 shares). |         |         |

Note that the implied carrying value of \$36,000, as shown above and used in the calculation of the \$1,500 gain does not match the actual carrying value on the books of the parent under the cost method. The reason for the difference is that the \$12,000 change in retained earnings of S (on the 15% original purchase) is not applied retroactively to the investment in S and the retained earnings accounting of P (as it is under the equity method, illustrated subsequently). Thus, a workpaper entry is needed on December 31, 2015, to convert to equity (establish reciprocity) from 2013 to the beginning of 2015 if P Company uses the cost method to account for its investment in S. This entry must be repeated in every future worksheet.

|   |        |        |
|---|--------|--------|
| Investment in S Company   | 12,000 |        |
| 1/1 Retained Earnings—P Company   |        | 12,000 |
| [.15 × (\$120,000 – \$40,000) change in retained earnings from 1/1/13 to 1/1/15]. |        |        |

Note that the FASB standards are not explicit with respect to the recording on the books of the parent company in a situation like the one illustrated here. Instead the standards focus on the correct reporting for the consolidated entity. A case could be made for recording (as a gain on the books of P under the cost method) the entire difference between the implied value of \$37,500 and the actual carrying value of \$24,000, or \$13,500. So long as the correct eliminating entries are made on the consolidating worksheet, this approach would not be inconsistent with GAAP. However, we believe the alternative of recording only the gain of \$1,500 to be preferable for the following reason: Since the \$12,000 is treated retroactively under the equity method, it never flows through the income statement of the parent. If we show it as a gain to the parent under the cost method, this introduces a permanent rather than temporary difference in the revenue reported by the parent company between the cost and equity methods. Thus, we believe the approach illustrated here to be the better alternative.

## Workpaper Elimination Entries

On the workpaper, the investment is eliminated by the following entry (per CAD Schedule):

|  |         |         |
|--|---------|---------|
| Common Stock—S Company                         | 100,000 |         |
| 1/1 Retained Earnings—S Company                | 120,000 |         |
| Difference between Implied and Book Value      | 30,000  |         |
| Investment in S Company (\$187,500 + \$37,500) |         | 225,000 |
| Noncontrolling Interest in Equity              |         | 25,000  |

The workpaper is then completed as illustrated in previous chapters.

If the cost method is used, in subsequent periods reciprocity (equity conversion) is established by taking 90% of the increase (decrease) in S Company's retained earnings from January 1, 2015, to the beginning of the current year, and then adding the \$12,000 initial adjustment (from 1/1/13 to 1/1/15, at 15%). For example, for the preparation of a consolidated statements workpaper on December 31, 2016, reciprocity (equity conversion) would be established as follows:

|  |                 |
|--|-----------------|
| Amount from the December 31, 2015, workpaper | \$12,000        |
| Add: Change in Retained Earnings             |                 |
| [.90 × (\$185,000 – \$120,000)]              | <u>58,500</u>   |
| Total  | <u>\$70,500</u> |

The reciprocity entry is not needed if P Company uses the equity method. The computation of the noncontrolling interest in consolidated net income is made by multiplying the *end-of-year* noncontrolling interest percentage times realized subsidiary income.

In the preceding example, the difference between implied and book values was assumed to relate to goodwill. If the differences were allocable to depreciable or amortizable assets (and liabilities), the difference would be assigned to the appropriate assets and/or liabilities as usual.

## Comparison to IFRS

IFRS 3, *Business Combinations*, provides the guidance for step acquisitions under international standards. Under IFRS 3, all previous ownership interests are adjusted to fair value, with any gain or loss recorded in earnings. This is similar to the rules issued by the FASB.

## 8.3 PARENT SELLS SUBSIDIARY STOCK INVESTMENT ON THE OPEN MARKET—COST METHOD

### Control Maintained

COST

The treatment of the sale of a portion (but not all) of its investment by a parent company depends on whether or not the sale results in the loss of effective control of the subsidiary. If control is maintained, no gain or loss is recognized in the income statement. Instead, an adjustment is made to additional contributed capital of the controlling interest. However, if control is lost, the entire interest is adjusted to fair value, and a gain or loss recorded in income on all shares owned prior to sale. This treatment is discussed in the next section.

**Lo 3** Parent sells shares subsequent to acquisition.

Recall the information from the previous example. P Company owns 9,000 shares of S Company that were revalued to \$25 a share on the date of acquisition, or \$225,000. Assume that P Company sold 1,800 shares of the 9,000 shares of S Company stock on July 1, 2015, for \$84,600 (\$47/share). The cost of the 1,800 shares sold equals \$45,000 (or 20% of \$225,000). The percentage of P Company shares sold is calculated by dividing the shares sold by the total owned by P ( $1,800/9,000 = 20\%$ ). After the sale, P Company retains control with a 72% ( $(9,000 \times 80\%)/10,000$ ) interest. It should be noted that the 1,800 shares sold represent 18% of total S Company shares. Retained Earnings balances were given on page 357.

To record the sale of the shares, P Company makes the following entry in its books on July 1, 2015.

#### P Company's Books

|   |        |        |
|---|--------|--------|
| Cash                                      | 84,600 |        |
| Investment in S Company (20% × \$225,000) |        | 45,000 |
| Additional Contributed Capital—P Company  |        | 39,600 |

After this entry, the balance in the investment in S Company account on P Company books will be \$168,000 (or \$24,000 + \$187,500 + \$1,500 − \$45,000).

From a consolidated standpoint, the cost of the shares sold (\$45,000) needs to be adjusted for 18% of the undistributed earnings since the date of acquisition. This is computed as follows:

COST

|   |          |          |
|---|----------|----------|
| Cost of Shares (1,800 × \$25/share)   |          | \$45,000 |
| Plus: Undistributed Income:   |          |          |
| (A) Change in Retained Earnings from the date of acquisition (1/1/14) to the beginning of the year (1/1/15) |          |          |
| (\$185,000 − \$120,000)   | \$65,000 |          |
| Ownership percentage sold   | 18%      | 11,700   |
| (B) Earnings from beginning of current year to the date of sale (1/1/15 to 7/1/15)                          |          |          |
| (\$80,000/2)  | 40,000   |          |
| Ownership percentage sold   | 18%      | 7,200    |
| Adjusted cost of shares sold  |          | \$63,900 |

Therefore, the correct consolidated amount of additional contributed capital on the sale is \$20,700, computed by subtracting the adjusted cost of \$63,900 from the selling price of \$84,600, or:

|  |               |
|--|---------------|
| Selling price of shares (1,800 × \$47/share) | \$84,600      |
| Adjusted cost of shares sold                 | <u>63,900</u> |
| Additional paid in capital—P Company         | \$20,700      |

Since additional contributed capital of \$39,600 is already recorded on the parent’s books (see entry above), an adjustment is needed on the workpapers to reduce it to \$20,700. The adjustments, totaling \$18,900, needed on the consolidated workpaper are as follows (these amounts are already computed above, 11,700 + 7,200 = 18,900):

|  |        |        |
|--|--------|--------|
| (1) Additional Contributed Capital—P Company | 11,700 |        |
| 1/1 Retained Earnings—P Company              |        | 11,700 |
| (2) Additional Contributed Capital—P Company | 7,200  |        |
| Subsidiary Income Sold                       |        | 7,200  |

The first entry represents undistributed income to the beginning of the year of sale on the shares sold accruing to the 18% of shares sold [(\$185,000 – \$120,000) × 18%]. This amount reduces the additional contributed capital and increases retained earnings for the prior year’s unrecorded earnings in P’s retained earnings.

The second entry adjusts for the subsidiary income earned during the first six months of 2015 that was sold to the noncontrolling stockholders. From January 1, 2015, to July 1, 2015, S Company earned \$40,000. Because 18% of Company S is sold, \$7,200 (18% × \$40,000) represents net income purchased by the noncontrolling stockholders. The \$7,200 should be excluded from noncontrolling interest in consolidated income, since it was purchased by the noncontrolling stockholders rather than being earned by them.

A workpaper for the preparation of consolidated financial statements on December 31, 2015, is presented in Illustration 8-1. Data necessary to complete the workpaper, other than those previously provided, are assumed. Workpaper entries, in addition to those made to adjust the additional contributed capital, are:

|   |        |        |
|---|--------|--------|
| (3) Investment in S Company (\$12,000 + \$46,800) | 58,800 |        |
| 1/1 Retained Earnings—P Company                   |        | 58,800 |

Entry (3) contains two components. The first component is the \$12,000 adjustment for the 1,500 shares purchased before control was obtained and retroactively adjusting the books for retained earnings. The second component establishes reciprocity by recognizing P Company’s share of the increase in S Company’s retained earnings from the date of control to the beginning of 2015 on the *shares still held at the end of 2015* (i.e., 72% of the change in retained earnings). The total adjustment is computed as follows:

|  |               |
|--|---------------|
| From January 1, 2012, to January 1, 2014 15% × (\$120,000 – \$40,000)  | \$12,000      |
| From January 1, 2014, to January 1, 2015 72% × (\$185,000 – \$120,000) | <u>46,800</u> |
| Total  | \$58,800      |

After conversion/reciprocity is established, the workpaper investment elimination entry is:

|   |         |         |
|---|---------|---------|
| (4) Common Stock—S Company                  | 100,000 |         |
| 1/1 Retained Earnings—S Company             | 185,000 |         |
| Difference between Implied and Book Value   | 30,000  |         |
| Investment in S Company (72%)               |         |         |
| (\$225,000 – \$45,000 + \$46,800)           |         | 226,800 |
| Noncontrolling Interest                     |         |         |
| [25,000 + 28% (185,000 – 120,000) + 45,000] |         | 88,200  |

| S Company                                       |                  | 100,000          | (4) 100,000         |                |                                |                              |
| Additional Contributed Capital—P Company        | 39,600           |                  | (1) 11,700          | (2) 7,200      |                                | 20,700                       |
| Retained Earnings from above                    | 363,500          | 265,000          | 185,000             | 77,700         | 22,400                         | 498,800                      |
| Noncontrolling Interest in Net Assets           |                  |                  |                     | (4) 88,200     | 88,200                         |                              |
| Total Liabilities and Equity                    | <u>1,005,700</u> | <u>440,000</u>   | <u>422,700</u>      | <u>422,700</u> | <u>110,600</u>                 | <u>1,307,700</u>             |

- (1) To adjust contributed capital for undistributed income on shares sold.  
(2) To adjust for current year's income sold to noncontrolling stockholders.  
(3) To establish reciprocity for remaining 72%.  
(4) To eliminate investment in S Company and create noncontrolling interest account.  
(5) To allocate the difference between implied and book value.

The workpaper entry to allocate the difference between implied and book value is:

|   |        |        |
|---|--------|--------|
| (5) Goodwill                              | 30,000 |        |
| Difference between Implied and Book Value |        | 30,000 |

- The additional contributed capital recognized for consolidation purposes is adjusted to \$20,700, consisting of the \$39,600 recorded capital less the portion of the additional contributed capital recognized in consolidated income in prior years (\$11,700) and the portion of the current year's income to the date of sale associated with the shares sold (\$7,200).

COST

2. Noncontrolling interest in consolidated income is represented by the December 31, 2015, noncontrolling interest percentage times reported subsidiary income ( $28\% \times \$80,000$ ), or \$22,400. Note, however, in Illustration 8-1 that \$7,200 of subsidiary income appears in the consolidated income statement columns of the workpaper as “subsidiary income sold.” The \$7,200 represents the amount that was purchased by the noncontrolling stockholders from the parent. Thus, the noncontrolling interest in consolidated income reported in the formal consolidated income statement reflects a net amount of \$15,200 ( $\$22,400 - \$7,200$ ). Note, however, that the full \$22,400 is included as a part of the noncontrolling interest on the balance sheet (the \$15,200 noncontrolling interest share of consolidated income plus the \$7,200 purchased by the noncontrolling stockholders). That is, the full \$22,400 represents an appropriate claim by the noncontrolling stockholders against the consolidated net assets, although \$15,200 represents assets earned during the period and \$7,200 reflects assets purchased.

In subsequent periods, the amount needed to convert to equity/establish reciprocity is the total of 15% of the increase in S Company’s retained earnings from January 1, 2012 to January 1, 2014 (always \$12,000), plus 72% of the change in S Company’s retained earnings thereafter. Thus, the entry needed to establish reciprocity for a workpaper on December 31, 2016, would be:

|  |         |         |
|--|---------|---------|
| Investment in S Company  | 116,400 |         |
| 1/1 Retained Earnings—P Company  |         | 116,400 |
| [ $15\% \times (\$120,000 - \$40,000)$ ] + [ $72\% \times (\$265,000 - \$120,000)$ ] |         |         |

### TEST YOUR KNOWLEDGE

8.1

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

#### Multiple Choice

- Proper Company purchased the outstanding common stock of Silly Company in increments as follows:  
January 1, 2010, Purchased 15%  
June 1, 2010, Additional 20%  
August 1, 2010, Additional 30%  
September 30, 2010, Remaining 35%  
Both Proper and Silly have fiscal years ending on September 30. Silly’s stock was acquired at book value. The controlling interest in net income for the consolidated entity for the fiscal year ending September 30, 2010, should include which of the following percentages of subsidiary earnings?
  - 100%, January–September 2010.
  - 65%, January–September 2010.
  - 15%, January–May 2010; 20%, June–July 2010; and 30%, August–September 2010.
  - None of the above.
- Suppose a parent company owns 90% of a particular subsidiary at the beginning of its fiscal year, but during the year the parent sells 10% of its interest, thus reducing its ownership percentage to 80%. The most popular view of this transaction under current consolidations theory is:
  - Any increase or decrease in equity as a result of the sale should be adjusted to donated capital.
  - The transaction occurs between the controlling and noncontrolling owner groups and has no effect on consolidated income.
  - The transaction is a sale of an investment at either a gain or loss, depending upon the selling price.
  - The transaction results in an adjustment to additional contributed capital of the controlling interest, with no gain or loss in the income statement.

## 8.4 EQUITY METHOD—PURCHASES AND SALES OF SUBSIDIARY STOCK BY THE PARENT

EQUITY

As stated in the previous section (cost method), sometimes the controlling interest in a subsidiary is acquired through the initial stock purchase; at other times control is not achieved until two or more stock purchases are made. When control is achieved on the first purchase, the date of acquisition is the purchase date. However, when more than one purchase is made before control is obtained, the acquisition date is defined as the date at which control is achieved.

Determination of the date of acquisition is important under purchase accounting because subsidiary retained earnings accumulated before that date constitute a portion of the equity acquired by the parent company, whereas the parent's share of subsidiary retained earnings accumulated after acquisition is properly included in consolidated retained earnings.

Recall that under the equity method, the parent company adjusts its investment in subsidiary account for its share of subsidiary income or loss and dividends distributed. Under the complete equity method (as compared to the partial equity method), additional adjustments are made on the books of the parent company to adjust for excess depreciation, amortization, elimination of unrealized intercompany profit, and so forth.

However, under the assumptions presented at the beginning of this chapter (no intercompany sales and the difference between implied and book value attributed to goodwill), the complete and partial equity methods require the same procedures (and, as always, yield the same consolidated results). To illustrate the procedures followed for open-market purchases and sales of subsidiary stock under the equity method, the previous cost method example will be used. For convenience, the facts are repeated here:

1. S Company had 10,000 shares of \$10 par value common stock outstanding during 2012–2015 and retained earnings as follows:

| <i>S Company<br/>Retained Earnings</i> |           |
|--|-----------|
| January 1, 2012                        | \$ 40,000 |
| January 1, 2014                        | 120,000   |
| January 1, 2015                        | 185,000   |
| December 31, 2015                      | 265,000   |

2. P Company purchased S Company common stock on the open market as follows:

| <i>Date</i>     | <i>Shares Acquired</i>       | <i>Cost</i> | <i>Cost/share</i> |
|-----------------|------------------------------|-------------|-------------------|
| January 1, 2012 | 1,500 (15% of 10,000 shares) | \$ 24,000   | \$16/share        |
| January 1, 2014 | 7,500 (75% of 10,000 shares) | 187,500     | \$25/share        |
| Total           | 9,000 (90% of 10,000 shares) | 211,500     |                   |

EQUITY

3. Any difference between implied and book value of net assets acquired relates to goodwill.
4. S Company distributed no dividends during the periods under consideration. Since no dividends were declared, the change in retained earnings represents the net income for that year.
5. P Company sold 1,800 shares of S Company stock on July 1, 2015, for \$84,600.

As with the cost method, the initial purchase of the 15% interest is recorded at its cost of \$24,000 and reported as an investment on P Company's balance sheets on December 31, 2012 and 2013. The second purchase on January 1, 2014, is also recorded in the investment account at its cost of \$187,500. Since P Company now has a 90% interest in S Company and intends to apply the equity method, the investment account must be restated to recognize P Company's share (15%) of the increase in S Company's retained earnings from January 1, 2012, to January 1, 2014. In essence, consolidation is being retroactively applied to the time period when the parent owned only 15% of the subsidiary. This results in the following entry on P Company books:

|  |        |        |
|--|--------|--------|
| Investment in S Company  | 12,000 |        |
| 1/1 Retained Earnings—P Company  |        | 12,000 |
| [.15 3 (\$120,000 – \$40,000) or the change in retained earnings from 1/1/12 to 1/1/14]. |        |        |

Then, to adjust the investment to fair value as of the date of acquisition, the gain on revaluation of the initial shares is computed as:

|                                    |               |
|------------------------------------|---------------|
| Implied value (\$25/share × 1,500) | \$37,500      |
| Carrying value of initial shares   | <u>36,000</u> |
| Revaluation gain                   | <u>1,500</u>  |

Thus the following entry is made on P company books.

| P Company's Books  |         |         |
|--|---------|---------|
| Investment in S Company  | \$1,500 |         |
| Gain on revaluation  |         | \$1,500 |
| To adjust from the carrying value of \$36,000 to fair value of \$37,500 (or \$25/share × 1,500 share). |         |         |

P Company will recognize its share of S Company income for 2014 with the following entry:

| P Company's Books  |        |        |
|--|--------|--------|
| Investment in S Company  | 58,500 |        |
| Equity in Subsidiary Income<br>[90% × (\$185,000 – \$120,000)] |        | 58,500 |

Recall (from item 4) that because there were no dividends declared by S Company, the change in retained earnings equals the amount of net income.

When a sale of subsidiary shares is made during a fiscal period, the parent's share of the subsidiary's income to the date of sale is normally recorded by a book entry if the information is available. Thus, assuming P Company received a six-month interim income statement from S Company reporting \$40,000 of net income, the following entry will be made by P Company on June 30, 2015.

| P Company's Books                            |        |        |
|--|--------|--------|
| Investment in S Company                      | 36,000 |        |
| Equity in Subsidiary Income (90% × \$40,000) |        | 36,000 |

After this entry, the Investment in S Company account will appear as follows:

| Investment in S Company                   |               |
|---|---------------|
| 1/1/12 Purchase (15%)                     | 24,000        |
| 1/1/14 Adjustment of 15%<br>to fair value | 1,500         |
| 1/1/14 Purchase (75%)                     | 187,500       |
| 1/1/14 Adjustment                         | 12,000        |
| 12/31/14 Subsidiary Income                | 58,500        |
| 6/30/15 Subsidiary Income                 | <u>36,000</u> |
| Balance                                   | 319,500       |

To record the sale of the S Company shares on July 1, 2015, P Company will make the following entry (recall that P Company is selling 20% of its shares):

| P Company's Books  |        |        |
|--|--------|--------|
| Cash   | 84,600 |        |
| Investment in S Company*   |        | 63,900 |
| Additional contributed capital                                       |        | 20,700 |
| * \$63,900 = 20% of \$319,500, the carrying value of the investment. |        |        |

The \$20,700 difference between selling price and carrying value is appropriately reported as an adjustment to the parent's additional contributed capital for consolidated purposes and, as always, agrees with the amount reported for consolidated purposes under the cost method (Illustration 8-1). Since the investment account was brought up to date as of the date of sale under the equity method on P Company books, no *workpaper* adjustments to the gain are necessary.

After the sale of the 1,800 shares, P Company holds a 72% interest in S Company. Thus, for the second six months of 2015 (and for subsequent periods), P Company will

recognize 72% of the reported income and dividends received from S Company. The December 31, 2015, book entry by P Company is:

| P Company's Books  |        |        |
|--|--------|--------|
| Investment in S Company                                  | 28,800 |        |
| Equity in Subsidiary Income $72\% \times \$40,000$       |        | 28,800 |
| To record equity income for the second 6 months of 2013. |        |        |

**LO 4** Controlling interest in income after parent sells shares.

(1) To reverse the effect of subsidiary income for the year.  
 (2) To eliminate investment in S Company.  
 (3) To allocate the difference between implied and book value.

A December 31, 2015, workpaper, using the same basic information as under the cost basis (Illustration 8-1), is presented in Illustration 8-2. Notice, again, that consolidated net income, consolidated retained earnings, and consolidated balance sheet totals are identical in Illustrations 8-1 and 8-2.

## 8.5 PARENT SELLS SUBSIDIARY STOCK INVESTMENT ON THE OPEN MARKET—COST METHOD

### Loss of Control

COST

The treatment of the sale of a portion (but not all) of its investment by a parent company depends on whether or not the sale results in the loss of effective control of the subsidiary. If control is maintained, no gain or loss is recognized in the income statement. Instead, an adjustment is made to additional contributed capital of the controlling interest. However, if control is lost, the entire interest is adjusted to fair value, and a gain or loss recorded in income on all shares owned prior to sale. It should be noted that under past GAAP, the treatment of the sale of a portion of an investment by the parent company was the same, regardless of whether or not control was surrendered.

The parent accounts for the deconsolidation by recognizing a gain or loss in net income attributable to the parent, measured as the difference between:

1. The carrying value of S Company
2. The sum of the following:
  - a. The fair value of the consideration received
  - b. The fair value of the retained noncontrolling interest (at the date of deconsolidation)
  - c. The carrying value of the former noncontrolling interest (at the date of deconsolidation).<sup>1</sup>

Consider the following. Suppose P Company owns 9,000 shares of S Company (90% of S Company) that were acquired at \$25 a share (or \$225,000) on January 1, 2014. During 2014, S Company reported \$60,000 of income and did not pay any dividends.

| P Company's Books                      |         |         |
|--|---------|---------|
| Investment (9,000 shares × \$25/share) | 225,000 |         |
| Cash                                   |         | 225,000 |

On January 1, 2015, P Company sold two-thirds of its investment (6,000 shares of the 9,000 shares) of S Company stock, for \$180,000 (\$30/share). After the sale, P Company has lost control and now only maintains a 30% ((9,000 – 6,000)/ 10,000) interest.

The carrying value of S company, on January 1, 2015, is computed as follows:

|  |           |                |
|--|-----------|----------------|
| Implied Carrying value of S Company                |           |                |
| Carrying value of S Company (on 1/1/2015)          |           |                |
| P Company's carrying value of Company S            |           |                |
| Initial cost (9,000 shares × \$25/share)           | \$225,000 |                |
| Increase in retained earnings (\$60,000 × 0.90)    | 54,000    |                |
| Carrying value of investment in S Company 1/1/2015 |           | 279,000        |
| Noncontrolling carrying value in Company S         |           |                |
| Initial value (1,000 shares × \$25/share)          | \$25,000  |                |
| Increase in retained earnings (\$60,000 × 0.10)    | 6,000     |                |
| Carrying value of NCI in S Company 1/1/2015        |           | 31,000         |
| Total carrying value of S Company (1/1/2015)       |           | <u>310,000</u> |

COST

<sup>1</sup> This amount also includes any accumulated other comprehensive income attributable to the noncontrolling interest.

The gain or loss in net income attributable to P Company is computed as follows:

|   |               |                 |
|---|---------------|-----------------|
| Gain or loss is the difference in:                  |               |                 |
| (1) Total carrying value of S Company               |               | 310,000         |
| (2) Sum of:   |               |                 |
| Fair value of consideration received (6,000 shares) | \$180,000     |                 |
| Fair value of retained NCI (3,000 × \$30)           | 90,000        |                 |
| Carrying value of the NCI (1,000 shares)            | <u>31,000</u> |                 |
| Total   |               | <u>301,000</u>  |
| Loss attributable to P Company                      |               | <u>\$ 9,000</u> |

The loss is split between the 6,000 shares that are sold and the 3,000 shares that are still held as an investment. To record the sale of the shares, P Company makes the following entry in its books on January 1, 2015.

#### P Company's Books

|  |         |         |
|--|---------|---------|
| (1) Cash (6,000 × \$30/share)                    | 180,000 |         |
| Realized loss on sale (on 6,000 shares sold)     | 6,000   |         |
| Investment in S Company (2/3 × \$279,000)        |         | 186,000 |
| (2) Unrealized loss (on 3,000 shares retained)   | 3,000   |         |
| Investment in S Company (remaining 3,000 shares) |         | 3,000   |
| To reduce the remaining shares to market value.  |         |         |

Because P Company now holds a 30% (not controlling) interest in S Company, the investment must be carried on the books using the equity method, even if P Company uses the cost method for its controlled subsidiaries. Thus the investment account must be adjusted for previous earnings of S Company (i.e., the reciprocity entry usually made on the consolidated workpaper).

|   |        |        |
|---|--------|--------|
| (3) Investment in S Company (\$60,000 × 0.90) | 54,000 |        |
| 1/1 Retained Earnings—P Company               |        | 54,000 |

After this entry, the balance in the investment in S Company account on P Company books will be equal to its fair value of \$90,000 (or \$225,000 + \$54,000 – \$186,000 – \$3,000). Consolidated financial statements will no longer be required because P Company has lost control.

## 8.6 SUBSIDIARY ISSUES STOCK

COST

A parent company's equity interest in a subsidiary also may change as the result of the issuance of additional shares of stock by the subsidiary. The effect of these subsidiary stock transactions on the parent company depends on whether the parent is a party to the transactions, as well as on the price at which the subsidiary shares are sold. Throughout this section, most adjustments, will affect only the additional contributed capital (controlling interest) or the noncontrolling interest in equity. This approach is consistent with the FASB's position that transactions in the shares of a subsidiary by any of the affiliates are transactions in the equity of the consolidated group. Subsidiary shares are part of the residual interest remaining after subtracting consolidated liabilities from net assets; thus, no gains or losses should be recognized.

### Issuance of Additional Shares by a Subsidiary

Assume that the parent company already has a controlling interest in a subsidiary, and the subsidiary issues additional shares of its common stock. The newly issued shares may be purchased (1) entirely by the parent company, (2) partly by the parent company and partly by the noncontrolling stockholders, or (3) entirely by the noncontrolling stockholders.

When shares are purchased by the noncontrolling stockholders, the situation is analogous to a sale of shares by P Company while maintaining control. If the shares are purchased by the noncontrolling stockholders for more than book value, the effect is equivalent to a sale of a portion of its interest by P Company with an increase in the parent's additional contributed capital. Conversely, if the shares are purchased by the noncontrolling stockholders for less than book value, the effect is equivalent to a sale of a portion of its interest with a decrease in the parent's additional contributed capital. To keep the focus on the relevant issues in the next section as we illustrate these possibilities and to conserve space, we combine the presentation of cost and equity methods. Adjustments to the parent's additional contributed capital resulting from subsidiary stock issuance transactions that decrease the parent company's percentage of ownership are recorded on the parent's books the same way under both methods. The effects of subsidiary stock issuance transactions that change the parent's percentage of ownership are adjusted to the additional contributed capital when the investment is eliminated on the consolidated workpaper, as illustrated in the following section. In either case, subsequent recognition of the parent's share of subsidiary income and dividends is based on the new percentage of ownership. Of course, no entries are needed to establish reciprocity/convert to equity when the equity method is being used. Otherwise the entries are the same as those presented for the cost method.

**One Hundred Percent of New Shares Purchased by the Parent Company** When shares are purchased by the parent company directly from the subsidiary, care must be exercised in the determination of equity acquired. This occurs because the number of subsidiary shares outstanding is increased and the proceeds from the stock issue flow increase the subsidiary's total stockholders' equity.

If the parent company holds less than a 100% interest and purchases the entire new issue of stock directly from the subsidiary, one of two situations must exist. Either (1) the preemptive right has previously been waived or (2) the noncontrolling stockholders have elected not to exercise their rights. The purchase of the entire new issue by the parent company will increase the parent company's percentage of ownership with an equal reduction in the noncontrolling interest's percentage of ownership. Since a subsidiary's stock transactions affect the balances in the subsidiary's stockholders' equity accounts, a special computational method is needed to determine the change in the parent's share of the subsidiary's equity. The change is determined by comparing the parent's share of the subsidiary's equity immediately before and immediately after the new purchase.

### New Shares Issued above Existing Carrying Value per Share

**Lo 5** Issue of new shares entirely to the parent.

To illustrate, assume that P Company purchased 14,000 shares (70%) of S Company's \$10 par value common stock on January 1, 2008, for \$210,000, which included a \$20,000 excess of implied over book value; the excess cost was assigned to land. S Company's retained earnings on January 1, 2008, were \$50,000, common stock at par was \$200,000, and other contributed capital was \$30,000. See Computation and Allocation Schedule below.

**Computation and Allocation of Difference between Implied and Book Value**

| <i>January 1, 2008</i>                    | <i>Parent Share</i> | <i>Noncontrolling Share</i> | <i>Implied Value</i> |
|---|---------------------|-----------------------------|----------------------|
| Cost                                      | \$210,000           | \$90,000                    | \$300,000            |
| Equity Acquired:                          |                     |                             |                      |
| Common Stock (1)                          | 140,000             | 60,000                      | 200,000              |
| Other Contributed Capital (2)             | 21,000              | 9,000                       | 30,000               |
| Retained Earnings (3)                     | 35,000              | 15,000                      | 50,000               |
| Total                                     | <u>196,000</u>      | <u>84,000</u>               | <u>280,000</u>       |
| Difference Between Implied and Book Value | \$ 14,000           | \$ 6,000                    | \$ 20,000            |
| Adjust Land to fair value                 | <u>(14,000)</u>     | <u>(6,000)</u>              | <u>(20,000)</u>      |
| Balance                                   | <u>—0—</u>          | <u>—0—</u>                  | <u>—0—</u>           |

(1) 70% × \$200,000.  
 (2) 70% × \$30,000.  
 (3) 70% × \$50,000.

On January 1, 2016, P Company purchased 4,000 additional shares of S Company stock directly from S Company at its current market price of \$22 per share (\$88,000). This price is **greater** than the existing book value per share of S Company. Noncontrolling stockholders elected not to participate in the new issue. S Company's stockholders equity on January 1, 2016, was:

#### S Company's Stockholders' Equity and Book Value per Share

| <i>January 1, 2016</i>       | <i>Immediately<br/>before the<br/>New Issue</i> | <i>New<br/>Issue</i> | <i>Immediately<br/>after the<br/>New Issue</i> |
|------------------------------|---|----------------------|--|
| Common Stock, \$10 Par Value | \$200,000                                       | \$40,000             | \$240,000                                      |
| Other Contributed Capital    | 30,000  | 48,000               | 78,000   |
| Retained Earnings            | <u>120,000</u>                                  | <u>—0—</u>           | <u>120,000</u>                                 |
| Total Stockholders' Equity   | <u>\$350,000</u>                                | <u>\$88,000</u>      | <u>\$438,000</u>                               |
| Common Shares                | 20,000  | 4,000                | 24,000   |
| Book Value per Share         | \$ 17.50  | \$ 22.00             | \$ 18.25                                       |

Note that after P Company buys the new shares, the book value per share of S Company goes from \$17.50 to \$18.25. There are 24,000 shares of S Company stock outstanding after the new issue, 18,000 of which are owned by P Company. Thus, P Company's percentage of ownership has increased to 75% (18,000 shares/24,000 shares). The computation of the book value of the equity interest acquired in the purchase of the new shares is as follows:

#### P Company's Carrying Value of the Investment in S Company

|                              | <i>Before New<br/>Purchase<br/>(70%)</i> | <i>After New<br/>Purchase<br/>(75%)</i> | <i>Book Value of<br/>Interest<br/>Acquired</i> |
|------------------------------|--|---|--|
| Common Stock                 | (1) \$140,000                            | (4) \$180,000                           | \$40,000                                       |
| Other Contributed Capital    | (2) 21,000                               | (5) 58,500                              | 37,500   |
| Retained Earnings            | (3) <u>84,000</u>                        | (6) <u>90,000</u>                       | <u>6,000</u>                                   |
| Total Stockholders' Equity   | <u>\$245,000</u>                         | <u>\$328,500</u>                        | <u>\$83,500</u>                                |
| Land to fair value           | (7) <u>14,000</u>                        | (8) <u>15,000</u>                       | <u>1,000</u>                                   |
| Carrying Value in S Company  | <u>259,000</u>                           | <u>343,500</u>                          | <u>\$84,500</u>                                |
| (1) $.7 \times \$200,000$ .  | (5) $.75 \times \$78,000$                |   |  |
| (2) $.7 \times \$30,000$ .   | (6) $.75 \times \$120,000$ .             |   |  |
| (3) $.7 \times \$120,000$ .  | (7) $.7 \times \$20,000$                 |   |  |
| (4) $.75 \times \$240,000$ . | (8) $.75 \times \$20,000$ .              |   |  |

The cost of the new shares was \$88,000 and the book value of the interest acquired was \$84,500, as determined above. The difference is debited to the parent's additional contributed capital. It should be noted that the \$4,500 excess cost resulted because P Company purchased the additional shares from S Company at a price of \$22 per share, which exceeded the \$17.50 book value of S Company's shares (\$350,000/20,000 shares). The noncontrolling shareholders' book value per share increased from \$17.50 to \$18.25, or 0.75 per share. Since they own 6,000 shares, the book value of their shares increased by \$4,500 (or  $.75 \times 6,000$ ) and decreased by the difference between implied and book value (assigned to land) considered transferred to P Company of \$1,000, yielding a net increase of \$3,500.

Although the noncontrolling stockholders did not participate in the new issue and their percentage of ownership decreased (30% to 25%), the amount of their total book value interest in S Company's net assets increased by \$3,500. It is not a coincidence that the increase in the noncontrolling interest equals the amount debited to the parent's additional contributed capital. The noncontrolling interest will increase if the cost of the new shares is greater than the carrying value of the interest acquired. Because the shares were purchased directly from the subsidiary, the \$3,500 represents a transfer of interest from

the controlling interest to the noncontrolling stockholders. This can be verified as follows:

**Noncontrolling Interest in S Company**

|  |                          |                 |
|--|--------------------------|-----------------|
| Before the new issue                               | $.30 \times \$350,000 =$ | \$105,000       |
| After the new issue                                | $.25 \times \$438,000 =$ | <u>109,500</u>  |
| Increase in noncontrolling interest                |                          | \$ 4,500        |
| Less: land value transferred to P (5% of \$20,000) |                          | <u>(1,000)</u>  |
| Net increase                                       |                          | <u>\$ 3,500</u> |

Essentially, because the controlling stockholders paid more than the existing carrying value per share, the noncontrolling stockholders' carrying value must increase.

To record the purchase of the new shares, P Company will make the following entry:

**P Company's Books**

|                         |        |        |
|-------------------------|--------|--------|
| Investment in S Company | 88,000 |        |
| Cash                    |        | 88,000 |

If a workpaper were prepared immediately after the purchase of the new shares, the workpaper entries to establish reciprocity (convert to equity) and eliminate the investment account would be:

|  |        |        |
|--|--------|--------|
| Investment in S Company                                | 49,000 |        |
| 1/1 Retained Earnings—P Company                        |        | 49,000 |
| [70% × (\$120,000 – 50,000)]                           |        |        |
| To establish reciprocity (convert to equity).*         |        |        |
| *Conversion entry not needed if equity method is used. |        |        |

COST

|   |         |         |
|---|---------|---------|
| Common Stock—S Company                          | 240,000 |         |
| Other Contributed Capital—S Company             | 78,000  |         |
| Retained Earnings—S Company                     | 120,000 |         |
| Difference between Implied and Book Value       | 20,000  |         |
| Additional Contributed Capital—P Company        | 3,500   |         |
| Investment in S Company                         |         | 347,000 |
| (\$210,000 + \$88,000 + \$49,000)               |         |         |
| Noncontrolling interest in S Company            |         | 114,500 |
| (\$90,000 + \$21,000 + \$3,500)                 |         |         |
| To eliminate the investment and create the NCI. |         |         |

Because this entry only reflects the change in Retained Earnings—S Company up to the *beginning of the year*, we use the percentage of ownership as of the beginning of the year (70%). In later years, reciprocity is established on the basis of a 70% interest to the date of purchase of the new shares plus a 75% interest thereafter. The elimination of S Company's stockholders' equity, however, is based on the level of ownership held after the purchase of the new shares (75%).

**New Shares Issued at or below the Existing Book Value per Share**

**Lo 5** New shares issued to the parent.

In the previous example, the parent paid more than the existing book value per share of S Company. If the new shares are issued at a price *equal* to their book value, the parent's additional contributed capital will change only by difference between implied and purchase price considered transferred. For example, if the shares are issued at their book value of \$17.50 per share (or \$70,000), the computation is as follows:

**P Company's Share of S Company's Net Assets**

|  |   |                  |
|--|---|------------------|
| Before the new issue                                 | $.70 \times \$350,000 =$                    | \$245,000        |
| After the new issue                                  | $.75[\$350,000 + (4,000 \times \$17.50)] =$ | <u>\$315,000</u> |
| Increase in P Company's share                        |   | 70,000           |
| Land value transferred to P ((75% – 70%) × \$20,000) |   | <u>1,000</u>     |
| Total  |   | 71,000           |
| Cost of investment (4,000 × \$17.50)                 |   | <u>70,000</u>    |
| Difference   |   | <u>\$ 1,000</u>  |

Although the noncontrolling stockholders' percentage of ownership decreases from 30% to 25%, their share of the net assets of S Company decreased only by the land value transferred, as shown here:

#### Noncontrolling Interest in S Company

|   |                                       |                 |
|---|---------------------------------------|-----------------|
| Before the new issue  | $.30 \times \$350,000 =$              | \$ 105,000      |
| After the new issue   | $.25 \times (\$350,000 + \$70,000) =$ | 105,000         |
| Decrease in noncontrolling share                              |                                       | \$ —0—          |
| Land value transferred to P $((0.30 - 0.25) \times \$20,000)$ |                                       | 1,000           |
| Difference  |                                       | <u>\$ 1,000</u> |

If the new shares are issued at a price *less* than their book value, total noncontrolling book value interest decreases, and the controlling book value interest increases by more than the amount of the land value transferred. In this case, an excess of book value over implied value results. For example, assume the new shares were issued at \$14 per share (or \$56,000). The excess of book value over cost is computed as follows:

|   |  |                 |
|---|--|-----------------|
| Before the new issue  | $.70 \times \$350,000 =$                 | \$ 245,000      |
| After the new issue   | $.75[\$350,000 + (4,000 \times \$14)] =$ | \$ 304,500      |
| Increase in P Company's share<br>(book value acquired)              |  | 59,500          |
| Plus: land value transferred to P $((75\% - 70\%) \times \$20,000)$ |  | 1,000           |
| Total   |  | 60,500          |
| Cost of the investment $(4,000 \times \$14)$                        |  | 56,000          |
| Increase in additional contributed capital                          |  | <u>\$ 4,500</u> |

The resulting decrease in the noncontrolling interest is verified as:

#### Noncontrolling Interest in S Company

|  |  |                 |
|--|--|-----------------|
| Before the new issue   | $.30 \times \$350,000 =$                 | \$ 105,000      |
| After the new issue  | $.25[\$350,000 + (4,000 \times \$14)] =$ | \$ 101,500      |
| Decrease in noncontrolling interest                                |  | \$ 3,500        |
| Less: land value transferred to P $(0.30 - 0.25) \times \$20,000)$ |  | 1,000           |
| Total decrease in NCI  |  | <u>\$ 4,500</u> |

In this case, the journal entry by P Company to record the purchase of the new shares is:

#### P Company's Books

|                         |        |        |
|-------------------------|--------|--------|
| Investment in S Company | 56,000 |        |
| Cash                    |        | 56,000 |

In this case, the \$4,500 excess of book value over cost is treated as an increase in the additional contributed capital of the parent. Thus, the workpaper entries to establish reciprocity and eliminate the investment account in the preparation of a consolidated workpaper immediately after the purchase are:

|   |        |        |
|---|--------|--------|
| Investment in S Company   | 49,000 |        |
| 1/1 Retained Earnings—P Company<br>[ $70\% \times (\$120,000 - \$50,000)$ ] |        | 49,000 |
| To establish reciprocity/convert to equity*                                 |        |        |

|  |         |         |
|--|---------|---------|
| Common Stock—S Company   | 240,000 |         |
| Other Contributed Capital—S Company  | 46,000  |         |
| Retained Earnings—S Company  | 120,000 |         |
| Difference between Implied and Book Value  | 20,000  |         |
| Investment in S Company<br>(\$210,000 + \$56,000 + \$49,000)                                       |         | 315,000 |
| Additional contributed capital—P Company   |         | 4,500   |
| Noncontrolling interest in S Company<br>[\$90,000 + $(\$120,000 - 50,000) \times 30\% - \$4,500$ ] |         | 106,500 |
| To eliminate the investment account and create NCI   |         |         |

\*Entry not needed if equity method is used.

COST

COST

**LO 6** New subsidiary shares purchased ratably by the parent and noncontrolling shareholders.

**New Shares Purchased Ratably by Parent and Noncontrolling Stockholders** In the previous example, noncontrolling stockholders elected not to exercise their right to purchase a ratable number of the new shares. If the noncontrolling stockholders had elected to exercise their rights, the percentage of stock owned by the parent and noncontrolling stockholders after the new issue would be the same as their respective interests prior to the new issue. Assume, for example, that the shares are issued at \$22 each, that P Company is permitted to purchase only its ratable share of the new issue, and that the remaining shares are purchased by the noncontrolling stockholders. Thus, P Company would purchase 2,800 of the 4,000 new shares and retain its 70% (16,800 shares/24,000 shares) interest in S Company. Comparison of cost with the book value of the interest acquired by P Company is as follows:

|   |                |                 |
|---|----------------|-----------------|
| Cost of investment (2,800 × \$22)                     |                | \$ 61,600       |
| Book value of equity interest acquired:               |                |                 |
| P Company's share of S Company's net assets:          |                |                 |
| Before the new purchase .7(\$350,000)                 | \$245,000      |                 |
| After the new purchase .7[\$350,000 + (4,000 × \$22)] | <u>306,600</u> |                 |
| Increase in P Company's share of S Company            |                | 61,600          |
| Land value transferred (0.70 – 0.70)(\$20,000)        |                | <u>— 0 —</u>    |
| Difference  |                | <u>\$ — 0 —</u> |

Note that the book value of the interest acquired is equal to the cost of the shares to P Company; thus, there is no need to adjust the parent's additional contributed capital. This condition will always result if the shares are purchased ratably by the existing stockholders, regardless of whether the new shares are issued at a price below, equal to, or above their book value.

**LO 6** New subsidiary shares purchased by noncontrolling shareholders.

COST

**New Shares Purchased Entirely by Noncontrolling Stockholders** Occasionally, in order to obtain an additional capital increment for the consolidated entity or to meet the requirements of employee stock options or stock purchase plans, the subsidiary may issue new shares entirely to noncontrolling stockholders. Since any shares purchased by the parent represent a transfer of funds within the affiliated group, purchases by the parent do not provide any additional capital to the group as a whole. As long as the number of new shares issued is not so large that it reduces the parent's percentage of ownership below that needed for control, new financing can be made available and control retained. The issuance of all the new shares to noncontrolling stockholders does, of course, reduce the parent's percentage of ownership. Thus, the economic substance of the transaction is a sale of interest by P Company. However, the book value of the parent's interest in the subsidiary may increase, decrease, or remain unchanged depending on the relationship of the issue price to book value per share of stock. To illustrate, assume the previous example except that the 4,000 new shares were issued entirely to noncontrolling stockholders at the current market price of \$22 per share. The new issue results in a decrease in P Company's percentage of ownership from 70% to 58.33% (14,000 shares/24,000 shares). The change in the book value of P Company's interest in S Company is determined as before by an immediately "before" and "after" computation as follows:

**P Company's Share of S Company's Net Assets**

|   |   |                 |
|---|---|-----------------|
| Before the new issue  | 70% × \$350,000 =                       | \$245,000       |
| After the new issue   | 58.33% × [\$350,000 + (4,000 × \$22)] = | <u>255,500</u>  |
| Increase  |   | \$ 10,500       |
| Less: land value transferred to NCI (0.70 – 0.5833)(\$20,000) |   | <u>(2,333)</u>  |
| Net increase  |   | <u>\$ 8,167</u> |

Although P Company's ownership interest decreased from 70% to 58.33%, the book value of its interest in S Company after the new issue increased by \$8,167. The \$8,167 increase in P Company's book value interest is accompanied by a decline in the noncontrolling book value interest relative to the cost of the new shares. The total \$88,000 cost of

the new shares is allocated between the controlling and noncontrolling interests in essence, even though the noncontrolling interest paid the entire amount as follows:

|   |           |        |                 |
|---|-----------|--------|-----------------|
| Cost of new shares to noncontrolling interest<br>(4,000 × \$22) |           |        | \$88,000        |
| Less: equity in net assets acquired:                            |           |        |                 |
| Noncontrolling interest's share of net assets:                  |           |        |                 |
| Before the purchase .3(\$350,000)                               | \$105,000 |        |                 |
| After the purchase  |           |        |                 |
| 41.67% × (\$350,000 + \$88,000)                                 | 182,500   | 77,500 |                 |
| Plus: land value transferred to NCI (41.67% – 30%)(20,000)      |           | 2,333  |                 |
| Increase in noncontrolling interest                             |           |        | 79,833          |
| Increase in controlling interest                                |           |        | <u>\$ 8,167</u> |

COST

Since the purchase of the shares by the noncontrolling stockholders decreased P Company's ownership percentage, the situation is analogous to a sale of shares by P Company, while retaining control. The transfer of the \$8,167 interest in consolidated net assets from the noncontrolling stockholders to the controlling stockholders is recorded on the books of P Company as follows:

#### P Company's Books

|                                |       |       |
|--------------------------------|-------|-------|
| Investment in S Company        | 8,167 |       |
| Additional Contributed Capital |       | 8,167 |

Because the shares were purchased by the noncontrolling stockholders for more than book value, P Company's percentage interest decreased, and P Company's interest in the consolidated net assets increased, the effect is the equivalent of a sale of a portion of its interest by P Company, while retaining control. Note that, in this example, the new shares are purchased by the noncontrolling stockholders at a price in excess of book value, which results in an increase in P Company's share of consolidated net assets. If the new shares are issued at book value, the parent's additional contributed capital will change only by the amount of land value transferred:

#### P Company's Share of S Company's Net Assets

|   |   |                   |
|---|---|-------------------|
| Before the new issue                                      | 70% × 350,000 =                         | 245,000           |
| After the new issue                                       | 58.33% × [350,000 + (4,000 × \$17.5)] = | 245,000           |
|   |   | <u>—0—</u>        |
| Land value transferred to NCI ((70% – 58.33%) × \$20,000) |   | 2,333             |
| Difference  |   | <u>(\$ 2,333)</u> |

If the shares are issued below book value, P Company's book value interest decreases and a book entry debiting Additional Contributed Capital and crediting Investment in S Company is made. For example, assuming the issue of the entire 4,000 shares to noncontrolling stockholders at \$14 per share (or \$56,000), the computation and journal entry are:

#### P Company's Share of S Company's Net Assets

|   |   |                  |
|---|---|------------------|
| Before the new issue  | 70% × \$350,000 =                       | 245,000          |
| After the new issue   | 58.33% × [\$350,000 + (4,000 × \$14)] = | 236,833          |
| Decrease  |   | 8,167            |
| Less: land value transferred to NCI ((70% – 58.33%) × \$20,000) |   | 2,333            |
| Total decrease in book value interest                           |   | <u>\$ 10,500</u> |

#### P Company's Books

|                                |        |        |
|--------------------------------|--------|--------|
| Additional Contributed Capital | 10,500 |        |
| Investment in S Company        |        | 10,500 |

## IFRS and Step Acquisitions

There are some important differences between U.S. GAAP and IFRS with regard to step acquisitions. Under IFRS, a choice is available to measure noncontrolling interests either (1) at their proportionate interest in the net identifiable assets of the acquired firm or (2) at fair value (which is required under U.S. GAAP). The choice of method affects the

**IFRS**

amount recognized on the acquisition date as goodwill and is available for each business combination. Measuring the fair value of noncontrolling interest is similar to U.S. GAAP. It may be possible to use market prices for noncontrolling shares trading shortly after acquisition or other valuation methods may be necessary.

Under IFRS, a change in control is a significant economic event. Accordingly, acquisition accounting is applied only at the date that control is achieved. Consequently, goodwill is identified and net assets remeasured to fair value only in respect of the transaction that achieved control, and not in respect of any earlier or subsequent acquisitions of equity interests. In measuring goodwill, any previously held interests in the acquiree are first remeasured to fair value, with any gain recognized in income (including the reclassification of gains or losses included in other comprehensive income). Similarly, on disposal of a controlling interest, any residual interest is remeasured to fair value and reflected in income on disposal.

After control is attained, any subsequent transactions between the parent and noncontrolling interests (that do not result in a loss of control) are accounted for as equity transactions. Consequently, additional goodwill is not recorded on any increase in the parent's ownership percentage. Also, there is no remeasurement of net assets to fair value and no gain or loss is recognized on any decrease in parent ownership percentage.

Consider the following example. Suppose that Company P acquired an 80% interest in S Company for \$120,000. On this date, the fair value of S Company's identifiable net assets is \$100,000. The fair value of the noncontrolling interest is \$30,000. Goodwill is computed under each acceptable alternative for recording noncontrolling interests (NCI) for firms using IFRS and under U.S. GAAP.

|                               | IFRS   |                                   | U.S. GAAP                         |
|-------------------------------|--|-----------------------------------|-----------------------------------|
|                               | <i>NCI Recorded at % of Fair Value of Net Assets</i> | <i>NCI Recorded at Fair Value</i> | <i>NCI Recorded at Fair Value</i> |
| Purchase price                | \$120,000  | \$120,000                         | \$120,000                         |
| Noncontrolling interest (NCI) | <u>20,000</u>  | <u>30,000</u>                     | <u>30,000</u>                     |
| Total                         | 140,000  | 150,000                           | 150,000                           |
| Fair value of net assets      | <u>100,000</u>                                       | <u>100,000</u>                    | <u>100,000</u>                    |
| Goodwill                      | 40,000   | 50,000                            | 50,000                            |

Suppose that one year later, S Company earned income of 40,000 and did not pay any dividends. The carrying value of the noncontrolling interest is computed as follows:

|                                | IFRS   |                                   | U.S. GAAP                         |
|--------------------------------|--|-----------------------------------|-----------------------------------|
|                                | <i>NCI Recorded at % of Fair Value of Net Assets</i> | <i>NCI Recorded at Fair Value</i> | <i>NCI Recorded at Fair Value</i> |
| NCI at acquisition             | 20,000   | 30,000                            | 30,000                            |
| S Company income $\times$ 0.20 | <u>8,000</u>   | <u>8,000</u>                      | <u>8,000</u>                      |
| Carrying value of NCI          | 28,000   | 38,000                            | 38,000                            |

Suppose that P Company acquires the remaining 20% for \$40,000. The adjustment to equity is:

|                              | IFRS   |                                   | U.S. GAAP                         |
|------------------------------|--|-----------------------------------|-----------------------------------|
|                              | <i>NCI Recorded at % of Fair Value of Net Assets</i> | <i>NCI Recorded at Fair Value</i> | <i>NCI Recorded at Fair Value</i> |
| Purchase price               | \$40,000   | \$40,000                          | \$40,000                          |
| Carrying value of NCI        | <u>28,000</u>  | <u>38,000</u>                     | <u>38,000</u>                     |
| Reduction in paid in capital | 12,000   | 2,000                             | 2,000                             |

Thus there can be no difference or quite a difference depending on the alternative chosen under IFRS.

**SUMMARY**

- 1 *Identify the types of transactions that change the parent company's ownership interest in a subsidiary.* The parent may buy additional shares of the subsidiary from third parties; the parent may sell subsidiary shares to third parties; the subsidiary may issue additional shares, either to the parent or to others, or both; the subsidiary may buy its own shares either from its parent or from others.
- 2 *Describe the process needed when the parent acquires subsidiary shares through multiple open market purchases.* The initial investment(s) is revalued to fair value when control is achieved, and adjustments are recorded in the income statement. Subsequent purchases result in adjustments to additional contributed capital.
- 3 *Explain how the parent reports the difference between selling price and book value when shares are sold subsequent to acquisition.* If the parent maintains control, the difference is an adjustment to additional contributed capital. If not, the difference after adjusting any remaining ownership to fair value, is treated as a gain or loss.
- 4 *Compute the controlling interest in income after the parent sells some shares of the subsidiary company.* The controlling interest in income is computed as the internally generated income of the parent plus or minus the usual adjustments for excess depreciation, and so on, plus the controlling percentage of the subsidiary adjusted income. The controlling percentage of the subsidiary adjusted income is layered in the year of sale so that the portion of the year's income prior to the sale reflects the initial percentage ownership and the portion subsequent to the sale reflects the new lower percentage ownership.
- 5 *Describe the effect on the eliminating process when the subsidiary issues new shares entirely to the parent, and the parent pays either more or less than the book value of the subsidiary shares.* The number of subsidiary shares outstanding is increased, and the proceeds from the stock issue flow increase

the subsidiary's total stockholders' equity. This affects the additional contributed capital of the parent and the noncontrolling interest. The change in the parent's share of the subsidiary's equity is determined by comparing the parent's share of the subsidiary's equity immediately before and immediately after the new purchase. The noncontrolling interest will increase if the cost of the new shares is greater than the book value of the interest acquired and decrease if the cost is less than the book value. This change must be decreased (increased) for the value of goodwill transferred between the controlling and noncontrolling interests.

- 6 *Describe the impact on the parent's investment account when the subsidiary issues new shares and either the new shares are purchased ratably by the parent and noncontrolling shareholders or entirely by the noncontrolling shareholders.* If the shares are purchased ratably by both, the percentage of stock owned by the parent and noncontrolling stockholders after the new issue would be the same as their respective interests prior to the new issue. If the shares are purchased entirely by the noncontrolling shareholders, the parent's percentage of ownership is reduced. Thus, the economic substance of the transaction is a sale of interest by parent. However, the book value of the parent's interest in the subsidiary may increase, decrease, or remain unchanged depending on the relationship of the issue price to book value per share of stock. If the price is higher than book value, the parent's interest increases. If the price is lower than book value, the parent's interest decreases.

**QUESTIONS**

- LO 1 1. Identify three types of transactions that result in a change in a parent company's ownership interest in its subsidiary.
- LO 2 2. Why is the date of acquisition of subsidiary stock important under the purchase method?
- LO 3 3. When a parent company has obtained control of a subsidiary through several purchases and subsequently sells a portion of its shares in the subsidiary, how is the carrying value of the shares sold determined?
- LO 3 4. When a parent company that records its investment using the cost method during a fiscal year sells a portion of its investment, explain the correct accounting for any differences between selling price and recorded values.
- LO 3 5. ABC Corporation purchased 10,000 shares (80%) of EZ Company at \$30 per share and sold them several years later for \$35 per share. The consolidated income statement reports a loss on the sale of this investment. Explain.
- LO 5 6. Explain how a parent company that owns less than 100% of a subsidiary can purchase an entire new issue of common stock directly from the subsidiary.
- LO 6 7. When a subsidiary issues additional shares of stock to noncontrolling stockholders and such issuance results in an increase in the book value of the parent's share of the subsidiary's equity, how should the increase be reflected in the financial statements? What if it results in a decrease?

- LO 5** 8. P Company holds an 80% interest in S Company. Determine the effect (that is, increase, decrease, no change, not determinable) on both the total book value of the noncontrolling interest and the noncontrolling interest's percentage of ownership in the net assets of S Company for each of the following situations:
- LO 6**
- P Company acquires additional shares directly from S Company at a price equal to the book value per share of the S Company stock immediately prior to the issuance.
  - S Company acquires its own shares on the open market. The cost of these shares is less than their book value.
  - Assume the same situation as in (b) except that the cost of the shares is greater than their book value.
  - P Company and a noncontrolling stockholder each acquire 100 shares directly from S Company at a price below the book value per share.

### Business Ethics

During a recent review of the quarterly financial statements and supporting ledgers, you noticed several unusual journal entries. While the dollar amounts of the journal entries were not large, there did not appear to be supporting documentation. You decide to bring the matter to the attention of your immediate supervisor. After you mentioned the issue, the supervisor calmly stated that the matter would be looked into and that you should not worry about it.

*Question:* You feel a bit uncomfortable about the situation. What is your responsibility and what action, if any, should you take?

## ANALYZING FINANCIAL STATEMENTS

### AFS8-1 Cadbury Acquisition

On January 19, 2010, Kraft Foods announced the terms of its final offer for each outstanding ordinary share of Cadbury, including each ordinary share represented by an American Depositary Share ("Cadbury ADS"), and the Cadbury Board of Directors recommended that Cadbury shareholders accept the terms of the final offer. On February 2, 2010, all of the conditions to the offer were satisfied or validly waived, the initial offer period expired, and a subsequent offer period immediately began. At that point, Kraft Foods had received acceptances of 71.73% of the outstanding Cadbury ordinary shares, including those represented by Cadbury ADSs ("Cadbury Shares").

As of June 1, 2010, Kraft Foods owned 100% of all outstanding Cadbury Shares. Kraft Foods believes the combination of Kraft Foods and Cadbury will create a global snacks powerhouse and an unrivaled portfolio of brands that people will love. Under the terms of its final offer and the subsequent offer, Kraft Foods agreed to pay Cadbury shareholders 500 pence in cash and 0.1874 shares of Kraft Foods Common Stock per Cadbury ordinary share and 2,000 pence in cash and 0.7496 shares of Kraft Foods Common Stock per Cadbury ADS. This resulted in a \$18.5 billion value for Cadbury, or approximately £11.6 billion (based on the average price of \$28.36 for a share of Kraft Foods Common Stock on February 2, 2010 and an exchange rate of \$1.595 per £1.00).

On February 2, 2010, Kraft Foods acquired 71.73% of Cadbury Shares for \$13.1 billion and the value attributed to noncontrolling interests was \$5.4 billion. From February 2, 2010, through June 1, 2010, Kraft Foods acquired the remaining 28.27% of Cadbury Shares for \$5.4 billion.

#### Required:

- For this step acquisition, describe the appropriate accounting for the acquisition.
- The change in value for the noncontrolling interest between February 2 and the date that Kraft acquired all remaining shares was an increase of \$38 million. What is the appropriate accounting for the increase in value?

## EXERCISES

### EXERCISE 8-1 Multiple Stock Purchases—Journal Entries **LO 2**

Peck Company purchased Sanno Company common stock in a series of open-market cash purchases from 2012 through 2014 as follows:

| <i>Date</i>     | <i>Shares Acquired</i> | <i>Cost</i> |
|-----------------|------------------------|-------------|
| January 1, 2012 | 1,800                  | \$ 46,000   |
| January 1, 2013 | 4,500                  | 95,000      |
| January 1, 2014 | 9,900                  | 262,350     |

Sanno Company had 18,000 shares of \$20 par value common stock outstanding during the entire period. Retained earnings balances for Sanno Company on relevant dates were

|                   |           |
|-------------------|-----------|
| January 1, 2012   | \$ 20,000 |
| January 1, 2013   | (30,000)  |
| January 1, 2014   | 85,000    |
| December 31, 2014 | 170,000   |

Dividends in the amount of \$50,000 were distributed by Sanno Company only in 2014. Any difference between implied and book values is assigned to goodwill. Peck Company uses the cost method to account for its investment in Sanno Company.

**Required:**

- Prepare the journal entries that Peck Company would record on its books during 2014 to account for its investment in Sanno Company.
- Prepare the workpaper eliminating entries necessary to prepare a consolidated statements workpaper on December 31, 2014.

**EXERCISE 8-2 Parent Company Entries—Multiple Stock Purchase and Sale of Stock, Cost Method LO 2 LO 3**

Papke Company acquired 85% of the common stock of Serbin Company in two separate cash transactions. The first purchase of 72,000 shares (60%) on January 1, 2013, cost \$490,000. The second purchase, on January 1, 2014, of 30,000 shares (25%) cost \$220,000. Serbin Company's stockholders' equity was as follows:

|                                   | 2013             | 2014             |
|-----------------------------------|------------------|------------------|
| Common Stock, \$5 par             | <u>\$600,000</u> | <u>\$600,000</u> |
| Retained Earnings, 1/1            | 175,000          | 201,000          |
| Net Income                        | 46,000           | 60,000           |
| Dividends Declared, 9/30          | <u>(20,000)</u>  | <u>(25,000)</u>  |
| Retained Earnings, 12/31          | <u>201,000</u>   | <u>236,000</u>   |
| Total Stockholders' Equity, 12/31 | <u>\$801,000</u> | <u>\$836,000</u> |

On April 1, 2014, after a significant rise in the market price of Serbin Company's stock, Papke Company sold 21,600 of its Serbin Company shares for \$260,000. Serbin Company notified Papke Company that its net income for the first three months was \$15,000. The shares sold were identified as those obtained in the first purchase. Any difference between implied and book values relates to goodwill. Papke uses the cost method to account for its investment in Serbin Company.

**Required:**

Prepare the journal entries Papke Company would record on its books during 2014 to account for its investment in Serbin Company.

**EXERCISE 8-3 Workpaper Entries—Multiple Stock Purchases LO 4**

Use the data provided in Exercise 8-2.

**Required:**

- Prepare the workpaper eliminating entries needed for a consolidated statements workpaper on December 31, 2014.
- Determine the amount of noncontrolling interest that would be reported on the consolidated balance sheet on December 31, 2014.

**EXERCISE 8-4 Parent Company Entries—Multiple Stock Purchases, Equity Method LO 2 LO 3 LO 4**

Use the data from Exercise 8-1, but assume use of either the complete or the partial equity method rather than the cost method.

**Required:**

- Prepare the journal entries Peck Company will make on its books during 2013 and 2014 to account for its investment in Sanno Company.
- Prepare workpaper eliminating entries necessary to prepare a consolidated statements workpaper on December 31, 2014.

**EXERCISE 8-5 Parent Company and Workpaper Entries—Equity Method LO 2 LO 4**

Use the data presented in Exercise 8-2, but assume use of the complete or the partial equity method rather than the cost method.

**Required:**

- A. Prepare the journal entries Papke Company will make on its books during 2013 and 2014 to account for its investment in Serbin Company.
- B. Prepare the workpaper eliminating entries needed for a consolidated statements workpaper on December 31, 2014.

**EXERCISE 8-6 Parent Company and Workpaper Entries—New Shares Issued by Subsidiary LO 5**

On January 1, 2014, Pace Company purchased 250,000 shares of common stock directly from its subsidiary, Sime Company, for \$1.50 per share. Noncontrolling stockholders elected not to participate in the new issue.

Pace Company acquired its initial 92.5% interest in Sime Company by purchasing on the open market 462,500 shares of Sime's common stock for \$578,125 on January 1, 2010. Sime Company's stockholders' equity just before each of the two purchases was as follows:

|                           | <i>December 31</i><br><i>2009</i> | <i>December 31</i><br><i>2013</i> |
|---------------------------|-----------------------------------|-----------------------------------|
| Common Stock \$1 par      | \$500,000                         | \$500,000                         |
| Other Contributed Capital | 40,000                            | 40,000                            |
| Retained Earnings         | <u>60,000</u>                     | <u>150,000</u>                    |
| Total                     | <u>\$600,000</u>                  | <u>\$690,000</u>                  |

During 2014 Sime Company reported \$90,000 net income and declared a dividend in the amount of \$30,000. Any difference between implied and book values relates to subsidiary land. Pace uses the cost method to account for its investment.

**Required:**

- A. Prepare the journal entry on Pace Company's books to record the purchase of the additional shares on January 1, 2014.
- B. Prepare the eliminating entries needed for the preparation of a consolidated statements workpaper on December 31, 2014.

**EXERCISE 8-7 Parent Company and Workpaper Entries—New Shares Issued by Subsidiary LO 5**

Use the same data provided in Exercise 8-6, with the exception that Pace Company purchased the additional shares from Sime Company on January 1, 2014, at a price of \$1.30 per share rather than \$1.50.

**Required:**

- A. Prepare the journal entry on Pace Company's books to record the purchase of the additional shares on January 1, 2014.
- B. Prepare the eliminating entries needed for the preparation of a consolidated statements workpaper on December 31, 2014.

**EXERCISE 8-8 Parent Company and Workpaper Entries—New Shares Issued by Subsidiary LO 6**

Padilla Company acquired 80% of the outstanding common stock of Skon Company on January 1, 2012, for \$132,000. At the date of purchase, Skon Company had a balance in its \$2 par value common stock account of \$120,000 and retained earnings of \$30,000.

On January 1, 2014, Skon Company issued 15,000 shares of its previously unissued stock to noncontrolling stockholders for \$3.00 per share. On this date, Skon Company had a retained earnings balance of \$50,500. The difference between implied and book values relates to subsidiary land. No dividends were paid in 2014.

Skon Company reported income of \$10,000 in 2014.

**Required:**

- A. Prepare the journal entry on Padilla's books to record the effect of the issuance assuming
  - (1) Cost method
  - (2) Complete or partial equity method
- B. Prepare the eliminating entries needed for the preparation of a consolidated statements workpaper on December 31, 2014 assuming
  - (1) Cost method
  - (2) Complete or partial equity method

**ASC Exercises:** For all ASC exercises indicate as part of your answer: the Codification topic, subtopic, section, and paragraph upon which your answer is based (unless otherwise specified). All ASC questions require access to the FASB Codification.

- ASC8-1** **Recognition** FASB assumes that if the number of shares issued in a stock dividend is large enough to materially reduce the per-share market value, it is inappropriate to record the impact using the firm's market value. What is the preferred treatment in such cases? Does FASB provide a guideline as to the percentage of previously outstanding shares that would qualify for the treatment?
- ASC8-2** **Overview** Does ASC 505 (stock dividends and stock splits) apply to both issuers and recipients? If not, which party is addressed?
- ASC8-3** **Glossary** There are three definitions of *control* in the glossary. Which definition is used for business combinations? Provide the definition.
- ASC8-4** **Glossary** Define *kick-out rights*. How can you determine if the kick-out rights are substantive?

## PROBLEMS

### PROBLEM 8-1 Multiple Stock Purchases LO 2

Sarko Company had 300,000 shares of \$10 par value common stock outstanding at all times, and retained earnings balances as indicated here:

|                 | <i>Retained Earnings</i> |
|-----------------|--------------------------|
| January 1, 2013 | \$260,000                |
| January 1, 2014 | 540,000                  |
| January 1, 2015 | 630,000                  |
| January 1, 2016 | 820,000                  |

Pelzer Company acquired Sarko Company stock through open-market purchases as follows:

| <i>Date</i> | <i>% Acquired</i> | <i>Shares</i> | <i>Cost</i> |
|-------------|-------------------|---------------|-------------|
| 1/1/13      | 10%               | 30,000        | \$ 365,000  |
| 1/1/14      | 25%               | 75,000        | 960,000     |
| 1/1/15      | 45%               | 135,000       | 1,890,000   |
|             | 80%               |               |             |

Sarko Company declared no dividends during this period. The fair values of Sarko Company's assets and liabilities were approximately equal to their book values throughout this period (2013 through 2015). Pelzer Company uses the cost method.

#### Required:

- Prepare a schedule to compare investment cost with the book value of equity acquired.
- Prepare elimination entries for the preparation of a consolidated statements worksheet on December 31, 2015.

### PROBLEM 8-2 Workpaper—Sale of Shares by Parent, Cost Method—Loss of Control

The accounts of Pyle Company and its subsidiary, Stern Company, are summarized below as of December 31, 2014:

| <i>Debits</i>               | <i>Pyle</i>        | <i>Stern</i>       |
|-----------------------------|--------------------|--------------------|
| Current Assets              | \$ 600,000         | \$ 320,000         |
| Investment in Stern Company | 480,000            |                    |
| Other Assets                | 1,180,000          | 668,000            |
| Dividends Declared, 11/1    | 80,000             | 60,000             |
|                             | <u>\$2,340,000</u> | <u>\$1,048,000</u> |
| <i>Credits</i>              |                    |                    |
| Liabilities                 | \$ 190,000         | \$ 90,000          |
| Common Stock, \$5 par       | 500,000            | 300,000            |
| Other Contributed Capital   | 230,000            | 180,000            |
| 1/1 Retained Earnings       | 1,200,000          | 292,000            |
| Net Income                  | 220,000            | 186,000            |
|                             | <u>\$2,340,000</u> | <u>\$1,048,000</u> |

Pyle Company made the following open-market purchase and sale of Stern Company common stock:

- January 2, 2012, purchased 51,000 shares (85% of Stern), cost \$510,000, \$10/share;
- January 1, 2014 sold 40,000 shares (two-thirds of Stern), proceeds, \$480,000, \$12/share.

The book value of Stern Company's net assets on January 2, 2012, \$600,000, approximated the fair value of those net assets, including retained earnings of \$120,000. Subsequent changes in book value of the net assets are entirely attributable to earnings of Stern Company. Stern Company earns its income evenly throughout the year.

**Required:**

Prepare the journal entries needed on Pyle Company's books to record the transactions regarding the investment in Stern Company account assuming that the cost method is used to account for the investment.

**PROBLEM 8-3**

**Workpaper—Sale of Shares by Parent, Cost Method LO2 LO3 LO4**

The accounts of Pyle Company and its subsidiary, Stern Company, are summarized below as of December 31, 2014:

| <i>Debits</i>               | <i>Pyle</i>        | <i>Stern</i>       |
|-----------------------------|--------------------|--------------------|
| Current Assets              | \$ 600,000         | \$ 320,000         |
| Investment in Stern Company | 480,000            |                    |
| Other Assets                | 1,180,000          | 668,000            |
| Dividends Declared, 11/1    | <u>80,000</u>      | <u>60,000</u>      |
|                             | <u>\$2,340,000</u> | <u>\$1,048,000</u> |
| <i>Credits</i>              |                    |                    |
| Liabilities                 | \$ 190,000         | \$ 90,000          |
| Common Stock, \$5 par       | 500,000            | 300,000            |
| Other Contributed Capital   | 230,000            | 180,000            |
| 1/1 Retained Earnings       | 1,200,000          | 292,000            |
| Net Income                  | <u>220,000</u>     | <u>186,000</u>     |
|                             | <u>\$2,340,000</u> | <u>\$1,048,000</u> |

Pyle Company made the following open-market purchase and sale of Stern Company common stock: January 2, 2012, purchased 51,000 shares, cost \$510,000; April 1, 2014, sold 3,000 shares, proceeds, \$100,000.

The book value of Stern Company's net assets on January 2, 2012, \$600,000, (including retained earnings of \$120,000) approximated the fair value of those net assets. Subsequent changes in book value of the net assets are entirely attributable to earnings of Stern Company. Stern Company earns its income evenly throughout the year.

**Required:**

Prepare a consolidated financial statements workpaper as of December 31, 2014. Begin the income statement section of the workpaper with "Net Income Before Dividend Income" which is \$172,000 and \$186,000 for Pyle Company and Stern Company, respectively.

**PROBLEM 8-4**

**Workpaper—Purchase and Sale of Shares, Cost Method LO3 LO4**

Trial balances for Porter Company and its subsidiary, Spitz Company, as of December 31, 2014, follow:

| <i>Debits</i>               | <i>Porter</i>    | <i>Spitz</i>     |
|-----------------------------|------------------|------------------|
| Cash                        | \$ 90,000        | \$ 40,000        |
| Accounts Receivable (net)   | 62,000           | 38,000           |
| Inventory                   | 106,000          | 64,000           |
| Investment in Spitz Company | 121,500          |                  |
| Plant Assets                | 320,000          | 149,000          |
| Land                        | 69,000           | 46,000           |
| Dividends Declared, 10/1    | 50,000           | 30,000           |
| Total                       | <u>\$818,500</u> | <u>\$367,000</u> |
| <i>Credits</i>              |                  |                  |
| Liabilities                 | \$102,000        | \$ 61,000        |
| Common Stock, \$2 per value | 250,000          | 100,000          |
| Other Contributed Capital   | 172,500          | 20,000           |
| 1/1 Retained Earnings       | 206,500          | 126,000          |
| Income Summary              | <u>87,500</u>    | <u>60,000</u>    |
| Total                       | <u>\$818,500</u> | <u>\$367,000</u> |

Porter Company made the following open-market purchase and sale of Spitz Company common stock: January 1, 2010, purchased 45,000 shares for \$135,000; May 1, 2014, sold 4,500 shares for \$28,000.

The book value of Spitz Company's net assets on January 1, 2010, was \$140,000; the excess of cost over net assets acquired relates to land. Subsequent changes in the book value of Spitz Company's net assets are entirely attributable to earnings retained in the business. Spitz Company earns its income evenly throughout the year. Porter Company uses the cost method to account for its investment.

**Required:**

Prepare a consolidated financial statements workpaper as of December 31, 2014. Begin the income statement section of the workpaper with "Net Income Before Dividend Income" which is \$63,200 for Porter Company and \$60,000 for Spitz Company.

**PROBLEM 8-5**

**Workpaper—Sale of Shares by Parent, Equity Method LO 3 LO 4**

(Note: This is the same problem as Problem 8-3, but assuming use of the complete or the partial equity method.)

The accounts of Pyle Company and its subsidiary, Stern Company, are summarized below as of December 31, 2014:

| <i>Debits</i>               | <i>Pyle</i>        | <i>Stern</i>       |
|-----------------------------|--------------------|--------------------|
| Current Assets              | \$ 600,000         | \$ 320,000         |
| Investment in Stern Company | 718,400            |                    |
| Other Assets                | 1,180,000          | 668,000            |

| Liabilities                 | \$102,000        | \$ 61,000        |
| Common Stock, \$2 par value | 250,000          | 100,000          |
| Other Contributed Capital   | 161,160          | 20,000           |
| 1/1 Retained Earnings       | 301,900          | 126,000          |
| Income Summary              | 113,600          | 60,000           |
| Total                       | <u>\$928,660</u> | <u>\$367,000</u> |

Porter Company made the following open-market purchase and sale of Spitz Company common stock: January 1, 2010, purchased 45,000 shares for \$135,000; May 1, 2014, sold 4,500 shares for \$28,000.

The book value of Spitz Company's net assets on January 1, 2010 was \$140,000; the excess of cost over net assets acquired relates to land. Subsequent changes in the book value of Spitz Company's net assets are entirely attributable to earnings retained in the business. Spitz Company earns its income evenly throughout the year.

**Required:**

Prepare a consolidated financial statements workpaper as of December 31, 2014. Begin the income statement section of the workpaper with "Net Income before Equity in Subsidiary Income and Gain on Sale of Investment," which is \$63,200 for Porter Company and \$60,000 for Spitz Company.

**PROBLEM 8-7 Multiple Stock Purchases and Sale of Shares LO3 LO4**

On January 1, 2014, Plum Company made an open-market purchase of 30,000 shares of Spivey Company common stock for \$122,000. At that time, Spivey Company had common stock (\$2 par) of \$600,000 and retained earnings of \$240,000. On July 1, 2014, an additional 210,000 shares were purchased on the open market by Plum Company at a cost of \$789,600 or \$3.76 a share. On November 1, 2014, 3,000 of the shares purchased on January 1, 2014, were sold on the open market for \$21,000. Assume that any excess of implied value over book value acquired relates to subsidiary goodwill.

During 2014, Plum Company earned \$22,000 (excluding any gain or loss on the sale of the shares). Plum Company received income statements from Spivey Company reporting the following results.

|                                      | <i>Spivey Company Income</i> |
|--------------------------------------|------------------------------|
| January 1, 2014 to June 30, 2014     | \$ 60,000                    |
| January 1, 2014 to October 31, 2014  | 96,000                       |
| For the year ended December 31, 2014 | 130,000                      |

Neither company declared dividends during the year. Plum Company's retained earnings were \$460,000 on January 1, 2014.

**Required:**

- A. Prepare the book entries Plum Company would make during 2014 to account for its investment in Spivey Company, assuming
  - (1) The use of the cost method.
  - (2) The use of either the complete or the partial equity method.
- B. Prepare in general journal form the eliminating entries for a consolidated statements workpaper on December 31, 2014, assuming
  - (1) The use of the cost method.
  - (2) The use of either the complete or the partial equity method.
- C. Compute controlling interest in consolidated net income for 2014.

**PROBLEM 8-8 New Shares Purchased by Parent LO6**

Pryor Company acquired 51,000 shares of Spero Company's common stock on January 1, 2013, for \$400,000 when Spero Company had common stock (\$5 par) of \$300,000 and retained earnings of \$200,000.

On January 1, 2015, Spero Company issued 7,500 additional shares of its common stock for \$8.50 per share. The new shares were purchased entirely by Pryor Company. Spero Company's retained earnings had increased to \$360,000 by that date.

During 2015, Spero Company declared dividends of \$40,000 and reported net income at year-end of \$90,000. Pryor Company uses the cost method. Assume that any difference between implied and book values relates to subsidiary land.

**Required:**

- A. Prepare the journal entry on Pryor's books to record the purchase of the new shares.
- B. Prepare in general journal form the workpaper entries needed for the preparation of a consolidated statements workpaper on December 31, 2015.

**PROBLEM 8-9 New Subsidiary Shares Issued to Outsider LO6**

On January 1, 2013, Purdy Company acquired 84% of the capital stock of Sally Company for \$840,000. On that date, Sally Company's stockholders' equity was:

|                           |           |
|---------------------------|-----------|
| Capital Stock, \$20 par   | \$600,000 |
| Other Contributed Capital | 200,000   |
| Retained Earnings         | 160,000   |
| Total                     | \$960,000 |

The difference between implied and book values relates to land owned by Sally Company.

On January 2, 2015, Sally Company issued 6,000 shares of its authorized capital stock, with a market value of \$55 per share, to Marcy Smith in exchange for a patent. Sally Company's retained earnings balance on this date was \$400,000, capital stock and other contributed capital balances had not changed during 2013 and 2014.

**Required:**

- A. Prepare (1) the entry on Purdy's books to record the effect of the issuance, and (2) the elimination entries for the preparation of a consolidated balance sheet workpaper immediately after the new issue of shares assuming use of the cost method.
- B. Assuming that the market value of the new shares issued was \$34 per share, repeat requirement A above.

**PROBLEM 8-10 Open Market Purchases and Sales of Stock—Cost Method LO3 LO4**

On January 2, 2013, Pullen Company purchased, on the open market, 135,000 shares of Souza Company common stock for \$665,000. At that time, Souza Company had common stock (\$2 par value) of \$300,000 and retained earnings of \$400,000. On May 1, 2014, Pullen Company sold 13,500 of its Souza Company shares on the open market for \$91,000. Changes in Souza Company retained earnings during 2014 follow:

|   |                  |
|---|------------------|
| Retained Earnings 1/1/14                                | \$500,000        |
| Net Income for 2014 (earned evenly throughout the year) | 270,000          |
| Dividends Declared on 11/1/14 and paid on 12/16/14      | (70,000)         |
| Retained Earnings, 12/31/14                             | <u>\$700,000</u> |

Pullen Company, which uses the cost method to record its investment in Souza Company, reported net income for 2014 amounting to \$352,500. Any difference between implied and book values relates to subsidiary land.

**Required:**

- A. Prepare the book entries Pullen Company will make during 2014 to account for its investment in Souza Company.
- B. Prepare, in general journal form, the eliminating entries needed to prepare a consolidated statements workpaper on December 31, 2014.
- C. Compute controlling interest in consolidated net income for 2014.
- D. Prepare the workpaper entry to establish reciprocity for the 2015 consolidated statements workpaper.

**PROBLEM 8-11 Workpaper—Sale of Shares by Parent, Equity Method—Loss of Control LO3 LO4**

The accounts of Pyle Company and its subsidiary, Stern Company, are summarized below as of December 31, 2014:

| <i>Debits</i>               | <i>Pyle</i>        | <i>Stern</i>       |
|-----------------------------|--------------------|--------------------|
| Current Assets              | \$ 600,000         | \$ 320,000         |
| Investment in Stern Company | 480,000            |                    |
| Other Assets                | 1,180,000          | 668,000            |
| Dividends Declared, 11/1    | 80,000             | 60,000             |
|                             | <u>\$2,340,000</u> | <u>\$1,048,000</u> |
| <i>Credits</i>              |                    |                    |
| Liabilities                 | \$ 190,000         | \$ 90,000          |
| Common Stock, \$5 par       | 500,000            | 300,000            |
| Other Contributed Capital   | 230,000            | 180,000            |
| 1/1 Retained Earnings       | 1,200,000          | 292,000            |
| Net Income                  | 220,000            | 186,000            |
|                             | <u>\$2,340,000</u> | <u>\$1,048,000</u> |

Pyle Company made the following open-market purchase and sale of Stern Company common stock:

- January 2, 2012, purchased 51,000 shares (85% of Stern), cost \$510,000, \$10/share;
- January 1, 2014, sold 40,000 shares (two-thirds of Stern), proceeds, \$480,000, \$12/share.

The book value of Stern Company's net assets on January 2, 2012, \$600,000, approximated the fair value of those net assets, including retained earnings of \$120,000. Subsequent changes in book value of the net assets are entirely attributable to earnings of Stern Company. Stern Company earns its income evenly throughout the year.

**Required:**

Prepare the journal entries needed on Pyle Company's books to record the transactions regarding the investment in Stern Company account assuming the equity method is used to account for the investment.

**PROBLEM 8-12** Worksheet, Multiple Stock Purchases, Cost Method LO 2

Trial balances for Phan Company and its subsidiary Sato Company on December 31, 2013, are as follows:

|                            | <i>Phan</i>        | <i>Sato</i>        |
|----------------------------|--------------------|--------------------|
| Current Assets             | \$ 165,500         | \$ 138,000         |
| Investment in Sato Company | 334,425            |                    |
| Other Assets               | 920,000            | 672,000            |

## Chapter 8 – Review Questions

The review questions accompanying this course are designed to assist you in achieving the course learning objectives. The review section is not graded; do not submit it in place of your qualified assessment. While completing the review questions, it may be helpful to study any unfamiliar terms in the glossary in addition to course content. After completing the review questions, proceed to the review question answers and rationales.

53. Under current accounting rules for incremental acquisitions:
- Acquisitions of additional shares should be handled in a step-by-step manner.
  - Computation and allocation schedules should be prepared for each portion purchased.
  - Sales of shares are handled like a sale of any asset with gain or loss going to earnings.
  - Remeasure the acquiree's assets and liabilities at fair value on the date that the acquirer attains control.
54. One of the requirements under the current rules for acquisitions which occur in stages is:
- To recognize only the parent's share of goodwill.
  - Previously held noncontrolling interest should be remeasured to fair value and any adjustment are Additional Contributed Capital.
  - If the parent loses control, the retained investment should be remeasured to fair value and any adjustments are recognized in income.
  - After control is achieved, any additional adjustments due to increased ownership are recognized in income.
55. Which of the following statements is accurate when a parent sells some, but not all, of the subsidiary stock?
- The accounting treatment will be the same whether or not the parent retains control of the subsidiary.
  - If the parent retains control of the subsidiary in spite of the sale, no gain or loss is recognized and any adjustments flow through Additional Contributed Capital.
  - If control of the subsidiary is lost upon sale, no gain or loss is recognized and any adjustments flow through Additional Contributed Capital.
  - At the time of sale, the entire investment must be revalued to fair value and the difference is recognized in income.

56. Under the equity method of accounting for the investment in subsidiary, when the parent purchases the shares that create control, the parent will record all of the following entries on their books with the **EXCEPTION** of:
- The purchase based on the cash price of the shares acquired by increasing investment in subsidiary.
  - The increase (decrease) in the investment in subsidiary account for the amount of the revaluation gain (or loss).
  - The increase in the investment in subsidiary account to retroactively record the earnings of the subsidiary at the original ownership percentage for the time between the first purchase and the second purchase.
  - Goodwill for the difference between the implied value of the subsidiary and the fair market value of its assets after allocating the fair market value to the underlying assets and liabilities of the subsidiary.
57. When a parent company sells subsidiary stock and loses control of the company, all of the following information is needed in order to correctly account for the sale with the **EXCEPTION** of:
- The book value of the subsidiary.
  - The fair value of the consideration received by the parent.
  - The fair value of the noncontrolling interest at the date of the sale.
  - The carrying value of the former noncontrolling interest as of the date of the sale.

58. P Company acquired an 80% interest in S Company and accounted for that investment using the cost method on the separate company books but prepared consolidated financial statements as required. Several years later, they sold 50% of their stock. As a result:
- They have a choice of switching to the equity method or continuing to use the cost method.
  - They must now switch to the partial equity method.
  - They have a choice of using the partial equity method or the cost method.
  - They must now switch to the equity method.
59. Which of the following statements is accurate regarding consolidation entries after a purchase of additional shares by the parent when the cost method is used?
- In the year after the purchase of the additional shares, the reciprocity entry will be based on the new ownership percentage.
  - In the year after the purchase of the additional shares, the entry to eliminate subsidiary equity will be based on the old ownership percentage up to the date of purchase of the new shares and the new percentage for the activity after the purchase.
  - In the year after the purchase of the additional shares, the reciprocity is established based on the old ownership percentage to the date of purchase of the new shares and the new ownership percentage thereafter.
  - In the year after the purchase of the additional shares, the reciprocity entry will be based on the old ownership percentage.
60. Which of the following is an accurate statement regarding changes when the parent company purchases additional subsidiary shares from the subsidiary directly?
- When the parent pays more than carrying value for the new shares, the noncontrolling interest carrying value will increase even though their ownership percentage decreases.
  - When the parent pays book value for the new shares, the parent's additional paid in capital will not change.
  - When the parent pays book value for the new shares, the noncontrolling interest carrying value will not change.
  - When the parent pays less than carrying value for the new shares, their additional paid in capital decreases.

## **Chapter 9 – Intercompany Bond Holdings and Miscellaneous Topics – Consolidated Financial Statements**

### **Learning Objectives**

After completing this section of the course, you will be able to:

- Identify the appropriate accounting treatment for constructive retirement of debt.
- Identify the appropriate accounting treatment when a company issues a note to an affiliated company which then discounts it to a third party.
- Determine the effect on the consolidated financial statements when a subsidiary issues a stock dividend and differentiate the impact of this versus a cash dividend on the consolidated financial statements.
- Identify the impact of stock dividends from pre-acquisition earnings versus post-acquisition earnings.
- Determine the purchase price allocation when a subsidiary has both common and preferred stock outstanding and determining controlling interest in income.

# INTERCOMPANY BOND HOLDINGS AND MISCELLANEOUS TOPICS—CONSOLIDATED FINANCIAL STATEMENTS

## CHAPTER CONTENTS

- 9.1 INTERCOMPANY BOND HOLDINGS
- 9.2 ACCOUNTING FOR BONDS—A REVIEW
- 9.3 CONSTRUCTIVE GAIN OR LOSS ON INTERCOMPANY BOND HOLDINGS
- 9.4 ACCOUNTING FOR INTERCOMPANY BONDS ILLUSTRATED
- 9.5 BOOK ENTRY RELATED TO BOND INVESTMENT
- 9.6 INTERIM PURCHASE OF INTERCOMPANY BONDS
- 9.7 NOTES RECEIVABLE DISCOUNTED
- 9.8 STOCK DIVIDENDS ISSUED BY A SUBSIDIARY COMPANY
- 9.9 DIVIDENDS FROM PREACQUISITION EARNINGS
- 9.10 SUBSIDIARY WITH BOTH PREFERRED AND COMMON STOCK OUTSTANDING
- 9.11 CONSOLIDATING A SUBSIDIARY WITH PREFERRED STOCK OUTSTANDING

### IN THE NEWS

In 2007, Bain Capital acquired Guitar Center in a leveraged buyout that resulted in Guitar Center carrying over \$1.6 billion in debt. Guitar Center's annual debt payments over the next several years will exceed \$144 billion (in 2012, interest expense was approximately 90% of operating income and its cash coverage ratio was slightly over 2 times interest payments). In its discussion of the risk factors, Guitar Center noted that they cannot provide any assurance that cash from operating activities will be sufficient to cover the principal and interest on debt.<sup>1</sup>

<sup>1</sup> Guitar Center 2012 10K.

In this chapter, we discuss several areas related to the preparation of consolidated financial statements, including:

1. Intercompany bond holdings.
2. Intercompany notes receivable discounted.
3. Stock dividends issued by a subsidiary company.
4. Cash dividends from preacquisition earnings.
5. Preferred stock of a subsidiary.

All new aspects of consolidations introduced in this chapter are the same whether the parent uses the cost or partial equity method. As in prior chapters, the complete equity method differs from the other two in that the beginning retained earnings of the parent always equals the beginning consolidated retained earnings under the complete equity method.<sup>2</sup> Hence no entries are needed to the beginning retained earnings of the parent in the consolidating workpaper. There is, of course, no entry under this method (nor under the partial equity method) to establish reciprocity/convert to equity.

Reporting complications relating to accounting for the difference between the implied value of a subsidiary (based on acquisition cost) and the book value are avoided by assuming that all acquisitions of common stock are made at the book value of the acquired interest in net assets, and that the book values of the subsidiary's assets and liabilities are equal to their fair values on the date of acquisition. Also, deferred tax consequences are avoided by assuming the affiliates file consolidated tax returns. To conserve space, we present the entries for the cost and the complete equity methods only. The workpaper entries for the partial equity method would be identical to those for the cost method with one exception. As in previous chapters, a workpaper entry to reverse the effect of the parent company entries during the year for subsidiary income and dividends replaces the cost method entries to establish reciprocity/convert to equity and eliminate dividend income, if any.

IN  
THE  
NEWS

Avaya managed to grow revenue by 22% thanks to the assets it acquired from Nortel Networks at the end of 2009. Although the acquisition bumped up revenues, it has been costly. Avaya spent millions consolidating operations, paying severance, and closing facilities.

Private-equity firms Silver Lake Partners and TPG took Avaya private in 2007 for \$8.3 billion. That buyout, along with the acquisition of the Nortel assets, led to more than \$500 million in charges and saddled the company with almost \$6 billion in debt as of the end of its fiscal year. As a result, the company was required to pay several million dollars in interest during the year.<sup>3</sup>

## 9.1 INTERCOMPANY BOND HOLDINGS

### LO 1 Constructive retirement of debt.

An affiliate company may purchase bonds issued by another affiliate directly from the issuing company or from outsiders after the original issue. In either case, because the bonds are held within the affiliated group, the intercompany bond investment (a receivable) and the bonds payable (a liability), along with any related intercompany interest expense and interest revenue, must be eliminated. In other words, because the bonds are not held by external parties, they are viewed as being *constructively retired* in the consolidated financial statements. Constructively retired means that the bonds are considered retired from a consolidated entity point of view, but legally the bonds are still outstanding as far as the issuing company is concerned. Since this is viewed as an early retirement of debt, a gain or loss on the constructive retirement is computed and allocated to the affiliated companies. A brief review of accounting for bond transactions is presented in the next section before the preparation of a consolidated statements workpaper involving intercompany bond holdings is illustrated.

<sup>2</sup> An exception occurs under the complete equity method when the treasury stock method is used for reciprocal holdings.

<sup>3</sup> CNN.com, 5/13/2011.

## 9.2 ACCOUNTING FOR BONDS—A REVIEW

To review accounting for bonds, assume that a company issued \$100,000 par value bonds on January 2, 2013, for \$90,000. The bonds mature 10 years later and pay 12% interest each December 31. The bonds were all acquired by one investor, and the fiscal year-end of both entities is December 31. The journal entries for the first year of operations, assuming straight-line amortization of the discount, are:<sup>4</sup>

### Issuing Company

|         |                           | 2013   |         |
|---------|---------------------------|--------|---------|
| Jan. 2  | Cash                      | 90,000 |         |
|         | Discount on Bonds Payable | 10,000 |         |
|         | Bonds Payable             |        | 100,000 |
| Dec. 31 | Interest Expense          | 12,000 |         |
|         | Cash                      |        | 12,000  |
| 31      | Interest Expense          | 1,000  |         |
|         | Discount on Bonds Payable |        | 1,000   |

### Investor Company

|         |                     | 2013   |        |
|---------|---------------------|--------|--------|
| Jan. 2  | Investment in Bonds | 90,000 |        |
|         | Cash                |        | 90,000 |
| Dec. 31 | Cash                | 12,000 |        |
|         | Interest Revenue    |        | 12,000 |
| 31      | Investment in Bonds | 1,000  |        |
|         | Interest Revenue    |        | 1,000  |

### RELATED CONCEPTS

When using *present value* techniques to estimate the fair value of a bond payable, the objective is to estimate the price at which other entities are willing to hold the entity's liabilities as an asset.

From the point of view of the issuing company, \$90,000 was received, but the company must pay \$100,000 to the bondholders when the bonds mature 10 years later. Instead of deferring the \$10,000 discount to be reported as a reduction in income in the year that the bonds mature, one-tenth of the discount (\$1,000) is amortized each year as an increase in interest expense. The increase in expense results in a reduction of \$1,000 in net income each year, which also reduces the retained earnings balance. At the end of 10 years, the issuing company's retained earnings is reduced \$120,000 for the cash interest paid and \$10,000 for the discount amortization. In effect, the \$10,000 discount is recognized as additional interest expense over the life of the bonds. From the investor's point of view, \$90,000 is paid for the bonds, but if the bonds are held to maturity, \$100,000 will be received. One-tenth of this \$10,000 is added to interest revenue each period, which results in an increase in reported income. As a result of acquiring the bond investment at a discount, retained earnings is increased \$1,000 each year for a cumulative total of \$10,000 over the life of the bonds.

If, in the foregoing example, the bonds had been issued for \$110,000, the issuing company receives \$10,000 more on the date of issue than must be paid when the bonds mature, while the investor will receive \$10,000 less than the purchase price when the bonds mature. The investor (issuing) company, rather than reporting a reduction (increase) in income when the bonds mature, records one-tenth of the reduction (increase) each year as the premium on the bonds is amortized to interest revenue (expense) over the remaining life of the bonds. The effect is that the net income of the investor (issuing) company is \$1,000 less (greater) each year as a result of amortizing the premium. The effect on income is, of course, also reflected in the reported retained earnings balance. Another way of viewing the amortization is that both parties are adjusting interest on the income statement from the coupon rate toward the market rate at date of issue.

<sup>4</sup> For simplicity, it is assumed in this chapter that straight-line amortization is used. However, the reader is reminded that the interest method is required unless the straight-line method does not result in a material difference (FASB ASC paragraph 835-30-35-4).

## 9.3 CONSTRUCTIVE GAIN OR LOSS ON INTERCOMPANY BOND HOLDINGS

The purchase of an affiliate's bonds does not alter the accounting in the books of the individual companies. As noted in the preceding section, the issuing company and the purchasing company recognize a gain or loss on the bond transaction indirectly as the related premium or discount is amortized to interest expense and interest revenue over the remaining life of the bonds. Thus, on the books of the individual companies, the bonds are accounted for as if the transactions were with independent parties. In the preparation of consolidated statements, however, the acquisition of an affiliate's outstanding bonds from outsiders is considered a **constructive retirement** of the bond obligation by the consolidated entity.<sup>5</sup> The generally accepted practice of accounting for the early extinguishment of debt is to report an ordinary gain (loss) if the carrying value of the bonds is greater than (less than) the purchase price.<sup>6</sup> Thus, as with the intercompany sale of inventory or other assets, the constructive gain or loss is eventually recognized both on the books of the individual companies and the consolidated financial statements but in different periods.

Observe, however, that the constructive gain or loss on the bond retirement *is recognized in the consolidated income statement prior to the recognition of the gain or loss on the books of the individual companies*. In contrast (see Chapter 6), a gain or loss on the intercompany sale of inventory or other assets *is recognized currently on the books of the selling company, but the gain or loss is deferred for consolidation purposes* until the profit or loss is confirmed by an arm's-length transaction with an independent party. Thus, the objectives of the intercompany bond workpaper entries are essentially opposite the objectives of making workpaper entries for the intercompany sale of inventory or other assets. That is to say, in the period the bonds are purchased, workpaper entries are made to accelerate the recognition of the constructive gain or loss. After the bonds are purchased, workpaper entries are then needed to eliminate the portion of the constructive gain or loss recorded during the period on the books of the individual companies. In the case of the intercompany sale of inventory or other assets, workpaper entries are made in the year of the sale to eliminate or defer the profit or loss recorded on the books of the individual companies. In subsequent periods when the asset is sold to a third party and the profit or loss realized from a consolidated point of view, workpaper entries are made to recognize the profit or loss.

As noted in a preceding paragraph, the gain or loss on the bond retirement is computed as the difference between the carrying value (book value) of the liability and the purchase price of the bonds. There is general agreement on the amount of the gain or loss to be reported, but not on how the gain or loss should be allocated between the affiliated companies involved in the bond transaction for purposes of calculating the controlling and noncontrolling interests in consolidated net income.

### Allocation of Constructive Gain or Loss

**Lo 2** Allocating the constructive gain or loss.

Four methods for allocating the constructive gain or loss between the parent and subsidiary have been supported in practice in the past and in the accounting literature.

1. The constructive gain or loss is allocated entirely to the issuing company. Support for this method is based on the contention that the purchasing affiliate, as a member of the consolidated group operating under the control of common management, was simply

<sup>5</sup> When one affiliate purchases bonds directly from another affiliate, the purchase price of the bond investment will be equal to the issue price of the bonds. Therefore, there is no constructive gain or loss reported in the consolidated income statement. However, under the approach used in this text, if the issue price is greater than or less than par value, one company will be allocated a gain and the other allocated a loss of an equal amount.

<sup>6</sup> A gain or loss on the early extinguishments of debt was once reported as an extraordinary item net of related income tax consequences (*SFAS No. 4*). This treatment is no longer allowed (FASB ASC paragraph 470-50-40-2).

acting as an agent for the issuing company. Thus, any gain or loss on the constructive retirement is allocated entirely to the issuing company.

2. The constructive gain or loss is allocated entirely to the purchasing company. Support for this method rests on the contention that the purchasing company initiated the transaction and should be assigned the full amount of the gain or loss.
3. The constructive gain or loss is allocated entirely to the parent company. Under this approach, it is maintained that the management of the parent company controls the financing decisions of the consolidated affiliates. Since management directed or permitted the purchase of the bonds, any gain or loss is allocated entirely to the parent company.
4. The constructive gain or loss is allocated between the purchasing and issuing companies. This method recognizes that a discount or premium will often be associated with both the issuance and purchase of the bonds on the open market. A gain or loss will be recognized over the remaining life of the bonds as each company amortizes the related discount or premium to interest expense and interest revenue. If the bonds are held to maturity, the full amount of the gain or loss will be recognized by the two entities.

The authors consider the fourth method to be the soundest conceptually. The method is consistent with the allocation of a gain or loss between the parent and subsidiary on other types of intercompany transactions. It also recognizes that if the purchasing company holds the bonds to maturity, the maturity value is paid by the issuing company. In such cases, each company realizes a gain or loss on the bond issuance or purchase that has been recognized on the books of the individual companies over the life of the bonds. Thus, if one of the companies is a partially owned subsidiary, the noncontrolling shareholders have an interest in the portion of the gain or loss allocated to, and recorded by, the subsidiary.

## Computing the Constructive Gain or Loss

On the date that bonds of an affiliate are purchased, a constructive gain or loss is computed and this total gain or loss is allocated between the issuing and purchasing companies. The portion of the gain or loss allocated to the issuing company is the difference between the book value (carrying value) of the bonds issued and their par value; the portion allocated to the purchasing company is the difference between the par value of the bonds and their cost. There is no constructive gain or loss to either the purchasing company or the issuing company if the bonds are issued at par value. If the issue price and the purchase price of the bonds were not equal to par value, there are four possible combinations that can result when a constructive gain or loss to the consolidated entity is allocated between two affiliated companies. The combinations are shown below assuming two different book values of \$110,000 and \$90,000 and two different purchase prices of \$115,000 and \$85,000. The bonds have a par value of \$100,000 in all situations.

| <i>Issuing<br/>Company</i> |   |           |   | <i>Purchasing<br/>Company</i> |  |
|----------------------------|---|-----------|---|-------------------------------|--|
| 1. Book value              | > | Par value | > | Purchase price                |  |
| \$110,000                  |   | \$100,000 |   | \$ 85,000                     |  |
| 2. Book value              | < | Par value | < | Purchase price                |  |
| \$ 90,000                  |   | \$100,000 |   | \$115,000                     |  |
| 3. Book value              | > | Par value | < | Purchase price                |  |
| \$110,000                  |   | \$100,000 |   | \$115,000                     |  |
| 4. Book value              | < | Par value | > | Purchase price                |  |
| \$ 90,000                  |   | \$100,000 |   | \$ 85,000                     |  |

The constructive gain or loss for combination 3 is illustrated below. To compute the gain or loss allocated to each affiliate, the par value is subtracted from the book value and then the purchase price is subtracted from the par value. If the number is positive, it is a gain; if it is negative, it is a loss.

|                    |   |                              |           |   |            |                   |
|--------------------|---|------------------------------|-----------|---|------------|-------------------|
| Issuing company    | { | Book value                   | \$110,000 | } |            |                   |
| Purchasing company | { | Par value                    | \$100,000 | } | + \$10,000 | Constructive gain |
|                    | { | Purchase price               | \$115,000 | } | - \$15,000 | Constructive loss |
|                    |   | Net constructive gain (loss) |           |   | (\$5,000)  |                   |

There is a net constructive loss of \$5,000 to the consolidated entity because the purchase price of the bonds on the open market exceeded the carrying value of the debt.

To illustrate another situation, assume that \$100,000 par value bonds with a book value of \$90,000 were purchased by an affiliated company for \$85,000 (combination 4 above).

|                    |   |                              |           |   |            |                   |
|--------------------|---|------------------------------|-----------|---|------------|-------------------|
| Issuing company    | { | Book value                   | \$ 90,000 | } |            |                   |
| Purchasing company | { | Par value                    | \$100,000 | } | - \$10,000 | Constructive gain |
|                    | { | Purchase price               | \$ 85,000 | } | + \$15,000 | Constructive loss |
|                    |   | Net constructive gain (loss) |           |   | \$ 5,000   |                   |

In this case there is a favorable settlement of debt (carrying value > purchase price) and a constructive gain of \$5,000 is reported in the consolidated income statement, of which a \$10,000 loss is allocated to the issuing company and a \$15,000 gain is allocated to the purchasing company.

| <b>CONSTRUCTIVE GAINS AND LOSSES</b> |                             |                   |
|--------------------------------------|-----------------------------|-------------------|
|                                      | <i>Originally Issued At</i> |                   |
|                                      | <i>Premium</i>              | <i>Discount</i>   |
| Issuing Company                      | Constructive Gain           | Constructive Loss |
|                                      | <i>Purchased At</i>         |                   |
|                                      | <i>Premium</i>              | <i>Discount</i>   |
| Purchasing Company                   | Constructive Loss           | Constructive Gain |

In the year that the bonds are constructively retired, if either the issuing company or the purchasing company is a partially owned subsidiary, the noncontrolling interest in consolidated net income is reduced (increased) by a loss (gain). In subsequent periods, the income of the subsidiary will be decreased or increased as the related discount or premium is amortized. The noncontrolling interest is also affected by this increase or decrease in income.

## 9.4 ACCOUNTING FOR INTERCOMPANY BONDS ILLUSTRATED

To illustrate entries that are necessary on the books of the affiliated companies and in the consolidated statements workpaper when one affiliate holds bonds of another affiliate, the following are assumed:

1. P Company acquired an 80% interest in S Company for \$1,200,000 on January 2, 2012, when the retained earnings and common stock accounts of S Company were \$500,000 and \$1,000,000, respectively.
2. On December 31, 2015, P Company acquired \$300,000 of S Company's par value bonds (60% of S Company's bonds) on the open market for \$310,000 after the semiannual interest payment had been made. At the time of purchase there were \$500,000 par

value bonds outstanding with a book value of \$480,000. The bonds mature in four years on December 31, 2019, and carry a nominal interest rate of 9%. Interest is paid semiannually on June 30 and December 31.

3. Both companies use the straight-line method to amortize bond discounts and premiums because the results obtained do not materially differ from those that would be obtained if the effective-interest method were used.
4. The fiscal year-end of both companies is December 31.

In this illustration, bonds of the subsidiary are purchased by the parent company. Book entries, as well as consolidated statements workpaper entries and procedures, would be similar if the parent company bonds were purchased by a subsidiary company, except that, the Investment in Bonds account is carried on the books of the subsidiary and the bond liability is carried on the parent company's books. Also note that, in this example, the parent purchased the bonds at a premium (on investment), while the subsidiary issued the bonds at a discount (on bonds payable). Clearly it is possible that the reverse might occur (purchase at a discount, issue at a premium) or that both the purchase and the issue might occur at a premium, or both at a discount.

## 9.5 BOOK ENTRY RELATED TO BOND INVESTMENT

P Company will prepare the following entry to record the bond investment:

|   |         |         |
|---|---------|---------|
| Dec. 31, 2015 Investment in S Company Bonds | 310,000 |         |
| Cash  |         | 310,000 |

Note that the usual practice of recording a bond investment does not separate the discount or premium. Since the bonds were purchased on the open market, there is no entry made on the issuing company's books. In this illustration, the bonds were purchased on the last day of the fiscal period after the semiannual interest had been paid. Thus, there is no accrued interest to be recorded in the current period.

### Consolidated Statements Workpaper—2015

The total gain or loss on the constructive retirement to be reported in the 2012 consolidated income statement, and the constructive gain or loss allocated to each company are computed as follows:

|                                   |   |                              |           |   |                   |                   |
|-----------------------------------|---|------------------------------|-----------|---|-------------------|-------------------|
| S company<br>(Issuing company)    | { | Book value                   | \$288,000 | } | -\$12,000         | Constructive loss |
| P company<br>(Purchasing company) | { | Par value                    | \$300,000 | } | -\$10,000         | Constructive loss |
|                                   | { | Purchase price               | \$310,000 | } |                   |                   |
|                                   |   | Net constructive gain (loss) |           |   | <u>(\$22,000)</u> |                   |

If the purchase price were less than the book value of \$288,000, a total constructive gain would result.

On the books of the individual companies, the constructive loss is not recorded in the year that the bonds are purchased on the open market. From a consolidated entity point of view, however, the purchase is a constructive retirement of debt. Thus, the constructive loss is recognized in the determination of combined income in the year of the purchase.

Workpaper entries necessary in the consolidated statements workpaper for the year ended December 31, 2015, are presented in general journal form below. The consolidated statements workpaper for 2015 is presented in Illustration 9-1.

| Cost Method  |           | ILLUSTRATION 9-1  |              |           |                         |                       |
|--|-----------|---|--------------|-----------|-------------------------|-----------------------|
| 80% Owned Subsidiary   |           | Consolidated Statements Workpaper                             |              |           |                         |                       |

| Retained Earnings from above                                     | 1,796,000 | 805,000   | 738,000      | 176,000   | 18,600                  | 2,020,400             |
| 1/1 Noncontrolling Interest in Net Assets**                      |           |   |              | (6)       | 340,000                 | 340,000               |
| 12/31 Noncontrolling Interest in Net Assets                      |           |   |              |           | 358,600                 | 358,600               |
| Total Liabilities and Equity                                     | 6,930,000 | 2,620,000   | 2,198,000    | 2,198,000 |                         | 8,040,000             |

\* Noncontrolling interest in income computation:  $(\$125,000 - \$12,000) \times .20 = \$22,600$ .

\*\*  $\$300,000 + (\$700,000 - \$500,000) \times .20 = \$340,000$ .

(1) To establish reciprocity (convert to equity) as of 1/1/2015  $[(\$700,000 - \$500,000) \times .80 = \$160,000]$ .

(2) To recognize constructive loss not recorded by P Company and adjust the bond investment to par value.

(3) To recognize the constructive loss not recorded by S Company and adjust the intercompany bonds payable to par value.

(4) To eliminate intercompany bond investment and liability.

(5) To eliminate intercompany dividends.

(6) To eliminate investment account and create noncontrolling interest account.

**Consolidated Statements Workpaper Entries—2015**

|   |                  |         |
|---|------------------|---------|
| (1) Investment in S Company Stock   | 160,000          |         |
| Beginning Retained Earnings—P Company   |                  | 160,000 |
| To establish reciprocity, or convert to equity  |                  |         |
| The reciprocity (conversion to equity) entry, computed as follows, is not needed if the partial equity method is used:  |                  |         |
| Retained earnings balance—January 1, 2015   | \$700,000        |         |
| Retained earnings balance—date of acquisition   | <u>500,000</u>   |         |
| Increase in retained earnings   | 200,000          |         |
| Percentage interest held by P Company   | <u>.80</u>       |         |
| Amount to establish reciprocity   | <u>\$160,000</u> |         |
| (2) Loss on Constructive Retirement of Bonds  | 10,000           |         |
| Investment in S Company Bonds   |                  | 10,000  |
| To recognize the constructive loss not recorded by P Company and <i>adjust the bond investment to par value</i> (i.e., the premium paid by P Company over the par value).                             |                  |         |
| (3) Loss on Constructive Retirement of Bonds  | 12,000           |         |
| Discount on Bonds Payable   |                  | 12,000  |
| To recognize the constructive loss not recorded by the subsidiary and <i>adjust the intercompany bonds to par value</i> (i.e., the difference between the carrying value to S Company and par value). |                  |         |

Entries (2) and (3) recognize the constructive loss allocated to each company and adjust the bond investment and carrying value of the intercompany debt to par value in preparation for the elimination of the intercompany receivable and payable.

|   |           |           |
|---|-----------|-----------|
| (4) Bonds Payable   | 300,000   |           |
| Investment in S Company Bonds                                       |           | 300,000   |
| To eliminate intercompany bond investment and liability.            |           |           |
| (5) Dividend Income   | 16,000    |           |
| Dividends Declared—S Company  |           | 16,000    |
| To eliminate intercompany dividends.                                |           |           |
| (6) Beginning Retained Earnings—S Company                           | 700,000   |           |
| Common Stock—S Company  | 1,000,000 |           |
| Investment in S Company Stock                                       |           | 1,360,000 |
| Noncontrolling Interest in Equity                                   |           | 340,000   |
| To eliminate investment account and create noncontrolling interest. |           |           |

Entries (2), (3), and (4) could be combined into one entry as follows:

|  |         |         |
|--|---------|---------|
| Loss on Constructive Retirement of Bonds | 22,000  |         |
| Bonds Payable                            | 300,000 |         |
| Discount on Bonds Payable                |         | 12,000  |
| Investment in S Company Bonds            |         | 310,000 |

**Complete Equity Method** If the complete equity method is used, entry (1), the reciprocity entry, is not needed and the following entry replaces entry (5) above. The consolidated statements workpaper for 2015, assuming the use of the complete equity method, is presented in Illustration 9-2. (Entries (2) and (3) above are also combined into entry (1)).

|   |        |        |
|---|--------|--------|
| Equity in S Company Income                          | 80,400 |        |
| Dividends Declared                                  |        | 16,000 |
| Investment in S Company Stock                       |        | 64,400 |
| To eliminate the intercompany income and dividends. |        |        |

Since the bonds were purchased on the open market on the *last day of the fiscal period*, there is no intercompany interest reported in the 2015 income statement. Accordingly, no elimination of intercompany interest revenue and expense is required in the 2015 consolidated statements workpaper. Since the amount of net income reported by S Company that is included in consolidated net income is reduced by the constructive loss allocated to

| 1/1 Noncontrolling Interest<br>in Net Assets** |                  |                  |                  | (4)              | 340,000                    | 340,000                  |
| 12/31 Noncontrolling Interest<br>in Net Assets |                  |                  |                  |                  | <u>358,600</u>             | <u>358,600</u>           |
| Total Liabilities and Equity                   | <u>7,154,400</u> | <u>2,620,000</u> | <u>2,102,400</u> | <u>2,102,400</u> |                            | <u>8,040,000</u>         |

\* Noncontrolling interest in income computation:  $(\$125,000 - \$12,000) \times .20 = \$22,600$ .\*\*  $\$300,000 + (\$700,000 - \$500,000) \times .20 = \$340,000$ .

(1) To recognize the constructive loss and adjust the bond investment and the intercompany bond to par value.

(2) To eliminate intercompany bond investment and liability.

(3) To eliminate intercompany income and dividends.

(4) To eliminate investment account and create noncontrolling interest account.

S Company, noncontrolling interest in consolidated income is 20% of the income reported by S Company reduced by the constructive loss of \$12,000 allocated to the subsidiary [ $.20 \times (\$125,000 - \$12,000) = \$22,600$ ].

A careful review of Illustrations 9-1 and 9-2 will reveal these important points concerning the objectives of the bond elimination entries:

1. Since the bonds were purchased this year, the constructive loss is reported in full in the determination of combined income.
2. Interest expense is the amortized interest paid to outside parties during the fiscal period. In this illustration, the intercompany portion was purchased on December 31. Therefore, the bonds were held by outside parties for the full 12 months. Interest expense reported in the consolidated income statement is for the full year, which is equal to the cash interest paid of \$45,000 plus discount amortization of \$5,000. As shown in the next illustration, if the bonds are held by P Company during the period, interest expense, net of amortization, is eliminated. Thus, for a 12-month period, \$30,000 in interest expense is eliminated, resulting in consolidated interest expense of \$20,000 (\$50,000 times the 40% held by outside parties).
3. The book value of the debt is the amount held by outside parties on the balance sheet date, which is \$192,000 [ $(\$500,000 - \$20,000) \times .40$ ]. The 60% held by the parent is eliminated by workpaper entries (2) and (4) in Illustration 9-1 and (1) and (2) in Illustration 9-2.

Consolidated net income and retained earnings for the year ended December 31, 2015, using the t-account approach, are computed as shown Illustration 9-3. If the equity method is used, the reconciliation of retained earnings is not needed.

#### ILLUSTRATION 9-3

##### T-Account Approach to Controlling Interest in Consolidated Net Income and Consolidated Retained Earnings

###### Controlling Interest in Consolidated Net Income—2015

|  |  |           |                  |
|--|--|-----------|------------------|
|  | Reported net income of P Company   | \$296,000 |                  |
|  | Less: Dividend income  | (16,000)  |                  |
|  | Net income from independent operations   | 280,000   |                  |
|  | Less: Constructive loss not recorded by P Company in the current year (unamortized premium on bond investment) | (10,000)  |                  |
|  | P Company's contribution to consolidated income  | 270,000   |                  |
|  | Reported net income of S Company   | \$125,000 |                  |
|  | Less: Constructive loss not recorded by S Company  | (12,000)  |                  |
|  | S Company's contribution to combined income  | 113,000   |                  |
|  | Percentage interest in S Company   | .80       | 90,400           |
|  | Controlling Interest in Consolidated net income  |           | <u>\$360,400</u> |

###### Consolidated Retained Earnings—December 31, 2015

|  |        |  |                    |
|--|--------|--|--------------------|
| Constructive loss on bond retirement not recorded by P Company | 10,000 | Ending retained earnings—P Company, December 31, 2015 (Cost Method)  | \$1,796,000        |
|  |        | Retained earnings adjusted for unrecorded constructive loss          | 1,786,000          |
|  |        | Ending retained earnings—S Company                                   | \$805,000          |
|  |        | Less: Retained earnings—date of acquisition                          | (500,000)          |
|  |        | Increase in recorded retained earnings                               | 305,000            |
|  |        | Less: Constructive loss on bond retirement not recorded by S Company | (12,000)           |
|  |        | Adjusted increase in recorded retained earnings                      | 293,000            |
|  |        | Percentage interest in S Company                                     | .80                |
|  |        | Consolidated retained earnings on December 31, 2015                  | <u>\$2,020,400</u> |

## Year Subsequent to Acquisition of Bonds, Entries on the Books of Affiliated Companies—2016

During 2016, the two companies record on their individual books the following entries related to the bond transaction:

### P Company's Books

*Entries on June 30 and December 31*

|  |        |        |
|--|--------|--------|
| Cash   | 13,500 |        |
| Interest Revenue   |        | 13,500 |
| To record receipt of interest ( $\$300,000 \times .09 \times 6/12$ ).  |        |        |
| Interest Revenue   | 1,250  |        |
| Investment in S Company Bonds  |        | 1,250  |
| To amortize premium on outstanding bonds ( $\$10,000 \div 8$ periods). |        |        |

For the full year 2016, P Company received total cash of \$27,000, recognized total interest revenue of \$24,500, and recorded amortization of the premium on the bond of \$2,500.

### Complete Equity Method—Additional Entries on the Books of P Company Subsequent to Acquisition of Debt

In the years subsequent to the acquisition of the subsidiary's debt, there are additional entries needed by P Company. The following entries would be made to the Investment in S Company Stock account in the year subsequent to acquisition:

|   |         |         |
|---|---------|---------|
| Investment in S Company Stock   | 112,000 |         |
| Equity in S Company Income  |         | 112,000 |
| To record equity income (80% of \$140,000).   |         |         |
| Cash  | 48,000  |         |
| Investment in S Company Stock   |         | 48,000  |
| To record dividends received (80% of \$60,000).   |         |         |
| Investment in S Company Stock   | 4,900   |         |
| Equity in S Company Income  |         | 4,900   |
| To eliminate the intercompany effect from the amortization of P Company's share of the constructive loss. |         |         |

This last entry ensures that P Company's income equals consolidated income. The \$4,900 can be computed several ways. First, the total constructive loss is \$22,000, of which P Company is allocated \$19,600. Since the total loss will be recognized to income over the term of the bond through amortization and because the bond has four years remaining, one-fourth of the loss is amortized in each period ( $\$19,600/4 = \$4,900$ ). Because this is an intercompany transaction, under the complete equity method, an additional \$4,900 must be added to income to offset the additional expense. Recall that the entire \$22,000 is recognized as a loss in the year of purchase. Alternatively, the \$4,900 can be computed by comparing the amount of interest expense and interest revenue recognized by each company as follows:

|   |                       |
|---|-----------------------|
| Interest Expense (60% of S Company's \$50,000 interest expense reported in 2016)      | \$30,000              |
| Interest Revenue recognized by P Company (2016)                                       | <u>24,500</u>         |
| Excess Expense  | 5,500                 |
| Controlling interest's share of the total constructive loss ( $\$19,600/\$22,000$ ) = | <u><u>× .8909</u></u> |
|   | <u><u>4,900</u></u>   |

### S Company's Books

*Entries on June 30 and December 31*

|   |        |        |
|---|--------|--------|
| Interest Expense  | 22,500 |        |
| Cash  |        | 22,500 |
| To record payment of interest ( $\$500,000 \times .09 \times 6/12$ ).   |        |        |
| Interest Expense  | 2,500  |        |
| Discount on Bonds Payable   |        | 2,500  |
| To amortize discount on outstanding bonds ( $\$20,000 \div 8$ periods). |        |        |

Thus, S Company paid \$45,000 in cash interest and amortized \$5,000 of the bond discount. Since 60% of the bonds (\$300,000) were purchased by P Company, S Company paid \$27,000 cash to P Company and amortized \$3,000 of the related bond discount.

Recall in the prior year, a constructive loss of \$22,000 was reported on the consolidated income statement. This amount is equal to the sum of the premium yet to be amortized by P Company (\$10,000) and the discount yet to be amortized by S Company (\$12,000). Therefore, as the companies amortize these amounts, they, in essence, recognize a portion of the total constructive loss throughout the term of the bond. For the full year (2016), \$2,500 ( $\$1,250 \times 2$ ) of the total constructive loss was recognized on the books of P Company as a result of amortizing the premium on the investment. S Company recognized \$3,000 [ $(\$2,500 \times 2) \times .60$ ] of its share of the loss through the amortization of the discount. To prevent double counting, these amortization amounts must be eliminated for consolidated purposes.

The account balances related to the intercompany bond holdings at the end of 2016 are:

**P Company's Books**

| <i>Investment in S Company's Bonds</i> |         |          |       | <i>Interest Revenue</i> |       |          |        |
|--|---------|----------|-------|-------------------------|-------|----------|--------|
| 12/31/15                               | 310,000 | 6/30/16  | 1,250 | 6/30/16                 | 1,250 | 6/30/16  | 13,500 |
|  |         | 12/31/16 | 1,250 | 12/31/16                | 1,250 | 12/31/16 | 13,500 |
| Balance                                | 307,500 |          |       |                         |       | Balance  | 24,500 |

**S Company's Books**

| <i>9% Bonds Payable</i> |          |         | <i>Discount on Bonds Payable</i> |        |                |
|-------------------------|----------|---------|----------------------------------|--------|----------------|
|                         | 12/31/15 | 500,000 | 12/31/15                         | 20,000 |                |
|                         |          |         |                                  |        | 6/30/16 2,500  |
|                         |          |         |                                  |        | 12/31/16 2,500 |
|                         |          |         | Bal.                             | 15,000 |                |

Consolidated balance =  $\$500,000 \times .40$   
= \$200,000

Consolidated balance =  $\$15,000 \times .40$   
= \$6,000

*Interest Expense*

|             |              |
|-------------|--------------|
| <u>2016</u> |              |
| 6/30/16     | 22,500       |
| 6/30/16     | 2,500        |
| 12/31/16    | 22,500       |
| 12/31/16    | <u>2,500</u> |
| Balance     | 50,000       |

Consolidated balance =  $\$50,000 \times .40$   
= \$20,000

Rationale: For consolidated balances, 60% of the bonds held by the affiliated company must be eliminated. The remaining 40%, held by outside parties, is reported in the consolidated financial statement.

**Consolidated Statements Workpaper Entries—December 31, 2016**

Workpaper entries necessary in the consolidated statements workpaper for the year ended December 31, 2016, are presented in general journal form below. The consolidated statements workpaper for 2016 is presented in Illustration 9-4.

\*  $(\$140,000 + \$3,000) \times .20 = \$28,600$ .

\*\*  $\$300,000 + (\$805,000 - \$500,000) \times .20 = \$361,000$ .

(1) To establish reciprocity (convert to equity) as of 1/1/2016  $[(\$805,000 - \$500,000) \times .80 = \$244,000]$ .

(2) To adjust beginning retained earnings for unrecorded constructive loss recorded in prior years as workpaper entry only and adjust bond investment to par value.

(3) To adjust beginning retained earnings for unrecorded constructive loss at the beginning of year, adjust interest expense for the loss recorded this period, and adjust intercompany bond payable to par value.

(4) To reverse the amortization of premium on investment recorded by P Company during the year.

(5) To reverse the amortization of discount on bonds payable recorded by S Company during the year.

(6) To eliminate intercompany interest.

(7) To eliminate intercompany bond investment and bonds payable.

(8) To eliminate intercompany dividends.

(9) To eliminate the investment account and create noncontrolling interest account.

|     | S Company during current year (and not needed by consolidated entity        |         |         |
|     | since the constructive loss was recorded in its entirety in 2015).          |         |         |

Recall that the individual companies record a portion of the loss ( $\$5,500$  in total) this year as amortization of the discount ( $\$5,000 \times .60 = \$3,000$ ) and premium ( $\$2,500$ ). Workpaper entries are necessary to add back this portion of the loss reported as a reduction in the current income of the individual companies because the entire loss was reported in the consolidated income statement in the year that the bonds were acquired by P Company. Failure to do so will result in reporting the constructive loss twice, once in the year of acquisition and again in subsequent periods when the companies record the loss. The credit to interest revenue for  $\$2,500$  [entry (4)] and the credit to interest expense for  $\$3,000$  [entry (5)] increase combined income by  $\$5,500$ .

|     |   |           |           |
|-----|---|-----------|-----------|
| (6) | Interest Revenue ( $\$45,000 \times .60$ ) or ( $\$13,500 + \$13,500$ ) | 27,000    |           |
|     | Interest Expense  |           | 27,000    |
|     | To eliminate intercompany interest.                                     |           |           |
| (7) | Bonds Payable ( $\$500,000 \times .60$ )                                | 300,000   |           |
|     | Investment in S Company Bonds   |           | 300,000   |
|     | To eliminate intercompany bond investment and bonds payable.            |           |           |
| (8) | Dividend Income   | 48,000    |           |
|     | Dividends Declared  |           | 48,000    |
|     | To eliminate intercompany dividends.                                    |           |           |
| (9) | Beginning Retained Earnings—S Company                                   | 805,000   |           |
|     | Common Stock—S Company  | 1,000,000 |           |
|     | Investment in S Company Stock   |           | 1,444,000 |
|     | Noncontrolling Interest in Net Assets                                   |           | 361,000   |
|     | To eliminate the investment account and recognize NCI in Net Assets.    |           |           |

Workpaper entries (2) through (7) could be combined into one entry as follows:

|                                       |         |         |
|---------------------------------------|---------|---------|
| Beginning Retained Earnings—P Company | 19,600  |         |
| Beginning Noncontrolling Interest     | 2,400   |         |
| Interest Revenue                      | 24,500  |         |
| Bonds Payable                         | 300,000 |         |
| Interest Expense                      |         | 30,000  |
| Discount on Bonds Payable             |         | 9,000   |
| Investment in S Company Bonds         |         | 307,500 |

Noncontrolling interest in consolidated net income is 20% of the income reported by S Company plus the portion of the loss recorded by S during 2016, but fully reported in the 2015 consolidated income statement, the year the bonds were constructively retired [ $.20 \times (\$140,000 + \$3,000) = \$28,600$ ].

## Consolidated Statements Workpaper Entries—2016

### The Complete Equity Method

COMPLETE

|     |  |           |           |
|-----|--|-----------|-----------|
| (1) | Investment in S Company Stock  | 19,600    |           |
|     | Beginning NCI  |           | 2,400     |
|     | (\$12,000 × .20)   |           |           |
|     | Investment in S Company Bonds  |           | 10,000    |
|     | Discount on Bonds Payable (\$15,000 × .60)   |           | 12,000    |
|     | To adjust beginning Investment in S Company Stock balance and NCI for unrecorded constructive loss at beginning of the year (recorded in 2015 in workpaper entry only; see 2015 entry 2 and entry 3) and adjust intercompany bonds to par value. |           |           |
| (2) | Investment in S Company Bonds  | 2,500     |           |
|     | Interest Revenue (\$1,250 + \$1,250)   |           | 2,500     |
|     | To reverse the amortization of premium on investment recorded by P Company during the current year (and not needed by consolidated entity since the constructive loss was recorded in its entirety in 2015).                                     |           |           |
| (3) | Discount on Bonds Payable (\$5,000 × .60)  | 3,000     |           |
|     | Interest Expense   |           | 3,000     |
|     | To reverse amortization of discount on bonds payable recorded by Company during current year (and not needed by consolidated entity since the constructive loss was recorded in its entirety in 2015).   |           |           |
| (4) | Bonds Payable (\$500,000 × .60)  | 300,000   |           |
|     | Investment in S Company Bonds  |           | 300,000   |
|     | To eliminate intercompany bond investment and bonds payable.   |           |           |
| (5) | Interest Revenue (\$45,000 × .60) or (\$13,500 + \$13,500)   | 27,000    |           |
|     | Interest Expense   |           | 27,000    |
|     | To eliminate intercompany interest.  |           |           |
| (6) | Equity Income  | 116,900   |           |
|     | Investment in P Company Stock  |           | 68,900    |
|     | Dividends Declared   |           | 48,000    |
|     | To eliminate intercompany dividends and income.  |           |           |
| (7) | Beginning Retained Earnings—S Company  | 805,000   |           |
|     | Common Stock—S Company   | 1,000,000 |           |
|     | Investment in S Company Stock  |           | 1,444,000 |
|     | Beginning NCI  |           | 361,000   |
|     | To eliminate the investment account and recognize NCI.   |           |           |

Whether a single entry or a series of entries are made, the eliminating entries must accomplish the following under the cost (or complete equity) method (Illustration 9-5):

1. Under the *cost* or *partial equity method*, the parent company's beginning retained earnings is reduced by:
  - a. 100% of the constructive loss allocated to P Company that has not been recorded in prior periods as a decrease in interest revenue via the periodic amortization of premium (\$10,000).
  - b. 80% of the constructive loss allocated to S Company that has not been recorded in prior periods as an increase in interest expense via the periodic discount amortization (\$9,600).

\*  $(\$140,000 + \$3,000) \times .20 = \$28,600$ .\*\*  $\$300,000 + (\$805,000 - \$500,000) \times .20 = \$361,000$ .

- (1) To adjust the investment in S Company Stock account and beginning retained earnings of S Company for the constructive loss reported in the previous year.
- (2) To reverse the amortization of premium on investment recorded by P Company during the current year.
- (3) To reverse the amortization of discount on bonds payable recorded by S Company during the current year.
- (4) To eliminate intercompany bond investment and bonds payable.
- (5) To eliminate intercompany interest.
- (6) To eliminate intercompany dividends and income.
- (7) To eliminate the investment account and create noncontrolling interest.

Under the *complete equity method*, the parent company's beginning retained earnings does not need to be adjusted for these amounts because each year adjustments are made to the parent company accounts Equity in Subsidiary Income (and hence to retained earnings of P Company) and Investment in S Company. Thus, replacing the entries to Beginning Retained Earnings—P Company with entries to the investment account facilitates the elimination of the investment account under the complete equity method.

The sum of these two components is the controlling interest share of the constructive loss not recorded on the books of the affiliated companies as of the beginning of the current period. This sum is also equal to (a) 100% of the unamortized premium on the books of the parent (\$10,000) plus (b) the parent's share of the unamortized discount related to the intercompany bonds on the subsidiary's books ( $.80 \times \$12,000 = \$9,600$ ) at the beginning of the year.

2. The beginning retained earnings balance of the subsidiary is reduced by the noncontrolling interest share of the constructive loss allocated to the subsidiary that has not been recorded in prior periods through periodic amortization of the discount related to the intercompany bonds.
3. The interest expense and interest revenue related to the intercompany bonds and reported by the respective companies are eliminated from the income statement.
4. The bond investment and the carrying value of the intercompany bonds are eliminated from the balance sheet.

Consolidated net income and retained earnings for the year ended December 31, 2016, using the t-account approach, are computed as shown in Illustration 9-6.

#### ILLUSTRATION 9-6

##### T-Account Approach to Consolidated Net Income and Retained Earnings

| Consolidated Net Income—2016  |   |
|---|---|
|   | Reported net income of P Company \$454,000  |
|   | <i>Less:</i> Dividend income <u>(48,000)</u>  |
|   | Net income from independent operations 406,000  |
|   | <i>Add:</i> Constructive loss recorded by P Company in the current year (premium amortization) <u>2,500</u>   |
|   | P Company's contribution to consolidated income 408,500   |
|   | Reported net income of S Company \$140,000  |
|   | <i>Add:</i> Constructive loss recorded by S Company in the current year (discount amortization) <u>3,000</u>  |
|   | S Company's contribution to consolidated income 143,000   |
|   | Percentage interest in S Company <u>.80</u> 114,400   |
|   | Controlling Interest in consolidated net income <u>\$522,900</u>  |
| Consolidated Retained Earnings—December 31, 2016  |   |
| Constructive loss on bond retirement not recorded by P Company (\$10,000 – \$2,500) 7,500 | Ending retained earnings—P Company, December 31, 2016 (Cost Method) \$2,100,000                               |
|   | Retained earnings adjusted for unrecorded constructive loss 2,092,500   |
|   | Ending retained earnings—S Company \$ 885,000   |
|   | <i>Less:</i> Retained earnings—date of acquisition <u>(500,000)</u>   |
|   | Increase in recorded retained earnings 385,000  |
|   | <i>Less:</i> Constructive loss on bond retirement not recorded by S Company (\$12,000 – 3,000) <u>(9,000)</u> |
|   | Adjusted increase in recorded retained earnings 376,000   |
|   | Percentage interest in S Company <u>.80</u> 300,800   |
|   | Consolidated retained earnings on December 31, 2016 <u>\$2,393,300</u>  |

## Second Year Subsequent to the Debt Acquisition—2017

In subsequent years until the bonds mature, the companies will continue to recognize a portion of the loss each year as the discount and premium are amortized on their separate books. The consolidated statements workpaper entries are similar to those illustrated for 2017. Recall that the constructive loss occurred on the last day of 2015. Thus 2016 was the first year necessitating amortization reversals, and 2017 is the second. Workpaper entries in general journal form related to the intercompany bondholdings in the 2017 consolidated statements workpaper are as follows:

| Consolidated Statement Workpapers Entries—2017 |   |                             |
|--|---|-----------------------------|
| (1)  | Beginning Retained Earnings—P Company*<br>Investment in S Company Bonds<br>To adjust beginning retained earnings for constructive loss (recorded in 2015 as workpaper entry only; see 2015 entry (2)) and to adjust investment to par.  | 10,000<br><br>10,000        |
| (2)  | Beginning Retained Earnings—P Company ( $\$12,000 \times .80$ )*<br>Beginning NCI ( $\$12,000 \times .20$ )<br>Discount on Bonds Payable ( $\$20,000 \times .60$ )<br>To adjust beginning retained earnings balance and NCI for constructive loss (recorded in 2015 as workpaper entry only; see 2015 entry (3) and adjust intercompany bonds to par value. | 9,600<br>2,400<br>12,000    |
| (3)  | Investment in S Company Bonds<br>Retained Earnings—P Company*<br>Interest Revenue ( $\$1,250 + \$1,250$ )<br>To reverse the amortization of premium on investment recorded by P Company during the current year and prior year (and not needed by consolidated entity since the constructive loss was recorded in its entirety in 2015).                    | 5,000<br><br>2,500<br>2,500 |
| (4)  | Discount on Bonds Payable ( $\$10,000 \times .60$ )<br>Retained Earnings—P Company*<br>Interest Expense<br>To reverse amortization of discount on bonds payable recorded by S Company during current year and prior year (and not needed by consolidated entity since the constructive loss was recorded in its entirety in 2015).                          | 6,000<br><br>3,000<br>3,000 |

Under the complete equity method, the amounts in entries (1) through (4) recorded to P Company's beginning retained earnings would be assigned to the Investment in S Company Stock account. These accounts are marked with an asterisk.

## Three-Year Comparison

Illustrations 9-7 and 9-8 show the entries on P Company's books, S Company's books, and the consolidated workpaper entries using both the cost method and the complete equity method. For the year 2017, S Company income is assumed to be \$200,000 with \$75,000 of dividends declared.

**TEST YOUR KNOWLEDGE****9.1**

**NOTE:** Solutions to *Test Your Knowledge* questions are found at the end of each chapter before the end-of-chapter questions.

**Multiple Choice**

- Sandler Company is a wholly owned subsidiary of Portnoy Company. On January 1, 2012, Sandler has \$100,000 of 8% bonds outstanding. These bonds were issued at face value and had five years to maturity as of January 1, 2012. Both Sandler and Portnoy amortize any premium or discount using the straight-line method. On January 1, 2012, Portnoy bought Sandler's bonds for \$98,000. The amount(s) that should appear on the consolidated balance sheet of Portnoy and Sandler relative to these bonds is (are):
  - Bonds payable \$100,000
  - Bonds payable \$100,000, discount \$2,000
  - Bonds payable \$100,000, discount \$1,600
  - The bonds do not appear.
- Company Planets Galore owns 100% of the common stock of Saturn Inc. Saturn carries 10-year 8% bonds, issued to yield 7%, on its balance sheet. On January 1 of the current year, Planets Galore bought all Saturn's outstanding bonds at a price reflecting a current effective interest rate of 9%. How should this transaction be reflected in the consolidated financial statements for the current year?
  - Increase \$8,600
  - Decrease \$8,600
  - Increase \$200
  - Decrease \$200
- The bonds remain in the balance sheet and are accounted for at a 9% effective rate.
  - The bonds remain in the balance sheet and are accounted for at a 7% effective rate.
  - The bonds are treated as having been retired, with an ordinary loss shown on the consolidated income statement.
  - The bonds are treated as having been retired, with an ordinary gain shown in the consolidated income statement.

**9.6 INTERIM PURCHASE OF INTERCOMPANY BONDS**

In the preceding illustration, the intercompany bonds were initially purchased on December 31, the fiscal year-end of both affiliates. Had the bonds been held during 2015, P Company would have amortized a portion of the premium and S Company would have amortized a part of the discount that was related to the intercompany bonds. Thus, a part of the constructive loss would have been recorded in 2015 by the individual companies. Assuming that P Company amortized \$500 and S Company amortized \$600 during 2015, the original workpaper entries (2) and (3) for constructive losses are modified as follows:

|  |        |        |
|--|--------|--------|
| (2) Loss on Constructive Retirement Bonds    | 10,000 |        |
| Interest Revenue                             |        | 500    |
| Investment in S Company Bonds                |        | 9,500  |
| (3) Loss on Constructive Retirement of Bonds | 12,000 |        |
| Interest Expense                             |        | 600    |
| Discount on Bonds Payable                    |        | 11,400 |

The consolidated income statement will still show a total loss on the constructive retirement of \$22,000. The credits to interest revenue and interest expense add back the portion of the loss that was recorded by the individual companies, but which is reported in total in 2015, the year the bonds were constructively retired. Failure to add back the \$1,100 (\$500 + \$600) to the reported income of the individual companies will result in reporting this portion of the loss twice, as part of the \$22,000 and again as a reduction in interest revenue and as an increase in interest expense, both of which have reduced reported income.

## 9.7 NOTES RECEIVABLE DISCOUNTED

Accounting for the impact of a discounted note receivable on the consolidated financial statements, when a company issues a note to an affiliated company and then discounts the note with an outside company, can be found in the online content at [www.wiley.com/college/jeter](http://www.wiley.com/college/jeter).

## 9.8 STOCK DIVIDENDS ISSUED BY A SUBSIDIARY COMPANY

**LO 4** Stock dividends issued by a subsidiary.

**LO 5** Stock dividends vs. cash dividends.

A subsidiary may issue *stock dividends* in the same class of stock that is held by the parent company. The parent company records the receipt of the shares in a memorandum entry only, since a dividend in like stock is not considered income to the recipient. For consolidated purposes, the stock dividend does not alter the investor's proportionate interest in the subsidiary. On the books of the subsidiary, the declaration of a stock dividend is recorded as a transfer from the retained earnings account to one or more paid-in capital accounts. The amount transferred is dependent on whether the dividend is a large or small stock dividend. (Recall that a large stock dividend, one in which the number of shares issued is greater than 20–25% of the outstanding shares, reduces retained earnings by the par value of the stock issued, while a small stock dividend reduces retained earnings by the market value of the stock issued.) Also, stock dividends are assumed to be distributed from the earliest earnings accumulated in the retained earnings balance. Conversely, a cash dividend is considered to be a distribution of the most recent profits (usually current period income).

To illustrate the effects of a stock dividend on the preparation of the consolidated statements workpaper, assume that P Company purchased 4,000 shares of S Company's \$100 par value common stock on January 2, 2015, for \$560,000. At the time of purchase, S Company reported common stock and retained earnings balances of \$500,000 and \$200,000, respectively. If consolidated statements were prepared on January 2, 2015, the investment eliminating entry would be:

|                                   |         |         |
|-----------------------------------|---------|---------|
| Capital Stock—S Company           | 500,000 |         |
| 1/1 Retained Earnings—S Company   | 200,000 |         |
| Investment in S Company           |         | 560,000 |
| Noncontrolling Interest in Equity |         | 140,000 |

Now assume that S Company reports net income of \$50,000 and declares a 30% stock dividend (1,500 shares) on December 31, 2015. S Company would record the dividend as follows, assuming that the company capitalized the par value of the stock issued:

|  |         |         |
|--|---------|---------|
| Stock Dividend Declared (or Retained Earnings) | 150,000 |         |
| Capital Stock (1,500 shares × \$100)           |         | 150,000 |

Note that this entry has no effect on the total stockholders' equity. Only the composition of the account balances changes as shown here:

| Accounts          | <i>S Company's Capital Account Balances</i> |                           |   |
|-------------------|---|---------------------------|---|
|                   | <i>Before the<br/>Stock<br/>Dividend</i>    | <i>Stock<br/>Dividend</i> | <i>After the<br/>Stock<br/>Dividend</i> |
| Capital Stock     | \$500,000                                   | 150,000                   | \$650,000                               |
| Retained Earnings | 250,000*                                    | (150,000)                 | 100,000                                 |
| Totals            | \$750,000                                   | —0—                       | \$750,000                               |

\*\$200,000 + \$50,000

If the dividend had been considered a small stock dividend, the totals in the schedule above would not change. To record a small stock dividend, the retained earnings account is normally reduced by an amount equal to the number of shares to be issued times the fair market value per share; capital stock and other paid-in capital accounts are increased by the same amount.

The only book entry made by P Company in 2015 is the following memorandum entry to record the receipt of the 1,200 shares from S Company, since no cash dividends were declared during the period.

Memorandum entry—Received 1,200 shares (1,500 × .80) of S Company common stock based on the declaration of a 30% stock dividend.

A condensed consolidated statements workpaper for the year ended December 31, 2015, is presented in Illustration 9-9. In the year that the stock dividend is declared, one additional workpaper eliminating entry is made to eliminate the effects of the dividend on the parent’s interest in the capital accounts of the subsidiary. This entry is necessary because the capital stock account has been increased by \$150,000, but the stock dividend declared account has not been closed to retained earnings. In other words, the balance in the capital stock account is the ending balance and needs to be restored to the beginning of year balance before elimination of the investment account.

The workpaper entries in general journal form are as follows:

| <b>Workpaper Entries—Year Stock Dividends Are Declared</b> |  |         |         |
|--|--|---------|---------|
| (1)  | Capital Stock—S Company  | 120,000 |         |
|  | Stock Dividends Declared—S Company                                     |         | 120,000 |
|  | To reverse effects of stock dividend (\$150,000 × .80).                |         |         |
| (2)  | 1/1 Retained Earnings—S Company  | 200,000 |         |
|  | Capital Stock—S Company  | 500,000 |         |
|  | Investment in S Company  |         | 560,000 |
|  | Noncontrolling Interest in Equity                                      |         | 140,000 |
|  | To eliminate investment account and recognize noncontrolling interest. |         |         |

In the closing process the stock dividends declared account is closed to the retained earnings account. In subsequent periods, the two workpaper entries are combined as follows (this is the entry before the reciprocity entry):

|   |         |         |
|---|---------|---------|
| 1/1 Retained Earnings—S Company (\$200,000 – \$150,000)               | 50,000  |         |
| Capital Stock—S Company (\$500,000 + \$150,000)                       | 650,000 |         |
| Investment in S Company   |         | 560,000 |
| Noncontrolling Interest   |         | 140,000 |
| To eliminate investment account and recognize NCI before reciprocity. |         |         |

The result is that the debit to capital stock is increased \$150,000, and a corresponding decrease is made in the debit to the retained earnings balance.

In the consolidated workpapers the entry to establish reciprocity is based on the undistributed income earned by the subsidiary since the date of acquisition. A cash dividend declared by the subsidiary is generally considered to be a distribution of the most recent profits, which, of course, reduces undistributed profits of the subsidiary accumulated after the date the parent obtained control of the subsidiary. Conversely, the source of a stock dividend is the earliest earnings accumulated in the retained earnings balance.

In this illustration the procedures to compute the amount of the entry to establish reciprocity must be modified to recognize that the retained earnings balance at the date of acquisition has been reduced to \$50,000 as a result of the stock dividend. The workpaper entries for the *second* year December 31, 2016, are as follows:

|     |   |        |        |
|-----|---|--------|--------|
| (1) | Investment in S Company                                 | 40,000 |        |
|     | Beginning Retained Earnings—P Company                   |        | 40,000 |
|     | To establish reciprocity as of 1/1/16 (\$50,000 × .80). |        |        |

A portion of the retained earnings section of the December 31, 2016 workpaper is presented here:

| 1/1 Retained Earnings | P<br>Company | S<br>Company | Eliminations |            | Noncontrolling<br>Interest | Consolidated<br>Balances |
|-----------------------|--------------|--------------|--------------|------------|----------------------------|--------------------------|
|                       |              |              | Dr.          | Cr.        |                            |                          |
| P Company             | 700,000      |              |              | (1) 40,000 |                            | 740,000                  |
| S Company             |              | 100,000      | (2) 80,000   |            | 20,000                     |                          |

Observe that these entries make the beginning retained earnings balances for the second year equal to the first year's ending retained earnings balances reported for the noncontrolling interest and the consolidated retained earnings on the December 31, 2015, workpaper (see Illustration 9-9).

The issuance of a stock dividend does not affect the computation of consolidated retained earnings. As proof, the consolidated retained earnings balance as of December 31, 2015, can be computed as follows:

|  |                  |
|--|------------------|
| P Company's retained earnings balance at December 31, 2015   | \$700,000        |
